Fortunately, all trades do not strike their good times and their bad times together. The industries which deal with primary commodities have just about completed their adjustment. Many other industries still have to go through theirs. The anomaly of the situation is that with the big crops the world has produced this year, it is actually better off than it was a few months' ago, although the financial situation is in a much more critical position. I don't look for an early change in the present situation. We must get on to a more healthy basis for all industry and on permanently lower prices before we can expect a period of commercial activity.

1920 Market Excellent

By E. D. McCafferty

H. J. Heinz Company, Leamington.

SUPPLY of raw material is, and for some time has been, adequate. The trend of price is downward. The supply of labor has been short; efficiency poor; and wages high. Present labor situation is practically normal.

Market for our products during 1920 has been excellent and price movements in finished products are downward. We do not believe that the process of deflation has been completed.

We believe that business during 1921 will be good. There is such a shortage of houses—both for residential and commercial purposes—that it seems to us a great deal of building will be necessary, and this will give employment to building trades and allied lines; and believing that labor will be pretty generally employed at satisfactory wages, it seems to us that business will be good.

Prices Coming down

By J. Wagstaffe

Wagstaffe, Limited, Hamilton.

PRICES of raw materials will, in our opinion, be considerably lower. The labor supply has been plentiful and efficiency is increasing. We expect that wages will be lower in the coming year. We are laying off hands at the present time (Dec. 1) in our industry.

The market for our goods is very poor at the present time, in fact, there is scarcely any business. Prices on finished goods are coming down. We do not think the process of deflation has been completed yet, as we expect sugar, cases, tins, etc. to be tending downward. There is no export trade at present owing to adverse exchange.

In our opinion, there should be a better outlook for business in 1921, as the retailers and wholesalers are keeping very small stocks, only buying from hand to mouth.

Conditions in Belleville

By R. J. Graham

President, Grahams, Limited, Belleville.

THE writer is interested as a director or president in perhaps a dozen or more manufacturing lines of business. In connection with them raw materials of all kinds are rapidly declining. Labor conditions are decidedly easier, and as labor is in greater supply, efficiency is undoubtedly better. Several of our factories have closed down and most of them are running much less than their capacity. Strange to say, the only industries that we are connected with that are really active are builders' hardware, the construction of machinery and the manufacture of wooden goods. All others are extremely dull.

It is difficult to sell for future delivery on declining markets. There have been many cancellations and much controversy over matters of this kind. The movement of finished products has been extremely slow, buyers constantly asking for postponement of shipments. In my judgment, the process of deflation has not been completed and will not be completed for some time.

Our export trade has been extremely small. Our only fields that are active have been in South America, England

and the United States, and conditions are not likely to improve while the present rates of exchange are maintained.

With reference to the outlook for 1921, I am sorry that I cannot be as optimistic as I would like. The situation looks to me as if great caution should be exercised by every manufacturer, and that no great quantity of goods should be manufactured even of staple lines faster than the demand for them is maintained.

The Fishing Industry

By J. K. Loggie

W. S. Loggie Co., Limited, Chatham, N.B.

WE have found the supply of raw materials to be short during 1920, and the trend, we think, is towards lower prices. The supply of labor during 1920 was sufficient and was also efficient, and wages were higher than in 1919. Our view is that the number of men employed in the fishing industry in New Brunswick in 1921 will be less than in 1920.

We have fortunately been able to dispose of practically our entire production of fish at profitable prices, but there has recently been a decline in prices and we look for lower prices, particularly in canned salmon. We do not think that deflation has been completed, and we think that merchants and manufacturers will keep their stocks at the lowest possible point for some time to come.

Our market, under ordinary conditions, is chiefly in Europe and the United States. The European market, owing to the exchange situation, has not taken the usual quantity of goods from us. Sales in Europe have been much curtailed. The American market has used the greater portion of our production of fish at satisfactory prices.

We do not look for as good business in 1921 as in 1920, but the drop in prices should have a tendency to increase consumption. We think that a large percentage of business houses have had a profitable business during the past few years and consequently are in a fair position to meet bad times should business not be good during 1921.

Expects Active Trade

By W. R. Drynan

Dominion Canners, Limited, Hamilton.

UP to the present time there is very little indication of lower prices for next season. The tendency, however, is apparently towards lower prices, but as we have to make our contracts early in the year, it looks at present as if our costs are going to run almost as high as in 1920.

We had no difficulty in securing sufficient help this past season. Wages have been high but there has not been much improvement, if any, in efficiency. Indications point to plenty of help for next season. Efficiency will depend to some extent on whether or not the help are able to secure employment easily.

Up till the end of October our business was somewhat in excess of 1919. There has been some falling off during the past two months and business is somewhat unsettled owing to the deflation of prices on a number of commodities handled by our buyers. Owing to the fact, however, that the retailers have been buying very conservatively during the past year, we should have an active trade commencing in the spring of next year, provided, of course, that labor generally is kept well employed.

There may be further deflation in the early part of the year. This will depend to some extent on the dealers' ability to finance; in other words as to the extent of their support from their bankers.

Export business is almost negligible owing to the deplorable condition of European countries and the unfavorable exchange.

Our condition in 1921 will depend to a large extent on conditions in the United States. United States' manufacturers look upon Canada as a dumping ground for their surplus products and apparently are willing to unload at any price, and were it not for the exchange situation, the position in Canada from a manufacturing standpoint, would undoubtedy be very serious. If conditions improve in the United States and there is no other outside interference, with the inherent wealth of Canada we see no reason why 1921 should not be faced with confidence. The principal lesson for everybody—individuals, Municipal, Provincial and Federal Governments—is to live in 1921 within our incomes; but, even under worse conditions, when we contrast our position in Canada with that of the European countries, we have a great deal to be thankful for and, as deflation of prices is what everybody has been asking for, we see no reason why there should be any wails or sobs over present conditions.

Jam Manufacturing Industry

By HON. E. D. SMITH

E. D. Smith & Son, Limited, Winona

BOTH the canning and jam manufacturing industries are seriously affected by the expectation of lower prices on the part of the retail merchants. Whereas in some industries the lowered costs of raw materials soon bring about lower prices for the finished articles, in most industries it takes several months at least. In our industries nothing less than a year enables us to offer finished goods made of cheaper raw materials excepting only the jams made from pulps laid down during the season when the fruit was on the market. In this case any cheapening of the finished product must arise from the lower costs of some other items than the pulp. Sugar is cheaper, but that cannot affect the cost of jams made up in the fruit season when most jams have to be made up if one is to put up really first-class jam, nor can it affect the cost of any canned goods whatever, as they have all to be put up in the season when the raw fruit or vegetables are in the proper condition for canning.

Notwithstanding this situation, well known to anyone who stops to think, the retail merchants are holding off buying in the usual quantities and as a consequence canners and jam manufacturers are going into winter with rather larger stocks on hand than usual. However, as the packing was done on a very conservative scale in all those lines the quantity of which was controllable—that is, lines the raw material of which was not contracted for early in the season—there is not more than enough on hand to supply the ordinary wants of the public. Costs were high, very high, indeed, because labor was high and also less efficient even than usual; because tins were higher than ever before; because strawberries, raspberries, currants, gooseberries and cherries were abnormally high, and it is from the first four that seven-eighths of all jams are made. Tomatoes, corn, peas and beans were contracted at prices on the whole higher than ever before. Canned goods prices show extremely small profits, tomatoes not over four cents on a dozen tins. Canners cut their profits almost to the vanishing point and so did jam manufacturers in order to meet as far as possible the cry for lower prices.

There was a normal crop of peas, corn and tomatoes, and that helped out on overhead costs and helped to offset the increased costs of raw material and labor. It may easily happen that poor crops next year would so increase overhead costs that the increase would offset any lowering costs in wages and raw materials. At the present time tin can manufacturers do not promise any lower prices for cans and these are now costing us on an average double the first cost of the contents.

As a consequence of the sluggishness of the market many jam factories are closed. Of course canning factories are always closed or nearly so for six months of the year, which makes canning an expensive and unsatisfactory business. Last year there was a brisk demand for tomatoes and apples in the British market, but as I prophesied last year, that demand was an unnatural demand and it has already ceased.

Then, in addition, the demand for the one article that we can usually find a market for in Britain, namely, gallon apples, has ceased owing to the high cost laid down in Britain due to high cost of tin cans, high freight rates and finally exchange, all of which combined

makes the cost so high laid down in Britain that the demand is nil. However, I look for things to improve in the spring. Once the labor situation becomes stabilized, I look for good times in Canada, but that may take more time than one year.

I have the utmost optimism as to the future of every industry that is well conducted and protected to just that extent that is sufficient to offset any special advantage that our greatest competitor has in the matter of wages, as well as a little to offset dumping and specialized manufacture which can be carried on somewhat cheaper than when a manufacturer, owing to our smaller market, is obliged to make a great variety of goods entailing many changes and adding greatly to factory expense.

Breakfast Foods

By R. K. McIntosh

Battle Creek Toasted Corn Flake Co., Limited, London.

IT is to be regretted that we are unable to purchase our supplies of raw material in Canada. Owing to the acreage of white corn being so small, it necessitates our getting our supplies from the United States. With the enormous crop just harvested we are experiencing no difficulty whatever in getting ample supplies of raw material. It is our opinion that there is a more or less panicky feeling in the grain trade and the trend of price for the next year would be to work somewhat higher than at present.

We have experienced no difficulty in getting sufficient labor during the past year, and of course at the present time we have a number of unemployed men in our city. Indications are for plenty of labor during the coming year. Labor efficiency is below pre-war conditions, but we find in our industry they are gradually coming back and we look forward to material improvement during the coming year.

There has been a heavy falling off in the export demand for our goods during the past year particularly owing to the readjustment period through which South America and Europe are passing. Our shipments to the West Indies have been very regular and very satisfactory.

Indications are for lower prices for finished products during the early part of next year, and the present outlook would indicate a stiffening up of prices again, probably in May or June. The process of deflation with us is peculiar in this extent, that when the consumer gets the idea (and they have it just now) that prices are going to come down and stop purchasing, it materially decreases the demand and increases our cost to produce. While we have had lower prices on some raw material, our cost to produce has risen owing to the lack of demand, and our goods are really costing us more to produce to-day than previous to the deflation in raw products. If the consumer would have sufficient confidence and sense to purchase their requirements as usual it would assist us in materially reducing our price, so that the consumer and retailer holding back refusing to buy decreases the demand and increases the cost and at the same time causes much unemployment.

We are at the present time just starting an energetic development of export fields and are looking forward to a very material increase in our export business during 1921.

The outlook for 1921 is not bad if something could be done to have the press of the country boost instead of knock, or in other words to instil optimism in the minds of the people of Canada. There is no reason why we should not enjoy the greatest prosperity. A country like Canada that produces so much and so many raw materials should have this optimism and the people of our country realize they have the greatest country in the world. It seems to me 1921 is going to be just what the people of this country like to make it. If they would use their common sense 1921 should be a wonderful year for Canada.

J. B. Detweiler, president Bluebird Corporation, Limited, Brantford, writes: "Our outlook for 1921 is indeed very promising. We are manufacturing the only all-Canadian electric washing machine, the materials for which are all purchased from Canadian producers. We have entered the market with a very extensive advertising campaign and indications are very favorable for 1921."

A Fleet of Grain Carriers of the Western Lakes

FURNITURE MANUFACTURE

General Review of Furniture Manufacturing Industry

By W. CAWKELL

Secretary, Furniture Manufacturers Association, Toronto

DURING the earlier months of 1920, the Canadian manufacturers of furniture had considerable difficulty in obtaining a prompt supply of the necessary materials required in their industry. After the first few months of the year, conditions in this regard steadily improved and for the greater part of the year they had little or no difficulty in this direction. For several months, the price trend, in the majority of cases, have been in a downward direction, especially with regard to oak and gum lumber, leather, glass and mirror plate. It is impossible to state whether there will be further deflations in these commodities or not, but some good judges are of the opinion that the prices of oak lumber will be firmer before many months have elapsed. There has been very little change in the prices of the other lumber and veneers used in the furniture industry.

With regard to labor: the supply during the first six months of the year was below normal, and there is still no surplus whatever of skilled labor. The labor efficiency in the furniture industry has been fairly good and wages were higher than they have ever been. Regarding employment: the majority of the plants have been very quiet for the past three months, and in very many instances the factories are running short time, but there has not been any decrease in the wages paid per hour.

During the first six months of 1920, the demand for furniture was excellent, but since June business has gradually declined until it could be described now as being stagnant in a number of factories, although firms specializing in certain lines, such as office furniture, still have a fair amount of orders on hand.

Furniture prices are decreasing accordingly with the lesser costs of materials, consequently the prices of some classes of furniture have been hardly affected at all, while in other cases, the reduction in price will vary according as to how the materials that enter into their manufacture have been reduced.

As to whether the process of deflation has been completed it is impossible to state, as several factors governing the situation are psychological and not economic. The possible lessened costs of some materials may be offset by other added costs. The price situation will in the final analysis be governed by the costs of production.

With regard to the exporting of furniture, the industry during the past year has shipped a quantity of hardwood chairs and rattan furniture to New Zealand and the British West Indies. They have also shipped extension dining tables to South Africa. The above-mentioned furniture has been shipped finished and knocked down. With regard to the European market, the adverse rate of exchange practically makes the exporting of furniture prohibitive. Regarding shipping furniture to Britain, furniture manufacturers have been advised that there was no demand there that they could successfully compete for.

The furniture manufacturers are looking forward with confidence to 1921. Furniture retailers throughout the country have, in the main, been fairly busy, but had large stocks, which they have been gradually reducing. It is therefore thought that there will be a pretty large amount of sorting up orders to be obtained during the earlier months of the year, with a gradual improvement all around, towards the fall.

A great deal depends upon the housing problem. If the building trade commences operations on anything like an adequate scale commensurate with the demand for housing accommodation, then the furniture industry would be greatly stimulated, and as there is a great shortage of houses all over Canada, which will eventually have to be provided, furniture manufacturers have every reason to look forward to many years of prosperity for their industry.

Waiting for Prices to Drop

By J. G. Hay

The North American Bent Chair Co., Limited, Owen Sound.

MATERIALS have been plentiful, but prices are very high. Labor has been scarce and poor, with wages high, men turning out about 30 per cent. less work than before the war. At present labor is improving and settling down to work.

Business for the first nine months of the year was good; in October, business dropped off entirely. Export orders have been cancelled from all over the world, on account, it is claimed, of high freight rates and exchange. We understand that large shipments are being received from European countries. Prices are inclined slightly downward, guided by the change in labor and materials.

So far as export trade is concerned, Canada has a chance as never before if exchange could be stabilized and a reasonable ocean rate secured.

At the present rate of reconstruction of prices, 1921 should prove a good year for business. The public are waiting for prices to drop and they will not purchase any more than is necessary until they are convinced that prices cannot go any lower. We cannot see how prices can drop very much as long as labor retains the high standard of wages, and we do not see how wages can drop as long as daily living expenses are so high. We have never received so many small orders to be shipped by express, which goes to show that stocks are low.

Safe Ground Soon

By A. E. Ruby

H. Krug Furniture Co., Limited, Kitchener.

RAW materials in almost all lines are more readily attainable and, with a few exceptions, prices are still firm. Up to the latter end of August skilled labor was scarce, but in the last few months it has been plentiful and more efficiency has been shown by the workers, wages during the year remaining about the same. We have been running ten hours per day except during the months of October and November, when we worked thirteen hours for four days per week. We have added about thirty employees during the past three months.

We are now facing the period of readjustment and, if we do not lose our heads, we shall reach safe ground in the course of a few months.

Optimistic as to Outlook

By J. H. Kennedy

Malcolm & Hill, Limited, Kitchener.

IN the early part of the year prices of raw materials were firm and the supply difficult. In the latter part of the year there was a slight easing up in price and a better delivery, reflecting the larger supplies available.

As regards labor, during the first six months there was a general and constant demand for an increase in wages, without proportionate production, and experienced help was not available. In the later period, owing to the slump, there has been a considerable variety of labor available, but there is still a shortage in really experienced help. There is little or no agitation for increased wages and a decided improvement in production, even in face of shorter working periods per week. All indications point to a more general steadiness in employment. So far as market conditions are concerned, the early period reflected good business and substantial orders. In July there was a decided drop in orders, fol-

lowed by cancellations and deferred instructions as the general tightness was revealed. The general desire is to maintain furniture prices with possibly slight reductions in some lines. In some lines, in face of costs, a slight increase should be in order, but, in face of demand, it may be compulsory to squeeze down to the minimum permissible, though reduction in price must be extremely limited.

We are optimistic as to the outlook for 1921. We anticipate that the movement will be gradual but nevertheless solid. Lack of buying for practically a period of four to six months will necessitate a certain replenishing, while the influx of immigration and the natural growth of the country cannot but warrant a steady demand.

Stocks are Low

By J. Miller

Beach Furniture, Limited, Cornwall.

RAW material has been more plentiful with a lower tendency in prices. Labor has also been more plentiful, though there has been no reduction in wages. We are now working fifty hours per week instead of fifty-five as formerly, and our employees are all satisfied.

There was a good demand for furniture during the first six months of 1920, but during the last six months orders were very hard to get. There has been a lowering of prices for finished products.

We are looking forward for fairly good business in 1921. Stocks in retail stores are quite low and buying has been held off, waiting for lower prices which are expected early in January.

Revival of Trade Soon

By D. M. Wright

The George McLagan Furniture Co., Limited, Stratford.

RAW materials entering into the manufacture of furniture are still fairly scarce and with the exception of the prices of quartered oak and gum lumber the reduction in prices of materials have been very slight.

There is no tendency thus far towards a cut in wages in the furniture industry. We have the feeling that our craftsmen were about the most underpaid of any class of skilled workmen, up till two or three years ago.

With regard to the present amount of unemployment in our industry, would say we would suppose there would be a reduction of about 10 per cent. in number of hands employed since the first six months of the year. In addition to this the number of weekly hours of work have been reduced from 50 to 40. There is little likelihood of staffs being added to before April or May of 1921.

During the first six months of 1920 the demand for furniture was unprecedented but since July there has been a gradual falling off in orders. While there is a trend towards lower selling prices, in view of the expensive materials and labor represented in present stock, no heavy cut in prices can be looked for. The smaller output has increased the factory overhead to a point which fully consumes any reductions in materials. For these reasons selling prices will not likely show a reduction of more than 10 or 15 per cent., and this in many cases will entirely eliminate profit.

The development of export trade has been very limited indeed as many obstacles surround this class of trade extension.

With regard to trade outlook for 1921, at the present time it does not look any

Scene in a Canadian Furniture Factory

too bright, yet, evidently there is lots of money in the country with a very limited amount of the 1920 crop yet marketed. This would lead one to the conclusion that, if the buying public could be convinced that prices had reached the lowest level and money market becoming easier a revival of trade should commence almost immediately. Then, too, the impression is very general that nothing would tend to stimulate business activity more than were the Government to abolish the luxury tax and the business profits tax. If that were done, we believe that the moral effect would be such as to inspire confidence in the minds of the buying public as well as in the investor.

Prices Downward

By J. S. Knechtel

Knechtel Furniture Co., Limited, Hanover.

LUMBER is one of the materials in which I do not expect any reduction for 1921, as there has been a short cut. In most other materials there will be further reductions. The supply and efficiency of labor was low up to two months ago. Wages are still high and likely to remain so in furniture manufacturing industries. We are now working only about 25 per cent. capacity.

The market for furniture was good up to three months ago when business stopped short. There will be a lowering of prices in January price list and the tendency will be downward during 1921.

Confidence will be restored as soon as the buying public can be made to believe that the bottom has been reached. Just now the public will not buy at any price no matter how low.

Improvement in 1921

By Thomas McGill

McGill Chairs, Limited, Cornwall.

FURNITURE manufacturing conditions are more favorable than for three years, but orders are unobtainable.

There is a plentiful supply of raw material and labor, but the cost is still very high. Raw material has a few soft spots in price, though not sufficient to materially affect the selling prices of manufactured goods. The principal advantage in labor conditions so far is in improved efficiency. There have been very few cuts in wages.

Business in 1921 will require the closest possible attention, as it will be a year of continued change in values of everything, but the end of 1921 should find manufacturers on a more solid footing, and a sufficient demand for product to keep everybody busy.

Good Year on the Whole

By Thomas Bell

The Bell Furniture Co., Limited, Southampton.

THE condition of the furniture trade during the first six months of 1920 was above normal and, while there has been a decided drop in the demands for goods since July, 1920, it will work out at the end of the year that the factories have had a fairly good year on the whole.

During the first part of the year raw material used in our business advanced greatly in price and delivery was hard to obtain. The factories generally, we believe, were protected by contracts and did not have to purchase at advanced prices. At the present time prices on our raw materials are about on a par with those of a year ago, with a further tendency to decline.

There has been no cutting of wages in the furniture business up to date, but a gradually weeding out of the inefficient men. The year as a whole will average fairly well as to shipments, but there is in our opinion likely to be a readjustment of prices now that costs of raw materials and labor can be arrived at more closely than a year ago. Some lines will remain as they are as to price and others wi probably go lower. We do not think, ho ever, that there will be a general lowe ing of prices.

The export business is not looked with favor by many manufacturers. N doubt chairs, desks and other standa lines could now be exported to advantag Canadian designs of household goods a not suitable for the regular export trad

The furniture factories in Canada hav as a whole, increased their productio during the past 18 months and are w able to supply the Canadian market bo in quality and quantity, and we belie that with the wonderful crop of the pa season, the great savings deposits here our Canadian banks and the large imm gration due to come to Canada next s son, we are bound to have a better ye in 1921 than in 1920.

The Salmon Canning Industry

By H. BELL-IRVING

H. Bell-Irving & Co., Limited, Vancouver

THE position of the canned salmon industry in British Columbia is somewhat difficult at present. The pack of red sockeye salmon for the past season was an average one. There was also a fair pack of pink salmon but only a small pack of chums, the cheaper grade. The cost of production was the highest ever experienced. Nearly the whole of the sockeye pack has been marketed at good prices, but most of the pink salmon remains in packers' hands as well as a substantial portion of the chums.

As about seventy-five per cent. of the output of British Columbia salmon is exported, the price received by packers is largely dependent upon the position of the industry in United States, whose output is some six times as large as that of British Columbia. The consumption of United States salmon is mainly in their own market, and that market has been severely congested owing to the following reasons:—

Business houses have recently suffered severely owing to their stocks of sugar, coffee, tea, rice and such like, which were purchased at high prices, declining in value. The violent fluctuations in the price of sugar and the losses sustained in this connection alone have upset the equilibrium of business throughout the United States, and to a considerable extent in Canada. Banks are charging heavy interest for accommodation, compelling jobbers to adopt a hand to mouth policy, and are cautioning retrenchment. There has been a general want of confidence as to the stability of prices of many commodities. The condition of European exchange has discouraged exports. It is recognized that prices for salmon are moderate and r sonable and that salmon remains one the cheapest articles of food on t market. The slow market is not a qu tion of price; dealers do not want buy anything at present. The selli price of the cheaper grades of salmon already substantially below aver cost of production and of probable c of replacement.

The outlook for the future, howe is promising in this regard, that deal in United States are reported to h smaller stocks at this time of year th ever previously known, and a simi condition is said to exist in Canada.

The export market for Europe the cheaper grades has been affected the presence of Government sto which are, however, now practically hausted. An improvement may th fore shortly be anticipated.

Dealers will have to keep in m that there will be a drastic curtailm in the packing of cheaper grades of ned salmon in British Columbia du the coming year. A number of canne are being closed down entirely both British Columbia and Alaska. There be a great curtailment in the total put on the Coast.

In several industries many facto have been closed or are shortly to closed, which will give an opportu of making the necessary readjustm in labor conditions. The process of adjustment will be difficult, but i necessary that all classes should rea these difficulties and face the situa

I am quite hopeful that in spring shall see a general return of confid and revival of business.

Review of Piano and Organ Industry*

By E. C. SCYTHES

Nordheimer Piano & Music Co., Ltd., Toronto

THE past year will go down as a momentous one in the history of he piano and organ industry. The year 919 was probably the best with regard to olume of trade and profits which the ndustry on the whole has ever had. It, owever, was a period fraught with nxiety and difficulty for the manufacurer. The labor shortage reached its ost acute stage; wages advanced for all rades of work to the highest point ever nown in this branch of trade, and the arcity of certain materials was almost ore acute and aggravating than the inability and shortage of labor.

The earlier months of 1920 saw a connuance of these conditions with further dvances in wages and increased in all aterials and supplies; manufacturing sts were rising at a rate never before perienced; overhead and general exenses kept pace in the rapid upward end of prices. Such sudden changes ake it exceedingly difficult for the anufacturer to devise methods of costg that would show from month to onth the increased costs that he had to eet. There was no alternative but to y the prices asked for the materials and bor if the manufacturer wished to stay business. The seller's market still ntinued. The demand exceeded the pply. The problem was to make the ods and to maintain the standard of ality and keep up the reputation which e line enjoyed. It is to the undying edit of piano manufacturers of Canada t they did maintain the quality; no eapening was indulged in despite the ny temptations to do so.

et it also be said to the credit of adian piano and organ manufacturers t, in spite of the tremendous handicap, ly developed efficiency in processes and duction, that held costs at a point rprisingly low considering the difficies they had to face. The difficulties re none the less exacting than those erienced in other branches of industry, ch by comparison showed very much her and much more rapid advances in ing price.

o get only a faint idea of some of the nufacturers' problems one needed but to e the rising values of inventories in th factories from month to month, not be use of greater quantity but solely beaie of increased costs. This, as you wi readily appreciate, meant more capital, which means a heavier burden on the already heavy laden backs of the factory owners. It meant that $2.00 had to be provided to do the work that was formerly done by $1.00.

I know that the piano trade has been criticized by bankers, financiers, and manufacturers in other lines for their failure to seize the opportunity which was presented under the conditions that existed for basing cost and selling prices on a basis of replacement values instead of upon actual cost of material and processes. If the plan of costing on replacement values had been adopted, it no doubt would have greatly strengthened the position of the piano manufacturers, but it would have meant also much greater and more frequent increases in selling prices. The replacement basis of costing and price fixing has been advocated and defended by some of the highest authorities on industry and finance and with the hazards of business there is no doubt some justification for that practice. To build up a strong reserve against reverses or seasons of depression is a wise precaution, and is sound in principle, but it should be done through a practice of proper ethics and upon legitimate profits and not by profiteering. To-day the profiteers are getting their just deserts, but unfortunately many who are not profiteers are made to suffer for their sins.

I have never heard the slightest accusation of profiteering against the piano trade in Canada, and I do not believe there has been any.

Now this brings us down to the changed conditions that we have to face to-day. Since the announcement in the last Budget speech of the imposition of the luxury tax against pianos we have experienced a falling off in trade. Subsequent events have shown that the musical industry has been vitally affected by this announcement, and I believe the industry is justly entitled to an elimination of this arbitrary and unjust discrimination imposed upon it, and the undeserved moral stigma which arises from mistaken public opinion when an industry is placed in an excise tax class by virtue of its luxury characteristics, and I think that the industry is right in its determination to fight for the taking off of this tax, which, I believe, has been one of the contributing factors in the slowing down of business.

As I started to tell you, no matter what economic factors were underlying there is no doubt but the announcement of the luxury tax proved to be the spark which ignited the fire, and we have to-day almost a complete reversal of conditions that prevailed during the earlier part of the year.

During this period of deflation through which we are passing there have been sweeping reductions in many lines of merchandise, and no doubt some have predicted that it would affect pianos similarly. It must be remembered that musical instruments were about the last of the commodities to advance in price, and increases were small in comparison to many other lines. I know that during the past year many manufacturers have absorbed the increased cost themselves rather than pass it on to their dealers or raise prices higher to the public. Anyone familiar with piano manufacturing knows that it will be some time before there can be any reduction on the finished article. I can safely assert, however, that just as soon as the manufacturers feel any relief themselves they will pass it on to the dealers and to the buying public, as I know they are all anxious to bring prices down to the point where the dealer will be in a position to secure the largest number of customers. This is the time when each manufacturer should endeavor to show his dealers and salesmen as clearly as possible just what the position is so that they in turn can show the buying public that the values of pianos are on the right foundation and that reductions which are being made in other lines are not possible and cannot be made in musical instruments.

I think this period of deflation or depression through which we are passing has again demonstrated the solidity and permanence of the musical industry. We see on all sides uneasiness and anxiety amounting almost to hysteria in many of the so-called staple lines, boots and shoes, clothing, silks, woollens, but none of that has been apparent in our industry. I think that, if we could see figures in other lines, it would show that the volume of trade, and the conditions in the musical industry during this period of test, show up most favorably.

There is wealth in the hands of the masses of the people such as we never saw before; the holdings of Victory Bonds and the savings deposits are indisputable evidence of that. People may be holding back on buying, but that is a mental condition, and it is one that the salesman has a chance of overcoming. All that is needed is to see clearly through the mist and to command that courage and deter-

*From address of the president at the annual meeting of the Piano and Organ Manufacturers' Association.

mination which characterized those sturdy pioneers who laid the foundations of this industry in Canada.

Outlook is Fair

By C. A. Bender

Heintzman & Co., Limited, Toronto.

CANADA is passing through a period of readjustment at the present time, and prices of raw materials are showing a tendency to come down. The imposition of the luxury tax had a very bad effect on the piano trade, and we believe on trade generally, curtailing output.

The curtailment of credit by the banks has also affected the buying power of wholesalers and reduced sales. Further, exchange has curtailed the export trade to a very great extent.

Adjustments have got to be made in wages as well as raw material, when the country will gradually adjust itself to normal conditions. The outlook for 1921 is fair. We are still doing some export business. The financial position of Canada is good.

Likely to be Quiet Winter

By Owain Martin

Martin-Orme Piano Co., Limited, Ottawa.

THE beginning of the year found manufacturing conditions good but with the demand of labor increasingly unreasonable culminating in June in this district in the woodworking departments, amenable to the labor unions, going on strike for Utopian demands, which gained them nothing whatever but held up production for five weeks. The limit had been reached; increasing costs had forced prices to a point beyond which they could not go. Then as a climax came the imposition of the heavy tax which had a stunning effect on the market in our line, which is still being felt, the usual fall and holiday trade having been the worst for years.

In this plant we have not been forced to reduce the hours of labor nor to seriously curtail our staff, but prospects point to a quiet winter. There will be no sudden fall in prices, but as they are at present above normal and must in the nature of things settle down in time, so as in the period of advancing costs, prices will gradually follow. But the process will be slow and in our opinion will never even approximately reach pre-war levels.

There has not yet been any indication of a reduction in the cost of such skilled labor as we employ, nor in many of the important materials we use, and while in all the semi-manufactured parts we purchase about 83 per cent. of the cost is chargeable to labor, it is obvious that little immediate relief is to be expected in these lines.

All our observations point to the belief that the present slackness in business arises from a mental attitude largely fostered by the daily press toward deferring buying in the false belief that after some vaguely foreshadowed date, perhaps, Jan. 1st, prices will come tumbling down, an occurrence which would be as disastrous as it is fortunately unlikely, and it behoves manufacturers and merchants everywhere who see it to point this out to their public and remind them that the country is financially and economically safe but calls for sane, commonsense thought and action during this reconstruction period.

Pick up by Fall

By H. P. Bull

Williams Piano Co., Limited, Oshawa.

WE are meeting with strong opposition on the part of our supply houses of semi-finished products to reduction of prices. We recently made a direct request on all firms who supply us with materials, for a stipulated reduction in price on orders on hand and future deliveries. With the exception of lumber and veneers, in almost every case we were told they could not grant reductions for some time. Supplies for our requirements are plentiful and the quality improved.

Labor is plentiful and appears to be agreeable to work for wages offered. Wages have not as yet been reduced in our factory, but we are now at the place where a wage reduction is apparently necessary. At the present time we are working full time with one-third of our usual number of men.

The demand for pianos and player pianos for the year 1921 is most difficult to determine. We believe the turn for the better depends upon our farmers disposing of their crops, but in any event we do expect a general pickup about next September. Up to that period we anticipate about two-thirds of the normal output. We have been making some price concessions that are even less than our manufacturing costs, for the purpose of reducing our inventory.

We do not believe that the deflation of prices has yet reached the bottom, and it is most necessary that we have much further reductions from our supply houses almost immediately, in order to enable us to reduce our costs, which have not at this period been reduced one dollar. In fact our December manufacturing costs are higher than any previous month, due particularly to increase of overhead through reduced production.

The export field was of great assistance to us during this year, until the markets closed through cancellation of orders, which to our mind was caused by the coal strike in England. This instantly stopped all the exporting to that country, and left on our hands a large number of orders that were made according to their specifications. South Africa, Australia, New Zealand and South America also stopped shipment of their orde We believe there is a big future in t export field for Canadian manufacturir and we are of the opinion that we w have to match the credit terms being fered in the export trade by the manuf turers of other countries.

Supply Catching Up

By C. H. Weicker

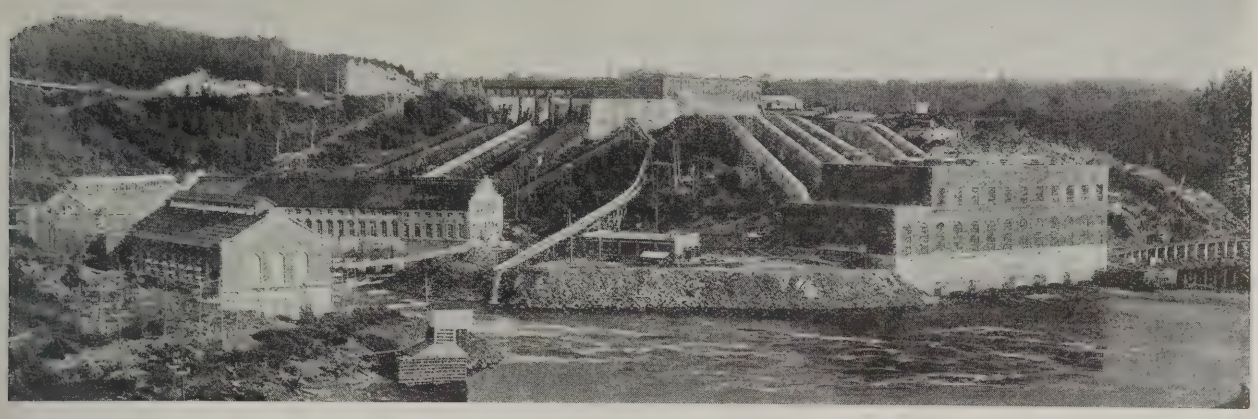
The Brunswick Balke-Collender Co., of Cana Limited, Toronto.

TO date we have not noticed a gre deal of dropping off in our bu ness. However, prospects are not a too bright owing to the great amount publicity given to the expected slump business.

With reference to supply and pr trends the supply seems to be catchi up with the demand. We doubt th there can be any great reduction in t prices of our products, as only in a ve few instances have our raw materi been reduced in price.

The supply of labor is much grea and efficiency seems to be a trifle bett We have not as yet reduced any wag and it is not likely that we will do immediately.

With regard to price movements might say that we do not feel that th has been any inflation in the prices our products. Therefore any drop t may come will be very slight.



Regarding the outlook for 1921, believe that prospects are very go especially after the first few mont We feel quite certain that in the spri conditions will improve wonderfully. far as our own products are concer this can be helped materially by the G ernment withdrawing the 10 per c tax that they are now charging on pho graphs and billiard tables. It is an justice which will not help matters a if continued.

Present Conditions Temporary

By Ontario Manufacturer

THERE seems to be a sufficient s ply of raw materials of all kin required by us at the present time prices lower than those which have be ruling during the past year. Labor pears to be more plentiful, and acco ingly we have the opportunity of pick men, a privilege which is not availa when labor is scarce. The fact of creasing requirements of labor, a seems to tend to an increased efficie in the labor retained. We regret t at the present time it has been necess to reduce operations considerably, this has meant a reduction of ab thirty per cent. in labor.

The market for our chief produ during the past nine months was go At present (December 1), conditions very quiet. Some finished products h increased in price, some have decreas Our personal opinion is that furt deflations in prices can be expected.

STATE OF CHEMICAL AND ALLIED INDUSTRIES

Movement for the Better During 1921

By Chemical Manufacturer

THE chemical industry has been enormously over-expanded during the iod of the war—probably no other intry more so, except those directly en-ed in the manufacture of munitions—this industry is now suffering from natural reaction which must always ow any such over-expansion. This ex-sion took place in the United States much greater extent than in Canada, the effect is naturally being felt in ada, at the present time, to practically as great an extent as in the United es for reasons that are obvious.

am not at all pessimistic as to the re of the industry, but I believe the od of depression has not yet reached bottom, and the recovery of its activie will naturally be slow, but it is hoped by this means it can reach a healthy ition. The present inactivity in the stry is being accompanied by the re of a great many smaller concerns, even some of the very large ones in United States are tottering.

far as our own Canadian chemical electro-chemical industries are con-d, they largely depend on export ness, and the export demand at the nt time is rather poor for several ns: First, large over-production; d, keen competition in England Germany where on a number of es prices quoted on German goods gland are about one-half of our this, of course, being due to the ate of exchange between England ermany.

price trend in raw materials has neral been downwards in the last three months. The labor supply is more than ample at the present time, although this has only become so in the last four months of the year. The efficiency of the labor will naturally increase as the supply increases, although in our case the period has not been sufficiently long to warrant us stating that the efficiency has increased to any marked extent. The present state of employment is about 50 per cent. of that in war time and possibly about 65 per cent. at the present time of what it was in the early part of the year.

Markets have largely decreased, and not only for the reasons mentioned above, but for the reason that in some countries a prohibitive tariff has been placed on some of our products. This is particularly true of Australia, which country has placed a prohibitive tariff on calcium carbide. Prices have moved downwards greatly in the last six months, due to over-production, and the low price of some of our products has been largely due to the great amount of second-hands held by brokers and also the manufacturers whose plants have shut down and who have dumped products on the market at a sacrifice.

I do not believe the process of deflation has yet been completed, but it is generally conceded that in the early part of 1921 a general movement for the better will be felt. It is felt that 1921 will see a movement for the better in all markets. The great excess of finished products which have been slowly moving during the latter part of the present year is in some lines being depleted. This will naturally start a buying movement for the manufacturers which, however, it is believed will be increased very slowly. I think probably the most discouraging feature of the export business will be German competition, which, on account of the low value of the mark, will be a serious problem we will have to contend with. Exactly what effect it will have on the future I do not believe anyone can foresee.

Markets are Frozen

By A. E. Bonn

American Cyanamid Co., Niagara Falls.

OF the raw materials utilized at the Cyanamid Works, Niagara Falls, Canada, limestone and coke deliveries are not satisfactory, either in quality, quantity or price. These materials are essential to the operations, and the irregularity of their delivery and continued high cost is concerning the management.

The labor situation has shown an improvement as to numbers of men and to an extent in efficiency, but the wage rates are excessive in comparison with the present earnings of labor on the American side. This condition, we understand, is influenced by the demand for men and the wages that are being paid for work on the hydraulic and Welland ship canals. Employment at the Cyanamid Works has been on full time during the entire year and is likely to continue so during the first quarter of the New Year.

The export market for our products, excepting that of United States, has been seriously affected during the past six months by the adverse rates of exchange. No improvement on this deterrent to foreign sales is yet in evidence. Some lines of heavy chemicals are now selling, both here and abroad, at prices below their pre-war value, notwithstanding that production costs have not been relatively

decreased. This development, as we view it, was not influenced by over-production or surplus holdings, particularly in the class of chemicals that we manufacture; the depression of their market value being a sympathetic trend with the deflated values of farm crops and basic commodities.

The technical position of heavy chemicals is good and if a revival of buying against needs for next year quickly follows easier credits, we expect an adequate demand and a reasonably profitable level of values to develop.

Unless the international credit situation is immediately remedied to encourage an easier movement of imports and exports, there can be no early return of normal rates of exchange nor capacity operations of any basic industries throughout 1921. World requirements of agricultural and industrial chemicals have not diminished, but generally speaking, all markets are "frozen" for lack of money or credit to thaw them into motion.

Much Deferred Buying

By R. H. Combs

Prest-o-Lite Co., of Canada, Ltd.
Canadian National Carbon Co., Ltd.

MATERIALS used in manufacturing processes by the companies under my direction are at the present time in plentiful supply, we having experienced no trouble whatever during the past year in securing all the materials used by us. During the past thirty days we have noticed a tendency towards lower prices of these raw materials, but up to the present time, with the exception of one or two cases, prices have been shaded only slightly. We have, however, been advised by the suppliers of several of these raw materials that, owing to existing conditions, it is felt that further reductions will be permissible in the near future—after the first of the year—it being generally conceded that the latter part of December or the first part of January will see most raw materials on a somewhat lower basis, which basis will perhaps be representative of the bottom for such materials.

In the early part of 1920 the supply of labor was adequate for our demands, but unfortunately was not of such good quality as we needed, same being inefficient and having a tendency more or less to a spirit of unrest. However, since June first there has been considerably less unrest and labor of the best class has been in supply. Up to the present time there has been no reduction in wages of our employees, and as we have a great deal of piece-work in our shops, our labor has been successful through increased production in materially increasing their earnings.

The companies under my direction, manufacturing as they do such a wide range of products, are using about 80 to 85 per cent. full staff. In some lines our business is much heavier than it has been at any other time since commencing business in Canada. Only those lines directly connected with the automotive industries are affected by the present slump which has hit the industries so hard.

The market for all goods manufactured by our companies was exceptionally good up to July 1st, which condition continued except in lines directly connected with the automotive industry, and in this connection there has been only a small slump in our sales to the general public, the greater slump being due to the closing down of automobile plants with whom our companies had large contracts.

There has been very little price movement with these companies during the past year. It does not seem that the process of deflation has as yet been completed, although it has undoubtedly reached bottom in some lines. In fact, the downward swing has been so violent in some lines that a reaction to higher prices is to be expected. In the market as a whole, a downward tendency should continue for some time yet, particularly in such lines as provisions, fuel, textiles, lumber and other building materials, etc. Undoubtedly retail prices must and will come down considerably after the first of the year, as those prices do not at the present time reflect the jobbing or manufacturing market which has in most lines come off from previous high very extensively.

During the past year there has bee some development in the export field, e pecially in the British Dominions, b owing to the discount rates and prese industrial condition, just now the expo proposition is not particularly bright. is, however, apparent that improved co ditions are in sight and the developme of the export business will be rapid in t near future.

We are looking forward to the ye 1921 with considerable confidence, bas on the known financial condition of t country at large and especially the buyi power of the agricultural communiti because of the abundant crops of 19 This will be greatly aided by the creased purchasing power of the doll the result of deflation which has be going on for the past several mont and which, as above stated, has p gressed to the point where more co dence can be expected in market sta ization. It is, however, apparent th the large falling off of trade during t latter part of 1920, represents consid able deferred buying on the part of t public and we do not feel that all t business shrinkage of 1920 represe loss. Deferred buying will be added current buying in 1921, which sho have a stimulating effect on product and thus call for increased employm with consequent improvement.

The Financial Outlook

By SIR FREDERICK WILLIAMS-TAYLOR

General Manager, The Bank of Montreal

THERE is a general sense of relief resulting from the present evidence that the decline in the high cost of living has commenced. From now onward we may confidently expect the trend of prices to be downward, and with lower values the demands for bank credit should logically diminish. It is relevant to add that by restrictive measures the banks have contributed in no small degree to this improved condition.

The record of commercial failures in any country is a fair index of its trade conditions. It is both pertinent and enlightening to note that in Canada there have been 856 failures during the twelve months constituting our bank year as compared with 766 during the previous twelve months.

Canada is still suffering from the slings and arrows of outrageous fortune in the premium on New York funds, which continues an ever-present factor in our banking and commercial activities. When this condition will disappear one cannot venture to predict, certainly not while the trade balances run so heavily against Canada. Undoubtedly, relief would come were we to borrow abroad in large volumes by way of public loans, but that would be merely a palliative, not a remedy. In addition to this, the conversion rate of sterling precludes loans in London, while, in the United States, interest rates are penalizing. The advantage gained in bringing capital from N York in the premium on American fu is offset by the loss in providing inte thereon.

What is wanted is rigid economies the purchase of non-essentials abr with an increase in our own exports. would then be only a question of t when investment capital would pour this country of opportunities and the value of the Canadian dollar be restored

One advantage that Canada der from the premium on New York fu is that American money earned in ada remains here in considerable volt and is not likely to be withdrawn so as the present premium continues.

Since August, 1914, the world travelled far along the road to ruin. may be thankful that the waste and struction ended before the point of exhaustion was reached. Canada has escaped, but we are still a virile pe in a goodly land. There is no reason dismay over our national outlook, there is every reason for sober tho while we take stock of our resources of our prospects.

We must bear in mind there is no r road to the stable conditions of fo years, no magic by which we can re the wealth that has been lost or wip the debts incurred. There is nothin it but to repair the damage, retrench confidently work out our salvation.

Regards Outlook as Good

By H. N. Cowan

The Cowan Company, Limited, Toronto.

THE trend of prices of all our raw materials is downward. Sugar is ll more than double the normal price. coa beans are cheaper than they ever re in the history of the business. Of rse, laid-down cost to us is consider- y increased because of the exchange iation. We have to settle for cocoa ns in New York funds.

Ve have been able to get plenty of or during this year, and wages paid very little more than in 1919. We n't get efficiency until jobs are harder get, and then people will be keener hold the jobs they have.

There has been a good demand for goods during 1920, although for this ie of the year we are not as busy as should be. We are reducing prices our finished goods from time to time our raw materials come cheaper. We not think the process of deflation has n completed.

Ve consider the outlook for our busi- s for 1921 as being very good, be- se the goods we manufacture are ple lines of cocoa and chocolate, ich we consider as necessities, not uries. There are plenty of features ich tend to inspire confidence. There some things which may cause us to r for the future. We know that this ntry is all right, and it is going to w, and it is going to grow rapidly. ittle hard sledding, for a limited e, might not do any of us a great m.

Good Prospects for 1921

By Jas. W. Moir

Moirs, Limited, Halifax, N.S.

HE present supply of raw materials is adequate and the price trend is nward. The supply and efficiency of r during the past year showed a de- l improvement over the several s preceding. We have given more oyment and paid out more wages ng this year than ever before in our ness.

Tring the summer months demand r taple confectionery was very small, h goods selling about as usual. The ease in the demand for staple con- ctionery was due to the very high price gar and to the imposition of the xty tax of 10 per cent. During the ll months the demand revived and siness for all classes of our manufac- re was very good indeed. The prices fished products have followed in a ea r or lesser degree the prices of w naterials. We think the process of deflation in some materials has been completed; other lines will probably work still lower.

We look forward to a good business in 1921, although we expect that the demand for our goods will be very small during the next two or three months. Lower prices at which we will be able to offer many lines of our manufactures, will, we believe, make for an increased consumption.

Ought to Brisk up Soon

By F. A. McCormick

McCormick Mfg. Co., Limited, London.

WE think that the prices of raw materials and finished goods and labor have a decided tendency downward. Our business for 1920 will be fairly satisfactory, only not what it should have been, things being especially quiet the last couple of months. It is difficult, of course, to predict next year's developments, although we would think from the scarcity of stocks that are in the retailers' hands that our business ought to brisk up a little during the early months of the year.

Early Return to Normal

By F. W. Bean

Bean & Westlake, Limited, Woodstock.

THE year 1920 was unlike the previous war years in that it was possible to procure almost any raw material, although sometimes at a greatly enhanced price. The four basic ingredients of the confectionery and biscuit manufacturers are sugar and glucose, flour and shortening. These steadily increased in price until about September, when the peak was reached. The slump in sugar was very rapid, but the other three underwent a gradual decline.

The supply of male labor was ample throughout the year, but up till October sufficient girl help was impossible to procure. Labor efficiency was fair, but great tact and diplomacy had to be exercised in handling employees.

The Christmas trade has been good, but it is not certain that the merchant will be as fortunate in disposing of the stocks that he has bought. The value of 1920 trade will exceed all previous years, but on the other hand the volume was not as large as the manufacturer made provision for.

The price movements in the finished article naturally followed sharply after those in raw materials. There was a steady advance until about October, with general declines since that date.

The process of deflation has not been completed. While prices may not go to pre-war levels, the early months of the year will doubtless witness very radical reductions.

Canadian confectionery was being exported in a very heavy volume during 1919 and the first half of 1920. Great Britain took the most of this, but Scandinavia, the British Dominions and South America also proved lucrative markets. The current of export has now almost entirely stopped, and in view of the exchange situation, many lines of British manufacture will doubtless appear on the Canadian market during 1921. New Zealand is a liberal purchaser of Canadian chocolates at the present time, and the South American market looks promising.

The confectionery and biscuit trade is always slack during the early months of the year. This depression will be more marked this year, until prices reach something like a permanent basis. Expenses must be cut to a minimum, and the manufacturer must use all his skill and initiative in catering to the most sensitive demands of the market, and in arranging his sales force with a view to the maximum of efficiency. Apart from the temporary depression, Canada's trade prospects look the brightest. We are inseparably connected with the economic system of the continent. The establishment of the Federal Reserve banks in the U.S. precludes a recurrence of the panics that marked American finance in the past. The failure of the Canadian grain growers and of the American wheat and cotton growers to stampede their respective Governments into artificially fixing prices of these commodities, ensures an early return to normal prices, which will be in the interests of trade. The exportable surplus of Canadian field crops will pay the interest on our whole foreign debt.

Collections Never Better

By C. E. Edmonds

Christie, Brown & Co., Limited, Toronto.

WE are of the opinion that during 1921 there will be a plentiful supply of raw materials and that prices of same will be lower than those which prevailed during 1920. Labor is plentiful and workers seem to be contented and attach more value to the positions they hold. This tends to increase their efficiency. We see no immediate prospect of reducing wages and are hoping that present rates can be maintained.

Newspapers have by their recent systematic publication of articles in relation to lower prices of foodstuffs, etc., caused considerable disturbance in trade and discouraged both dealers and consumers from

buying. Many of the former at the present time are not carrying sufficient stock to meet the immediate needs of their customers.

Business generally during 1920 was very satisfactory and collections were never better. Our opinion is that deflation has not been completed.

Manufacturers who have to import their machinery and raw materials on which they pay freight and Canadian revenue duty, are debarred from developing a profitable export trade to countries where revenue duties are high and inland and water transportation costly. There are manufacturers of course who are not in the unfortunate position that biscuit manufacturers are.

Our outlook for 1921 is optimistic. Immigration is bound to increase. Neglected public works will be undertaken and more land placed under cultivation. We have so many things to be thankful for that there is every reason for being lion-hearted and hopeful.

Stocks are very low

By A. D. Ganong

Ganong Bros., Limited, St. Stephen, N.B.

DURING the first of the year, sugar was scarce and kept advancing in price. Sales, however, and output were in excess of last year until the luxury tax. When the luxury tax of 10 per cent. was placed on confectionery, it applied only to manufacturers' stocks and not to the jobbers' stocks. Sugar was scarce and had been advancing in price and the jobber was loaded up very heavily. They saw in this their opportunity to unload. Immediately following this, sugar started downward and the combination of the two made business very quiet. Added to this was the feeling that had spread all over the country that prices were coming down, and everyone bought as little as possible. Further, the very high-priced sugar curtailed the output of the cheaper lines, but the business on high-priced chocolates was ahead of last year.

In the early part of the year, labor was scarce, but during the last month there was an ample supply.

The output of the confectioner was large in Canada during the first few months and a good many shipments went to England, the West Indies, New Zealand and in a small degree to other foreign countries.

The average confectioner, at the first of next year, will be in an excellent position because he will have cleared out the large bulk of his stock of high-priced raw materials. Further, buying has been very light both with the jobber and retailer and the first of January should see the smallest stocks held in the hands of the trade that they have had for a great many years. The export trade has failed almost completely and very little confectionery is being exported at the present time. For 1921 we should have a fairly good business but this will be based more on 1914-15 output than on those years when we had large export trade to England. A great many factories have over-built and without export business it looks as if the most of the plants will have to work with only about the amount of equipment they used in pre-war days.

Have Confidence in Future

By Harvey Shaw

North-West Biscuit Co., Limited, Edmonton.

WE find that the state of supply of raw materials for our requirements is practically up to the pre-war situation, with possibly the exception of paper products, such as cartons and containers, and while the prices are not at pre-war level, nevertheless there have been some very material reductions in the past few months. In our particular industry there have been no reductions of wages, nor do we anticipate this at a near date. The supply is full and we are enabled for this reason to secure more efficient help than during the scarcity of labor. Owing to an over-production, due perhaps to a slackened demand for our products, our force for the moment is reduced about 25 per cent., though we do not anticipate that this will be for any continued time.. Our business for the year 1920 will exceed any year up to the present time.

The price of our finished product is declining to some extent, according to raw materials used, though the process of deflation has not been completed, at least not nearly to the pre-war level.

We have up to the present moment made no effort to secure export trade though we are showing confidence in the years to come and the possibility of export trade, by building at the present time a new plant, modern in every respect, which will in time double our present capacity, and which will enable us to greatly develop the biscuit business in the West. We have this confidence in the future of Western Canada and feel that it will be fully justified in the years to come. Furthermore, we can see nothing which would tend to make one think that business would not even be better in the next few years, with more settled conditions and a great development which we look for in Western Canada.

Deflation not Completed

By T. W. McFarland

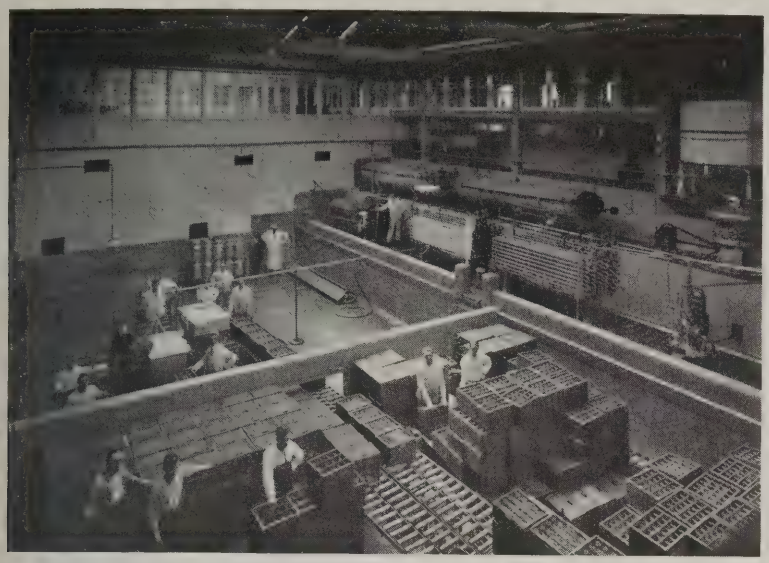
D. S. Perrin & Co., Limited. London.

RAW material supply is ample for requirements and price trends have been downward with few exceptions. The labor supply during first half of the year was below requirements. Efficiency was below normal, but since labor supply became more plentiful, efficiency has improved, but it is still below normal per employee. Wages reached their highest during 1919 and have remained at same peak during 1920.

Market conditions during the first half of 1920 were good; the last half will not be so favorable. Price movements have been upward until October, when declines were effected in sympathy wit the sugar market. This would appl more especially to candy, as biscuits di not advance on sugar advances afte April, 1920, and consequently biscui did not participate in reductions whe the sugar prices were reduced, as ou present biscuit prices are practicall based on sugar cost previous to Februar 1920. They are now under revision fo next year.

Deflation has not been completed to i possibility. Further deflation depend on prices for raw material, labor an efficiency. This, of course, refers to d flation of the manufactured products, as we understand it, further reductio in sales price.

Until further deflation is effected o the necessities such as farm product buying will be done on cautious line This will curtail manufacturing and ma continue into the best half of 1921.



The retailer must reduce his stocks high-priced goods. This he will natural fight against, preferring to have h losses come gradually, rather than me them at once. This will be his attitud unless his hands are forced. This con tion will not apply so strongly on su food products as we manufacture; they are purchased frequently and small lots east of the Lakes, but will effective in the western provinces.

This depreciation of stock values hands of retailers may impair th financial strength and thus curtail th buying powers, as collections will ceive considerable attention the first p of the year, which will have a furth tendency to reduce the current purcha of the retail trade.

Labor is a large factor in costs, a must bear a share of the reduction costs. As we view it, the four essen factors in reducing prices will be: Lower wages (but not to pre-war basi 2nd, Greater labor efficiency (this is v essential); 3rd, Lower cost raw mate (also a big factor); 4th, Cancellation excess profit tax (which is a grea factor than credited by some, retards velopment of plants and curtails exp sion).

Some factors that are favorable stabilizing 1921 trade conditions wo be: More plentiful labor supply; grea labor efficiency; large present crop dition; curtailment of speculative b loans; increased buying of "Made Canada" products; increased export manufactured and natural products.

The annual meeting of the Canad Pulp and Paper Association will be h in Montreal during the week of Janu 17. There will be meetings for all t sections such as the mechanical p section, the chemical pulp section, n newsprint section, the book and writ section, the wrapping section, the ti section, the coated paper section, h felt paper section, etc. More than usual interest attaches to this ye meeting of the Association in view the changing conditions in the indu

STATE OF DAIRY INDUSTRY

Review of the Industry During 1920

By J. F. SINGLETON

Chief, Markets Division, Dairy Branch, Ottawa

ROM a producer's viewpoint, the year 1920 has been favorable. Pro-tion generally has been good and the d, open weather during the fall nths assisted materially, not only in intaining the volume of milk pro-ed but also in reducing the cost of duction. The reduction during the fall nths in the cost of concentrated feeds also been an important factor in ering cost of production.

he season opened with high prices both cheese and butter, the season's rimum prices of 33⅜ cents per nd, f.o.b. country shipping point for former, and 60⅜ cents per pound treal delivery for the latter, being during the first week in May. hese prices showed a gradual decline ughout the season and at the end of vember, 20 cents per pound f.o.b. ntry shipping points was being paid. uer prices were generally quite ely until the end of September, and l the exception of a few weeks, ed from 56 cents to 60 cents per nd. Early in October the butter ket developed weakness and at the nd of November about 49 cents per nd Montreal delivery was being paid r the highest grade.

he decline in Canadian prices of both ter and cheese has obviously been un-rtunate for those engaged in the whole-le and export trades and some very ere losses have been incurred. The nsatisfactory situation regarding ster-ling exchange which was quoted at $4.50 early in July and below $3.70 in November, has been an important factor in reducing prices in this country of both cheese and butter.

Privately imported cheese was decontrolled in the United Kingdom as from May 25, 1920. The British Ministry of Food at that time had on hand a large quantity of Canadian cheese of the 1919 crop as well as a large part of the New Zealand crop of 1919-20. This so-called "Government cheese" was distributed under a fixed maximum retail price of 1/8 (40c.) per pound and was of sufficient quantity to practically fix a similar maximum retail price for privately imported cheese. Consequently, as sterling exchange has declined, the price paid the cheese producers in Canada has also declined. Butter is still controlled and rationed in the United Kingdom, the present retail price being 3/4 (80c.) per pound and the weekly ration one and one-half ounces per capita. During the summer, the British Ministry of Food was prepared to purchase Canadian butter, but the price offered, converted into Canadian currency at the prevailing rates of exchange, was considerably under Canadian prices. As it became apparent that Canadian holdings were in excess of domestic requirements, the price declined to an export basis and considerable quantities are now going forward to the United Kingdom.

Some Over-Production

During the period of the war, the Canadian production of condensed and evaporated milk and of milk powder increased greatly, and during the current year the market for these products suffered from over-production. During the early part of the season, the market for condensed milk was more active than for evaporated milk or for milk powder, being firmly sustained by the sugar scarcity, but as the sugar shortage became relieved the market for condensed milk became as dull as for the other two products. In September the production of all three commodities was restricted, several plants ceased manufacturing and the milk was diverted into other channels, particularly into the manufacture of butter. The market for whole milk powder has so improved that early in December two plants resumed the manufacture of this product.

For several years the volume of milk required for direct consumption and for the manufacture of ice cream has steadily increased, and 1920 has been no exception. The average direct consumption of milk is about ⅔ pint per capita per day.

Extent of Industry

Statistics for 1920 are of course not yet available, but during 1919 there were 924 creameries, 1,895 cheese factories, 610 combined cheese and butter factories, and 21 condensaries in operation in Canada, a total of 3,429 plants.

Table No. 1 shows the quantities and values of different dairy products in 1919.

"Dairy butter" and "milk used as milk" are estimated. All other figures are from Dominion Bureau of Statistics.

TABLE No. 1.

Table No. 4 shows the exports of milk and its products for the seven months ending October 31, 1919, and for the same seven months of 1920, with values of each and total values. The holdings of butter and cheese on October 31 of each year as reported by the Dominion Bureau of Statistics are also shown, together with the total of exports and holdings. Of the 1920 exports of cheese, sixteen million pounds were of the 1919 crop held in Montreal for the account of the

In order to get a proper conception of the development of the dairying industry, it is essential that all products be taken into consideration. If the production of one commodity decreases, it is frequently stated that the whole industry is declining, whereas the decrease may be, and usually is, due to a diversion of the raw material into other channels which are more lucrative or more suitable to the producer. When statistics for 1920 are available it will in all probability be found that the production and cash returns have been greater than during any previous year.

TABLE No. 4.

Exports of milk and milk products for the seven months ending October 31, 1919 and 1920, and holdings of butter and cheese in all Canada on the same dates.

The Salt Industry

By G. M. Duck

Canadian Salt Co., Limited, Windsor.

THE price of raw material during the past year from the beginning until the present time has advanced steadily, but indications are for a downward tendency from now on. Labor up to the latter part of September was high, and there was a great scarcity in this section, but owing to the automobile plants closing down, or restricting their output in this vicinity, there is plenty of labor now available, and the efficiency is increased considerably. Owing to the tendency of the trade generally to hold back buying with the expectation of a drop in prices, we are not now able to give our labor full employment.

There has been a steady demand our goods during the present year, to within the last month. We have be obliged to increase prices during year, owing to the increased cost of co labor and other materials, of which order to protect ourselves during winter months, we were obliged to in heavy stocks.

At the present time we are passi through a period of readjustment, but view of the world's shortage of all co modities, we cannot help but feel th the outlook for 1921 is most encouragi

Fibre Products Industry

By T. E. Webster

Diamond State Fibre Co. of Canada, Ltd. Toronto.

IN the beginning of 1920 there wa scarcity of raw material for manufacture of hard fibre. However, t was due more to insufficient pa making machines, rather than a scar of cotton rags. Since then, additio machinery has been installed, and demand has fallen off in several li We have endeavored to maintain a s cient stock at all times in our Toro warehouse, to meet any requirements the Canadian trade. The price on eral lines has remained stationary, v an increase on special parts where a tional labor is required.

Labor in this line, as in all others nowhere nearly as efficient as heretof and wages are still very high. Up to present time there has not been serious unemployment in connection v the fibre industry, although some fi are going on part time.

The market for fibre during 1920 at its highest in March and April, but off during the summer months, pici up again during September and Octo The year will no doubt be ended by t tomers buying only sufficient for t actual needs. As stated above, fini products in many cases have taken n higher prices owing to the increa wages and decreased production. I not likely that any deflation of p will take place in fibre owing to the that sheet fibre has remained statio in price for several years. Any sp lines on which prices have been r will no doubt soon reach their fo level.

Everyone at the present time seem be buying as little as possible, prob owing to the scarcity of funds, toge with possibilities of reduction in pric the New Year. Present indications that there will be quite an increas buying during the first few month 1921, and the general feeling is that ditions will be well on the way to normal by April. As stated above are endeavoring in every way to operate with the trade, and in order this, our policy has been to stock standard material, and to stock tional special material as we have f that our customers require same.

General Conditions in Industry

By F. M. Tabin

retary, Canadian Stove Founders, Toronto.

AW material prices are not changed to any great extent. Contracts for and steel are made six months ad and stove manufacturers are now ring a period when prices are higher n what costs were estimated on for last half of 1920. During 1920 steel obtainable only at a premium ughout the whole year and stoves e sold lower than actual cost under e conditions warranted.

he supply of labor for the first half he year was short; for the last half er. Efficiency for the first half was but showed improvement for the half. There has been no reduction he price of labor to date.

here are no stocks to speak of and ing is slow. The trade seems to ex- a lower price and there is nothing indicate why a lower price can be le until some lower cost is in sight. deflation is to come for there was er any wind in Canadian prices for e foundry goods. We have been er the American manufacturer's e notwithstanding his cost of at t 15 to 20 per cent. less than ours. ok for a much improved condition in e demand, for there is little stock in hands of the dealers.

1921 to be Good Year

By A. E. Hampson

ie Burrow, Stewart and Milne Co., Ltd., Hamilton.

HE supply of raw materials is somewhat improved. Prices, however, do show any material change. They are very steady, with the exception of ew odd lines, which latter show a ht easing, but not to any appreciable nt.

he efficiency of labor during the year was, in our opinion, approximately per cent. of normal. The wages ng that period were approximately to eighty per cent. in advance of nal. The present state of employ- in our factory is somewhat im- ed. Common labor is becoming more iful. Tradesmen are beginning to the necessity of increased produc- This is no doubt brought about the fact that there are more men nable than there have been since arly part of the war.

he market for our goods during 1920 been exceptional, the demand being h excess of the supply. We are still ng many unfilled orders on our files, which the trade desire us to take care of, in spite of the lateness of the season. In view of the fact that raw materials do not show any noticeable decline, we cannot see where it will be possible to reduce the prices to any great extent for some time to come.

In our opinion the outlook for 1921 is good. We cannot see where it is possible to be otherwise. There are but few if any stove dealers throughout the country who are carrying over a stock of stoves, and we believe that the warehouses of the majority of stove manufacturers are in the same condition as our own, that is, depleted. We, therefore, feel that in view of the fact that the stove business on the whole has not been thoroughly taken care of this year, and from the fact that no stocks are being carried, 1921 promises to be a good year in our line.

Improved Conditions Expected

By W. S. Fisher

Enterprise Foundry Co., Sackville, N.B.

DEMAND has kept up remarkably well throughout the year, the chief difficulty that we have suffered from being the extreme scarcity of raw materials such as pig iron, steel, etc., for which in many cases manufacturers have had to pay fancy premium prices in order to keep going. However, the time has now been reached when these premiums have become a thing of the past. Prices of these materials have shown little decline so far.

Labor conditions have been unsatisfactory owing to the scarcity of skilled help and the high wages demanded; the result of which has been that while the costs of production have mounted steadily, prices have not been in proportion to the increased cost. Consequently, manufacturers have been compelled to work on a smaller margin of profit than ever before. At present there is a surplus of labor which is likely to continue until there is a change for the better. Reduced costs either through lessened wages or increased efficiency are inevitable in order to put production on a proper basis and to meet the new conditions we are now facing. To this end the hearty co-operation of labor and the realization of their mutual interdependence are essential.

As to imports, there is very little likelihood of any development worth while in the stove business, the difficulty being to compete with the United Kingdom and the United States in the foreign markets —both of these countries being able to produce at less cost than we in Canada.

We are very hopeful for improved conditions in a few months after the people realize that the present deflation in values has run its course and the basis for this confidence to my mind is that this country is rich in those natural products that the world needs and the fact that Canada during the war and since has been attracting the attention of the world to such an extent that we may expect an increasing stream of immigrants of that class who are best adapted to the land, where they are most needed.

Prospects Encouraging

By T. L. Moffat

Moffat's Limited, Weston.

THERE is no large stock of stoves or raw material either in the manufacturers' or stove dealers' warehouses at the present time. Our own stock of materials and stoves is lower than it has been for ten years, although our sales of goods manufactured this year will be in the neighborhood of $1,000,000.

Some deliveries on raw materials, particularly sheets, are being made from orders taken ten or twelve months ago. Some of these goods may not be accepted unless the price is reduced to present market quotations, as the stoves they were intended for have been made up and sold some months ago, and there is very little spring or summer trade, particularly in coal ranges.

We have just received quotations on sheets for the first quarter, and the reduction is not sufficient to make any change in the present prices of the finished stove. Our cost prices for 1920 were based on $43.00 pig iron, the present price of which is considerably above this figure.

Wages will be the last item to be reduced. We are insisting, however, on better work and greater production where possible.

So long as our Canadian climate exists and people get married, stoves are a household necessity. Therefore, the Canadian stove manufacturers should have no fear for the future, and we feel assured there will be no change in prices during the first half of next year.

Some of our foundries are exporting some heating stoves to the United States of a type which are not made there. Outside of this, there is very little export business done. The principal factories being located in Ontario, the freight charges to the sea coast are too high to compete with other countries. With the Government's own railroads and steamship lines, we trust in the near future

that a through rate to destination will be given on export business.

As intimated above, the prospects for 1921 are encouraging and we are optimistic enough to believe that our sales for next year will not be any lower than 1920.

Deflation far from Complete

By C. A. Lusby

Amherst Foundry Co., Limited, Amherst, N.S.

WE have not had very great difficulty in securing supplies during the present year, although there were times when it was almost impossible for us to procure pig iron and one or two other articles which we use in our business. The price has kept up during the year and there has been very slight reduction in any of the goods which we use. Coal has been continually advancing and is still doing so, having gone up $1.25 per ton on the first of December. Pig iron still keeps up as high as ever but in some few of the other goods which we use there has been a slight reduction. Taking all together prices are practically as high as they were the beginning of the year.

We have had no difficulty in getting all the labor we required during the year. Wages have been very high as we had to give a considerable increase to all our men during the early part of the year and have not been able to make any reductions. Efficiency is not a strong point with labor at present, and we think this applies wherever men are employed. We have a number of men that we have had in our employ for a great many years, and probably taken altogether, our employees work as well and as efficiently as the average workman.

We are still running our business on about the same basis as we have been doing during the greater part of this year, but business is now getting very slack and we will have to curtail our operations very considerably for some time.

The state of the market for our goods during 1920 has been fairly good. The stove and furnace trade has been very good during the autumn months. Our trade in enameled sanitary goods has been fair, but as you know a market for these goods depends largely on building operations, which have been very limited during the past year. We have not made any reductions in the price of our finished products up to the present, and unless raw materials and labor decline somewhat in price, we do not see any prospects of making our prices any lower.

It seems to me that the process of deflation is far from being completed and I would say on the contrary, in my opinion, it has only just started. Taking the prices of goods in general, there have been very slight reductions, although, of course, in some articles there has been a large reduction in price. I look, however, to see a very much greater lowering of prices during the next year than has taken place this year.

Financial and Business Outlook for Coming Year

By G. F. TOWERS

Superintendent Foreign Trade Department, Royal Bank of Canada

THE prospects for business in 1921 must be the object of considerable thought on the part of Canadian manufacturers at the present time. In common with manufacturers the world over, they are face to face with a very difficult situation—an industrial world operating on a declining price level. It may not come amiss to sketch in broad outline the events which led up to this existing state of affairs.

The destruction and wastage of the war made the world as a whole in 1918 poorer in actual possessions than it had been in 1914. The only thing in plentiful supply was money—paper money—and credit, the volume of both of which steadily increased during 1919. Scarcity of goods and plentitude of money could only have one effect—rising prices; and this, as we all know, did take place on no small scale. The result was an appearance of prosperity, which in many countries, is being found to have been illusive.

In this post-war boom period it must for a time have seemed to many that the destruction of years was being swiftly and easily replaced. That is not so. A great part of Europe is now, and has been for some time, on a low consumption basis. Before Europe as a whole places itself again on a sound footing, hard work and a reduction of consumption more drastic than we can easily understand, will both have been in operation. And though measures as severe as this will not become necessary in Canada, since, when the worst has been said, our position is much better than that of most other nations, affairs abroad greatly influence our own industries. Consumers cannot afford to pay high prices indefinitely. Wheat goes down almost $1 a bushel, and in doing so cuts off probably two hundred million dollars from the buying power of our people. Manufacturers have to reckon with this when estimating business prospects for the near future.

There are encouraging features in the Canadian situation. Many companies have accumulated reserves which will more than make up for any losses sustained on stock. Individuals, too, have probably greater resources. Though the world did not come out of the war as well supplied with actual wealth as when the war commenced, such a country as Canada, whose productive capacity was encouraged to expand by the needs of Europe, probably became better off from the point of view of actual possessions; and on paper we are certainly much richer.

Many people thought that the great prosperity of 1919 would wane only gradually, as prices came down slowly from their peak. They based this on the assumption that the world as a wh was short of many types of foodstu and almost all kinds of manufactu articles. This was and still is true. the countries which require most, h least with which to pay. For the ti then, they are not a factor in the mar When they commence to produce the ticles they were accustomed to exp prior to the war, they will be able to more of our products.

It can be seen that skill and g caution is required to bring industr through the transition period. A pre tion as to its duration or severity can be made with any pretension of accura No one who knows Canada, however, be pessimistic over the future. We h great resources and only require peo to develop them. These will come in creasing numbers from the older wo and from our neighbor to the south. markets will expand, to the great adv tage of those companies which can w stand the strain of re-adjustment.

Prudent to Liquidate

By J. P. Bell

General Manager, Bank of Hamilton.

I FIND it extremely difficult to see v far ahead. It seems almost cer that we have definitely left behind us period of high prices incident to the w and it is surely prudent to liquidate surplus stocks, whether of food, raw terial, or manufactured goods, in o that we may not find ourselves in the p tion of some of the foreign countries experiencing financial difficulties, heavy stocks of food and goods and demand for them even at much lo prices than existed until recently.

The best way to reach a sound b is for everyone to accept his fair sh of the drop in prices, and the corresp ing drop in profits that goes with it.

Our banks are quite able to take of proper business needs—this has amply proven during the strain of war. We have a young country whic just beginning to develop its great nat resources. Our people are as energeti the Americans and more level-hea Legitimate requirements should give factories ample employment, even if t must be a period of slow business fol ing the feverish haste of the war pe Let us face the situation with cou and remember it takes time for trad recover its healthy rhythm, and for pe to resume their habits of work and cipline. In more work, and better jobs—not in more leisure—lies happi and economic salvation.

THE PAINT INDUSTRY

General Review of the Industry

By W. S. FALLIS

Vice-President and Managing Director,
The Sherwin-Williams Co. of Canada, Limited, Montreal

tracing the development of the paint nd varnish business in 1920 and its pects for 1921 there are several fac- which, as in almost every other in- ry, vitally affect and control its se. First, we have to consider the ly and price levels of raw materials. year saw some very high prices re- red by the most important raw rials used in this industry. The lt was that to enable manufacturers eep up with rising costs, the price our finished products touched its est point during the twelve months past, although at no time has the ease in the price of our goods been ly as great as in most other staple , which are or recently have been, any cases 200 per cent. and even 300 cent. higher than in the pre-war d.

other important factor—that of and employment—is one that has r caused us any great anxiety. As le, we have been able to obtain a factory supply of efficient men, and y we have found no exception to this. es in our business as in others, have largely increased during the past years, but, outside of this, the ty and efficiency of the men have re- ed very much the same. We have been remarkably free from troubles as strikes, agitations and disturb- s, and we anticipate no further diffi- es in this direction. At present, the ne of labor employed in our numer- factories is quite normal with the ge of other years.

e year just closed witnessed a re- able stimulation in the consumption aints, varnishes and allied pro- Not only was the home demand heavy, but a considerable export iess was obtained, the result of all hich was that every manufacturer Dominion was producing at capa- uring the greater part of the year. demand was the result of the de- of the consumer that paint and h, in spite of the necessarily in- d prices, were necessary preserva- for his property—whether old or and, in view of the great quantity ainting still to be done and the t of new construction under way mand will persist and ensure con- activity during the coming year. ng prices in raw materials, while nt, are not the only influence g the costs of manufacturing. Labor, freight rates and other operating expenses continue high. A reduction of 50 cents per gallon has just been made in the price of high-grade house paint which will operate, we believe, as a stabilizing factor in the present situation. It must be remembered that, while the question of prices in general is very much in the mind of the buying public, this reduction represents some sacrifice at least on the part of the manufacturer, who is still working with older and higher-priced raw materials and manufactured stock and has not as yet obtained the full benefit of the present conditions. Linseed oil is a basic material which has shown the widest fluctuation, and its present price is one of the chief factors in the recent reduction in the price of paint. As a matter of fact, there are many lines—such as varnish paint and varnish, where linseed oil is not an important factor—the manufacturing cost of which has shown practically no reduction.

In our own company we are making preparations for a still larger business than we have done in past years. We believe that the situation at present represents a mental rather than a material reaction; in other words, the people of Canada are buying slowly at the present time, more because they believe they have been spending too freely in the past than because they have no money at all to spend now. These periodic reactions in the mind of the public are well known to students of economic and commercial conditions and should occasion no alarm unless accompanied by actual business depression and an abnormal scarcity of money. Money is not scarce in Canada at the present time. The most profitable crop in the history of the Dominion has been harvested and millions of dollars are flowing into circulation as it is being paid for. Unwise speculation has been checked; unduly high prices in certain staple lines have fallen extensively; and the man on the street is once again the same, careful buyer of pre-war days. That surely is a constructive fact and one that will be beneficial in the future. It is well for all of us to get our feet on solid earth again and our heads out of the clouds, and we are fast getting there now.

In our own business, our spring stock orders are coming in on about the same basis as last year and the recent constructive and reassuring action of the manufacturers in passing on to the retailer the immediate benefit of lower market levels, even before the full effect had become available to the manufacturer himself, will, we believe, further stimulate buying. Then, with business in general throughout Canada marching forward again in the spring months after the perhaps salutary lesson that progress to be permanent must be sound and sane, we, in this essential industry of manufacturing paint and varnish with which to preserve public and private property, look for our share of the general prosperity that will follow the courageous and confident manner in which the people of Canada have faced the economic dangers of the last few months.

Looks for Rush

By Arthur D. Brown

A. Ramsay & Son Company, Montreal.

OUR experience in connection with supply and trend in price of raw materials is that while raw materials were extremely hard to secure in 1919, we find they are much easier to obtain now, and before long feel that manufacturers will be caught up and consequently will be able to get the same quite readily. We find some slight reductions in prices, but the majority of the materials are holding firm.

During the year just completed the labor situation has been very hard and awkward to control, but we managed to get sufficient help to carry on, and now find that it is gradually becoming easier. As far as the year is concerned, we have just completed the largest year in the history of our business.

At the present time we have no difficulty in taking care of the manufacturing of our products, and while, as stated, we have had trouble in the past, we feel that from now on we will be able to get sufficient employees at different rush seasons in the year to take care of our business.

Regarding market conditions during the year 1920, we would say that the tendency was upwards and very hard to obtain material, so much so, that we were compelled to order considerably ahead to take care of our requirements for increased business. The price tendency for finished products was slightly on the advance, but in all remained fairly stationary.

Regarding developments in the export field, conditions are a little difficult at the present time, owing to the fact that the banks are not honoring sight drafts against documents, and until such time as this is brought about, it means that the Canadian manufacturer will be compelled to grant credits and wait for payments, which entails considerably more risk than heretofore, and made it very difficult for the credit department to pass credits at great distances.

As to the outlook for 1921, on sizing up the situation from every point of

view, our business at the present time has a tendency to be quiet, yet in our class of business we feel that it is merely a postponement of shipments for a little later date, when it will tax each and every one in this industry to their utmost to take care of the business, not only for home consumption but for export. We cannot help but feel that the total year's business will be equally as large as that of last year. Shipments will come in rushes at certain seasons of the year instead of being spread out as they have been heretofore.

Confident in Outlook

By Royal Cluxton

The Canada Paint Co., Limited, Montreal.

WE are finding no difficulty in purchasing supplies of raw materials and there is a slight tendency towards lowering of prices on some products, although on others there is also a tendency towards increasing of same. We have no difficulty whatever in securing all the labor necessary, and it is also of an efficient character and wages are being maintained. Employment is steady.

The outlook for 1921 is extremely satisfactory, and we expect a substantial increase in volume of business.

The price situation is easing off, but the decline will be very small as the increase during the war period was of a minor nature. Present prices will be maintained until at least midsummer.

The development of the paint industry in the export field is increasing on a small scale.

Our confidence in the outlook for 1921 is assured, as Canada is fundamentally sound, and with our rapidly increasing immigration, agriculture and manufacturing, it is our opinion that Canada is entering into a period of rapid expansion and commercial development.

Strikes Optimistic Note

By Frederick Moore

Benjamin Moore and Co., Limited, Toronto.

REGARDING the supply of raw material, without exception you can get all the raw materials you require for our industry. The price on the majority of the lines is firm, some slightly higher than a year ago, and a few, probably 10 per cent. of the various colors we purchase, reduced approximately 10 per cent. in price. Manufacturers of raw materials seem to hesitate to make contracts for the first six months of next year, which would indicate a rather unsettled state of the raw material market. We are inclined to think that there will not be very much reduction on the line as a whole for the first six months of next year.

With regard to efficiency and wages for labor during the past year, we admit that it has not been as efficient as it might have been, but we think this has been due, in some measure, to lack of co-operation in all departments, and particularly with the management. Recently we have started an efficiency competition and have succeeded in effecting a very much closer co-operation between the employees in all departments, whether selling or manufacturing. This we expect will improve conditions generally in our factory during the coming year. The present state of employment would indicate that men are willing to work for very much lower wages than they were a year ago. This is no doubt caused by the large number of men being laid off where certain industries have partially closed down. We have not had occasion so far to lay off any men, so that from the labor or employment standpoint everything is very satisfactory.

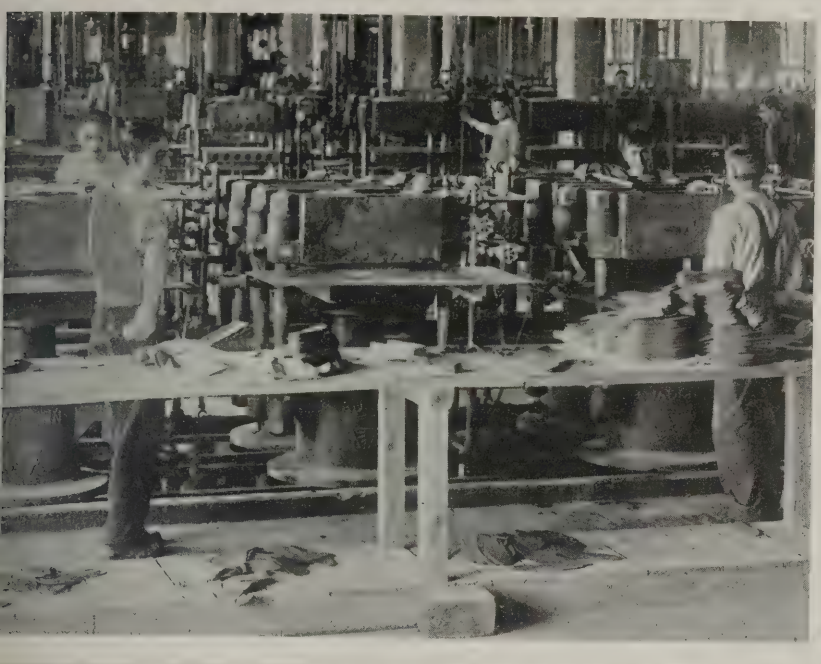
The state of the market for our goods during 1920 was exceedingly good, but due to the difficulty in getting raw material we could not possibly fill all our orders.

Referring to price on the finished product, naturally there is a tendency to lower prices. It is true that in our industry there is a lot of high priced raw material in the finished product on our shelves. It is equally true, however, that oil has declined over 100 per cent., a this would naturally influence futu prices. Then again, the public are loo ing for some revisions, and we thin with justification. We do not think th we have reached the bottom on a gre many lines yet, but in our business pa ticularly believe the deflation will gradual. It is only necessary to ke cool.

With regard to the outlook for 1921, is difficult to prophesy, and there nothing very tangible at the moment inspire confidence in a big year for 19 At the same time, from several visits have made to large centres, there is spirit of confidence that the paint ind try will have an exceptionally good ye next year. This optimistic note is c firmed in the large orders being plac for future shipment. We feel sure th the manufacturing industry as a wh will be true to their own industry a endeavor to market their goods on equitable and fair basis, no one trying take advantage of the other but all pu ing together for the best interest of t industry. This attitude will inspire c fidence in the general trade, who in tu will inspire confidence in the consum with the result that it will be a satisf tory year for all concerned.

The Clothing Industry in British Columbia

By JAS. B. THOMSON



Jas. Thomson & Sons, Limited, Vancouver

THE greater proportion of the cost of any product is what is paid in wages, directly or indirectly for the cost of production. It is stated by many on a broad average that 80 per cent. of the cost of a given article up to the point of its reaching the consumer is what might be termed labor costs. Therefore, it must be readily seen that what in the past few months has been created largely by newspaper propaganda cannot be taken as a genuine decline in price to the consumer, unless coupled with that the quota represented in the cost of the article from a labor standpoint is reduced accordingly. So far there has been no decline in the amount of wages paid of any moment. Consequently, reductions in price considered with replacement values cannot be as drastic as the public is lead to believe at the present time by the final distributor, the retailer, who has more or less got panicky on the situation and is trying to get out from under at a cost which does not compare favorably in many instances with replacement value.

While as a firm and in our industry we cannot say that we have found efficiency lacking amongst our factory employees, it is a recognized fact that such inefficiency did exist and idling on the job, as it is termed, was very prevalent, especially during the period when the demand for labor was very much greater than the supply. It is noticeable even in our own plant that employees are more anxious and to-day consider it essential to produce to their fullest capacity that they may retain their position. this, impetus is given to production, a I think that when thoroughly explain the average employee realizes that it his or her duty just as much as the ployer's for the responsibility held.

When reviewing the decline in price think the consumer to-day must consi that the impetus given to production the employee is more responsible for cheaper prices the consumer is enjoy than a decline in wages. As far as firm is concerned, there is no quest but that the price of raw materials wh we use are lower than a year ago, the supply is very much greater from fact, no doubt, that a great many of European nations have not yet come the point where credits can be safely tended to them, and the market for posal of goods that is courted at present time in Canada by both G Britain and the United States.

During the past year we have use greater number of employees in our tory than previously and to-day we working full capacity, though at present time the sale of goods is so what limited owing to the curtailmen other lines of industry, the consump not being so great. The market for the ducts of our factory has up to the pre been practically of a provincial nature that if other industries play their p there is no question why we should have as great a market for our good the year previous.

RUBBER GOODS INDUSTRY

Normal Condition Prevails

By R. E. Jamieson

minion Rubber System, Limited, Montreal.

HE supply of raw materials is all hat could be desired and the trend ices is downward. The supply of is quite ample. Efficiency is im- ng, but not to the extent that it to. Wages of labor during the continue to be high and there has no change. The present state of yment is that we are running about cent. of employment against our of 1919. We feel, however, that the next three months this will sened.

state of the market for our goods 1920 was better than 1919, there a good general demand. The price ient in finished products is down- There is an absolute wish on the manufacturers of our products to o far as is possible the public de- for lessened prices. export field has been very good 1920, but the present rate of ex- is having a deterring effect. are not nearly so free on that

ew of the outlook for 1921 at the moment is optimistic. Indications in the rubber industry are that, owing to precautions taken by our industry in general, we are in a more fortunate position than almost any other class of commodity. Indications show that a fair, normal condition prevails and we hope that it will prevail during 1921. Stocks are not large in the hands of retailers. Prices are not abnormal and everything that can be reduced to the adjustment of matters is being very carefully dealt with, and consistently handed out to the public.

Rubber Footwear

By A. R. Kaufman

Kaufman Rubber Co., Limited, Kitchener.

SHIPMENTS are more prompt, and prices trend downward in raw materials. At present there is a surplus of labor, and on this account, labor is more efficient. We expect to produce over the winter approximately at the rate of two-thirds of last summer's production.

There was a good demand for our output until this fall, when weather conditions were against a ready sale of rubber footwear. Prices will decline according to lower costs of raw materials and labor. We expect rubber prices to decline materially in 1921. The prices of some other commodities may be near the bottom, and others will no doubt still decline. Reductions take place apparently as soon as there is a surplus of a commodity on the market.

There was more demand than supply for export until recently. Export prices have declined apparently on account of factories in United States and Canada, quoting prices without profit, in the effort to keep the factories running to nearly full capacity and assist in meeting the exchange situation.

The outlook for the manufacture and sale of necessities may be brighter than luxuries. We expect that general production for 1921 on this continent will be approximately two-thirds of 1920 production, unless this is materially increased by loans to foreign countries to lower the rate of exchange against these countries in order that they will be able to import requirements.

Conditions Should Improve

By J. O'Mara

K. & S. Tire and Rubber Goods, Limited, Toronto.

RAW materials with us have declined in price about 40 per cent. during the past five months. Until June we were operating our factory at Weston where labor was ample, efficiency fair and wages high. Employment in our industry generally at present is not more than 50 per cent., although in our own particular case we are installing a new plant and are not employing our usual help.

The sale of our products during 1920 showed an increase of over 200 per cent. over 1919. The prices of finished goods advanced during the year about 10 per cent. Owing to the high cost of raw materials held by the manufacturers in our particular line, there is little or no room for deflation, although there may be price cutting.

We opened up a good business in the export field, but owing to the fact that goods are being dumped in England and on the continent, this end of our business will not prove very attractive during the coming year.

Our view of the outlook for 1921 is that during the first three or four months conditions will be very unsettled, but that, as the year wears on, conditions should improve. We should make practically the same volume of sales. We believe that, if price-cutting is not indulged in too freely, business will be satisfactory for everybody concerned. While present conditions do not tend to inspire optimism, 1921 should prove to be an average year though it will not show the large profits some manufacturers had during the past six months.

Depends on Weather

By J. C. Beauchamp

Miner Rubber Co., Limited, Granby.

THE supply of raw material in 1920 has been ample and the trend on most materials has been downward, though on some materials there has been no reduction in price, while other

materials, owing to extraordinary conditions, have reached a price below pre-war level and below the pre-war normal price. Fuel has been scarce and abnormally high.

During the first six months of the year the supply of labor was scarce and, as a rule, all new labor that we employ is very inefficient and the wages of labor have been increased and are now at the high point of the year. We are at present employing practically our full complement of labor but are running on a somewhat reduced ticket, and prices paid for piece-work and day labor have not been disturbed.

The market for our product was exceptionally good for the first nine months of the year. The last three months, owing to weather conditions throughout Canada, have resulted in a curtailed demand. There has been no change in prices from that announced at the first of the year, though it is probable that in the near future, if present conditions continue, a reduction will take place.

Of course, the volume of our business greatly depends upon the weather, and if we were to have a genuine Canadian winter from now on it would have a great bearing on the volume of our business for 1921

The Tire Industry

By Gordon Spencer

THE position in the tire industry may be briefly summed up as follows: The high peak was reached in March, 1920, but from that time through the summer trade became dull.

This was due to two or three causes. In the first place the tightening of credits put a crimp into the selling of automobiles and consequently affected the tire industry. In the second place, as it seemed by common consent, people held off from purchasing in the hope of a reduction in prices, and in the third place a spirit of conservation was abroad and people have been looking after their tires and economizing by not carrying spare tires as has rarely, if ever, been the case in the history of the industry.

The consequences of all this were obvious and tire sales went down and down.

This is not true now, however, of the industry's condition, for from the middle of November the tide has undoubtedly turned and the increase in sales for the month of December is over that of November and there is every reason to feel with the help that the removal of the luxury tax has given that a remarkable recovery in the tire trade will have taken place by spring.

In fact it is possible to be even more optimistic than that. It is possible owing to cotton field conditions that there may be a considerable restriction in the output of cotton. It is reasonable also to feel that a large number of persons will hold off buying tires until the spring. The consequences of these two things will be that dealers and manufacturers who have been buying from hand to mouth will likely find themselves in the spring unable to meet the demand.

It is well to remember that the number of automobiles in Canada increases at the rate of about 25 per cent. per annum, to say nothing of the steady increase in the development and sale of the motor truck and the possibilities that are opening up in the Dominion for the motor bus.

In face of all this the rubber industry can look to 1921 with the greatest optimism.

The conditions of labor in the tire industry have been generally very good. There has been a large amount of welfare work done and factory conditions have been healthy and pleasant. It is true to say that the average wage in the tire business is at least as high, often times much higher than the average wage in any other industry. The avera wage at the Goodyear factory for a co siderable period was over $31.00 p week.

Every one knows that prices have be reduced very slightly during the pa few weeks. There never was any ne to reduce prices for tires because, as h been pointed out frequently, the p centage of increase in the prices of ti during the last six years has been ve nearly negligible so that it is unreas able to expect a very great change in t matter of prices. There may be an ward tendency. The possibilities in t export field are very large, especially in the east, although owing to conditi in Europe trade may be held up for time for this field.

To sum up, while we do not sugg any extravagance of view for the ind try, we feel that a sane position is position that says "all is well."

Conditions in the Brick Industry

By F. B. McFARREN

Interprovincial Brick Co. of Canada, Ltd., Toronto.

IN the year 1920, brick manufacturers as a whole, we think, experienced an excellent demand for their products until September. Many plants experienced difficulty, during the first half of the year, in obtaining coal for brick-burning purposes and this curtailed the production to such an extent that it was impossible to keep up with the demand, and the price of coal, of course, became very high. We ourselves were fortunate in having a large supply of coal on hand and were able to produce steadily all season and undertook extensions, increasing our capacity by an additional 50 per cent., having doubled our capacity in the previous year.

In September the combined effects of increased freight rates, which were particularly noticeable in the brick business, owing to the nature of the material, the difficulty in obtaining building loans and the anticipation of lower prices, caused a marked falling off in demand, but the general falling off of business in all lines has probably been effective in increasing the efficiency of labor and causing, to some extent, at least, the elimination of fictitious prices for coal. This leads us to believe that it will be at least possible to maintain a stabilized price and builders in the coming season should be able to figure their costs more accurately than has been possible for some time.

During the past year, while wages have been higher than ever before, the work produced per man has been more satisfactory. While most of our competitors are either closed down or running only to partial capacity, we feel so confident of the future of this industry that we are operating our plant to capacity without reducing wages, although the demand at present is extremely light and some wage adjustment may be necessary order to continue to operate.

While prices have advanced during past year to some extent, we do not ant pate a very marked reduction in p unless brick manufacturers are able operate their plants at capacity, whe will be possible to take full advantag the reduced cost of fuel combined wit reduced percentage of overhead expen This should mean a slight reduction price at the factory, but the increa freight rates will counteract this re tion almost entirely. Brick, however, not increased in price to such an ex as most other materials, and it is possible to obtain this material at pr which should not seriously retard bu ing operations, and there is so much templated work now in the hands architects in the country and still s a marked shortage of houses and e indication of more satisfactory finan and general business conditions, that feel sure that the coming season wil one of the most prosperous seasons have ever experienced in the buil trade.

While there has been no marked duction in wages in the building tra there has been a most marked increas the amount of work done per man. labor costs have been the biggest it in increasing the cost of building, du the combination of high wages and small amount of work performed, the insufficient number of men avail we feel that the increased numbe men available for construction indus and the increased amount of work by each man will probably be the gre factor in stabilizing and reducing the of construction, which will no doub courage many who have been dela building operations for some years, t ahead with contemplated constructi

What are Your Travellers Doing to Offset This Talk About Depression?

Some Thoughts Salesmen Can Spread to Inspire Confidence

By J. L. CHARLESWORTH

CONVERSATIONS nowadays have a way of turning towards the subject of business depression. The talk is by no means new; every few years some chain of rumour of much the same pattern will be started. The links may be weak, but they hang together with apparent strength, and that is enough for the general public. Equally, such conversation is highly unprofitable. If it is based on facts it is useless; if on falsehoods it is dangerous. Preventing it is the duty of every Canadian business man. Among preventive agents the travelling salesman is one of the most effective.

It is the modern custom to regard the traveller not as a mere salesman, but as the representative of the firm for whom he travels. More especially is this true in the case of a company doing business in all parts of Canada. For many of their customers the only personal contact with the house, and consequently the only vivid impression they receive of it, is through the traveller. What he says will be taken as the opinion of his employers, and the more important they are the more influence can he exert personally.

For that reason it is worth while paying some attention to what your traveller tells your customers. It is not likely that he will talk about depression in his own particular line, for by doing so he would be working against himself; but he may talk about hard times and a general decrease of trade, giving his listener, quite unintentionally, the general idea that it is time to exercise an excessive caution.

Such a traveller needs pulling up. His pessimism, of course, is not deliberate malice; it is more likely a result of the indigestible meals served by the small town hotel. But, whatever the cause, the effect will be the same. The customer meets his bosom crony at a whist drive that night.

"Jeremiah, of the Blank Company, was in to-day," he informs him; "from what he says, business is going to be pretty rotten for some time to come."

"Is that so?" says the other, trumping his partner's ace. "I guess he knows what he's talking about. I'd better pull in my horns."

A salesman who has always thought of him as a regular customer, calls next day, loses the expected sale, and goes away a determined pessimist.

So much for the evil. The remedy is not far to seek. Since your representative must talk, see that his conversation is along lines that are beneficial, not destructive. There are enough promising features to discuss without harping on the gloomy ones. Labour troubles are not so serious nor so frequent as they have been. The harvest has made a substantial contribution to our national wealth. There has been an increase in savings deposits.

Let the traveller speak of things like these, and pessimism about business conditions will give way to a sane and hopeful outlook. A shallow optimism is not advisable. "Hope for the best and prepare for the worst" is a sound motto; the trouble is that there is a tendency to follow the latter half only. Then there is the gospel of work, which needs continual preaching. The merchant in a rural town has too much time on his hands; there are few amusements beyond gossip with his friends and customers. If the traveller can find something for him to do, something that will take him out of his mental rut, he will confer a favor that must react to his own advantage. He may have some idea for window-dressing, or some rearrangement of stock that will promote efficient handling may be suggested. The sales manager should see that his force reads trade papers for ideas that can be passed on to customers. Any useful work that will keep him from brooding on the country's swift progression to the dogs will do. A busy man has no time to be morbid.

Constructive thought, with its implied corollaries, increased production and increased efficiency, is what Canada needs. Construction must start at the bottom, and in the small towns and cities of the Dominion, where lie the foundations of our industrial life, the adjustment to changing conditions should begin. The men who visit these places regularly, your travellers, have a splendid opportunity to offset the talk about depression by a message of faith, work and courage. Are they taking advantage of it?

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

December Meeting of the Executive Council

THE December meeting of the Executive Council, which was held at the head office in Toronto on Thursday, December 16, was largely attended, many members being present from a distance, including Mayor-elect Parnell of Winnipeg. The president, J. S. McKinnon, occupied the chair at the opening of the meeting, but relinquished it to vice-president J. R. Shaw a little later on. The agenda listed reports by the Executive Committee, Tariff Committee, Transportation Committee, Insurance Committee and Industrial Relations Committee, all of which were dealt with in the order named.

During the afternoon resolutions were carried felicitating Mr. Parnell on his election to the mayoralty of Winnipeg and expressing the appreciation of the association of the work of P. W. Ellis in connection with the completion of the big power deal. Both gentlemen replied in fitting terms, stating that they had felt the call to do what they could in the public interest and were gratified at the confidence reposed in them.

Ontario Division Hears Interesting Address

A GENERAL meeting of the Ontario Division was held at the King Edward Hotel, Toronto, on Thursday, December 16, when, following a luncheon, Dr. T. Kennard Thomson, C.E., the eminent Canadian engineer, delivered an illustrated address on "Niagara Water Power."

Dr. Thomson is a graduate of the School of Science, Toronto, and was the first engineer to receive the honorary degree of Doctor of Science from the University of Toronto. He has had a distinguished career as an engineer, commencing with work on the Rocky Mountain division of the C.P.R. in 1883-4-5. He was subsequently employed by the Dominion Bridge Co., Lachine, and by a large bridge company in the United States. For many years he has been a consulting engineer in New York, being one of a board of five engineers for the New York State Barge Canal and being retained for over thirty skyscrapers in New York City, besides numerous bridges.

Dr. Thomson put forward his proposal for the further development of the Niagara River by means of a dam to be built at Foster's Flats, three miles below the Falls. He claimed that this was perfectly feasible. Half the dam could be built on dry land. The river could then be diverted from its present bed through openings in the bottom of this part of the dam and the balance of the dam completed in the present bed of the river. There would be secured a drop of about one hundred feet, which would produce 2,000,000 horse-power.

The cost of construction of this scheme with the necessary power houses and equipment was estimated at less than one hundred million dollars, and in return will produce power equivalent to ten million tons of coal annually. That the supply of power generated could be distributed within a radius of 500 miles was a fact acknowledged by electrical engineers, and this area includes 60 per cent. of the population of the United States and 80 per cent. of that of Canada. Dr. Thomson was firmly convinced, however, that all of the power developed at Niagara would be consumed within 100 miles of the Falls.

The meeting was largely attended. The chairman of the Ontario Division, J. R. Shaw, presided, and seated near him at the head table were Hon. E. C. Drury, Premier of Ontario; Hon. Peter Smith, Provincial Treasurer; Hon. Walter Rollo, Minister of Labor, and J. S. McKinnon, President C.M.A.

Re Unemployment

The Executives of the Ontario Division and Toronto Branch recommend that workers in the factories should not be laid off where at all avoidable, but that when a decrease of production is necessary, it should be effected by closing down for half days or whole days rather than by a reduction of hours on the day's work, thus minimizing factory disorganization, assisting in relieving the power shortage, and enabling the workers to better utilize their spare time, and thereby keeping as many men employed as possible.

Work of the Translation Department

ONE of the departments at head office, which is handling a steadily increasing volume of work, is the Translation Department. During August, September and October of last year the department translated 652 documents and letters; of these 539 were French, 82 Spanish, 26 German, 4 Portuguese and 1 Italian. During the same period letters have been received for translation from the following countries: Austria, Argentine, Belgium, Bolivia, Egypt, Brazil, France, Colombia, Germany, Cuba, Italy, Dominica Republic, Poland Ecuador, Spain, Mexico, Switzerland, Panama, Uruguay, Peru, Venezuela. The work of the department reflects the increasing interest of Canadian manufactures in export trade.

Toronto Manufacturer on Panel of Enquiry

IN conformity with the terms of the peace treaty the Government has appointed Right Hon. Mr. Justice Duff, of the Supreme Court, Ottawa; Mr. S. R. Parsons, of the British American Oil Company, Toronto, and Mr. Joseph Gibbons, business manager of the Amalgamated Association of Street and Electri Railway Employees of America, Toronto Division, to be Canadian representatives on the panel from which a commission of enquiry would be chosen. Articles 41 and 412 of the peace treaty relating to action which may be taken in the event of a member of the international labor conference failing to observe the terms

a convention ratified by such member, ovides that the governing body may ply for the appointment of a commis- on of enquiry to deal with the situa- on. Each member of the conference is npowered to appoint three persons of dustrial experience, one representative employees, one of employers, and one independent standing, to the panel om which the three persons to con- tute the commission would be chosen.

anadian Air Force Offers Temporary Work

S some manufacturers may be tem- porarily laying-off certain mechanics, should be known that the Canadian r Force can take on a number of men ch week for from one to six months. ie advantage to the manufacturer to courage his employee to join the Air rce would be that during certain slack riods the manufacturer could let the nployee go and do a tour of duty with e C.A.F., and when he requires the rvices of this man, he could get him ck at almost any time.

In other words, a man enlists in the nadian Air Force for four years, and rees to do one month's training in ery two years, or a total of two months' ining. If he is a good man and there a vacancy on the semi-permanent es- blishment, he will be kept on for a ger course of training, up to twelve nths, but the man may, at his option, ve at any time after the one month. nufacturers who desire to retain their d in this way on good workmen should mmunicate with the Provincial Secre- y, Ontario Branch, Canadian Air Force ociation, 75 Sun Life Building, To- nto.

Toronto Branch Deals with Unemployment

P to September, 1920, labor in Can- ada was well absorbed, Toronto, oria and Vancouver being the only nts where unemployment was com- ned of. In these three places, em- oment outside the city at good wages a offered during September and Octo- r for 3,400 men, with practically no sponse. Since that time, the situation s changed in that men engaged in sea- nal occupations, or who lost their em- oyment through the contraction of in- stry, have taken the outside employ- ent offered, so that the opportunities two months ago no longer exist.

Immigration of industrial workers has en restricted to a minimum. As an mple of this, it may be stated that employers have since January last filed quests with the Department of Immi- ation and Colonization for permission bring in 4,385 skilled workers. These quests have not been granted except ases where the Employment Service the Department of Labor was unable to find suitable workers in Canada, re- sulting in only 770 being brought in, the remaining requirements being filled with home supply. The recent raising of the cash requirements and other incidents which might be named, are all indica- tions of the attention given to this im- portant question.

Ordinarily, unemployment problems are the more direct concern of the muni- cipality, state or province where they occur, federal aid being given only when the problem becomes too difficult to handle locally. The Government of Can- ada has intimated that it is willing and anxious to do what is necessary to aid but cannot assume obligations which properly belong to a particular munici- pality or province.

It is estimated that in Toronto ap- proximately 20,000 men, about one-third of whom are returned soldiers, are in need of work immediately. As a result of conferences held by his Worship the Mayor, a Citizens' Unemployment Com- mittee has been formed to assist in find- ing employment for these people. The C.M.A. is represented on the Citizens' Committee by T. A. Hollinrake, chair- man, Toronto Branch, Thos. Roden and H. Macdonald, secretary, the Board of Trade, Trades and Labor Council, Sol- diers' organizations, etc., being also re- presented, together with the Director of the Ontario Government Employment Bureau. W. H. Alderson, vice-chairman of the Board of Trade, is chairman, and F. D. Tolchard, Social Service Depart- ment, Board of Trade, is secretary. This committee has been holding daily meet- ings, and has invited the co-operation of the Provincial and Federal Governments.

Meantime, employers of labor have been asked to make a careful survey of their establishments, to see if it is not possible to absorb some of the surplus labor, if only temporary, with preference to the returned soldiers. The committee offers the following suggestions as ways in which aid might be rendered:—(1) That wherever possible, employers re- frain from working overtime, in order that a larger staff may be employed; (2) That rather than reduce their staffs and thereby add to the number of unem- ployed, employers of labor reduce the number of working days per week or shorten the hours per day; (3) That, as far as possible, "Made-in-Canada" goods be purchased.

The committee believe that if every citizen will do his or her part in giving employment, where and when possible, and will purchase only the products of Canadian labor, where obtainable, the Ontario labor unemployment problem will be minimized.

Our Branch Chairmen for 1920-21

C. J. Watson
Great West Saddlery Co., Limited
Chairman, Regina Branch

MR. WATSON was born in the village of Ayr, county of Waterloo, Ontario. When he was seven years of age the family moved to the west, landing in Winnipeg, which was then a small village, in the spring of 1878. His family settled on a farm at Portage La Prairie, but, as they all came from a manufacturing stock, they did not stay long on the farm.

When C. J. was sixteen years of age he took up the leather business, learning the trade of harness making; and, after spending several years in the retail business, went on the road for The Great West Saddlery Company, travel- ling for the above company for eight years, when he was appointed manager of the company's branch which was then opened at Regina, which position he still holds.

Recent Visitors at Our Vancouver Office

AMONG the more prominent visitors to the Vancouver office of the Asso- ciation during the past few weeks were Mr. C. F. Yegge, president of the Chicago Mill & Lumber Company, operating six- teen different box manufacturing plants in various parts of the United States, and past president of the National As- sociation of Box Manufacturers, with headquarters at Chicago, and Mr. W. D. Burr, general secretary of the National Association of Box Manufacturers, Chi- cago, an organization comprising over 100 firms engaged in the manufacture of dif- ferent types of boxes in the United States. Facilities were placed in the way of Messrs. Yegge and Burr for visiting box plants in this district. A meeting was also arranged for them with the chair- man of the Box Manufacturers section of this Division, and with the chairman of the Local and Export sub-committees of that section. Messrs. Yegge and Burr spent two days in Vancouver and vicinity.

Another visitor was Captain Evan J. Edwards, senior commissioner in Canada for the British Department of Overseas Trade, whose headquarters are in Mont- real, and who was accompanied by Mr. L. B. Beale, assistant commissioner of the same service, with headquarters in

Winnipeg. This was Captain Edwards' first trip to British Columbia, and he and Mr. Beale spent upwards of two weeks in visiting various industrial establishments in Vancouver, New Westminster and Victoria, and in familiarizing themselves with business conditions in this district. In co-operation with the Vancouver Board of Trade the Vancouver office of the C.M.A. devoted the greater part of an entire week in assisting to show Messrs. Edwards and Beale various industries.

Garment Manufacturers Hold Annual Meeting

THE third annual convention of the Canadian Association of Garment Manufacturers was held in the City of Montreal, Quebec, during the second week in December, when the following officers were elected for 1921:—President, R. P. Sparks, Ottawa, Ont.; Eastern Vice-President, P. S. Hardy, Montreal, Que.; Western Vice-President, C. A. Graham, Edmonton, Alta.; Treasurer, H. F. Brooks, Ottawa, Ont.; Secretary, F. E. Hawkins, Ottawa, Ont.

Among matters discussed at the convention the present business situation was dwelt upon. While the difficulties of that situation are fully recognized, an undercurrent of optimism was strongly evident. In the opinion of the great majority of those present, the most menacing feature of the process of deflation has been the almost universal disregard of moral, if not legal, responsibility in the matter of contracts. Manufacturers are held firmly to commitments, and while the difficulties of the retailers are recognized, resumption of business depends upon the re-establishment of confidence between buyer and seller. The problem then is one of rebilling. Manufacturers are going out to the trade after January 1st in the full conviction that prices are now established—that all the water has been squeezed out and, unfortunately, not a little blood. The salvation of business and the resumption of employment depends upon recognition of these facts, and the placing of orders conservatively and sanely by the retail trade, and the confident belief that the business integrity of Canadian merchants will insure acceptance of all goods purchased from now on.

The tariff was fully discussed, also the case for the industry which had been presented in the form of a brief or statement before the Tariff Commissioners at Montreal in November last. The feeling of the convention was largely one of hope that the Government at last would see its way clear towards doing something to relieve the hardship resulting to the garment industry from the operation of the tariff.

Also as a further result of the convention a question of price adjustments was taken up with the mills for the first time as an association enterprise.

So far as possible at this time of uncertainty plans were laid for next year's activities in the full belief that the return of normal conditions might be a hard, but none the less necessary process, and that the sooner the problem was tackled in a practical manner by everybody, the better.

Fifty-Eight New Members in December

MEMBERSHIP work is reported to be progressing satisfactorily. At the December meeting of the Executive Council, applications from 58 firms were received and accepted. While there have been a number of resignations, it is significant that these have been chiefly due to amalgamations, business failures or firms going out of business.

Following is the list of new members for the month of December:—

FIRM.	ADDRESS.	REPRESENTATIVE.	PRODUCT.
Nichols Chemical Co., Ltd.	Barnet, B.C.	G. R. Charters (add'l.)	Chemicals
B.C. Manufacturing Co., Ltd.	New Westminster, B.C.	P. J. McMurphy, (add'l.)	
Columbian Pulleys, Ltd.	Vancouver, B.C.	Fred. N. Barger	Pulleys.
The Staneland Co., Ltd.	Victoria, B.C.	W. E. Staneland	Paint
Clayquot Sound Canning Co., Ltd.	Victoria, B.C.	J. L. Beckwith	Canned Goods.
Saults & Pollard, Ltd.	Winnipeg, Man.	G. H. Saults	Printing.
American Can Co., Ltd.	Hamilton, Ont.	F. McKinley (add'l)	Cans.
Carr Fastener Co., of Canada, Ltd.	Hamilton, Ont.	Louis del Berg	Snap Fasteners.
Don-O-Lac Co of Canada, Ltd.	Hamilton, Ont.	A. E. Hutson, Jr.	Shellac, etc.
The Moto-Meter Co. of Canada, Ltd.	Hamilton, Ont.	Samuel E. Ryder	Meters.
Perkins Glue Co.	Hamilton, Ont.	G. S. Perkins (add'l.) (Mail to Lansdale, Penn., U.S.A.)	Glue.
Ingersoll Knitting Co.	Ingersoll, Ont.	L. Waterhouse	Towels, etc.
McGill-Quinn Handcraft Products.	Norwood, Ont.	F. P. Quinn	Basketry, etc.
Canadian Packing Co., Ltd.	Peterborough, Ont.	G. N. Matthews (add'l.)	Meat.
Bouvier & Hutchinson	Toronto, Ont.	G. S. Hutchinson	Envelopes.
Chas. A. Branston Co.	Toronto, Ont.	Jas. C. La Trobe	Generators.
The Burrows Mfg. Co.	Toronto, Ont.	G. C. Burrows	Sheet Metal Gd
Canadian Panama Hat Co., Ltd.	Toronto, Ont.	P. H. Lustig (add'l). (Mail c/o Lustig Bros., 198 Greene St. New York, N.Y.	Hats.
The Coleman Lamp Co., Ltd.	Toronto, Ont.	H. H. Minard	Lamps, etc.
R. Dack & Sons, Ltd.	Toronto, Ont.	S. R. Dack	Shoes.
Dominion Cloak Co., Ltd.	Toronto, Ont.	H. Rosenberg	Ladies' Cloaks.
Dominion Oxygen Co., Ltd.	Toronto, Ont.	W. F. Thatcher	Oxygen, etc.
Dunlop Candy Co.	Toronto, Ont.	W. A. Dunlop	Candies.
Glena-Signal Oil Co. of Canada, Ltd.	Toronto, Ont.	Robert McVicar	Oils & Grease.
Goldsmith Bros. Smelting & Refining Co., Ltd.	Toronto, Ont.	N. L. Nussbaum	Dental Gold.
Hertel-Harshman Co., Ltd.	Toronto, Ont.	R. N. Harshman	Greeting Cards
Massey-Harris Co., Ltd.	Toronto, Ont.	T. Bradshaw (add'l.)	Agricultural Implement
Robert McCausland, Ltd.	Toronto, Ont.	A. J. McCausland	Memorial Window
McGregor, McIntyre, Ltd.	Toronto, Ont.	A. Ross Robertson, (add'l)	Structural Steel
National Cabinet Co., Ltd.	Toronto, Ont.	A. B. Beverly	Gramophones.
Sangamo Electric Co. of Canada, Ltd.	Toronto, Ont.	Scott Lynn	Electric Meters
A. Schrader's Son, Inc.	Toronto, Ont.	H. R. Cole	Tire Valves.
Shipway Iron Bell Wire Mfg. Co.	Toronto, Ont.	Thos. Henry Shipway	Iron Work, etc
The Silver Footwear Co.	Toronto, Ont.	J. Rotstein	Spats, etc.
Sinclair-Allen & Co., Ltd.	Toronto, Ont.	N. A. Sinclair	Stationery.
William H. Stevenson	Toronto, Ont.	Wm. H. Stevenson	Signs, etc.
The Thornton-Smith Co.	Toronto, Ont.	R. N. Irvine	Furniture.
Standard Steel Construction Co., Ltd.	Welland, Ont.	Clarke J. Madgett	Fabricators.
Wood Hydraulic Hoist & Body Co.	Windsor, Ont.	A. G. Kerr	Hoists.
Canadian Packing Co., Ltd.	Hull, Que.	R. G. Dalsier (add'l.)	Meat.
Canadian Buttons, Ltd.	Montreal, Que.	H. R. Rossler	Buttons, etc.
Canadian Packing Co., Ltd.	Montreal, Que.	S. G. Matthews (add'l.)	Meat.
Maguire, Paterson & Palmer (Canada), Ltd.	Montreal, Que.	A. W. Hugann (add'l)	Match Splits.
Maguire, Paterson & Palmer (Canada), Ltd.	Montreal, Que.	John Ernest Ardren	Match Splits.
The Montreal Forge & Shackle Co., Ltd.	Montreal, Que.	T. N. Hutchinson	Shackles.
Taylor Stoker Co.	Montreal, Que.	G. W. Henderson	Stokers.
Hermenegilde Sare	Quebec, Que.	Hermenegilde Sare	Mustards, etc.
Isidore Pouliet	Quebec, Que.	Isidore Pouliet	Furs.
Joseph Racine	Quebec, Que.	Joseph Racine	Leather.
General Lumber & Mfg. Co., Ltd.	Sherbrooke, Que.	R. W. Hibbard (add'l.)	Lumber.
Dominion Manufacturers, Ltd.	Three Rivers, Que.	Leopold Girard (add'l.)	Hearses.
Anselme Duke, Ltd.	Three Rivers, Que.	Auseline Duke	Lumber.
La Cie de Produits en Beton Special	Three Rivers, Que.	A. H. Morean	Washing Tubs
La Cie. de Pub. "Le Nouvelliste," Ltée	Three Rivers, Que.	R. Bourgue	Newspapers.
Trottier, Villeneuve & Lacroix	Three Rivers, Que. To come into effect on January 1st.	Jos. C. Villeneuve	Artificial Stone
Clark Dental Mfg. Co., Ltd.	Toronto, Ont.	T. N. Clark	Dental Appliances
Frame Neckwear, Ltd.	Toronto, Ont.	J. S. Frame	Men's Neckwear
The Goldstein Mfg. Co., Ltd.	Toronto, Ont.	Bernard Goldstein	Jewelry, etc.

New Legislation by Saskatchewan

THE Prairie Division reports as follows in connection with new legislation by the Province of Saskatchewan. The public press contained a news item with respect to a request made by the Saskatchewan Trades Council to the Government of that Province for state insurance and amendments to the factories act. The Government was communicated with and it was ascertained that it proposed to introduce an amendment to the factories act prohibiting the employment of male persons under the age of 14 years, and female persons under the age of 15 years; and an amendment to the workmen's compensation act increasing the total amount that can be recovered

r permanent disability from $1,800 to ,000, and for a death claim from $2,000 $2,500.

The chairmen of the various branches Saskatchewan were communicated th and inasmuch as the amendment to e factories act simply places boys and rls in Saskatchewan on the same foot- g with respect to employment that ists in other provinces, it was decided concur in the amendments to the fac- ries act and further, as the amounts ovided in the amendment to the work- en's compensation act were no greater an provided for in other provinces and ere considerably lower than provided in me provinces, it was decided to make objection thereto. Therefore, the fol- wing letter was dispatched to the Hon. as. A. Dunning, Minister in charge of e Bureau of Labor and Industries, der date of Nov. 30th:

Sir,—

"With further reference to your favor November 20th.

"I have corresponded with our mem- rs in Saskatchewan and they are quite illing to accept the amendments to the ctories act and the workmen's compen- tion act, outlined in yours of November th.

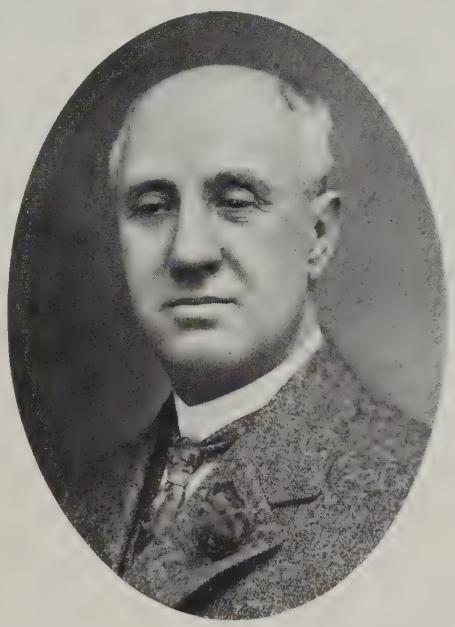
"It is the desire of manufacturers in askatchewan to co-operate with the Gov- rnment to the greatest possible extent legislation affecting industries in the rovince and they will at all times ap- reciate an opportunity of conferring ith the Government when any such gislation is under consideration.

"Again thanking you for your favor of ovember 20th, I remain."

Question of Insurance Agents' Commissions

THE Ontario Insurance Superintend- ent, Mr. Evan Gray, has recently used a considerable furore in the in- rance world by a statement of the Government's intention to limit the re- muneration of agents. Mr. Gray states tht his action is in pursuance of Judge Masten's report of the Ontario Insurance Commission in which the recommenda- tin is made that, unless the insurance companies themselves took voluntary a ion in this direction, the matter should b dealt with by legislation.

A circular letter to all fire insurance companies was issued by the superintend- ent outlining his views and inviting them to a conference on the subject. The Gov- ernment's suggestion was stated to be the li itation of commissions to all agents to 1[illegible] per cent. of the premium and the prohibition of over-riding commissions to general or supervisory agents. All super- vision of business was to be paid by salary only and no agent receiving com- missions was to be eligible for such salary. Mr. Gray personally advised the Insurance Committee of the Canadian Manufacturers Association that his sole object was to effect a direct saving in expenses which would be immediately deducted from the prevaling insurance rates.



The suggestion has naturally aroused no little alarm among insurance agents of every class in Ontario. Many have been the complaints that a commission of 15 per cent. is inadequate remuneration for the work done. It is clear, of course, that, if the superintendent's plan were carried out in its present form, it would mean the disintegration of many of the oldest and largest insurance firms, particularly in Toronto. Most of these firms combine ordinary brokerage work with the management of a group of insurance companies, whose business they supervise throughout the Province, appointing sub-agents, preparing policies and generally doing all the work necessary. For these services the insurance companies pay them a higher rate of commission than is paid by the general agents to the sub-agents and brokers. The adoption of Mr. Gray's scheme would necessitate the opening of a special office in Ontario by every insurance company wishing to transact business in the Province.

The opinion of the insurance companies themselves is divided. A few who already have branch or head offices in Toronto, maintain that their operating expenses would be considerably reduced and the assumption is that they would be willing to give the assured the benefit of the saving by means of reduced rates. The majority of the companies, however, operate through a general agent in Toronto and are very much averse to incurring the expense of opening a branch. These companies state emphatically that they can operate more economically through the general agency system and that the proposed changes would actually increase the expense ratio instead of reducing it. These companies, therefore, would not look very favorably on the consequent reduction in rates.

The fact of the matter seems to be that the larger companies who already have offices of their own in Ontario can transact their business more cheaply than they could by employing general agents, while most of the smaller companies, with a limited premium income, are only enabled to compete by means of the general agency system which divides the management expenses among several of them.

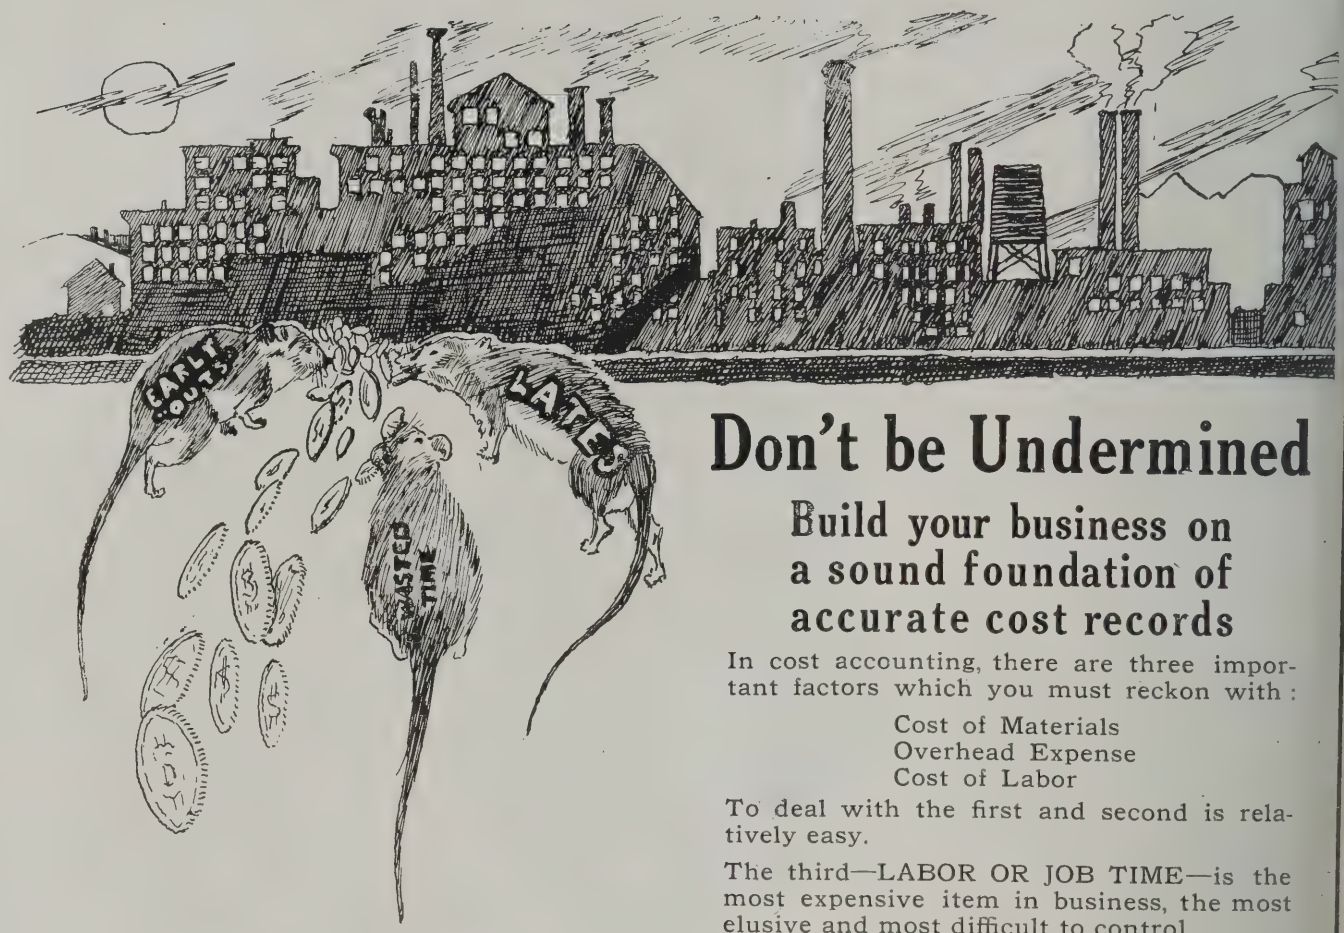
The conference between the superintendent and the insurance companies was duly held on December 16th, but no agreement was arrived at. It is a difficult problem which Mr. Gray will probably have some trouble in solving.

New Mayor of Winnipeg.

E. Parnell.
Spiers, Parnell Baking Co.

IN the recent municipal election in Winnipeg, the citizens' candidate for the mayoralty was Mr. Edward Parnell, a prominent member of the C.M.A. and an ex-chairman of the Prairie Division. He was successful in the contest and will be next year's mayor of Winnipeg. Mr. Parnell is an excellent type of public man. He is well read, has travelled widely, and is possessed of broad sympathies. His brief on the income tax presented before the Tariff Commission at its second hearing in Winnipeg is generally regarded as the last word on the subject.

The International Labor Conference



FOLLOWING upon the first annual meeting of the International Labor Conference, held at Washington last year, 29th Oct. to 29th Nov., the various draft conventions and recommendations which were adopted at the Conference have been forwarded to the different members (including, of course, Canada), in order that "each member may bring them before the authority or authorities within whose competence the matter lies, for the enactment of legislation, or other action." This has been done in accordance with Article 405, paragraph 5 of the Labor Part of the Treaty of Versailles, which limits the time for so doing to one year (or in exceptional cases, eighteen months) from the closing of the Conference, officially fixed as the 27th January, 1920. It is to be noted that there is no obligation on any signatory of the Treaty to enact into law the various conventions and recommendations. There is simply an undertaking to bring the different matters to the attention of the proper authority.

On the question of what is the competent authority, in the case of the several conventions, the Canadian Government has given the following rulings:

I. *Hours and Conditions of Labor*:

The following draft conventions and recommendations relating to hours and conditions of work are declared to involve legislation coming within the competence of the provinces, except, of

LOST MINUTES *Gnaw at the Vital Spots in Your Business*

Don't be Undermined

Build your business on a sound foundation of accurate cost records

In cost accounting, there are three important factors which you must reckon with:

Cost of Materials
Overhead Expense
Cost of Labor

To deal with the first and second is relatively easy.

The third—LABOR OR JOB TIME—is the most expensive item in business, the most elusive and most difficult to control.

When you buy labor, you pay for time and what it produces.

What portion of the time for which you thus pay is productive? What portion non-productive? Do you prove your purchased hours with Job Time Recorders?

Only by answering these questions can you gain control of your labor costs. You can answer them only by obtaining an accurate record of the time spent by each employee on each job.

SUCH RECORDS ARE PRODUCED BY THE INTERNATIONAL JOB TIME RECORDER

THE CONTROL OF LABOR COSTS

You insist on spending your own dollars, quite right! Then why let anybody spend your time? Most employers know the value of the dollar, but do not seem to recognize the value of the big element they are buying which forms the dollar—labor time!

"Production good, discipline good, everything running smoothly. Our Bonus System did it."

TIME is the heart, base and root of All Bonus Systems

A Bonus System will work wonders in connection with improving your output, keeping down overhead, getting full value from peak power loads, and in promoting discipline, contentment and loyalty. It is doing this for hundreds of other firms, why not for you too? In order to control the basic element of all Bonus Systems, which is TIME, you should use

International Time Recorders

An International makes every man his own timekeeper. The time records are accurate, unchangeable—yet impersonal and impartial. Its constant urge to punctuality and discipline will cut down the daily total of lost working minutes that so often run into the hundreds of thousands and increase the overhead expense. Our Job Time Recorders take care of piece work operations. Our In-and-Out Dial or Card Records insure punctuality at the daily shifts.

Send for our latest printed matter.

course, in so far as Dominion works are affected.

(1) Eight-hour day and forty-eight hour week.
(2) Prohibition of employment of women six weeks before and six weeks after childbirth.
(3) Prohibition of night work for women.
(4) Minimum age for children in industry, fourteen.
(5) Minimum age for night work, eighteen.
(6) Protection of women and children against poisoning.

II. *Unemployment*:

In the case of some of the questions which are declared to be for the Dominion, there is legislation already existing (as indicated below) under which the Dominion Government has adequate powers to give effect to the proposals of the draft conventions.

Question.	Jurisdiction.	Existing Legislation.
1. Centralized system of employment agencies.	Dominion	Employment offices. Co-Ordination Act.
2. Suppression of private employment agencies.	Provinces.	
3. Reciprocity in recruiting workmen in another country.	Dominion	Immigration Act. Alien Labor Act.
4. Unemployment insurance.	Dominion	
5. Co-ordination of execution of public works so as to provide work in periods of unemployment.	Dominion and Provinces.	

III. The question of reciprocity between different countries in the matter of admitting foreign workmen to the benefit of the laws for the protection of the home workmen is declared to be for the Dominion;

IV. Three recommendations relating to questions of health—all of which come within the competence of the Dominion and are covered by the Acts cited:

(1) Prevention of anthrax—Quarantine Act.
(2) Prohibition of use of phosphorus—Phosphorus Act, 1914.
(3) Government Health Service, for safeguarding health of workers—Department of Health Act, 1919.

Foresaw Niagara Falls Development

IN moving a resolution at the last meeting of the Executive Council expressing appreciation of the work done by Mr. P. W. Ellis in connection with Hydro-Electric power development at Niagara Falls, Mr. J. O. Thorn read extracts from a letter written by Mr. Ellis to Sir Adam Beck fifteen years ago. In view of subsequent events this letter showed amazing foresight on the part of Mr. Ellis and constitutes a tribute to his breadth of vision that is quite remarkable. In the letter, dated March 7, 1905, he said in part:—

"Although the consumption of power in the Province of Ontario in the past has probably been considerably less than the amount that will be generated by the three Canadian companies upon the completion of their respective undertakings, the development of manufactures, light railways, etc., of the next few years will certainly increase to an enormous extent the demand for electric energy. It is therefore of great importance that this reserve power be retained in the hands of the province as a public asset to be developed only for the public good, or if franchises be given to private companies to utilize it, they should be given under such safeguards and restrictions as shall effectually prevent the charging of excessive rates and the amalgamating of competing interests.

"This question, however, should be considered by the Government, not from the standpoint of the demand of the next few years, great though that may be, but from the standpoint of the future development of the province, viewed not in the aspect of the paltry necessities of a few decades, but rather in the aspect of an endless evolution of the country's activity. There are nearly 6,000,000 of H.P. represented at the present Niagara waterfall, according to the estimate of competent engineers, and if only one-quarter of this amount should be diverted for commercial purposes the Canadian share of this heritage of 1,500,000 H.P. will have an almost unimaginable effect upon the future development of Ontario.

"If the water in its natural state at the Falls were valued at the rate of $5 per H.P. per annum, thus leaving abundant margin for development and transmission cost and still permitting of its sale to consumers at revolutionary figures, the annual value to the province when the full quantity is consumed would be $5,000,000, which is more than the total consolidated revenue expenditure of the province for 1903. This is a short way of illustrating the value of Niagara Falls power potentialities. If it should be so arranged that 1,000,000 H.P. of the surplus water of the Falls were reserved for a Government or municipal development, and were sold to consumers at net cost of production, two startling things would follow, viz.—

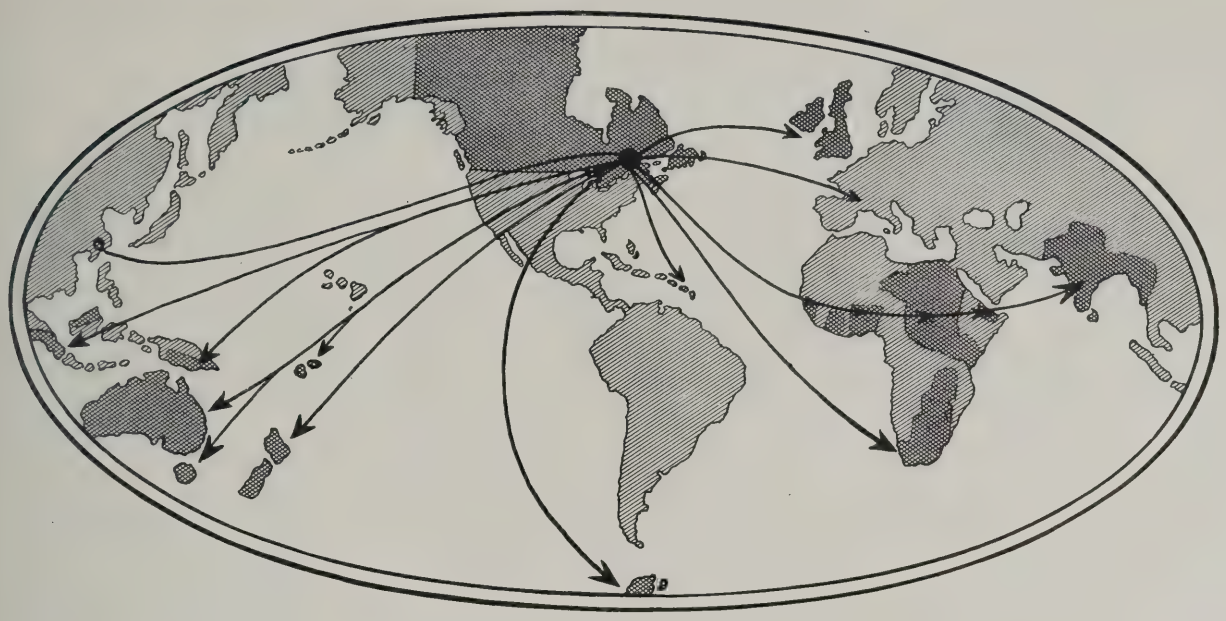
"1. The annual Government Revenue derived therefrom would, when the whole amount is consumed, amount to $5,000,000, which is more than the total consolidated revenue expenditure of the Province of Ontario for 1903.

"2. The gain to consumers of power would be, at least three times the above amount, or say $15,000,000; that is to say that, supposing the development and distribution in addition to the Government license aforesaid should bring the sale price up to $20 per H.P. per annum, that would represent a saving to the consumer at the very least as compared with present current prices of $15 per H.P. per annum, or $15,000,000 per annum.

"These figures are startling in their magnitude but the effects on the economic development of the province that would follow from their realization are still more startling. Of course people who think with night-caps on and whose futures are limited by five and ten-year horizon lines will dismiss the whole matter as something too visionary or too remote for realization. The reply is, we have always short-sighted people with us and the country has been sufficiently and severely punished because of their influence upon it. The Government stands in the position of a trustee for the province and its trust is not fulfilled by taking care of the people's interests for short periods of time. Much is said in these days about the necessity of preserving the lumber and mineral resources of the province, but if they should be given away the lumbermen at most would only receive a single crop and the miner would only receive a fixed quantity of ore which within the course of time is bound to be worked out; while in the matter of Niagara Falls, to whomsoever the water is given there is a perpetual gift, because as long as the order of nature stands the water is there available for conversion into electrical energy."

Labor Minister Holds Conference

WHEN the Minister of Labor was in Toronto as a member of the Tariff Commission, he took advantage of the opportunity to discuss the unemployment situation with representative bodies. Among others, he held a conference with manufacturers in the Association's offices on December 7, when the whole situation was thoroughly discussed. Following the return of the Minister to Ottawa, the following definition of government policy was published:—



"The Government has kept closely informed respecting the problem of unemployment, and has done all possible to provide against the foreseen inevitable contraction in business which was bound to occur.

"The employment service of Canada, carried on co-operatively by Federal and Provincial authority, rendered a valuable service following the ending of the great war in that more than 600,000 men and women have found employment through this agency since March, 1919.

"Up to September, 1920, labor in Canada was well absorbed, Toronto, Victoria and Vancouver being the only points where unemployment was complained of. At these three, placed employment outside of the city, at good wages, was offered during September and October for 3,400 men, with practically no response. Since that time the situation is changed in that men engaged in seasonal occupations or who lost their employment through the contraction of industry, have taken the outside employment offered, so that the opportunities of two months ago no longer exist.

"By the re-opening of work on the Welland Canal in 1919, employment was found for between two and three thousand workmen in the district where the industrial dislocation resulting from the cessation of war work was most acute.

"The Government's shipbuilding programme was extended in 1919 and 1920, with the approval of Parliament, primar-

From CANADA to ANYWHERE

goes the Gillette Safety Razor.

In the British Isles, in India, in China and Peru, men are shaving swiftly, perfectly and happily with the keen rigid edges of the waferlike Gillette blades, Made in Canada.

Wherever you go, in any part of the world, you will find business men profiting by the time-saving Gillette Safety Razor, Made in Canada.

The Gillette plant is the biggest safety razor factory in the Empire, and manufactures many, many millions of blades—little double edged wafers of steel that must answer by individual test to the finest degree of temper, exactitude and excellence known to British craftsmanship.

ily to employ labor during the re-organization period.

"Immigration of industrial workers has been restricted to a minimum. As an example of this, it may be stated that employers have, since January last, filed requests with the Department of Immigration and Colonization for permission to bring in 4,385 workers. These requests have not been granted except in cases where the employment service of the Department of Labor was unable to find suitable workers in Canada, resulting in only 770 being brought in, the remaining requirements being filled from home supply. The recent raising of the cash requirements and other incidents which might be named are all indications of the attention given to this important question.

"Obviously there can no longer be any recognized distinction between the physically fit returned man and other unemployed workmen. The disabled or partially disabled soldier must and will continue to receive special attention.

"Ordinarily unemployment problems are the more direct concern of the municipality, state or province where they occur, Federal aid being given only when the problem becomes too difficult to handle locally. The Government of Canada is willing and anxious to do what is necessary to aid, but cannot assume obligations which properly belong to a particular municipality or province.

"It will, however, through the Department of Labor, be glad to co-operate with and aid provincial authorities, as necessity appears, and through the Soldiers' Civil Re-establishment Department, continue to give special attention to disabled or partly incapacitated returned soldiers.

"Many employers are retaining as many of their workmen as possible, manufacturing stocks the sale of which is uncertain. Others who cannot do this have reduced working time, instead of reducing staff, which practice seems commendable. Everyone should remember that every Canadian-made article purchased reduces unemployment.

"If every citizen will do his or her part in giving employment where and when possible, and will purchase only the product of Canadian labor where obtainable, the unemployment problem will be minimized."

Issued Statement on Unemployment

IT was decided at the December meeting of the Executive Council that a statement dealing with the question of unemployment should be issued to the press with a view to controverting certain accusations that were being levelled against manufacturers. The statement reads as follows:—

"In view of the attempts of certain newspapers and speakers to attribute the present unemployment and trade depression to the deliberate action of manufacturers, the Executive Council of the Canadian Manufacturers Association takes this opportunity to say officially that these statements are not true. Such statements are so absurd that they should carry their own refutation, but as they may do some harm if they are allowed to pass unnoticed, we wish to deny them and also to point out what we think are some of the real causes of present conditions.

"The sales of goods made in Canadian factories have been steadily decreasing during the past six months.

"The decrease has been apparent in both foreign and home sales. The depreciated currencies of European countries, by creating unfavorable exchange, makes it almost impossible at present to sell in Europe. Moreover, most foreign countries are unable to finance credits for purchases abroad. In addition to the loss of export trade, there has been a considerable shrinkage in sales at home, partly due to the fact that the European exchange conditions have wiped out the protection on Canadian industry and have encouraged greatly the dumping of goods into Canada. The recent heavy increase in transportation rates has also restricted sales in Canada.

"It is obvious that a factory cannot continue to pay heavy wage bills, to spend large sums for raw material and to maintain operating and selling costs unless the articles it makes are being sold either at home or abroad.

"Consequently, some Canadian factories have been gradually forced to run five, four or three days a week instead of full time, and a few have been compelled to close, with the result that there is some unemployment, particularly in the large cities. In an endeavor to keep staffs engaged, factories have been manufacturing for stock beyond the limits of business prudence. This course was advisable, not only to avoid, as far as possible, the hardships of unemployment, but also to retain skilled employees, who cannot be replaced easily after they have been dispersed.

"While the existing exchange conditions appear to forbid any immediate revival of export trade, there are available certain remedies to stimulate trade in Canada.

"The purchasing power of the country, represented by bank deposits, Victory bonds, and other securities and investments, and the proceeds of national production are much greater than at any previous time in Canadian history, and the present situation will be relieved if those who are in a position to do so will buy goods in reasonable quantities. Goods are available in great volume at prices which include little or no profit and in many cases are offered below the cost of production, taking into consideration the high cost of material and labor entering into their manufacture.

"While extravagant expenditure on public works is always to be avoided, there is a great amount of useful construction and building which can be undertaken by the Dominion, Provincial and Municipal Governments and by private concerns and individuals.

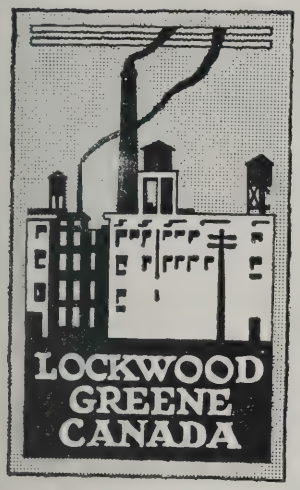
"Imports from other countries sho be reduced as far as possible. It see extraordinary that, while thousands Canadian workers are walking the stre looking for employment, Canadian c sumers are sending hundreds of milli of dollars out of the country for go that can be made in Canada. During month of October, 1920, Canadians ported goods to the value of $105,777,(as against $91,910,477 during Octol 1919, an increase of $13,859,560.

"The figures for the twelve mon ending October, 1920, are more startli During that period Canadians impor goods to the value of $1,339,627,508, against total imports valued at $900,(292 during the twelve months end October, 1919, an increase of purcha from other countries amounting to $4 609,216.

"While it is true that a considera volume of these imports consisted articles which are not produced in C ada but are necessary, by far the gre part were goods of a class or kind m in this country.

"Assuming that at least half of th articles could have been manufactu here, let us estimate the loss of emp ment their importation caused.

"According to the Dominion Bu of Statistics, about 700,000 people employed in Canadian factories in 1 and these factories produced during year goods valued at $3,500,000 Half the value of our total imports ing the twelve months ending Octo 1920, was about $700,000,000, or a one-fifth of our total factory produc in 1918. Consequently, if 700,000 pe were employed for a year in produ goods valued at $3,500,000,000, the duction of $700,000,000 worth of go or about half our annual imports, w have given employment to 14(people for a year.



"If we lessen imports, there will more employment available in Can if we buy still more abroad, more pe will be thrown out of work.

"We believe that the basic condi in Canada are sound, and that the cise of confidence and co-operation b classes along the lines suggested assist in bringing about a retur normal conditions."

Taxation in Vancouve Subject of Enquiry

DURING November, Dr. H. L. Brit Director of the Bureau of Muni Research, Toronto, conducted an quiry at Vancouver as to the best m of broadening the basis of taxatio Vancouver City. The chairman of British Columbia Division and the s tary spent considerable time atte the hearings and prepared a brie pressing the views of the membe the C.M.A. in Vancouver on the su of the inquiry. The brief has sinc ceived the approval of the Legisl and Executive Committees of the vision.

Factories Rejuvenated

Tariff Department Bulletin

Announcements Regarding Tariff Matters, Including Board of Customs Decisions, Departmental Rulings, Excise Tax Rulings and Exemptions from Sales Tax

Board of Customs Decisions

Tariff status of Peter Smith hot air car heaters—Declared that the stove and motor should be invoiced separately, the stove being entitled to entry under tariff item 451 at the rate of 25 per cent. and the motor under tariff item 453 at the rate of 27½ per cent., in effect from 9th November, 1920.

Declared that old newspapers and magazines imported for use as paper stock are entitled to entry under tariff item 681 and are subject to sales tax.

The ruling of the Department that the words "materials for use only in the construction of ships" includes engines, winches, compasses and such articles as are necessary to the navigation of the ship, but not to include movable furniture, carpets, dishes and such like furnishings and equipment, is upheld.

The ruling of the Department that the exemption from sales taxes on ships' materials applies solely to materials for use only in the *original* construction of ships and that materials for *repairs* to ships are subject to the sales tax, is upheld.

Declared that sales tax is applicable to materials for repair of ships licensed to engage in the Canadian coasting trade.

Declared that sales tax is applicable to materials for repair of ships used in international trade.

Declared that sales tax is not applicable to materials for the construction of any vessel entitled to registration under the Canada Shipping Act.

Departmental Rulings

Canadian goods returned, under the provisions of tariff item 709, held to be exempt from sales tax.

NOTE.—It will be noted that all of the foregoing decisions, with one exception, deal with the question of Sales Tax.

"Luxury" Taxes and Certain Manufacturing Excise Taxes Abolished.—Effective December 20th, 1920.

An Order in Council has been passed abolishing all of the so-called "Luxury" taxes and the Excise Manufacturing taxes with the exception of the manufacturing taxes on confectionery, playing cards, spirituous and alcoholic liquors, and with the exception of the taxes on importations of medicinal and medicated wines, vermouth and ginger wines, patent and proprietary medicines containing alcohol, lime juice or fruit juices, fortified spirits and strong waters, alcoholic perfumes and perfumed spirits, bay rum, etc., and other toilet preparations containing spirits.

All of the taxes mentioned in Section 19-BB of the Special War Revenue Act are abolished with the exception of the tax of 10 per cent. on confectionery, subsection 4, paragraph (*c*) and with the exception of the taxes specified in paragraphs (*e*), (*f*), (*g*) and (*h*) of subsection 4 and those specified in subsection 6.

Taxes on matches and tea not abolished. The excise taxes on matches manufactured in Canada or imported, and the excise tax on importations of tea are still in full force and effect. These taxes were imposed by the legislation of 1918.

The Sales tax remains in full force and effect.

Exemptions from Sales Tax

The only articles exempt from Sales tax are those enumerated in section 19-BBB of the Act and those set forth hereunder.

The original list of articles as exempted by the Act, when sold by manufacturers, wholesalers or jobbers, will be found set forth on page 20 of the Association's Excise Tax pamphlet—(Circular No. 266).

An Order in Council has been passed, effective on and after November 26, 1920, making certain additions to the abovementioned list.

In addition to these two lists the Department of Customs and Inland Revenue states that articles purchased for the use of Provincial Governments, or Departments thereof, are exempt from the Sales tax.

Sales of raw hides by farmers, retail butchers and other retail storekeepers; sales of raw furs by traders or retail storekeepers; sales of wool by farmers or retail storekeepers; and sales of domestic raw leaf tobacco by cultivators are not regarded as sales by manufacturers or wholesalers and are, therefore, held by Revenue to be exempt from the application of the Sales Tax.

The list of articles exempted by the recent Order in Council are as follows:

Bread,
Yeast,
Salt,
Malted foods for infants' use,
Real estate and buildings,
Hominy,
Cooked meats not canned,
Gluten flour,
Rolled wheat,
Poultry feed,
Stearine, when used solely in the manufacture of oleomargarine or any substitute for butter, or as a substitute for lard for the production of cottolene.

Oleo oil, when used solely in the manufacture of oleomargarine or any substitute for butter, or as a substitute for lard for the production of cottolene.

Edible tallow, for use solely in the production of butter or any substitute therefor, or as a substitute for lard,

Cotton-seed oil, when used solely in the manufacture of oleomargarine or as a substitute for butter, or as a substitute for lard or for the production of cottolene,

Corn oil, when used solely in the manufacture of oleomargarine or any substitute for butter or as a substitute for lard or for the production of cottolene,

Jams, jellies, marmalade and preserves,

Bees,

Manila fibre, for use only in the manufacture of rope for holding traps in lobster fisheries,

War veterans' badges,

Memorials or monuments, erected by voluntary public subscription, municipal corporations or provincial Governments in memory of soldiers who fell in the great war,

Articles imported for the use of the Governor-General,

Articles imported for the personal or official use of Consuls-General who are natives or citizens of the country they represent and who are not engaged in any other business or profession.

Bibles, prayer books, psalms, hymn books, religious tracts, and Sunday school lesson pictures,

Artificial eyes,

Crowns, bridge-work, and plates to which artificial teeth have been permanently affixed by a dentist.

Excise Tax Rulings and Regulations

Various rulings and regulations issued by the Department of Customs and Inland Revenue subsequent to the issuance of the Association's Excise Tax pamphlet (Circular No. 266) have been published in INDUSTRIAL CANADA. See October number, page 90; November number, page 87; and December number, page 90. Any further rulings of interest to our members will appear in forthcoming issues of INDUSTRIAL CANADA.

Fractional Sales.—Through a typographical error the Departmental ruling on Fractional Sales in the December issue of INDUSTRIAL CANADA reads, in part, as follows:

When the amount of tax on any sale is less than one-half cent the tax is collectible.

This sentence should have read:

When the amount of tax on any sale is less than one-half cent NO tax is collectible.

Licenses: One Firm—One License. The Department of Customs and Inland Revenue has issued instructions and re-

The Canadian Appraisal Company

LIMITED

The Pioneer Appraisal Organization of Canada

ESTABLISHED 1905

THE Canadian Appraisal Company, Limited, has now completed fifteen years of service and enjoys to-day an unrivalled position as an Appraisal organization amongst manufacturers as well as Insurance and financial houses within the Dominion.

Several thousand properties have been appraised by us to date. Amongst these are the most representative industrial concerns and those which are "a household word" in practically every line of manufacture, including also all the properties comprising the recently formed "British Empire Steel Corporation, Limited."

ADVANTAGES OF AN APPRAISAL

Its Appraisal is an expert detailed analysis which establishes beyond question both quantities and values. To be authoritative, such analysis must be made entirely independent of original cost records. It is so planned as to show separately the insurable portions of a property as distinguished from the portions that it is not necessary to insure. It is an authoritative exhibit of values existing before a fire loss, and therefore a tangible, satisfactory and instantly available basis of adjustment should a loss occur. It establishes a sound, authoritative basis of costs and values for operating, accounting, cost finding, taxation, insurance and financial purposes.

Collection of Freight Charges between Canada and United States — Express Companies Apply for Higher Rates

AT the December meeting of the Executive Council, approval was given to the recommendation of the Transportation Committee that Mr. W. S. Campbell, traffic manager of the Canadian General Electric Co., Limited, should succeed Mr. Burton S. Harris, resigned, as chairman of the committee for the remainder of the term of office of the committee.

Methods of Collection of Freight Charges Between Canada and U. S.

Reporting to the Executive Council at its December meeting, the Transportation Committee gave the following explanation of the situation as affecting the method of collecting freight charges on traffic passing between the United States and Canada,—

"By a ruling of the Interstate Commerce Commission decided on November 17th last, that body admitted the justice of the railway companies demanding prepayment of freight charges, if they so desire, and stated that on traffic moving from a point in the United States to a point in Canada, American currency was the only legal tender for payment of that portion of the haul within the United States. They indicated very clearly in their decision, however, that their jurisdiction did not extend beyond the borders of the United States and that the charges to be collected for the haul within Canada was a matter for regulation by the governing bodies in Canada, or in other words, the Board of Railway Commissioners. The assistant manager, on the instructions of your committee, and cooperating with the Hamilton Chamber of Commerce and other organizations, then approached the Canadian Railway Association with a view to arranging a conference for the purpose of endeavoring to dispose of this question, but their reply signified that such a conference was not agreeable to them and that they were indisposed to take up this matter.

"In connection with the complaint of the Western grain men heard at Ottawa on November 23rd, regarding the action of the railways making it compulsory to ship all freight to the United States, charges collect, resulting in the charges for the through haul being collected in American money, the counsel for the Canadian railways present admitted that they were receiving remittance of their portion of the charges in American currency. The Chief Commissioner, on receipt of this intelligence, remarked that in his opinion the Canadian roads were receiving more than their legal toll. Previously, the railways had always maintained that they were only receiving remittance from their United States connections in Canadian funds.

"The question was again discussed before the Board on December 14th and the Chief Commissioner then notified the railways that if some satisfactory solution was not soon arranged by them, the Board would act. It is, therefore, reasonable to expect that this question will be finally disposed of at an early date."

Transportation Committee's New Chairman.

W. S. Campbell,

Manager Transportation and Customs Department, Canadian General Electric Company, Limited.

THE new chairman of the Transportation Committee was born near Peterborough, Ont., and educated in that city. His first position was that of stenographer with the Peterborough Lock Mfg. Co. From this concern he went to the Canadian Pacific Railway as clerk in the local freight office. Moving up in the service, he became chief clerk in the Division Freight Agent's office in Hamilton, later returning to Peterborough to take charge of the freight office in that city. In 1910 he joined the Canadian General Electric Co. as traffic manager, with office at the Peterborough Works, and from that time on he has been working up the Transportation and Customs organization as a departmental branch. In March, 1920, the company opened a regular transportation and customs department at head office in Toronto, with jurisdiction over all factories and warehouses for both the Canadian General Electric Co. and the Canadian Allis-Chalmers, Ltd., and this necessitated Mr. Campbell's removal from Peterborough.

Manifest Fee of 11c on Freight Shipments

On November 1st the railways published in their tariffs a clause to the effect that a manifest fee of 11c on each entry would be assessed on all international traffic. The Transportation Committee decided that this charge should opposed on general principles, as charges of this nature were included the railways in their statement of c submitted to the Board at the hearings connection with their application for a per cent. increase and were allowed by the Board in issuing their judgm The assistant manager, therefore, out a circular letter to all members questing that they furnish informat showing just what this charge wo mean in dollars and cents for a f month period, and these figures w received will be projected to obtain approximate amount of revenue the r ways would secure from this source year. When this information is comp it will enable us to decide if the ma is one that should be strenuously follo up with the Board.

Application of Express Companies Increase in Express Rates

This case was heard in Ottawa December 1. The Assistant Manager the Transportation Department, toget with Mr. Macdonnell of the Legal partment, represented the Association this hearing, the Express Companies duced their application to 33⅓ per c with the provision that the cartage ferentials previously carried be r stated in lieu of an increase of 40 cent. as originally applied for which been based on the expectation that railways would receive a full 40 per c increase in rates all over Canada, wh of course, was not granted and which and after the first of January will re sent an increase of 35 per cent. in East and 30 per cent. in the West. ther evidence was submitted to Board to show that since the price various materials included in Express Companies' statement of c had been filed with the Board, man them had declined in a varying deg thus reducing the unit costs of Express Companies. It was conter that the present division of rates betw the Dominion Express Company and Canadian Pacific Railway, which all the latter one and one-half times the class freight rate, should also be g consideration by the Board, as this sion applied to the increased freight r allowed by the Board gives the rail company an excessive earning, and the Board should therefore establis basis for division as between the Exp Companies and the railways that w allow the latter only the actual opera cost plus a reasonable return.

Final argument in this case concl in Ottawa on December 15th, and Macdonnell, on behalf of the C.M strongly argued that any increase gra by the Board should be of a tempo nature, owing to the present unst conditions, and the Chief Commissi supported this view and stated that Board's judgment would provide temporary relief only.

THE CANADIAN BANK OF COMMERCE

Statement of the result of the business of the Bank for the year ending 30th November, 1920

Balance at credit of Profit and Loss Account brought forward from last year	$1,427,735 40

B. E. WALKER, PRESIDENT. JOHN AIRD, GENERAL MANAGER.

Report of the Auditors to the Shareholders of The Canadian Bank of Commerce.

In accordance with the provisions of subsections 19 and 20 of section 56 of The Bank Act, 1913, we report as follows:

We have audited the above Balance Sheet and compared it with the books and vouchers at Head Office and with the certified returns from the branches. We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

We have checked the cash, and verified the securities representing the investments of the Bank, at its chief office and principal branches at a date other than that of the verification at the chief office on the 30th November, 1920, and found that they were in agreement with the entries in the books of the Bank relating thereto.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

T. HARRY WEBB, C.A. of George A. Touche & Co.
JAMES MARWICK, C.A. of Marwick, Mitchell & Co.
Auditors.

Your Banking—

whether at Home or Abroad can be facilitated by the direct personal service afforded by this Bank through its chain of over 700 Branches.

In Canada and Newfoundland, from the Atlantic to the Pacific, we have over 600 Branches.

In the West Indies, Central and South America, our Branches are located in the principal trading centres.

We also have Branches in London, New York, Paris and Barcelona.

Our managers will be pleased to have you consult them about your banking transactions

OFFICE AND FINANCE

Planning the Office Scientifically

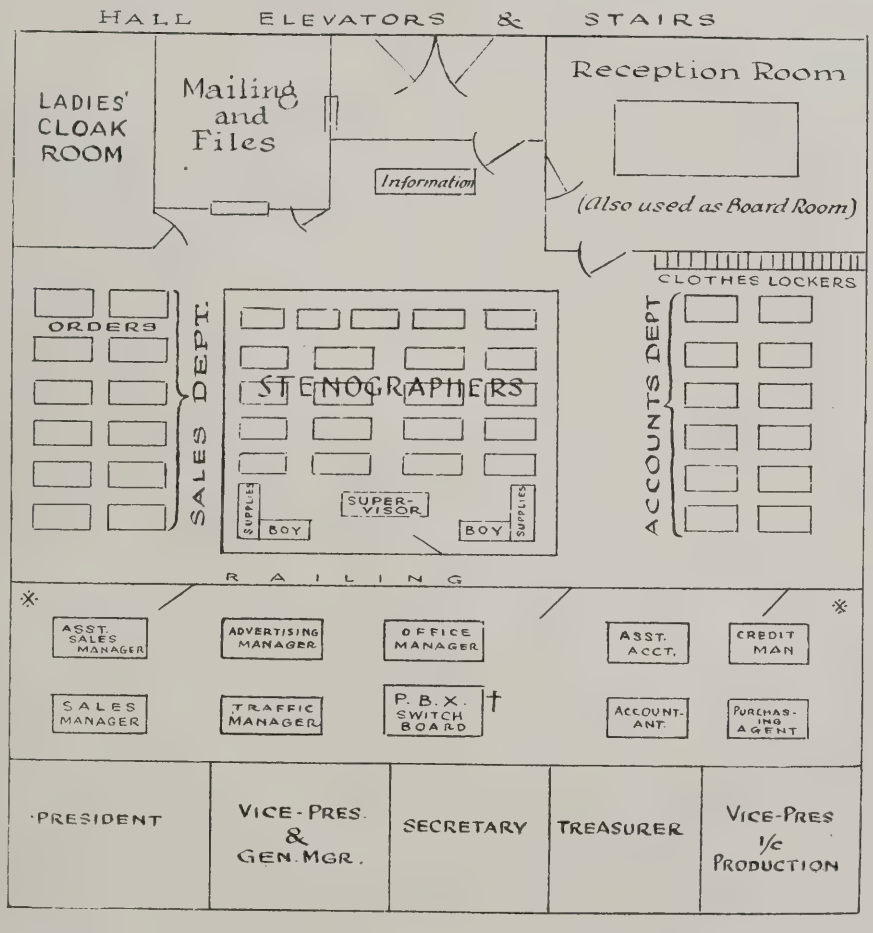
A Method of Securing Economy of Space and Effort in the Office — Arranging the Office to Suit the Work

By ALAN M. IRWIN

THERE are three main principles to be observed in the planning of an office. They are: Economy of space, ppearance, and economy of effort. The irst does not mean that in order to liminate the waste of space, it is neces- ary to cram every square inch of floor vith desks, files, etc. It is often notice- ble that a small ffice can contain a reater number of esks and retain an rderly appearance, vhile many larger ffices appear to be vercrowded with a uch smaller staff.

Again, many offices, aying the strictest ttention to efficiency n their methods, verlook the value f giving a pleasant ppearance to the urroundings. Card oxes, transfer cases nd papers of all inds lie around— ot sufficiently so to ive an impression untidiness — on ables, and desk orners, which could asily be placed refully in racks small cabinets. aste-baskets seem t have no permanet resting place, ey even litter the les at times. If eir capacity is too imited they overflow o to the floor and lp to create a poor ipression.

It is in these litl things that the ppearance of an ice is made or rred, and in a wl - planned one thre is a place for everything needed.



ccommodating the office to the flow of work in its natural route rather than adopting the routine of the work to the limitations of the office arrangement is what we mean by economy of effort.

he first consideration is the entrance. Where shall it be placed? What arrangemets shall be made for the reception of callrs? Shall it be central or located in one of the corners?

In a building in which the major portion of one floor is taken up it is advisable to have the door centrally situated for two reasons. The arrangement shown in the accompanying sketch shows the mailing and filing departments on the right of the entrance and the reception room (which is often the board-room) on the left. This arrangement is ideal from the point of view of both the office and the caller.

Taking the office point of view first, we find that the location of the filing department at the right of the central door facilitates the handling of incoming mail, telegrams and messages. They are simply handed in at the wicket and are received right on the incoming mail table. The filing department is not divided from the office by a counter, but has a ceiling-height partition. This arrangement is necessary in order that files shall only be accessible to those in whose charge they are placed.

Having the reception room within easy reach of the door and close to the information desk saves the caller many steps and eliminates much waste motion on the part of the "courtesy clerk" as the information and reception officer is often called.

All partitions except Reception and Cloak Rooms are glazed
** Elevated about Six inches*
† Elevated at least Eighteen inches.

Diagram of a Scientifically Planned Office

The General Office

The general office should be open and, as far as possible, lighted by natural means. The arrangement of electric lights calls for careful study—there is no necessity for a discussion of it here —and it is advisable to consult a lighting engineer in order that the best effect may be obtained. Base plugs should be installed in various advantageous positions to allow for the movement of dictaphones, adding machines, electric fans, etc., about the office.

An orderly arrangement of desks, telephone stands, file cabinets and the general paraphernalia of business not only contributes to a smart appearance but also makes for efficiency in the movements of the staff.

The illustration shows one type of office lay-out which accommodates itself to the flow of work. Each operation may follow the natural course without any unnecessary waste motion. It travels from the mailing table to the file clerk, on to the sales department, receives attention from the traffic man, the credit manager and finally arrives in the accounting department, for the final action.

The natural way in which to group

functions is to place those closely allied in proximity to each other. Careful attention to this principle will save many unnecessary journeys and will permit clerks to spend a maximum of time at their desks.

In the general office, but separated from the clerical and stenographic forces, are the various executives. Each is placed as a connecting link between the officer of the company to whom he is responsible and his junior staff. The loss of light occasioned by the giving of a private office to each of these executive is eliminated by this method and the dignity of their positions is upheld by their segregation from the main body of the office.

Supervision of the staff, an important duty of the office manager, is made simple by his commanding position. He can see all that goes on.

On the same platform as the executives is placed, in a clear glass booth, the switchboard operator, who is thus enabled to make connection with executives who may be at another desk when called.

All partitions are of clear glass, with the result that inter-office movements are clearly visible and much time is saved, which ordinarily is often wasted in attempting to locate a person who is wanted. Another advantage is that no light is imprisoned by solid walls or translucent glass.

The central stenographic bureau occupies the centre of the office, so that all stenographers are within easy access. To deaden the sound, this bureau is enclosed by ceiling-high partitions. In some offices a somewhat different arrangement of the desks is followed. The supervisor, dictating machines, shaving machine, record rack, supplies and office boys are grouped in the centre and the stenographers' desks are placed at right angles to the walls. Between each operator is a six-foot glass screen, which further localizes the noise and discourages talking.

Private Offices

The trend of public opinion with regard to private offices is toward abolition rather than retention; though this condition has not yet become general. Many banks and other large offices are instituting changes in this direction, and the "open door" policy is the rule rather than the exception. Where private rooms are desired it is advisable to confine them to officers of the company and not to permit the privilege to be extended to every lesser dignitary.

Clear glass partitions should take the place of division walls, and the arrangement shown in the illustration is one of undoubted value. All the officers are placed in such a way that they are most easily reached by those whose work brings them into close contact, and a system of communicating doors places them in constant communication with each other.

Office planning, like all business problems, of course, relies upon certain necessary conditions being right. One does not always find the ideal situation for an office. The shape of the building, available floor space, the size of the staff to be accommodated, all these things have to be weighed before plans are drawn and work started. It is not always possible to obtain floor space as desirable as that in the accompanying sketch, but planning will be simpler and easier of accomplishment when economy of space and effort is taken into account beforehand.

The office lay-out should be planned as carefully as the factory, for without a smooth-running office a smooth-running factory, no matter how well planned, cannot exist.

Dividend Declared

Sherwin-Williams Company of Canada, Limited, Report a Prosperous Year

At the annual meeting of the Sherwin-Williams Company of Canada, Limited, held in Montreal on November 24th, shareholders were advised that the common stock had been placed on a dividend basis for the first time since its issue. The initial disbursements of 1½ per cent. for the quarter ended November 30th will be made on December 31st next to shareholders of record of December 15th.

The action of the board in respect to the dividend is capable of ready warrant, upon survey of the statements sub-

MONTHLY COMMERCIAL LETTER

Write for Monthly Commercial Letter to our FOREIGN TRADE DEPARTMENT, MONTREAL, Que.

The Royal Bank of Canada

TOTAL RESOURCES, $584,000,000

mitted for the twelve-monthly period ended August 31st last, which disclosed earnings of $1,281,338, compared with $990,919 a year ago, and $1,162,951, the 1918 figures, which formerly constituted the best year in the company's prosperous career. After all deductions, including depreciation, bond interest, dividends on preferred stock and provision for Government taxes, there remained available for application on the $4,000,000 common shares outstanding an amount of $733,909, against $350,769 last year and $586,584 in the preceding period. The 1920 showing in this respect is equal to 18.3 per cent., compared with 8.7 per cent. in 1919 and 14.7 in 1918.

The net earnings of the year, together with the surplus carried over from the 1919 period, brought the total surplus up to $3,417,961, which, with the special reserve of $100,000 shown in the statement, is equal to, approximately, 88 per cent. on the total common stock capitalization of the enterprise.

Decrease in Profits

Annual Report of Canadian Car & Foundry Company, Limited, and Associated Companies

A decrease in profits is shown in the annual report of the Canadian Car & Foundry Company, Limited, Canadian Steel Foundries, Limited, and associated companies, for the year ended September 30th, 1920. The aggregate output of the combined companies amounted to approximately $27,000,000, as compared with $33,000,000 for the preceding year. After charging operations with the cost of maintenance of all plants as well as depreciation and interest on outstanding bonds, and after making proper provision for all known contingencies of the nature of bad debts, rebuilding of furnaces, etc., there remains, subject to Government taxes, a profit for the year of $539,397.32, as compared with the profit for the preceding year of $1,887,634.70.

The business done during the year was all in the regular lines of the company's products, but, in explanation of the comparatively small profit shown, the directors point out that, in common with all other companies engaged in the manufacture of products into which iron and steel largely enter, business was carried on during the year under most difficult conditions. In addition to internal labor difficulties, the congestion in the American steel mills which followed the strikes in the United States early in the year, together with American railroad embargoes, retarded in a most serious way the output of the companies, and at no time during the year were the plants able to operate to anything approaching capacity owing to shortage of materials necessary to complete the orders received.

Retarded operations caused by delay in the receipt of materials was especially responsible for the accumulation of large inventories and for the increase in current liabilities. This condition of affairs, however, is but temporary, and the execution of the business remaining unfilled at the close of the year will, it is considered, satisfactorily restore the liquid capital of the company and materially strengthen their resources.

Annual Report Submitted

Imperial Tobacco Company of Canada, Limited, Have Increased Profits for 1920

The Imperial Tobacco Company of Canada, Limited, have issued their report for the year ended 30th September, 1920. During that period dividends amounting to 6 per cent. were paid on the preference shares of the company, and four interim dividends, aggregating 6 per cent. were paid on the ordinary shares, leaving a balance of $4,224,673.84. After deducting all charges and expenses for management, etc., and providing for income war tax (1920), the net profits for the year were $3,386,150.31. The amount brought forward

This Bank and Canadian Industry

THE Imperial Bank of Canada provides adequate facilities to meet the banking needs of Canadian Manufacturers. Through our 220 branches in Canada and our agents and correspondents in foreign centres, collections are made with promptness and satisfaction.

At every branch money orders and letters of credit are issued, Domestic and Foreign Exchange bought and sold. Government and Municipal securities dealt in and deposits received.

We are always prepared to give you the benefit of our experience and intimate knowledge of trade conditions in Canada and throughout the world.

The accounts of Merchants and Manufacturers solicited

from last year less final dividend of 1 per cent., was $2,859,935.22, making a total of $6,246,085.53. From the available balance of $4,224,673.84, the directors recommend that a final dividend on the ordinary shares of 1 per cent., absorbing $270,025 be paid, and that the balance of $3,954,-648.84 be carried forward. The above figures do not include the company's proportion of undivided profits of the associated companies which they have not thought fit to declare as dividends.

In pursuance of the by-laws, Sir Mortimer Davis, president; P. R. Walters, D. C. Patterson, H. P. Buell, G. G. Allen, Sir Arthur Churchman, Sir Hugo Cunliffe-Owen and O. S. Perrault retire from the board at the annual meeting, and offer themselves for re-election.

Canadian Woollens, Limited

Directors Declare Regular Dividends on Preferred and Common Stock

The directors of the Canadian Woollens, Limited, have declared the usual preferred dividend of 1¾ per cent. for the quarter ending December 31st next, and the dividend will be paid on January 1st to shareholders of record December 20th.

The second dividend on the common stock, being 1¼ per cent. for the quarter ending December 31st next, has also been declared and this is payable on January 1st next to shares of record December 20th.

Royal Bank of Canada

Total Assets now Approach the Six Hundred Million Dollar Mark

Total assets of the Royal Bank of Canada as disclosed in the annual report of the bank for the year ended November 30, 1920, amounted to the record-breaking figure of $594,-670,013, a gain for the year of over $60,000,000.

Every section of the bank's statement has its evidence of progress and expansion. Perhaps the outstanding feature will be found in the exceptionally strong position that has been maintained, even at a time when the bank was handling the largest business in its history. Nothing could be calculated to lend greater confidence in the soundness of the Canadian banking position. Of the record total assets of $594,670,013 the liquid assets are alone equal to over 50 per cent. of the liabilities to the public, while the actual cash on hand and in banks amounts to over 30 per cent. of public liabilities.

The complete chain of branches with which the Royal now serves every part of Canada makes the report especially interesting from the standpoint of the savings tendencies of the people and the general trend of business. The Royal, as its share, reports a gain in savings deposits alone for the twelve months of over seventy millions, being at the rate of close to six millions a month, with the result that savings deposits now stand at $331,688,078, up from $259,465,169.

On the other hand, the growing demands of larger business throughout the Dominion have been well met, as shown by current loans, and discounts in Canada of $183,747,409, up from $143,259,518, a gain of over $40,000,000.

During the past few years every endeavor has been made to increase Canada's international trade and as a result it has assumed very large proportions. Outside business, however, is not in any way dependent on the Canadian resources of the bank, as the return to the Government shows that deposits elsewhere than in Canada now amount to $164,106,090, a gain for the year of over $42,000,000, and compare with outside commercial loans of $102,674,210. This indicates an excess of outside deposits over loans of more than $60,000,000.

With the larger resources at its disposal and the greater business handled there is, as was to be expected, a substantial increase in the profits for the year. Here again another

AUDITORS' CERTIFICATE

We Report to the Shareholders of The Royal Bank of Canada:

That in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank.

That we have checked the cash and verified the securities of the Bank at the Chief Office at 30th November, 1920, as well as at another time, as required by Section 56 of the Bank Act and that we found they agreed with the entries in the books in regard thereto. We also during the year checked the cash and verified the securities at the principal branches.

That the above Balance Sheet has been compared by us with the books at the Chief Office and with the certified returns from the Branches, and in our opinion is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank.

That we have obtained all the information and explanations required by us.

JAMES MARWICK, C.A.,
S. ROGER MITCHELL, C.A., of Marwick, Mitchell and Co.
JAMES G. ROSS, C.A., of P. S. Ross & Sons. } Auditors.

Montreal, 18th December, 1920.

record for a Canadian bank has been made and the profits for the period, after making full allowances for all bad and doubtful debts and providing for every possible contingency, amounted to $4,253,649, compared with $3,423,264. The Profit and Loss balance carried forward from the previous year was $1,096,418, and when added to the profit of the current year made a total amount available for distribution of $5,350,067. After the usual appropriations for dividends and bonus and other accounts and the transfer to Reserve Fund account of $1,567,005, there was carried forward to the balance of Profit and Loss for the new year an amount of $546,928.

Shows Generous Profit

Increased Profits of Nearly a Quarter Million for Canadian Bank of Commerce

The report of the Canadian Bank of Commerce just made public gives evidence of sound financing during the year. An appreciable increase in its cash assets, a general development of business, and a net profit for the year of roughly a quarter of a million in excess of last year can certainly be considered a highly satisfactory showing.

Splendid as this showing is, there is no question that were it not for the broad outlook of the management, who have provided for future business at the cost of present revenue, the showing might for the time at least have been still better. But even at that, when after paying a bonus of 1 per cent. in addition to the regular payment of 12 per cent. on stock, the bank is able to carry forward $1,783,979, or $356,244 more than last year, a record of which the Executive may well feel proud.

In addition, the bank has written off $500,000 on bank premises, an amount double that of last year, thus bearing this year a very heavy part of the cost of increasing its business. There has also been set aside $150,000 for the pension fund to provide for the increase in the number of its officers.

In the general business of the bank, as shown in the state

Approachable and Considerate

The so-called dignity of banking carries with it, to the minds of some people, an impression of reserve, which has, at times, actually prevented them from becoming depositors. As a matter of fact, a Bank is a business institution, conducted on business lines by practical, successful business men who are both approachable and considerate. It is a pleasure to do your banking at The Merchants Bank.

399 Branches in Canada extending from the Atlantic to the Pacific, of which 149 are in Ontario, 47 in Quebec, and 180 in Western Canada.

NEW YORK AGENCY, 63-65 Wall Street

114

Helping Humanity

BETWEEN the wheat on our prairies and the daily bread of the people of this country and of distant lands runs a long chain of operations, each link of which is strengthened by banking services.

For 55 years this Bank has been privileged to furnish a substantial part of the financial energy necessary in the growth, transportation and marketing of Canada's vast crops.

Union Bank of Canada

ment, there is no department that stands out as sharply as that dealing with current loans in Canada. This item has reached the figure of $231,114,772 as against $213,189,170 last year, a development in strictly Canadian business of nearly eighteen million dollars. This is one indication of the fact that the bank is following a definite policy of doing all in its power to facilitate Canadian manufacturing and agricultural interests.

In regard to the general business of the bank, the increase in note circulation of almost $700,000 indicates the activity of general business.

Another noticeable fact presented in the statement is a material increase in cash assets. These assets represented by specie and Dominion notes show an increase of $4,519,215. The item of cheques on other banks also shows a very material advance, one indeed that totals over eleven millions.

An interesting sidelight is the increase in interest-bearing deposits. These have increased from last year's figures of $241,916,674, to the present figures of $285,065,493, an increase of something over forty-three millions. This is a most surprising showing in the face of the many loan issues of recent date.

The decrease in demand deposits is directly traceable to the cessation of war financing by the Dominion Government, as a year ago very large sums were held by the banks as a result of the last Victory Loan Campaign.

Taken altogether, the statement shows the bank to be in a strong position. To have been able to improve its showing in a year when a measure of uncertainty was creeping into business is ample evidence of shrewd and sound management.

Imperial Oil, Limited

Extra Dividend of $1.50 per Share, to be Paid in Victory Bonds, Announced

Imperial Oil, Limited, has declared an extra dividend of $1.50 per share, to be paid in Victory bonds, as well as the regular quarterly dividend of 75 cents per share. The bonus will be paid out of the 1934 Dominion of Canada Victory bond issue (fractions to be adjusted in cash) on December 18th to shareholders of record December 15th. The regular dividend of 75 cents per share will be payable on November 30th to shareholders of record November 23rd. The par value of Imperial shares is now $25, and the total disbursements to shareholders this year would, therefore, be $4.50, or equivalent to 18 per cent.

Reorganization Approved

Wayagamack Pulp & Paper Company, Limited, to Increase Their Share Capital

At a shareholders' meeting of the Wayagamack Pulp & Paper Company, Limited, held in Montreal on December 9th, 1920, unanimous approval was given to the proposals of the directors providing for the reorganization of the enterprise's share capital. The board was authorized to proceed with the necessary steps to secure the supplementary letters patent whereby the present outstanding stock of the company, amounting to 50,000 shares of the par value of $100 each, will be converted into 100,000 shares without nominal or par value. Shareholders will receive two shares of the new stock for each one of the old on completion of the plan.

Ratification was also given to the proposal to increase the capital to 250,000 shares of no-par value. Of the additional 150,000 shares, according to a circular issued some weeks ago, 50,000 may be issued in the near future and offered to shareholders on favorable terms to provide for the cost of new extensions already made and new machinery installed and to provide additional working capital. The remaining 100,000 shares, it was stated, will be held by the company to be issued only when necessary or advisable in the company's interests.

The shareholders also approved of the by-law submitted by the board moving the head office of the company from Montreal to Three Rivers.

STOPPING THE LEAKS IN BUSINESS

During the past few years of prosperity many leaks have been tolerated. They may become a serious drain during a period of declining prices.

What business needs to-day is a change in attitude. There must be more careful control of raw material, more helpful cost accounting, and better knowledge of the efficiency of labor and machines. The only means of safeguarding net profits in many a business to-day is by the conserving of material, of equipment, of time, and of working capital.

We have had many years experience in the study of these management problems. We know which methods succeed and which fail. We can usually apply a time-tested method to stop the leaks of profit.

How may we serve you?

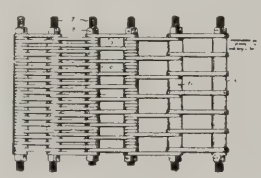
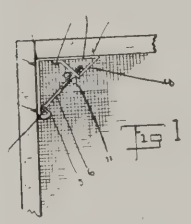
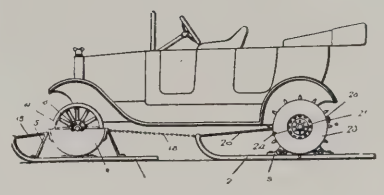
PATENTS FOR SALE



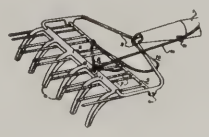


STENCIL. This invention relates to an improved stencil, and has for its primary object to provide a device by means of which a blind person may sign his name to checks or other documents. The invention has for a more particular object to provide a device of the above character which is foldable into small compass and may be conveniently carried in the pocket, but is capable of easy and quick adjustment when it is desired to use the same. Canadian and United States patents for sale. Write Woodford R. Walter, Paul Valley, Okla., U.S.A.



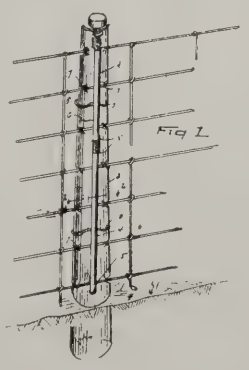
CLUTCH AND ACTUATING MECHANISM. This invention relates to a clutch and actuating mechanism which may be used in connection with the gearing of a mowing machine and which will be so constructed that it may be very efficiently operated from the seat of the mowing machine to throw the movable clutch element out of engagement with the stationary clutch element and thus permit the mowing machine to be moved across a field without the cutting knives being operated. Canadian and U.S. patents for sale. Write Edmond A. Salter, 231 Caddo Street, Shreveport, La., U.S.A.

SCREEN FOR STONE, SLAG, OR THE LIKE. My invention relates to screens for stone, slag, or the like, and my object is to provide a sectional screening surface for either rotary or gravity screens, the mesh of which may be readily changed in whole or in part of each section, and any worn screening bars of which may be renewed without renewing the entire section. For full particulars, write David B. Hoover, 506 North Charlotte St., Pottstown, Pa., U.S.A.



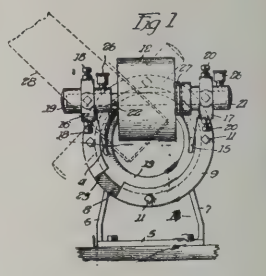
SCREEN DOOR BRACE. This invention relates to braces for doors, particularly screen doors, and its object is to provide a means for tightening the door without the use of special tools or without having to remove any part of the door. It can be manufactured cheaply and should be a good seller owing to the sagging of practically all screen doors. Canadian and U. S. patents for sale. Write William L. Allee, R.R. 28, Topeka, Kansas, U.S.A.

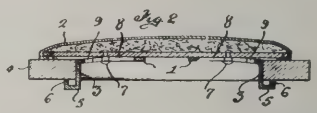
AUTOSLED (Canadian and United States patents for sale). The present invention relates to an autosled and aims to provide novel and improved, yet simple and inexpensive means for quickly converting an automobile into a sled for winter use, the construction being such that the sled structure can be quickly and easily applied to the automobile and also quickly removed, so that the machine can be used either way without requiring prohibitive trouble or alterations.



A further object is the provision of novel means for applying runners to the front wheels and rear axle and providing for the quick application of the runners to and removal thereof from the automobile.

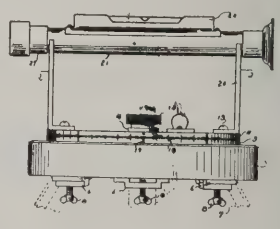
A still further object is to provide in combination with runners for supporting the rear axle, traction means which can be quickly applied and removed from the rear wheels for the propulsion of the machine when used as a sled. For particulars write Bernard T. Tollbom, Samuels, Idaho, U.S.A.





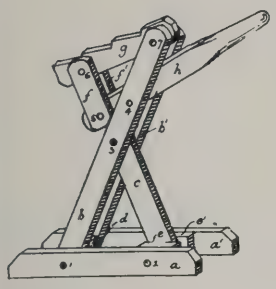
RAKE. My invention relates to new and useful improvements in rakes and more particularly to a cleaning attachment therefor that may be readily and easily attached and detached, is simple as to construction and inexpensive to manufacture, and will operate in an extremely reliable and expeditious manner to strip the teeth of leaves, trash and other foreign matter. An object of importance is to provide novel stripping means that will positively strip the teeth of trash, and is so arranged as to not interfere with the rake performing its usual function and also automatically return to normal or inoperative position. The inventor, Ulrich Redit, Box 30, Station H, Los Angeles, Cal., U.S.A., has Canadian and United States patents for sale.

FENCE POST. This invention relates to metallic fence posts, the main object of my invention being to provide a post which can be easily stamped out of sheet metal. A further object is to provide means for retaining the wire to said post without kinking the wire when passing through said post. For full particulars regarding Canadian patent, write George B. Clarke, Winnipeg Street, Penticton, B.C., Canada.

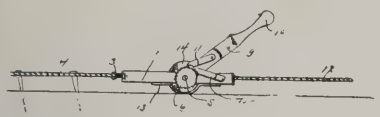


IDLER PULLEY STRUCTURE. My invention relates to idler pulley structures and covers improved construction and arrangement whereby a pulley wheel may be adjusted through a wide range for directing and guiding the driving belt connecting pulleys on shafts between which power is to be transmitted. One of the objects of my invention is to provide such construction and arrangement that the pulley wheel can be rotated bodily through a complete circle and with the centre of its face always in the axial line around which the pulley is bodily adjusted. For particulars of this invention, write Moline Mill Manufacturing Co., Moline, Illinois, U.S.A.

DETACHABLE CHAIR BOTTOM. This invention provides a means whereby the chair bottom may be replaced or changed easily without affecting any of the other parts or disfiguring the chair. Owing to the simplicity of this construction it should be a good seller when properly introduced on to the market. Full particulars can be had from the inventor, John W. Henry, 675 West 159th Street, New York City, N.Y., U.S.A.



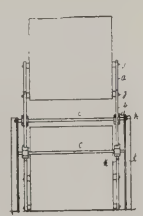
LEVEL. This invention relates to levels, and has for its main object to provide a level of simple and inexpensive construction, and one which will be of use to mechanics or others working on foundations, railroads, highways, or other such constructions where levels are to be taken. A further object is to provide a level for surveying purposes where various angles can be obtained by the movement of plates on which the sighting barrel is mounted. Write Bartlett C. Goodwin, R. R. No. 1, Granville Ferry, Annapolis County, N.S., Canada, who has Canadian patent rights for sale.

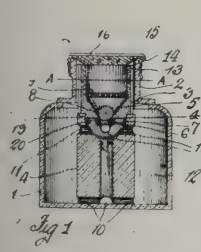


OVERSHOE ATTACHMENT. It is the object of this invention to provide an overshoe attachment, including a bail which can be made cheaply, without the use of a die in the formation of the arms of the bail. Within the scope of what is claimed a mechanic may work changes without departing from the spirit of the invention. Canadian and United States patents for sale by William H. Tillson, G. D., Quincy, Illinois, U.S.A.

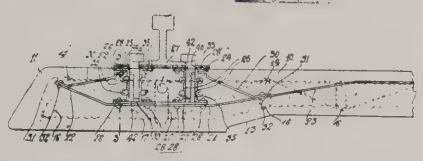
HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE



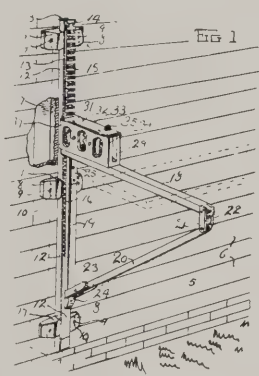


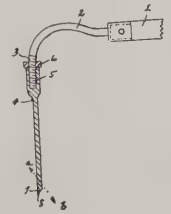
WAGON JACK. This invention relates to wagon jacks and owing to its simplicity and small number of parts and effective operation it should become a large seller on the market and on which there should be a good profit to the distributer. Full details can be had by applying to the patentee, Reginald A. Longley, Paradise, N.S., Canada.



COMBINED AUTO PULLER AND JACK. This invention relates to automobile pullers having primarily for its object to provide an incumbersome structure which may be anchored adjacent to an automobile or other vehicle that might be incapacitated on the road of travel, and placed in connection with a rigid part of the automobile or vehicle, pursuant to which the vehicle may be extricated by a simple manual operation. A co-ordinate object of the invention is to provide a device of the above named character which may be used as a hoisting jack by merely pendently supporting the device above the object to be hoisted and securing the draft cable to the latter, followed by a manual operation to wind up the draft cable with an obvious result. Canadian and U.S. patents for sale by Mrs. Enoch Thompson, Box 90, Taylorstown, Pa., U.S.A.

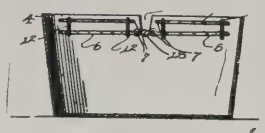
RIFLE TARGET. This invention has for one object to provide in rifle target construction of the type described as oppositely disposed pairs of pivotally supported parallel motion linkages, which are constrained to swing in parallelism by means entirely independent of the target frames, and devices whereby the latter may be supported for rapid and convenient removal and replacement from said means, the latter being preferably adjustable to accommodate targets of varying widths. Canadian and United States patents for sale. For particulars write T. C. Drury, 168a Marcil Avenue, Notre Dame de Grace, Montreal, Quebec, Canada.



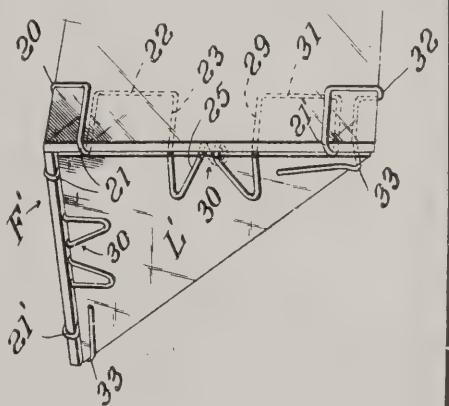


INKWELL. This invention provides a means whereby the writing fluid may be supplied to a pen without the necessity of having to project the pen into the body of the bottle. Full details and sample may be had from Miss Minnie Smith, 115 19th St., College Point, N.Y., U.S.A., who has Canadian and U.S. patents for sale.

CONCRETE RAIL TIE. My invention relates to a railway tie. Among the main objects may be mentioned the provisions of a simple, efficient and generally improved concrete or other composite tie, suitably reinforced by metal and yet permitting the use of a mold for its formation; the provision of the novel rail fastening means hereinafter described and the provision of the additional advantageous features to be pointed out as the description progresses. Copy of Canadian and United States patents can be had from Uriah O. Long, 7524 Sunset Blvd., Los Angeles, Cal., U.S.A.

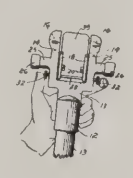


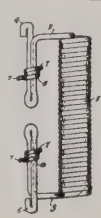
BUILDING SCAFFOLD. This invention relates to an improved adjustable and knockdown scaffold, which may be readily folded when not in use, but will be positively held against possible collapse while being used. John E. Yeagley, Ashland, Ohio, U.S.A., has Canadian and United States patents for sale.



HOE. This invention relates to an improved convertible self-grinding hoe, and an object of the invention is to provide a device of this kind in which the hoe blade, after it becomes worn on its outer face adjacent the cutting edge, may be reversed, hence providing a new cutting edge, and allowing the outer face near said edge to again become worn or ground. This use of the hoe blade may continue until the blade has been substantially entirely consumed or worn away. Canadian and U.S. patents for sale. Write Alexander Norris, Dexter City, Ohio, U.S.A.

AUTOMOBILE HOOD. This invention relates to automobile hoods and has for its object a hood provided with a concealed hinge at its top where the two leaves hinge together. It has been customary heretofore to use at this place an exposed hinge. The concealed hinge or watershed hinge that has been used at the sides of the hood has been an impossible construction for use at the top of the hood, for it will not open out in the proper direction, and if used at all at the top would have to have its parts exposed instead of being under the hood, which is necessary to make it concealed. For full particulars of this write Ferdinand Drlica, 588 Roosevelt Avenue, Detroit, Mich., U.S.A., whose Canadian and United States patents are for sale.

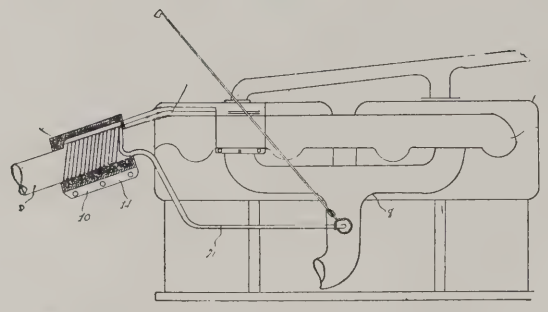


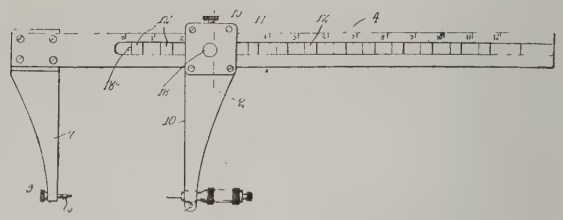


COOKING UTENSIL. This invention relates generally to cooking utensils and more particularly to certain new and useful improvements in broilers. The object of the invention is to provide a broiler of simple, cheap and durable construction, and one which will be well adapted for the purpose for which it is designed. Write for particulars to Josie M. McCulloch, Chula Vista, Cal., U.S.A. Canadian and United States patents for sale.

LIGHT HOLDER. My invention is an improved type of holder for retaining an end light at the end of a housing constructed of transparent panes disposed in angular relation, said housing being adapted to be placed over growing plants to promote growth. The object of the invention is to provide simply constructed holders which may be inexpensively manufactured and marketed, yet which, regardless of these characteristics, will be highly efficient and durable. Canadian and United States patents for sale. Write Edmund S. Boyer, Fewacres, Exeter, N.H., U.S.A.

PICTURE HANGER. This invention relates to improvements in picture hangers and has for its object to provide a device for hanging pictures and the like, for example, on the molding usually provided for this purpose. A further object is to provide means for attaching a picture hook to the moulding. Write Andrew M. Anderson and Nils T. Norbeck, 583 Gregory St., Bridgeport, Conn., U.S.A., for particulars regarding sale of Canadian and United States patents.



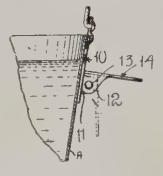


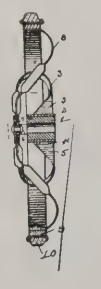
HANDLE FOR CANS. This is one of the simplest and most efficient handles for cans. Its usefulness is only apparent when the article is seen. It can be spaced to fit various sized cans, and the time required for such is only a few seconds. There is no adjusting matter of clamping the handle to engage the upper end of the can. For particulars of Canadian and United States patents, write John A. Easton, Waiuku, Auckland, New Zealand.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

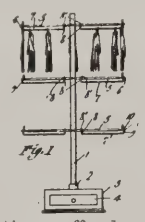
PATENTS FOR SALE

GAS ENGINE ATTACHMENT. This invention relates to internal combustion engine attachments for assisting in causing a greater explosion in the cylinder. The object of my invention is to provide a device which takes the heated air from the exhaust pipe and discharges the same in the manifold. A further object is to provide a device which assists in breaking the gasoline vapor into minute particles by mixing preheated air with it. Write the inventor, David J. Sharp, 110 Bayswater Avenue, Ottawa, Ontario, Canada, for particulars regarding Canadian patent.



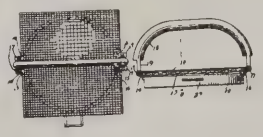


CALIPER. This invention relates to improvements in calipers, which are adapted to receive and co-operate with a micrometer head whereby small fractions of an inch may be measured. The object of my invention is to provide a simple construction which can be easily repaired and one which will not be expensive to manufacture. A further object is to provide a tool which can be adjusted to receive a plain micrometer or a threaded micrometer. Write Joseph W. Lovell, St. Catharines, Ontario, Canada, for particulars regarding Canadian and United States patents.

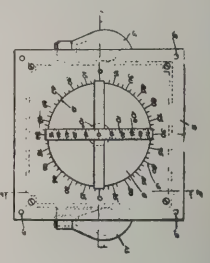


TIRE TREAD. This invention relates to tire tread and provides a cable of proper thickness and fineness of wire which will render the tire puncture proof. The construction of the tire is simple, and owing to the increased mileage it should prove a great seller on the present market. Write James W. Taylor, Dudley, Idaho, U.S.A., Canadian and United States patents for sale.

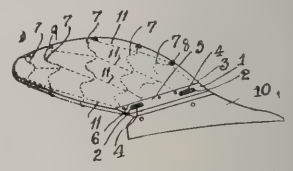
MILK PAIL SUPPORT. This invention provides a simple and efficient milk pail support which will fit over the knees when in sitting position, and will thus eliminate the necessity of inward pressure by the knees for holding the pail firmly while milking. This support can be easily attached to metallic pails or pails of other construction. Canadian and United States patents for sale. Write Abner E. Gale, R.D. No. 2, McDonough, N.Y., U.S.A.



SPRING WHEEL. This invention provides a series of bow springs diametrically fastened to the felly, which, with other co-operating parts, make a simple and efficient construction, and when properly introduced on to the market should make a good seller. For full particulars write Frederick B. Spross, Churchville, New York, U.S.A., who has Canadian and United States patents for sale.



DISPLAY RACK FOR GLOVES. The present invention appertains generally to display racks, and aims to provide a device of that character constructed especially for displaying gloves in an effective manner, and enabling a selection to be conveniently made without the unnecessary handling of the gloves. This invention affords practical and efficacious means for holding and displaying various sizes, styles and prices of gloves or equivalent articles, to enhance the selection of the gloves, both by the salesman and customer. Canadian and United States patents for sale. Write Walter M. White, Rockymount, Virginia, U.S.A.



TOASTING DEVICE. This invention relates to improvements in toasting devices and particularly to devices for toasting bread or for roasting or baking potatoes. One object of the present invention is to provide a novel and simple device of this character which can be placed on the top of a cook stove to toast bread and without danger of burning the bread. Another object is to provide a device of this character which is readily adapted to be placed in the oven of the stove for the purpose of baking potatoes or other articles of food. Full particulars can be had from John W. and Anna E. Bowers, Normal Hill, Kutztown, Pa., U.S.A., who have Canadian and United States patents for sale.

INCLINOMETERS. This invention relates to inclinometers. It was particularly designed for use in aeroplanes. The instrument can also be used in vessels of all kinds to show whether they are properly loaded. If a vessel is not loaded on an even keel the variation from level will show on the instrument. Full particulars may be had from the patentee, Frederick W. Charles, 1514 Westlake Avenue, Seattle, Washington, U.S.A., who has Canadian and United States patents for sale.

CULINARY ARTICLE. This invention relates to culinary articles, and it is the dominant object of the invention to provide a device for mixing and shaping Mexican nixtamal tortillas for enchiladas, tamales, gorditas de cuajada, pan de maiz, and other Mexican pastry edibles made from nixtamal. Canadian and United States patents for sale. Write Eulogio Luna, P.O. Box 313, Marfa, Texas, U.S.A.

PLOUGHS. This invention relates to ploughs and more particularly to an apparatus for holding plastic material on the mold board so as to make the plough more serviceable. Full particulars regarding Canadian and United States patents can be had from the patentee, George P. A. Weisenborn, Salt Lake City, Utah, U.S.A.

Canada's Industrial Expansion

A Record of Progress

New Lamp Factory

Coleman Lamp Company, Limited, Locate Canadian Branch in Toronto

The Coleman Lamp Company, manufacturers and wholesalers of gasoline and kerosene lamps and lanterns, have established a branch factory and office in Toronto where they will manufacture their products for distribution in Canada. W. C. Coleman, president of the company, came to Toronto and established the branch, and a factory has been erected at Queen St. and Davies Avenue. H. H. Minard is vice-president of the Canadian branch, and E. D. Ranck is secretary-treasurer. The former will be in charge of manufacturing, and the latter will supervise the Toronto office and sales.

The Coleman Lamp Company, Limited, though connected with the parent company at Wichita, Kansas, is a purely Canadian concern. The building they have erected is illustrated here, and sufficient ground has been purchased to allow this plant to be quadrupled should increased business warrant it.

The scarcity of houses in Toronto made it necessary for the company to purchase eight lots in the Broadview-Danforth district, on which apartment buildings are now being erected to accommodate the foremen and their families. These apartments are up-to-date and will be centrally heated, so that the men will have comfortable living conditions upon their arrival. It is expected that nine or ten families of departmental foremen will be brought from other factories to Toronto. Besides the plant of the parent company at Wichita, there are branch factories in Toledo, Chicago, Dallas, Los Angeles and Atlanta.

The Coleman Lamp Company manufacture table lamps and lanterns of 300 candle power. They do a considerable amount of export business, shipping 6,000 lamps to England, 5,000 to China, and 5,000 to India monthly, while they have agencies in almost every country in the world.

According to E. D. Ranck, secretary-treasurer and sales manager of the company, Toronto was selected as the logical location of their plant because of its central position in Canadian financial and industrial circles. Another inducement which affected the decision was the supply of cheap power available in that city.

A Product of the Coleman Lamp Co., Ltd.

First Building Completed

Modern Structure at Hamilton for the Carr Fastener Company of Canada, Limited

The first building of the new plant at Hamilton, Ontario, recently completed for the Carr Fastener Company of Canada, Limited, makers of the "Dot" line of fasteners is described by Lockwood, Greene & Company of Canada, Limited, the industrial engineers who planned the factory, as being a modern and up-to-date structure in all respects. Not only does it provide efficient housing for machinery and workers, which is the first, and some think only, duty of a factory, but also, with very

little additional expense, the building was made pleasing in appearance. The location, with the main entrance desired at the intersection of two streets, permitted special treatment of that corner of the building. The use of buff facing brick, with tile inserts, allowed further treatment and gives color and warmth as well as line to the structure.

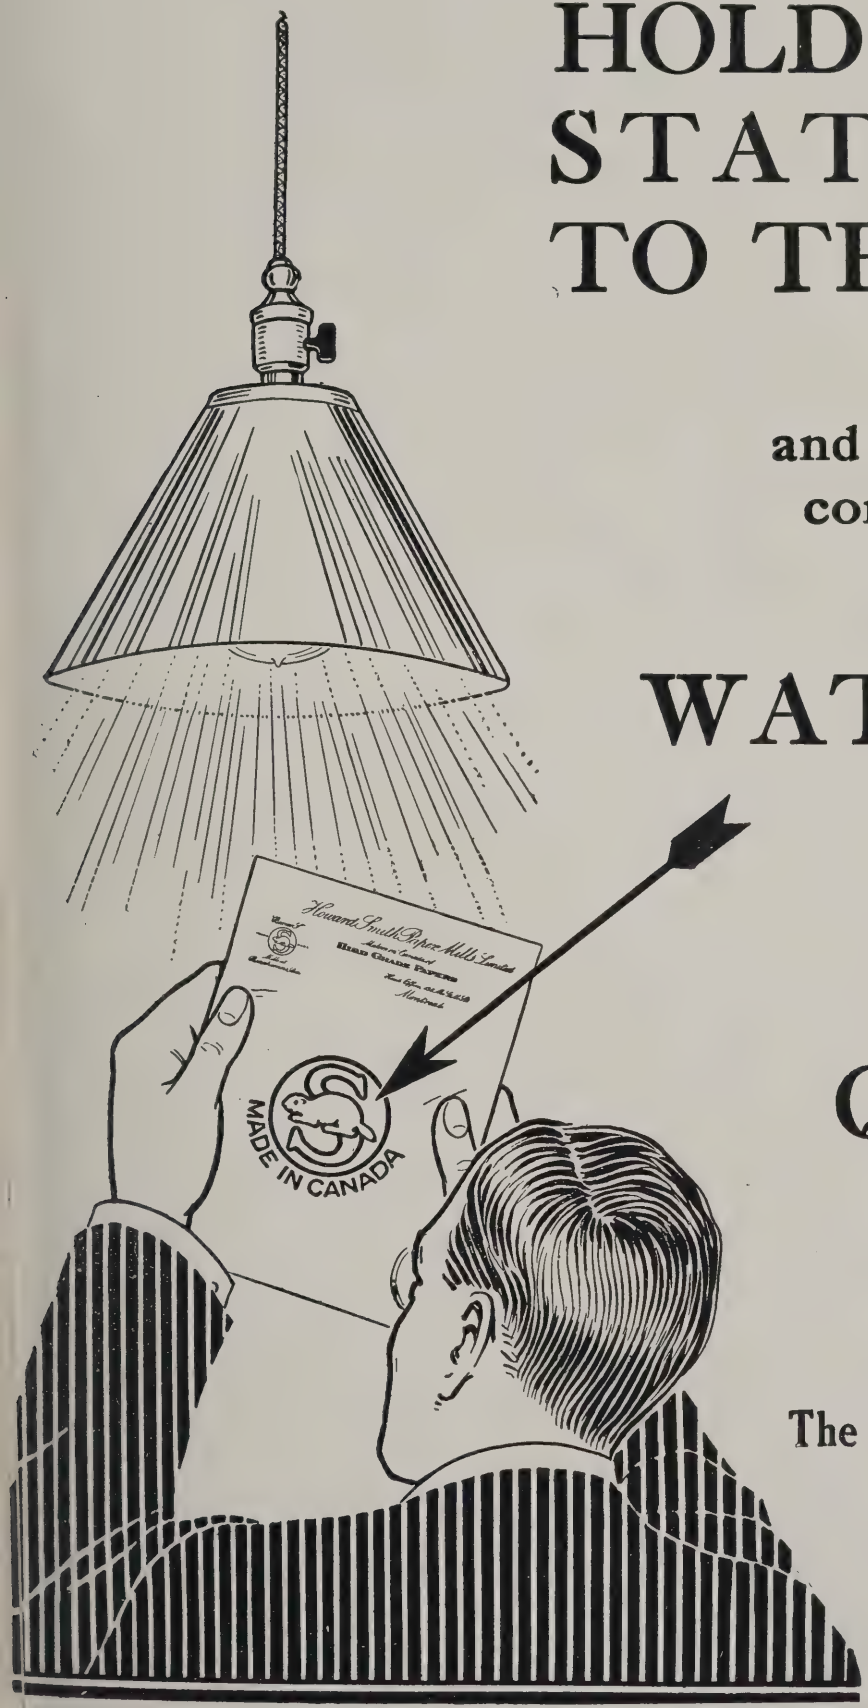
The building itself is a two-storey structure of modern fireproof construction, reinforced concrete, brick and tile being used throughout. It is about 175 feet long and about 72 feet wide and is designed to permit the building of a four-storey extension along one of the two streets on which the building faces. A small basement, only large enough to house the heating apparatus properly, has been provided. The interior of the building has been made as light as out-of-doors by the use of large window openings on all sides, fittted with steel sash; by the flat ceilings obtained by the use of flat slab construction and by the use of mill white paint. Factory rib glass further diffuses the light and reduces possible glare inside the building.

The building is heated by low pressure steam, generated by two cast iron sectional boilers located in the basement. In the summer, hot water is obtained for toilet and manufacturing purposes, by means of a small auxiliary heater. There is also complete equipment for lighting, power, an elevator and sprinklers. The sprinkler tank, located on the roof, is of a capacity and height to take care of a future four-storey building.

Spacious, well-lighted offices are located on the second floor, direct access to them from the street being obtained by means of the main entrance and a wide stairway. The windows in these offices are fitted with counter-balanced sash instead of the standard steel sash as in the rest of the factory. This sliding sash permits the installing of shades without interference from the tipping ventilating sections which are used in the standard sash.

Shipping and receiving are done from the rear of the building on a platform adjacent to the elevator. The labor entrance is located in the stair tower at the far corner from the main entrance.

Manufacture New Products



Port Arthur Shipbuilding Company, Limited, to Produce Pulp and Paper Machinery

In the annual report of the Port Arthur Shipbuilding Company, Limited, for the fiscal year ended June 30th, 1920, the president, James Whalen, announced that it had been found advisable to authorize other work than shipbuilding. Among the new lines, for the manufacture of which the plant was considered suitable, was pulp and paper machinery. Since June 30th the company have retained the services of John W. Brassington as chief engineer and designer of a pulp and paper machinery department. Mr. Brassington, who was previously chief engineer of the American Writing Paper Company at Holyoke, Mass., furnishes the following information about the company's new venture.

"Our plant," he writes, "was originally designed for the building of ships, but the design lends itself to our new product in a manner which is a source of congratulation. We are now developing drawings and making patterns covering all branches of pulp and paper machinery from the auxiliary details, such as suction pumps, chippers, etc., up to the most modern high-speed news machines, book paper machines, board machines, Yankee machines with the various variations of this class of machinery, such as pasting machines, breakfast food cookers and the other numerous branches of the same family which naturally are most economically manufactured in a plant devoted to the manufacture of pulp and paper machinery."

The company have a machine shop with good tools and an overhead crane in which they have built reciprocating engines and all auxiliary machinery necessary for a modern freighter. With the addition of roll lathes and grinders any paper machinery required can be handled, and arrangements have been made for the installation of these.

PURDY, MANSELL LIMITED
Engineers and Contractors
63 ALBERT ST TORONTO, CAN.

In the foundry castings up to a weight of fourteen tons can be made. These are heavier than any needed in paper machines with the exception of the large Yankee dryer. The foundry is now being developed so that its capacity for casting the large dryer cylinders of the paper machine can be quadrupled, and the large Yankee dryer easily cast.

In addition the company have a first-class pattern shop, a large boiler shop with overhead cranes, riveting machines, multiple drills, hydraulic presses, shears and punches, a large punching shed and a large erecting floor. These can all be adapted for the paper machine work, and space is only too plentiful.

The company are confident that the new enterprise will be successful. A reduction in gross earnings was experienced last year due to a decrease in the volume of business. But, to quote from that part of the report which deals with the manufacture of new products: "If nothing unforeseen arises to interfere with plans at present under consideration, which appear as far as investigation has gone to be entirely feasible, developments along these lines may, within a short time, result in an amount of business equal to, if not greater than, the falling off in new construction, and this at a very small additional capital expenditure."

To Make Ironing Machines

American Ironing Machine Company of Chicago Lease Branch Plant in Woodstock

To manufacture ironing machines and a line of medium laundry machinery of special character, the American Ironing Machine Company of Chicago have leased a plant in Woodstock, Ontario, with an option to purchase within one year. The plant has a floor space of 16,000 square feet, is modern and well constructed. Manufacturing operations are expected to start about March and products will be ready for the market around the first of May. About twenty hands will be employed.

There will be a Canadian company formed under the name of the Simplex Ironing Machine Company. Officials of this are likely to be identical with those of the United States Company, but in the event of Canadian capital becoming interested it would be represented on the directorate and probably among the officials. As these have not yet been definitely chosen their names cannot be published at the present time.

Will Manufacture Pulp

Cornwall Pulp & Paper Company, Limited, Soon to Operate Plant at Cornwall, Ontario

A new entry in the Canadian pulp and paper field is the Cornwall Pulp & Paper Company, Limited, who were incorporated on October 28th, 1920, with a capital stock of $200,000. They are closely affiliated with the Niagara Wall Board Company of Buffalo, N.Y., who operate a plant at Penn Yan, N.Y., manufacturing "Niagara" wall board. They are also interested in the Maine Pulp & Paper Company of Skowhegan, Maine, and Buffalo, N.Y., manufacturers of ground wood pulp, newsprint paper, hangings and specialties.

The Cornwall Pulp & Paper Company have leased, with option to buy, a factory building and land known as the Ross property at Cornwall, Ontario. The plant has been completely overhauled, and they are now installing a complete grinder plant for the production of spruce ground wood pulp. The initial installation consists of four four-pocket grinders together with wet machines and other equipment necessary for pulp production. The output will be from 50,000 to 60,000 pounds per 24 hours.

Installation of equipment is now going on and the company propose to be in operation about the middle of January. From 30 to 50 hands will be employed at the outset. It is later proposed to erect and equip a complete paper and board mill.

J. B. O'Brien, president of the Niagara Wall Board Co.,

Do you Work or Worry at your Desk?

With the "Office Specialty" Efficiency Desk you can develop the happy faculty of handling well and easily a tremendous amount of routine work. Like courtesy, it smooths away the countless small irritations that daily interfere with the correct performance of office duties.

The "Office Specialty" Efficiency Desk is a personalized filing case and desk combined. Space is provided in it for the systematic filing of business reports, graphic charts, statistics, clippings, catalogs, follow-up matter, personal items either in card or document form—all within easy arm's reach.

SYSTEM SERVICE—The advice and suggestions of our System Service Experts will be gladly supplied to help you solve your office routine problems. The standardization of forms, the making and filing of records and the organization and establishing of office routine and things concerning which, suggestions of System Service Experts are, while offered free to our customers, of untold value.

Paperboard Companies Amalgamate

Canadian Paperboard Company, Limited, to Operate at Campbellford, Frankford and Montreal

The Canadian Paperboard Company, Limited, have recently taken over the business and operations of the Northumberland Paper & Electric Company, Limited, of Campbellford, Ont., and the Canada Box Board Company, Limited, of Frankford, Ont., and Montreal, Quebec, with mills located at Frankford, Ont., Campbellford, Ont., and Montreal, Que., having a daily capacity of 100 tons.

In addition the company have constructed during the past year, a modern groundwood pulp mill at Frankford, Ont, which will shortly be in operation. This mill is located on the company's property there and is a one-storey stone building with solid masonry walls and concrete floors and roof, making it as near perfection from the standpoint of fire hazard as possible. Boilers equipped with Dutch oven settings have been installed for the utilization of waste and the production of ground wood pulp should be carried on at a minimum of expense.

The daily output of this product will be from thirty to thirty-five tons, most of which will be used in the company's own mills at Campbellford, Frankford and Montreal, but there will probably be a surplus for sale in the open market.

The new plant will give employment to some thirty or forty additional hands. Its cost, when completed, will be in the neighborhood of $150,000.

The other mills of the company are equipped to manufacture all grades of paperboards, including strawboard, chipboard, news board, news lined boards, filled woodboard, folding boards, test board, pasted board, colored boards and white patent coated boards. They are in an excellent position to cater to the demands of the trade in these lines.

The officers of the company consist of: J. G. G. Kerry, president; J. R. Walker, vice-president; Honorable E. D. Smith, J. A. O'Brien, David F. Robertson, directors; C. E. Whitten, secretary-treasurer. The affairs of the company will be under the direction of David F. Robertson as general manager, with their head office at No. 2 Seigneurs Street, Montreal.

Fulton Motors, Limited

Will Locate Canadian Branch in Welland Instead of in St. Catharines

In the November issue of INDUSTRIAL CANADA announcement was made of the location of Fulton Motors, Limited, at St. Catharines, Ontario. This information was premature, and it is now announced by George Day, Industrial Commissioner for Welland, Ontario, that the company will establish their plant in that town.

On November 26th Fulton Motors, Limited, closed their option for the purchase of the land, building and plant of the Canadian Automatic Transportation Company, on Ontario Road. The building is a model piece of factory construction. The land area is 4½ acres and further buildings will be erected upon it.

J. I. Springstead, sales manager of Fulton Motors, states that owing to the interests of their directors further industries are not unlikely to follow. A part of the machinery for the Fulton concern has arrived in Welland. The directors of Fulton Motors are: Garvin Denby, president; A. F. Irwin, C. W. Whitmore, W. H. Hyslop, J. E. Bell, Harold R. Frost and J. I. Springstead.

Oil Company Sold

Winnipeg Oil Company, Limited, Bought by British American Oil Company, Limited

A large commercial transaction was consummated when the assets and business of the Winnipeg Oil Company, Limited, were purchased by the British American Oil Company, Limited, of Toronto. The head office of the former company is in Winnipeg, and over one hundred branches and distributing stations are located throughout the prairie provinces. The British American Oil Company have had a rapid expansion in Eastern Canada during the fifteen years of their existence, and for some time have felt that their programme of service should be rounded out by covering the West. By this deal the British American come into the Western field with a business already well developed. The Western business on the other hand will have the benefit of the British American's experience and refinery facilities as well as connections on this continent and abroad.

Before the war when oil products from the Far East were available the British American sold, in addition to their own lines, certain products of the Asiatic Petroleum Company controlled by the Shell Company of London, for whom they acted as agents in Canada.

When the British American Oil Company started building their refinery on the water front in Toronto it was naturally a little time before all the different oil products could be manufactured to advantage. They therefore looked temporarily to Pennsylvania for some supplies, and this connection led later to the inclusion among their shareholders of Charles L. Suhr, of the Penn-American Refining Company, Oil City, Pa., and Henry McSweeney, of the same place, a large crude oil producer operating in Oklahoma, Texas, Mexico, etc. There being little crude oil produced in Canada, the British American bring their supplies for refining purposes in tank cars from Oklahoma and Northern Texas.

The active officers of the British American Oil Company, Limited, are S. R. Parsons, president, a former resident of Winnipeg, and A. L. Ellsworth, secretary-treasurer. The capital of the British American Oil Company will be enlarged sufficiently to provide for the purchase just made as well as to include large areas of prospective oil producing territories in the Canadian Northwest. Should crude petroleum be found in commercial quantities, refineries will later be established at convenient points in Western Canada.

Messrs. Parsons and Suhr have been in Winnipeg and the west looking over the ground and completing negotiations. The western business will be continued under the capable management of T. H. Payne.

Imperial Oil, Limited

Are Establishing Headquarters for New Marketing Division at Brandon, Manitoba

Headquarters for a new marketing division will be established at Brandon, Manitoba, by Imperial Oil, Limited. A piece of land 202 x 586 feet has been purchased there and will be served by a private siding from the C.P.R. trackage. On this property it is proposed to erect a two-storey, fire-proof office, a large two-storey fireproof warehouse, a fireproof garage probably large enough to accommodate six or eight tank trucks, a suitable boiler and pump-house, and a plant for the repair and care of barrels.

Two ten thousand barrel tanks will also be installed and the necessary lubricating storage plants, twelve of which will be located in the warehouse. The two large tanks will be used for the bulk storage of refined oil and gasoline. Construction will not be started until spring, and, once started, the company expect to put the station in commission by the fall of 1921. Estimates, so far as they are completed at the present time, call for a total expenditure of from $250,000 to $300,000.

Variable Volume Constant Efficiency

THE REES RoTURBo

A Centrifugal Pump for Any Service

IN the "Rees-RoTURBo" we have the very latest development in centrifugal pump design. The disadvantages of the ordinary pump have been entirely overcome and it meets perfectly the conditions of to-day for high efficiency.

The fluid velocities are low, reducing friction losses to a minimum, and there is no wear even from gritty water, and high permanent efficiency is maintained. This means that the "Rees-RoTURBo" is ideal for multi-stage operation and may be said to be a pump for any service.

Should there be any point on which you would like to be enlightened, our engineering department is always at your service and without any obligation on your part we heartily invite enquiries.

DEPENDABLE POWER EQUIPMENT

British Industries Fair

Federation of British Industries offers Accommodation to Canadian Visitors

The Federation of British Industries has drawn the attention of the Association to the fact that the Federation is taking stalls at the British Industries Fair at Birmingham and at London, from the 21st of February to the 4th of March, in order that the Federation may be of as much service as possible to members taking part in the Fair, for it is felt that a large portion of its work will consist in putting members in touch with foreign and other buyers.

The stalls will provide accommodation where members and buyers may meet, where information respecting the Federation and its members may be obtained, and in general will form a convenient headquarters for anyone doing business at the Fair. The Federation has asked the C.M.A. to make this known as widely as possible amongst firms and individuals likely to be visiting the British Industries Fair at either or both of these centres. Any Canadian manufacturers, therefore, who are either exhibiting at, or visiting these Fairs, would be well advised to apply to the Canadian Manufacturers Association for letters of introduction to the Federation representatives. The Federation has stated that if such visitors will go straight to them on arrival either at the head office in London, or at the stalls in the Fairs, they will be able to save them much time and trouble and ensure their being put in touch with the best people.

In the matter of securing accommodation, if they have difficulty, the Federation will be glad to help them, provided they have reasonable notice. If intending visitors will let them have beforehand some information respecting the types of goods they are interested in, definite appointments will be made and suitable literature and facilities placed at their disposal.

The Federation intimates that it desires to be of the greatest possible help to any visitors from Canada who may go there. While the Federation is not taking a stall in the Glasgow Fair, its District Representative will be glad to extend every possible facility to Canadian visitors to Glasgow.

The Metric System

A French view of the English System of Weights and Measures

Writing in *Produire*, a journal published in Paris and devoted to modern machine shop practice and machine tools, Mr. L. Descroix, its editor-in-chief, has the following comment to make on the relative merits of the metric and the English systems of weights and measures:

"The group formed by the Anglo-Saxon nations, being to-day industrially and commercially the strongest, does not at all care to change, at a cost which is beyond calculation, its economic and technical equipment.

"Personally, we are convinced that the metric system nevertheless will become, in spite of the shortcomings attributed to it, the universal system of weights and measures for scientific uses; to the English system will remain the vast field of commerce and industry.

"It is thus that the Latin countries of Central and South America, contributary as they are to the commerce of the mechanical industries of North America, are obliged to use two systems, having adopted the metric system, they support the English system, willing or unwilling (nolens volens).

"He (the peasant) has been taught the metric system and good French at the village school; nevertheless he retains his local measures and his dialect because he has been brought up on tradition and belongs to an old civilization.

"Our Anglo-Saxon friends can hardly blame him for this.

"Let them, therefore, frankly admit that our metre, our acre, our litre, our kilo, are practical units, but that for them the hour has passed to choose (the metric system). Shall they abandon their traditions? Shall they throw on the scrap heap the tools of their economic fabric which represents hundreds of billions of francs? We have not the right to ask of them such a sacrifice."

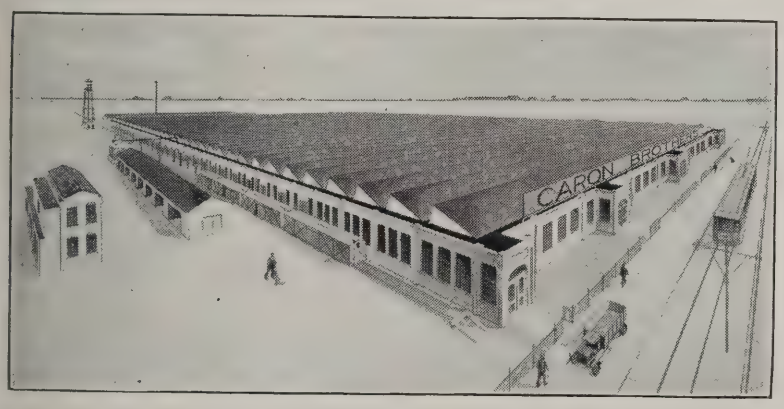
A Vindication for the C.M.A.

Editorial in Toronto Saturday Night for January 1st, 1921



The game of sniping at the Canadian Manufacturers Association has become so popular in pulpit, press and platform that a stranger from Mars might imagine that the buccaneers of the Spanish Main were meek and devoted curates in comparison. When they were straining every effort to secure labor and paying higher wages than had previously been known, they were "profiteers"; now that world conditions have rendered readjustments both of wages and production inevitable, they are denounced as something worse. The percentage of people who take the trouble to seriously consider what the industries our manufacturers have created mean to the country as a whole, and what the Canadian Manufacturers Association has done to help Canada "carry on," during the most difficult period in her history, is lamentably small. The dawn of a new year seems an appropriate time to survey the services of a much criticized class; and material for such a retrospect is to be found in a statement recently issued by the manager of the Intelligence Branch of the C.M.A.

Those who were privileged to know something of the worries which assailed the Government of Canada during the long sustained crisis which began in the summer of 1914 were aware that the armistice of November, 1918—though it brought great relief of mind, because slaughter had ceased, and fear of defeat forever ended—created a new set of anxieties for those entrusted with the task of administration. The question of how to weather through the period of reconstruction was an appalling one for mariners in charge of the ship of state. The task would have been an impossibility had they not been able to rely on the strong men of the country to keep their heads steady and render all the help they could. Upon the manufacturers of Canada a special pressure lay, for a sudden abatement of the large export trade that had been created during the war would have been disastrous. Moreover, popular sentiment in Canada, as in all other countries, is curiously fickle and inconsistent. Any Governmental measures to help and maintain other interests meet with popular approval; but steps to assist manufacturers to maintain production and wages at once cause the cry of "Stop thief!" to be raised by every crank and every out-at-elbows politician in the land. Nevertheless, the record of the manufacturers in helping Canada to "carry on," has been splendid. If they had been the gross and bloated "profiteers" dear to cartoonists, they might have been expected to hibernate like the bear and live through the time of storm and trouble on their own fat.

They did nothing of the kind. During the two years that have elapsed since the armistice, they have spent more money in efforts to develop Canadian export trade than in any previous decade. Their enterprise was justified, because trade returns show that in the last financial year, exports of Canadian manufactured goods were ten times the total for the year immediately preceding the war. They practically equalled the exports of Canadian agricultural products—the total value of all exports having been about one billion, two hundred million dollars. Such figures are an answer to those who are inclined to regard other Canadian interests as negligible in comparison with agriculture.

How far our manufacturers will be able to keep up the pace during the coming year is, of course, problematical. But in many important lines in which she was not seriously regarded as a competitor for export trade seven years ago, the name of Canada is now established in the markets of the world. Competition is certain to increase as various European countries, in which industrial production was arrested, are restored to a producing and exporting basis.

But Canada is fortunate in one respect. Her machinery and organization for production and marketing are on a broader and more efficient basis than ever in the past. Since 1913 a Government fleet of 63 steel freighters has come into existence with the definite purpose of serving as carriers of

PLANT FOR SALE

Canadian goods, and equipped with passenger accommodation and sample rooms primarily intended as assist in the Canadian campaign for wider markets. The factories of this country are much better equipped than they ever were in the past; and the labor problem, long a serious obstacle to trade ambition, is showing symptoms of solution. While it would be foolish to minimize the hazards that a prospective period of deflation holds, Canadian manufacturers, if they persist in the same courageous courses that they have developed in recent years, should continue as a great and indispensable factor in Canada's progress.

The Bonus System

The Banwell, Hoxie Wire Fence Company's Method of Securing Good Industrial Relations

A system of bonuses for employees is in force with the Banwell, Hoxie Wire Fence Company, Limited, at Hamilton, Ontario, and is found to work out very well. On several occasions bonuses have been paid, graded in amounts according to the length of service and position of the recipients. Recently a banquet was given at the Royal Connaught Hotel, to the employees, at the conclusion of which speeches were made and the bonus cheques presented.

The bonuses paid for the past year were as follows: Each employee with one year of continuous service to his credit received 5 per cent. of wages earned; those with three years' continuous service received an addition of 7 per cent. to their yearly earnings, while employees who had been with the company for five years were rewarded by a 10 per cent. bonus. An extra 1 per cent. was given for each year over five to those who had more than five years' continuous service.

J. Frank Walker, secretary-treasurer of the Banwell, Hoxie Company, gives the following statement about the scheme's advantages:

"The benefits derived by us from the above system are as follows: (1) Employees have hesitated to leave our employment and thus lose their service standing, even when they have been tempted with premium wages for their services.

"(2) Employees have been more diligent in their endeavors to earn piece-work wages because of their consciousness that the greater their weekly earnings were the greater their annual bonus would be.

"(3) Employees were tempted during the year by agitators to go on strike for an eight-hour day. We were successful in showing the men that by working ten hours per day they gave us more production which enabled us to pay better bonuses, and at the same time increased their own wages and by so doing increased their bonuses as well.

"The above system has been used by us for three years, and, while we have not adopted it positively for the future, we have found it to be a very good thing and will try to keep it in force if conditions will permit us to do so.

"During the recent period of high costs we have undertaken to buy, in a co-operative way, for our employees, certain cereals, canned goods and other groceries in which we find some of the storekeepers profiteering. This has been very much appreciated by our employees."

A recent bulletin of the Herbert Morris Crane & Hoist Company, Limited, illustrates the Morris travelling worm-gear chain-block. A new booklet gives prices for this and other products of the company.

L'Air Liquide Society announce that their Sudbury plant, their eighth factory to be erected, is now in normal operation for producing oxygen and practically ready to produce acetylene also.

According to a statement prepared by the British Columbia Salmon Canning Association, the total salmon pack for 1920 was 1,177,045 cases. At the prevailing market prices this gives the season's pack a selling value of $13,307,719. The 1919 pack amounted to 1,393,154 cases.

Dividend is Increased

Dividend of Dominion Glass Company, Limited, Raised to Six Per Cent.

When the directors of the Dominion Glass Company, Limited, met in Montreal on November 18th, they raised the dividend on common stock from 4 to 6 per cent. Such action on the part of the executive of the enterprise has been anticipated for many months past, the excellent earnings of the company forming the basis of expectations in this respect. The policy of the Dominion Glass has been laid along conservative lines, the last available annual statement showing that the company had established a new reserve account of $500,000 in the 1919 period, indicating that it was the intention of the board to place the concern in a strong financial position before yielding to the impulse to increase the distribution among shareholders of the splendid results obtained through operations.

Halifax Shipyards, Limited

Satisfactory Year, Good Surplus and Promising Outlook Reported at the Annual Meeting

At the annual meeting of the Halifax Shipyards, Limited, held in Montreal on December 14th, the president, Horace B. Smith, reported a satisfactory twelve months' operations. The net result of the year as shown in the annual report, was a substantial surplus, with a promising outlook for the coming year.

President Smith in his address to the shareholders present stated that the *Canadian Signaller*, constructed for the Canadian Government Mercantile Marine, a ship of 8,300 tons dead weight carrying capacity, had been constructed, launched and delivered during the period covered in the report. The vessel, he stated, had conformed to the highest classification of Lloyd's.

Two other ships, Mr. Smith said, of 10,500 tons capacity each were in course of construction at the shipyards of the company and it was anticipated that delivery of these would be made by June of next year. In addition, the Halifax concern has a large volume of repair work on hand.

Mr. Smith also reported that the company have in prospect orders for the construction of five large oil tankers, the booking of which is almost consummated. This work will be sufficient to keep the Halifax yards, as well as those of the Davie Company at Levis and the Tidewater Company at Three Rivers, busy during the whole of the coming year.

Altogether, Mr. Smith reported, the outlook was bright; 2,000 men were being employed at Halifax, and he regarded the future with optimism.

The following board and officers were elected for the ensuing year: Horace B. Smith, president; J. F. M. Stewart and M. J. Haney, vice-president; Fred Pearson, R. M. Wolvin, J. W. Norcross, F. S. Isard, W. E. Burke and J. Norris.

The Cross Fertilizer Company, Limited, of Sydney, Nova Scotia, are planning to establish a factory at Welland, Ontario, for the production of chemical fertilizers. The ground has been bought, and in April, when the company's technical man is expected to arrive from England, plans will be drawn. It is hoped to start building operations early next summer.

Manufacturing industries of New Brunswick increased from 628 in 1905 to 1,363 in 1918, while the value of output increased from $23,133,951 to $66,855,078. At the present time there are about 20,000 persons employed in industrial concerns on a payroll of approximately $17,000,000. In St John City the establishments have increased from 114 in 1905 to about 275 at the present time, while the output has increased from $7,000,000 to about $20,000,000.

MOTOR TRUCKS SEALED AGAINST OVER-SPEEDING

Who would think of applying life insurance to a motor truck?—The builders of the Mapleleaf did.

They saw that many a good truck has had the long end chopped off its life by reckless speeding on the homeward journey.

And so they built a governor into the engine and sealed it at safety speed right here in their Factory.

That is just one of the things that prolong the Mapleleaf's working days.

Earnings Are Doubled

Prosperous Year Shown in Annual Report of Wayagamack Pulp & Paper Company, Limited

A large gain in gross and net earnings is one feature of the Wayagamack Pulp & Paper Company, Limited, report for the year ended November 30th, 1920. The total assets at the end of the year amounted to $14,725,259 compared with $11,989,382 a year previous. The enlarged production and earning power was obtained from the existing plants of the company as proposed additions will not be in operation till the spring of this year.

The profit and loss account shows that the gross income for the year amounted to $2,152,707, as compared with $1,103,687 in the previous year. The net earnings were $1,108,807, equivalent to 22.17 per cent. on the outstanding common stock, and compared with $551,587, equal to 11.03 per cent. last year.

The general statement of assets and liabilities also shows some changes, representing the very much larger business which the company is now handling. Total current assets now stand at $4,445,627, and compare with $2,652,253. These compare with current liabilities of $2,337,173, against $585,095 a year ago. The current assets and current liabilities represent in particular the large addition of materials on hand, and the temporary financial arrangements which have been effected to provide for their purchase, in anticipation of additional financing, which will be carried out by the shareholders of the company.

In inventories, the pulp wood, logs and lumber holdings stand at $1,751,884, compared with $722,694; stores, chemicals and fuels, $1,071,950, up from $303,577; logging expenses season 1920-21, $531,667, against $417,528. In current liabilities, accounts payable stand at $937,836 up from $510,095. This year there also appear bills payable, including payments on account of limits, $240,500, and bank loans current for purchase of limits, $600,000, against the purchase made during the course of the year. Reserve for war taxes, 1919-20 amounted to $413,837.

New Management Announced

Whalen Pulp & Paper Mills, Limited, Appoint Reliance Corporation as Manager

Management problems for the Whalen Pulp & Paper Mills Limited, have been solved by the special committee of the directors of the company, who have engaged the services of the Reliance Mill & Trading Corporation of New York to take charge of the manufacturing end of the business. Recently Sir George Bury resigned from the position of president and managing director, and was succeeded by Hon. T. W. McGarry as president. The problem then was to secure a manager. Mr. McGarry, W. D. Ross and James Whalen directors, visited the plants in British Columbia, and their visit was followed by a careful inspection by special sulphite men. The selection of the Reliance Corporation has since followed.

At the head of the Reliance is John Ball, president, who was formerly with Price Bros. & Co., Quebec, and is highly regarded as a pulp and paper manufacturer. Vice-President E. M. Waite was formerly pulp-mill manager at the International Paper Company, and also of the Great Northern Paper Company. Both of these men, according to announcement, are to take personal charge of the operations of the Whalen Company, and will be assisted by Mr. Garrigan, an experienced manufacturer of sulphite. The three plants of the Whalen in British Columbia are all on tide-water, and have a total capacity of 70,000 tons per annum. It is the policy of the new management to manufacture up to the limit of capacity.

Tariff Commission Proceedings

(*Continued from page* 143.)

in large quantities and thus decrease costs of production. He gave a large number of statistics to show the extent of the industry.

John W. Hobbs, Canadian Libbey-Owens Sheet Glass Co., Limited, told of the plans of the company for the erection of a large plant in Hamilton and asked for increased protection.

C. N. Sherman, Dominion Foundries & Steel, Limited, gave a review of the extent and operations of the industry and said that without the protective tariff it would not have been in existence.

A. G. Garden, chairman Hamilton Harbor Commission, said that the present activities of the harbor were, in his opinion, due very largely to the manufacturing interests of the city, as was also the rapid growth of Hamilton, which had been built up under a protective tariff.

A. T. Enlow, Dominion Sheet Metal Co., manufacturers of galvanized sheets, told of the establishment of the industry.

T. H. Pratt, general merchant, spoke of the advantages of the home market and said that if the tariff was removed, Canada would be made a slaughter market for the manufacturers of the United States and Europe.

R. Buchanan, machinist, said that the increase in industry and in opportunities for employment was due to tariff protection.

A. F. Hatch, Stanley Steel Co., Limited, said that unless they received more tariff protection, the industry would not prosper.

Nov. 27.—Hon. E. D. Smith appeared as the official spokesman of the jam manufacturers of Eastern Canada. He gave statistics of the industry and showed how disastrous would be the result if production was wiped out. He gave very complete information about the industry.

James A. Livingstone, fruit grower, Grimsby, gave reasons why a tariff should be maintained against southern, western and tropical fruits coming into Canada.

John. B. Bridgeman, also a fruit grower, stated that they wanted reasonable protection for their industry.

H. Ussher, manager Niagara Fruit Co., Queenston, said that it would be a very serious matter for the fruit industry of the country were the tariff to be interfered with.

James Wagstaffe, Wagstaffe, Limited, Hamilton, endorsed the evidence of Senator Smith.

J. M. Piggott, general contractor, said that any change in the tariff would have very serious effects on the building industry.

W. E. Groves appeared on behalf the Canadian Florists' and Gardene Association, asked for certain chang in the tariff by means of which stoc easily raised in Canada might be pr tected and stock not capable of hon production might be given easier entr

R. L. Smith, on behalf of the Reta and Department Store Branch of th Hamilton Chamber of Commerce, pr sented a resolution passed by that bo asking for the withdrawal of the luxu tax.

D. N. Panabaker, R. Forbes Co., Lim ited, Hespeler, appeared for the Can dian Woollen Manufacturers Associ tion and urged the continuance of exis ing duties on woollen products. He w supported by Mr. R. Thomson.

H. G. Smith, chairman of the Knittin Section, Canadian Woollen Manufa turers Association, read a brief on t half of that industry which asked for continuance of protection.

Tariff Department

(*Continued from page* 214.)

gulations in respect of the issue of l enses to firms with branches. The Depa ment states that a manufacturer havi several factories in which are manuf tured articles subject to the manuf turer's tax, is not required to take more than one manufacturer's licen and that a manufacturer, wholesaler

jobber, having more than one factory, branch office, warehouse, sales office or other place of business, is not required to take out more than one sales tax license.

But note that each branch office, factory, warehouse, sales office, etc., is required to have on file a certified copy of the license taken out by the head office. The Collector of Inland Revenue issuing the original license should state therein what other places of business it is to cover and should issue a certified copy for each place. Where the head office of any firm, having branches, has already received its license, notice should be sent to the collector specifying the branches of the company with a request that the necessary certified copies be issued. The certified copies of licenses will be transmitted by the collector issuing same to the collectors of the divisions in which the branches are located and by the latter to the branches.

Where a branch has, in the meantime, applied for and obtained a separate license such branch may apply to the collector who issued the license for a refund of the license fee paid.

The Department states, however, that where a manufacturer has the wholesale or selling branch of his business entirely separate, and charges a sales tax between the factory and the wholesale or selling branch, he shall be required to take out two sales tax licenses—one for all of his factories, and one to cover the wholesale or selling divisions.

Ships' Stores: The ruling on page 12 of our Excise Tax pamphlet that ships' stores and goods sold to barber shops and pursers on ocean liners is cancelled. The Department of Customs and Inland Revenue now states that such goods are not regarded as exports from Canada and that they are subject to Sales Tax.

Sales to Wholesalers.

The Department of Customs and Inland Revenue has ruled that where a wholesaler purchases goods from a manufacturer for resale he must quote the number of his Sales Tax license, and also certify that the goods so purchased are for resale. Failing the fulfillment of either or both of these conditions the sales tax to be collected from wholesalers will be 2 per cent.

Purchases of Goods for Resale.

Manufacturers who purchase goods for resale are considered by the Department of Customs and Inland Revenue, for the purposes of the Act, to be wholesalers or jobbers in respect of such goods. Accordingly, when a manufacturer orders goods which are to be resold by him in his capacity as a wholesaler or jobber, he should endorse on his purchase order a certificate to the effect that the goods covered by the order are for resale in his capacity as a wholesaler and are therefore subject to a sales tax of only 1 per cent.

Where manufacturers are purchasing both raw material and also goods for resale, one certificate may be endorsed their order forms.

A sample form of certificate is gi herewith. This, however, is merely suggestion as any certificate that in cates that the goods are to be used, corporated in or attached to a manuf turer's product or are for resale will acceptable:

We hereby certify that the goods materials on this order are to be us incorporated in or attached to manufactured product, or are for sale in our capacity as wholesalers a are, therefore, subject to a sales tax 1 per cent. only.

Shipping Documents Necessary.

The attention of firms exporting Australia is directed to a regulat which the Australian Government putting into effect on the 1st of Janua 1921.

This regulation provides that goods riving at any Australian port will not delivered until the shipping docume come to hand. No exemptions to t ruling will be made except in the m exceptional cases, and even then extra duty amounting to at least 50 cent. of the ordinary duty will be quired, pending the production of complete documents.

It is, therefore, essential for all porters to Australia to forward the sh ping documents promptly so as to av the goods being held up pending arri of the necessary papers.

Steel for Permanence

The All Steel Elevated Water Tank is the most economical installation for Automatic Sprinkler systems for fire protection, general mill supply, or Municipal Water Works systems.

Its first cost is not excessive, the maintenance expense is very low, and there is no danger of leakage, falling ice, or possibility of the tank bursting or catching fire.

Hundreds of our All Steel Elevated Water Tanks now in service throughout Canada bear witness to these facts.

N. P. Petersen

Will Establish New Factory in England for Gillette Safety Razor Company

N. P. Petersen, plant superintendent of the Gillette Safety Razor Company of Canada, Limited, for the past twelve years, has been selected to take charge of establishing a new factory for Gillette products in England. Before sailing, Mr. Petersen was given an "au revoir" dinner, at which A. E. O'Hara and P. T. Flanagan, on behalf of the factory and office employees in the Canadian plant presented him with a gold watch and chain and a pocket knife. Mr. Petersen expects to return about the beginning of next summer and after a short stay will again cross the ocean to open factories in various countries of Europe.

E. J. Hathaway

Succeeds the Late C. E. Warwick as Secretary of Warwick Bros. & Rutter, Limited

By a recent reorganization of the executive of Warwick Bros. & Rutter, Limited, wholesale and manufacturing stationers, Toronto, E. J. Hathaway was promoted to be secretary in succession to the late Charles E. Warwick, who occupied the position of secretary-treasurer. Mr. Hathaway has been with the firm for upwards of thirty years, having for some years been head of the manufacturing end of the business and the loose leaf specialties. William Warwick, son of the late Charles E. Warwick, is now the treasurer of the company, and H. C. Woods is the managing-director.

Francis Gordon Osler

Appointed to Succeed Sir Edmund Osler on Steel Company of Canada Directorate

Francis Gordon Osler, of Osler and Hammond, Toronto, son of Sir Edmund Osler, president of the Dominion Bank, has been appointed to succeed his father on the directorate of the Steel Company of Canada. Mr. Osler is also vice-president of the Canada Saskatchewan Land Company; director, Canada Permanent Mortgage Corporation; director, Canadian General Electric Company, and a director of the Manufacturers Life Assurance Company.

C. T. Grantham

Resigns the Management of the Empire Cotton Mills, Limited, Welland

The resignation of C. T. Grantham from the position of general manager of the Empire Cotton Mills, Limited, Welland, has been announced. Mr. Grantham came to Welland in 1912 when the company was organized. He built the mills and has since managed them with much success. Annual sales reached about five millions. He is succeeded in the management by James G. Johnston and J. D. Payne.

The appointment of George M. Duck to succeed the late G. E. Henderson as general manager of the Canadian Salt Company, Limited, has been officially announced. Mr. Duck has served the company in various capacities during the last twenty years and was closely associated with Mr. Henderson in its management.

The History of a Word

The trade-mark "KODAK" was first applied in 1888 to a camera for amateur use manufactured by the founders of the Eastman Kodak Company. It was simply invented.

It rapidly became known throughout the world, as the business of the Kodak Companies grew. It, of course, has been registered in all important countries, and is ours in Canada both by such registration and by common law. Its first application was to the Kodak Camera. Since then we have applied it to other goods of our manufacture, as, for instance, Kodak Tripods, Kodak Portrait Attachments, Kodak Film, Kodak Film Tanks and Kodak Amateur Printers.

The name "Kodak" does not mean that these goods must be used in connection with a Kodak Camera, for as a matter of fact any of them may be used with other apparatus or goods. It simply means that they originated with, and are manufactured by, the Kodak Company.

"Kodak" being our registered and common law trade-mark, cannot be rightly applied except to goods of our manufacture.

If it isn't an Eastman, it isn't a Kodak

Deaths Among Prominent Manufacturers

Welland DeVeaux Woodruff

Vice-President and General Manager of Lincoln Paper Mills Company, Limited, Dies in St. Catharines

Welland DeVeaux Woodruff, paper manufacturer, died at his home, DeVeaux Hall, in St. Catharines, on December 13th, aged fifty-nine. He was born in St. Catharines, being the son of the late Samuel D. Woodruff, and was well known all over Canada and the United States as a manufacturer and a clubman.

Mr. Woodruff died after a few days' illness, following a stroke. He was a prominent member of St. George's Church, and philanthropic in a quiet way.

He entered the employ of the Lincoln Paper Mills in 1881, and practically devoted his entire business life to that one industry. For several years he had been the vice-president and general manager of that company, which a quarter of a century ago inaugurated the wage bonus system for employees.

Mr. Woodruff was a Liberal in politics, and in 1908 unsuccessfully contested Lincoln county against the late E. A. Lancaster for the Dominion House of Commons. His wife survives; also three brothers, Alfred and Hamilton K., of St. Catharines, and Dr. Thomas Woodruff, Chicago.

He was manager, president and director of the Lincoln Paper Mills Co.; director Coniagas Mines, Ltd., Cobalt; vice-president Coniagas Reduction Co., Thorold. He was a member of the St. Catharines Club, St. Catharines Golf Club, National Hunt Club (Toronto); Jekyl Island (Brunswick, Ga.); Caledon Mountain Club; Trout Club (Inglewood, Ont.); Niagara Club (Niagara Falls, N.Y.); Country Club (Buffalo, N.Y.); Long Point Club (Port Rowan); Brantford Club, Simcoe Club, Little Cascapedia (Que.); Game Club (Cascapedia, Que.); and Mountain View Country Club (Lewiston, N.Y.).

William Power

Death of President of W. & J. Sharples, Limited, and Power Lumber Company, Limited

The death of William Power, head of the firm of W. & J. Sharples, Limited, Quebec, occurred after a short illness on December 12th. Mr. Power was one of the outstanding figures in the timber trade of Quebec, and his association with the industry, extending over sixty years, was marked by uprightness, high ideals and splendid service. His passing removes one who was in every way a tower and bulwark to the cause which he espoused so early in his career and followed with ability, devotion and faithfulness to the end. It was only a few days before his death that he completed some important business transactions and showed his appreciation of those who had served the firm long and efficiently, by forming a new company known as W. & J. Sharples, Limited, to take over the old business of W. & J. Sharples, Regd. Another company was also organized known as the Power Lumber Co., Limited, for the purpose of purchasing and operating a number of mills, in which the members of the Power family are interested, and the head office of which was to be at St. Pacome.

The late Mr. Power is survived by his widow, four sons and two daughters. The sons are W. Gerard Power of St. Pacome, former president of the Canadian Lumbermen's Association; Joseph Power, Chas. G. Power, M.P., and Frank Power, of Quebec. The daughters are Mrs. M. Barclay of Montreal, and Mrs. F. A. Mosely of Montreal.

The late Mr. Power was a warm worker and enthusiastic endorser of all organizations in the lumber line. He was for

years a director of the Canadian Lumbermen's Association, president of the Quebec Limit Holders' Association, the Canadian Forestry Association, and many other concerns. Mr. Power was also president of the River Ouelle Pulp & Lumber Co., the Lafontaine Lumber Co., and others.

In religion Mr. Power was a devout Catholic. He was a former president and councillor of the Quebec Board of Trade, for many years a councillor of the municipality of Sillery, a member of the special committee of the tercentenary celebration, and a trustee of the Canadian Patriotic Fund. Speaking of his death, a Quebec paper pays the late Mr. Power the following tribute: "His devout faith and unfailing benevolence are an assurance in which those whom he left behind can find certain consolation. From its inception as a boy of eleven until the present time the record of the man is characteristic of the best type of Canadian enterprise and perseverance. It should serve as a model for emulation by the rising generation and example of success for its encouragement."

Herman Heintzman

Vice-President of Heintzman & Company, Limited, Dies at His Home in Toronto

Herman Heintzman, vice-president of Ye Olde Firme of Heintzman & Co., Limited, died on Saturday, December 11th, at his residence, 482 Avenue Road, Toronto, in his sixty-eighth year. Born in 1853, Mr. Heintzman spent the greater part of his life in Toronto. He was a vitalizing force in the firm, which was established over 70 years ago, and he had seen the greater part of its development from small beginnings to its present position. Throughout his life Mr. Heintzman was unostentatious, not a club man, but possessing a strong, genial personality that won for him many warm friendships. He was exceedingly generous, and one of his outstanding characteristics was a quiet habit of always doing good for somebody.

Mr. Heintzman is survived by his wife, one son, Charles, who is connected with the business, and three daughters, Mrs. G. Vandenberg, Mrs. Lindsay Graham, and Mrs. Arthur Edgar, all of Toronto. He leaves also three sisters, Mrs. A. T. Bender, Mrs. Archie Laughrey of London, and Mrs. Chas. Schwenkler; and two brothers, Mr. Geo. C. Heintzman, president of Heintzman & Co., and Mr. Wm. F. Heintzman. A second son was killed while serving in the flying corps during the war.

James Percy McNaughton

General Sales Agent of Dominion Iron & Steel Company, Limited, Dies in Montreal

James Percy McNaughton, General Sales Agent of the Dominion Iron & Steel Company, Limited, died at his residence, after a long illness, on the 21st November.

Mr. McNaughton entered the service of the Dominion Iron & Steel Company in 1903, succeeding to the position of General Sales Agent after Mr. Frank P. Jones became General Manager of the company. During the earlier stages of the company's progress Mr. McNaughton resided in Sydney, but in recent years he had his office at headquarters in Montreal and resided in the city. He was born and educated in Ottawa, and was 53 years old at the time of his death.

Those who knew Mr. McNaughton personally are best able to appreciate his loss to his family, the steel industry in Canada, and to the company whom he has faithfully served since its products were first placed on the market. He was a man who did not seek publicity, but whose integrity and loyalty could always be relied upon, as could also his assistance of a friend in need.

His early death, following that of Mr. Francis H. Whitton of the Steel Company of Canada, measurably thins the ranks of the steel men of Canada, never too numerous, and is a distinct loss to that industry and to his immediate associates in Montreal, Sydney and elsewhere.

The Pulse of Business in Canada

Trade Returns

Increases in Imports and Exports Shown by Trade Summary for November

The summary of Canadian trade for November, 1920, shows an increase in both imports and exports as compared with the month of November, 1919. Among the imports a considerable decline is to be noted in fibres, textiles and textile products, amounting to $1,925,304 in free importations and to $3,884,752 in dutiable goods. Increased importations of iron and steel and manufactures thereof, as well as of non-metallic minerals and products more than balance this decline. Among exports a large gain is shown in agricultural and vegetable food products. Exports of wood, wood products, paper, etc., have also increased. Following are the statistics of trade for November:

Imports Entered for Home Consumption.

	1919.		1920.	
	Free.	Dutiable.	Free.	Dutiable.
Agricultural and vegetable products, mainly foods	$2,409,549	$12,124,988	$2,414,052	$8,468,633
Agricultural and vegetable products, other than foods	4,285,476	2,181,752	2,567,423	3,559,009
Animals and animal products	4,444,459	4,097,043	1,184,988	2,865,977
Fibres, textiles and textile products	6,797,022	14,072,096	4,871,718	10,187,344
Chemicals and chemical products	1,329,022	1,656,922	1,348,311	1,773,620

Railway Earnings

Increase in Gross Earnings Shown by Principal Railways for November, 1920

The gross earnings of transcontinental railways for November, 1920, are greater in each case than those for November, 1919. The following are the figures for the three principal lines:—

	November, 1920.	November, 1919.	Increase.
Canadian Pacific	$23,524,000	$17,101,000	$6,423,000
Canadian National	12,426,824	8,949,583	3,477,241
Grand Trunk	10,400,390	8,203,832	2,196,558
Totals	$46,351,214	$34,254,415	$12,096,799

Trade With France

Canadian Section of the British Chamber of Commerce in Paris Publishes Booklet

A booklet, entitled "How to Trade with France," has been issued by the Canadian Section of the British Chamber of Commerce in Paris, and copies may be obtained on application to the Secretary of the section at 6 Rue Halévy (9 E 11), Place de l'Opéra, Paris. The publication explains what the Canadian Section has done and is doing to promote export trade from Canada to France.

Information is given regarding the commercial treaty between the two countries, and the French tariff and customs regulations. Some useful notes on packing and marking of goods, methods of sale and railroad rates are also given. For Canadian houses the membership fee for the British Chamber of Commerce is one hundred francs per annum, which covers a subscription to a monthly trade report and an annual report. A form of application for membership is to be found in the booklet.

TRADE IN THE FAR EAST

Returned soldier, with four years' experience travelling in Japan, China, Southern India, Malay Straits, and Ceylon, speaking two dialects of the East Indies and a sound knowledge of the crude rubber industry, anxious to secure a position as representative for Canadian firm desirous of doing business importing or exporting in the Far East. Address in first instance, Box 1000, INDUSTRIAL CANADA.

Spanish River News

Christmas Number of Spanish River Company Paper is Artistic Piece of Work

The Christmas number of the *Spanish River News*, the employees' paper, published at Sault Ste Marie by the Spanish River Pulp & Paper Mills, Limited, is a splendid example of the way in which the good-will appropriate to the season may be spread throughout an organization. The cover shows a writing pad on which lies a letter conveying Christmas wishes from the president, G. H. Mead, to all Spanish River employees. Letters from other officers are made features of some pages, while others carry photographs depicting notable events of the year, logging and manufacturing operations, athletic events, etc. The seasonable colors, red and green, have been used effectively for the cover and most of the other pages, and the whole number presents an appearance which should earn for the editor heartiest congratulations.

Recent Trade Inquiries

A List of Inquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC.

610. Western Canada: A manufacturers' agent, with twenty-four years' selling experience from Winnipeg to the Coast, desires to get in touch with manufacturers who are not yet represented in that territory, or who may wish to appoint additional representatives. His references are good.
611. Maritime Provinces: A firm has recently been started in Fredericton, New Brunswick, and are open to represent manufacturers throughout the Maritime Provinces. They would like any interested manufacturers to communicate with them.
612. British Columbia: A firm of manufacturers' agents in British Columbia are anxious to secure the agencies of eastern manufacturers who wish to sell their products in that province.
613. Vancouver: A Vancouver import and export house are well equipped to handle the British Columbia agency for Ontario manufacturers of specialty food stuffs, dry goods or household utensils.

FOREIGN.

614. England: A reliable firm of manufacturers' agents and importers are desirous of establishing relations with any manufacturers in Canada who are not yet represented in England. They are well known to the cabinet trade and its branches having been connected with it for the past twenty-six years. They have also a good connection amongst the fancy goods, textile and glass retailers.
615. Mexico: An import and export house in Mexico offer their services to manufacturers interested in exporting to that country. They specialize in food stuffs and are interested in getting the representation of manufacturers of canned fruits and vegetables. They furnish bankers' references.
616. Foodstuffs, canned goods, etc.: A London firm wish to effect connections with Canadian producers of the following lines for shipment to the United Kingdom and Europe, and would be glad to receive quotations c.i.f. United Kingdom and continental ports, and full range of samples from packers interested: flour, macaroni, corn starch, condensed and evaporated milk, and all kinds of canned goods, especially fruits in syrups; also evaporated apples and other fruits, and lard.
617. Canned fruits and vegetables: A Nottingham firm are open to purchase canned fruits of all kinds, and tomatoes.
618. Agency in Trinidad: A commercial house in Trinidad, B.W.I., desire to secure the agency in Trinidad for a large manufacturer of flour, oatmeal, and cornmeal; also interested in oilmeal, codfish, sardines, wrapping paper, and Portland cement.
619. Meats, canned fruits, vegetables, and fish: A well-established firm of commission agents in Port of Spain, Trinidad, having branch offices in Georgetown, Demerara, and British Guiana, and with travellers visiting Barbados, the Windward and Leeward Islands, and Dutch Guiana, would like to make arrangements to represent a Canadian packing house supplying meats, and also with Canadian companies in a position to supply canned fruits and vegetables, canned fish, etc. This firm already represents two important Canadian manufacturing companies and a well-known British manufacturing company, but would be glad to take on other agencies.
620. Grain, seeds and foodstuffs: An important firm in Antwerp, Belgium, having connections in Belgium, Holland, and France, wish to make arrangements with Canadian firms exporting grain, seeds, and foodstuffs.
621. Food products: An importer in Bordeaux, France, desires to obtain the agency for Canadian firms in all lines of food products.
622. Dry goods: A large firm of manufacturers' representatives in Trinidad, who also cover the neighboring islands, would like to represent Canadian dry goods firms for cotton and woollen piecegoods, linen, hosiery, and shirts. Firm carries a large staff of competent salesmen.
623. Blankets: Two large British firms in Constantinople, with extensive connections, are desirous of receiving particulars from Canadian suppliers of blankets of all kinds with a view to the resumption of normal trade with that centre.
624. Woollen hosiery: A large British firm in Constantinople, with extensive connections, are desirous of receiving particulars from Canadian suppliers of woollen hosiery with a view to the resumption of normal trade with that centre.
625. Textiles: A large British firm in Constantinople, with extensive connections, are desirous of receiving particulars from Canadian suppliers of textiles of all kinds with a view to the resumption of normal trade with that centre.
626. Hot-water heating stoves and hot-air heating apparatus: A British firm wish to be placed in touch with Canadian manufacturers of hot-air heating stoves and heating apparatus. They are very anxious to obtain any pamphlets or catalogues explaining the methods and equipment used.
627. Hardware: Three firms in Constantinople—one a large British concern with extensive connections—desire to receive particulars from Canadian exporters with a view to the resumption of normal trade with that centre.
628. Bedsteads: A firm of merchants and commission agents in Constantinople desire to receive particulars from Canadian exporters of bedsteads.
629. Brushes: A firm of merchants and commission agents in Constantinople desire to receive particulars from Canadian exporters of brushes.

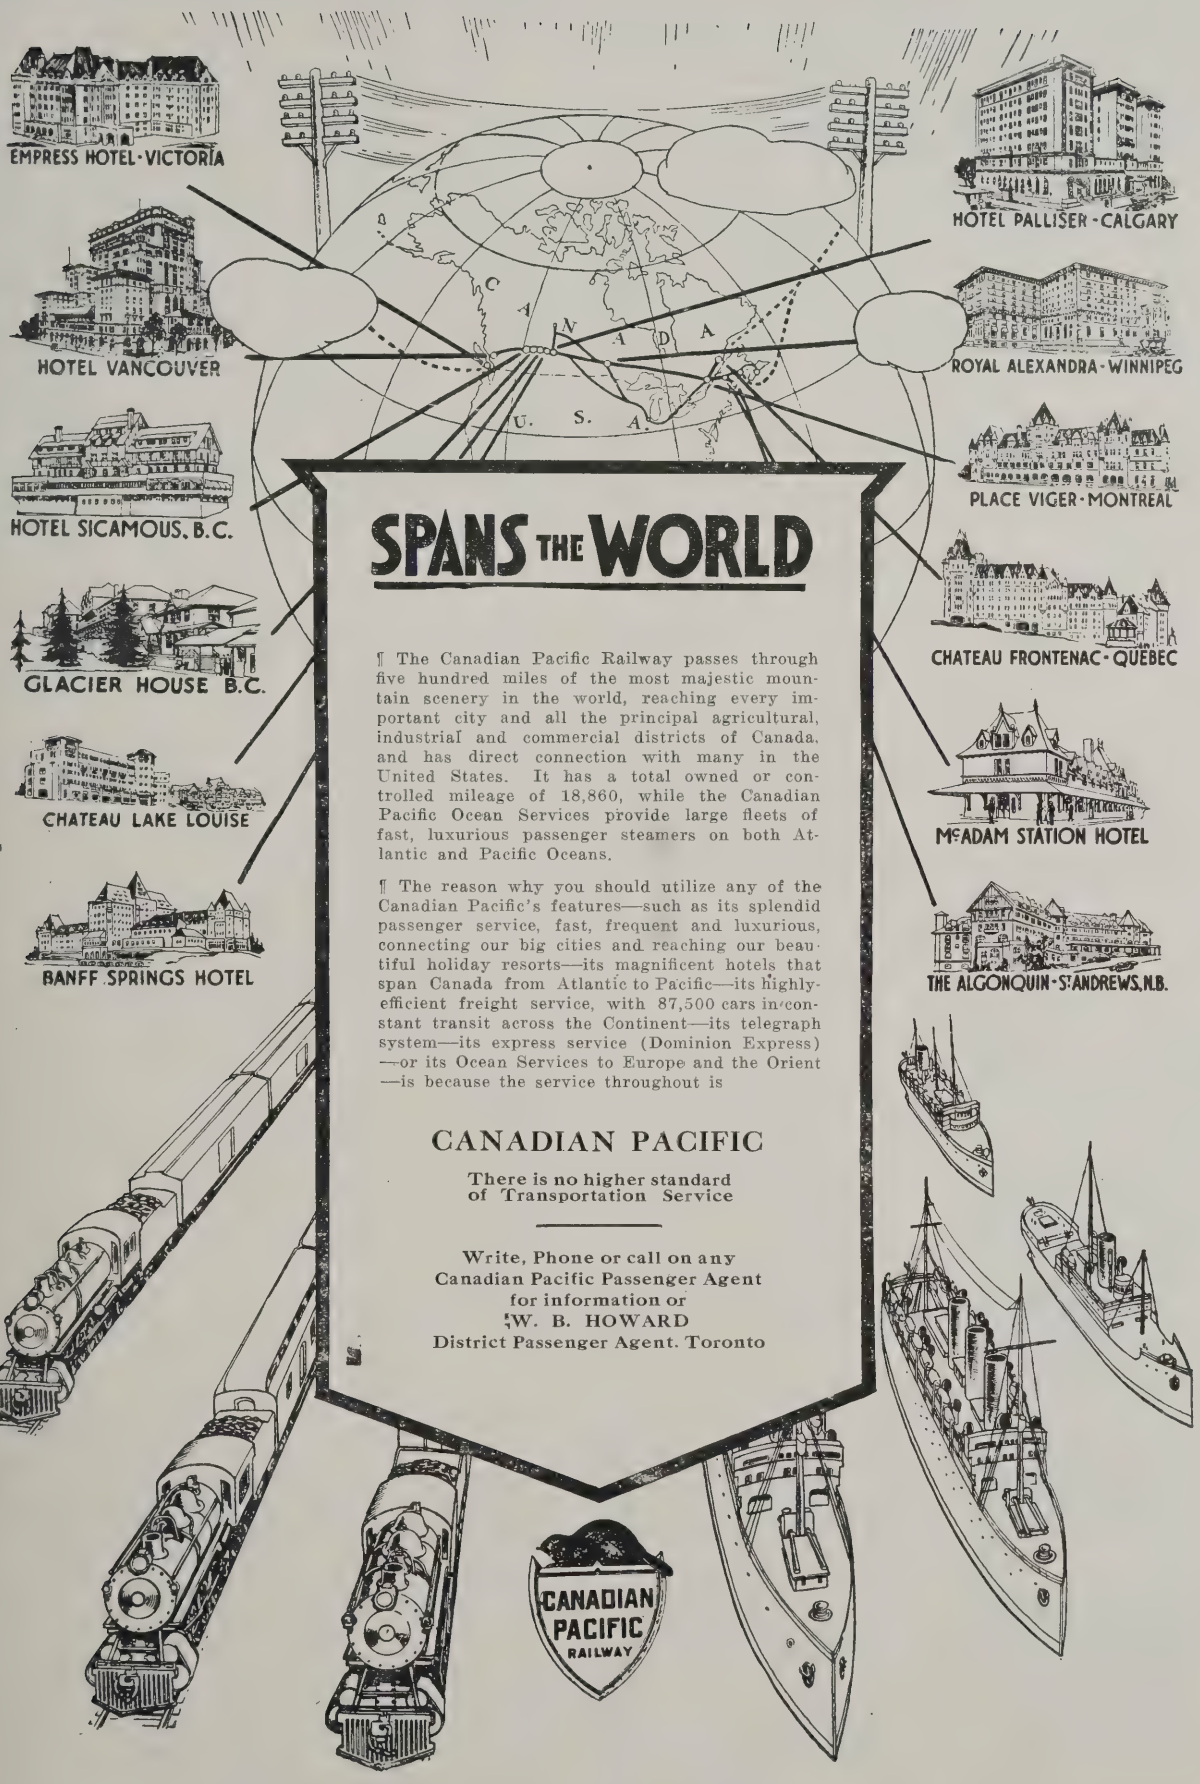
630. Iron pipes: Two British firms in Constantinople, with extensive connections, desire to receive particulars from Canadian suppliers of quarter-inch to three-inch iron pipes (black and galvanized), tubes, and water pipes, with a view to future developments of this trade.
631. Kitchen chairs: A Glasgow importer of furniture is anxious to do business with Canada in one-piece top kitchen chairs. Terms, thirty days' sight draft.
632. Doors and dowels: A manufacturers' agency in London, England, comprised of business men who served in the Canadian Army during the war, have already secured agencies for a number of Canadian lines, and desire to arrange to represent manufacturers of doors and dowels. They ask for sole selling rights in the United Kingdom,and in touch with importers in the United Kingdom who will give very large orders if satisfactory prices can be arranged.
633. Belting. A Nottingham firm are prepared to consider offers of leather belting.
634. Leather: A large British firm in Constantinople, with extensive connections, are desirous of receiving particulars from Canadian suppliers of leather of all kinds with a view to the resumption of normal trade with that centre.
635. Wrapping paper and Portland cement: A commercial house in Trinidad, B.W.I., desire to secure the agency in Trinidad for Canadian exporters of wrapping paper and Portland cement.
636. Canadian commodities: A merchant conducting an exclusively wholesale trade in St. Pierre and Miquelon wishes to represent Canadian exporters of flour, cornmeal, whole corn, feeds, tea, coffee, molasses, barrelled beef and pork, canned goods, leather and rubber boots and shoes, tobacco, cotton sheeting, oil clothes, marine and fishery cordage, dry goods, shingles and clapboards, etc.

International Industrial Fair

First International Fair for Utrecht, Holland, to Take Place in September

From September 6th to 16th, 1921, there will be held in Utrecht, Holland, the first International Industrial Fair, to which Canadian manufacturers are invited to send representatives and exhibits. National fairs have been held in Utrecht since 1917, and in 1919 the exhibitors numbered almost 1,300, including all branches of Dutch industry. As many applications for entrance tickets had been received from abroad and special commercial representatives of various governments had been sent to the fair for the fostering of trade relations between Holland and their respective countries, the directors felt encouraged to plan an international fair for the year 1921.



The advertising literature of the fair points out that Holland is a country of great buying power and sound financial standing, but that several foreign sources of supply formerly available have been temporarily or permanently cut off as a result of the war. Also, though the domestic Dutch industry developed considerably during the war when the country was thrown on its own resources, Holland, lacking raw materials and coal, cannot properly be called an industrial country.

Before the war over 75 per cent. of Holland's imports came from Germany, but with the present unstable condition of the latter country, and the adverse exchange rate, effective competition in Dutch markets is not to be anticipated. Since Holland is forced to import many goods the duties are small, 5 per cent. *ad valorem* being the usual rate.

The directors of the First International Fair have appointed the New York Chamber of Commerce for the Netherlands and the Netherlands East and West Indies, Inc., as their general representative for this continent. The Chamber, whose address is 44 Beaver St., New York City, will shortly issue a pamphlet containing full information about the fair and the conditions upon which foreign companies may exhibit their goods. The pamphlet will also contain statistics showing the selling opportunities on the Dutch market.

Allotment of space in the fair will be made in the order of receipt of the stamped application forms. Allotments will be begun on April 1st, 1921, and participation after that date will be granted only as far as available space remains. The amount of the rent for sample rooms, table spaces and spaces in the open air is payable in one lump sum on February 1st, 1921. Each applicant will be notified before January 15th whether or not participation has been allowed.

Before the opening of the fair, an official catalogue made up of particulars supplied by exhibitors will be issued. It will be printed in four languages: English, Dutch, French and German. Inclusion in the catalogue is made free of charge.

SPANS THE WORLD
¶ The Canadian Pacific Railway passes through five hundred miles of the most majestic mountain scenery in the world, reaching every important city and all the principal agricultural, industrial and commercial districts of Canada, and has direct connection with many in the United States. It has a total owned or controlled mileage of 18,860, while the Canadian Pacific Ocean Services provide large fleets of fast, luxurious passenger steamers on both Atlantic and Pacific Oceans.
¶ The reason why you should utilize any of the Canadian Pacific's features—such as its splendid passenger service, fast, frequent and luxurious, connecting our big cities and reaching our beautiful holiday resorts—its magnificent hotels that span Canada from Atlantic to Pacific—its highly-efficient freight service, with 87,500 cars in constant transit across the Continent—its telegraph system—its express service (Dominion Express) —or its Ocean Services to Europe and the Orient —is because the service throughout is

New C.P.O.S. Steamer

S.S. Montrose Launched last month at Govan, in Scotland

On Tuesday, December 14th, a new steamer, the S.S. *Montrose*, was launched at the yards of the Fairfield Shipbuilding and Engineering Company, Govan, Scotland, for the C.P.O.S. The ship will be 16,200 tons, 566 feet long, 70 feet in breadth, and will have a speed of 16½ knots. She is a sister ship to the S.S. *Montcalm* launched in July last and which it is hoped will make her first sailing in May next. The S.S. *Montrose* it is expected will be ready before the end of the St. Lawrence season.

In conjunction with the Canadian Marconi Company the C.P.O.S. are supplying a daily bulletin of purely Canadian news to each of its ships, for the consumption of its Canadian passengers. British and foreign items of interest are sent out from Poldhu, England, and U.S. items from Arlington, so that passengers on C.P.O.S. ships are now kept in touch with events in all quarters of the globe. In addition to items of interest, the *Canadian Bulletin* contains quotations from the stock exchanges.

Mr. Manufacturer :

The quality of service given on the National Lines is calling forth sterling testimonies from many satisfied shippers in all parts of Canada.

Have you given us a chance to prove the value of our assistance in your marketing problem ?

Our lines reach directly all the great ports and practically all of the large centres of distribution. Will you, when you read this, tell your head shipper to try out the National Lines ? We are sure the result will work out to mutual advantage.

Barrett Specification Roofs

Bonded for 20 and 10 Years

On the Pedlar People's New Factory

THE Pedlar People, Limited, one of Canada's pioneer manufacturing organizations, opened its first factory at Oshawa, Ontario, in 1861. The steady growth and expansion of this company has paralleled the remarkable development of the other great industries of the Dominion.

The year 1917 found them so large that they were forced to erect a new, giant plant—an imposing building of the most modern construction and equipment.

On the 129,000 square feet of roof area, they laid a Barrett Specification Bonded Roof. They know that for twenty years, at the very least, they will not have to spend a cent on roof maintenance. They also know that Barrett Specification Roofs minimize fire-risk, are absolutely impervious to the most severe weather, and—cost reckoned per year of service—are the lowest-priced roofs that can be built.

Before specifying or closing a contract for a Barrett Specification Bonded Roof, be sure to read carefully all the stipulations in the Specification.

The Barrett Specification Type "AA" 20-Year Bonded Roof represents the most permanent roof covering it is possible to construct, and while we bond it for 20 years only, we can name many roofs of this type that have been in service over 40 years and are still in good condition.

Where the character of the building does not justify a roof of such extreme length of service, we recommend the Barrett Specification Type "A" Roof bonded for 10 years. Both roofs are built of the same high grade materials, the only difference being in the quantity used.

Full details regarding these Bonded Roofs and copies of The Barrett Specifications sent free on request.

Editorial Comment

A Time for United Action

THERE was never a time in the nation's history when the desirability of buying made-in-Canada goods was more obvious. The country is faced with a situation which must cause concern to all thoughtful people. On the one hand we have continued importation of goods of foreign manufacture on a scale that is far beyond all necessity; on the other hand we see the serious menace of unemployment in our industrial centres. The two conditions have a direct bearing on one another, for, generally speaking, an increase in the importation of goods of a kind that can be supplied by Canadian factories, will involve a reduction in the operation of these factories, with consequent unemployment, while the reduction in the imports of these goods will tend to keep the factories running and labor employed.

In this critical time manufacturers are being urged to take the lead in their respective localities in furthering a movement which will bring straight home to the people the folly of buying imported goods when home productions are available. There are many lines along which beneficial action can be taken, but in the last analysis it is a case of education. Once get the public thoroughly conversant with the situation, once get them to see that their earnings and incomes are directly dependent on whether or not they are buying made-in-Canada goods, and the goal will be achieved.

What is greatly to be desired is that action should be taken promptly and collectively so that the movement may be nation-wide in its scope. Local movements, while good in themselves, will not have the same powerful effect as if they were linked together in one great national drive. Then the sentiment will become contagious, passing from one community to another and permeating the whole country. We had such an exhibition of united action during the Victory Loan campaigns, when the whole country was thoroughly organized and combined action was taken to achieve the desired objective. At that time publicity proved to be a powerful factor in the work of raising the loans, and it is to be desired that publicity should again be utilized to the greatest possible extent in urging the people of Canada to do their duty in the present emergency.

The Association has recently sent out to its entire membership a circular, in which the extent of our unfavorable trade balance is pointed out and its evil effects emphasized. The circular suggests methods by which members can lend assistance in a movement, which it is hoped will be nation-wide, to promote the greater use of made-in-Canada goods. We bespeak widespread action along the lines suggested.

Bank Officials Deplore Large Imports

BANK officials addressing annual meetings of shareholders have almost to a man expressed concern over the manner in which our imports have been increasing. Sir Herbert Holt, president of the Royal Bank of Canada, after referring to the fact that last year imports exceeded exports by $50,000,000, declared:—

"This adverse balance of trade is disquieting and the outflow of returns on foreign capital adds to the difficulties of the situation. The steady increase of American investments in Canada is an equalizing factor, but inadequate. Only by increasing the sale of Canadian commodities can we avoid increasing our foreign indebtedness. Never, even in war time, was it so essential to increase our exports. A duty falls on manufacturers to produce articles of a quality and price that will compare favorably with foreign makes and on our agricultural interests to increase production."

The same thought occurred in the address of Mr. E. L. Pease, vice-president and managing director of the same bank. "Is it any wonder," he exclaimed, "that we are suffering from adverse exchange rates? The only correctives, we repeat, are the curtailment of imports of non-essential articles and the increase of

exports. So far as a country's currency is at a discount, the cost of imports is increased, and wide fluctuations tend to change legitimate business into speculation."

Mr. Pease pointed out that the value of iron and steel products imported during the six months ending September, was about the same as the value of imports for the entire fiscal year 1913, viz., $130,000,000. The year's purchases of cotton and its products in the United States were $70,000,000, compared with $17,000,000; automobiles, 11,000, as against 8,000; $12,500,000 worth of automobile parts as compared with less than a million dollars. Canada consumed 300,000,000 gallons of United States petroleum, gasoline and lubricating oils, as against 190,000,000 in 1913.

Advocated All-Round Development

IT may be worth noting by those who regard agricultural development as the most important work in which this country can engage that so eminent an authority as Sir Edmund Walker maintains that, from the standpoint of national finance, the non-use of our untouched stores of raw materials is even more serious than the non-use of unplowed land. In the course of his review of business conditions at the annual meeting of the Canadian Bank of Commerce, Sir Edmund declared that, while Canada needs more people on the land, it needs more industries as well.

"We export food by which our foreign debts are partly paid," he said, "but we import what we should make ourselves and thus create foreign debt. The present high rate of exchange on New York is the concrete expression of this debt, not only of that being created to-day, but in the form of annual interest payments of all the foreign debt we have created in the past."

Sir Edmund put in a strong plea for more research work. While commending the Governments, both Federal and Provincial, for all that they are doing on behalf of agriculture, he felt that we had reached a juncture where it was necessary to carry research in countless directions in order that by increased production the heavy pressure of the national debt might be relieved. He intimated that it might be possible, as a result of research work, to so reduce the cost of home productions that the flow of imports might be lessened.

Dealing with the alarming extent of our importations, Sir Edmund was inclined to regard the situation as well-nigh hopeless. After pointing out that from September, 1919, to September, 1920, we exported less by 23 millions than in the previous twelve months, and actually imported 440 millions more, he exclaimed:

"It is painfully evident, however, that we waste our breath by setting out these figures year after year. Nothing but inability to buy will check such fatuous extravagance. Is it to be wondered at that people coming to Canada from Great Britain are shocked and profoundly astonished at such lavish expenditure of money at a time when the world is so full of real trouble?"

Denatured Alcohol in Industry

ATTENTION is directed by Mr. Theo. H. Wardleworth in an interesting article in this issue to the action of the Dominion Government last year in removing from government control the denaturing or methylating of alcohol for the purposes of fuel, light and a limited number of industrial purposes. Power is given under the Act to the Minister of Inland Revenue to approve any special denaturants that may be required, so that practically all requirements of industries which employ alcohol may now be met.

Apparently Canadian manufacturers have not realized fully the privilege that has been extended to them. Mr. Wardleworth points out that this privilege opens up a very wide field, for there is a large range of products not now made in Canada, the manufacture of which can now be undertaken. He urges manufacturers to take prompt action so that opportunities for development may not be lost. A reading of his article will prove suggestive.

Many Farmers Support Protection

IT is incorrect to assume that the farmers of Canada as a class are opposed to the principle of protection. An analysis of the evidence presented before the Commission of Inquiry into the working of the customs tariff demonstrates that this is not the case. The Canadian Council of Agriculture and the various provincial organizations of farmers comprised in its membership did advocate a policy which aimed at free trade with Great Britain in five years, together with the removal of all duties on certain commodities, but there were other farmers' organizations, and not a few individual farmers, who stood out in favor of the protection of Canadian industry.

During the tour of the Tariff Commission at least forty farmers appeared and made representations in favor of protection, either directly for the products of their own farms, or more generally for all products of Canadian industry. These farmers were representative of practically all departments of agriculture. Even the grain growers of the West, who are regarded in some quarters as inveterate free traders, were not without spokesmen to give testimony in favor of protection. As for the mixed farmers in Ontario and Quebec, they

came out strongly in favor of a system which had been the means of building up the local market for their products, increasing the value of their farms and bringing prosperity to the agricultural community.

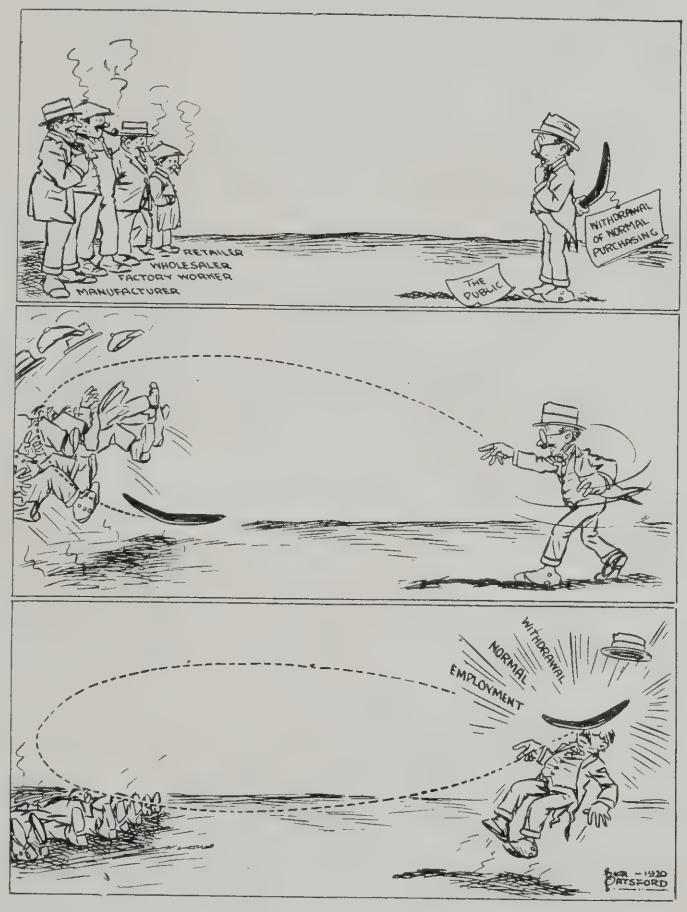
Industrial Sites in Cities

PROPOUNDING the statement that "in many cities in Canada ideal industrial sites are occupied by the poorer class of industrial workers and industries that should be located thereon, in close proximity to transportation, are driven to the suburbs of the city or beyond the city boundary," a writer in *Town Planning and Conservation of Life* advocates the prescribing of certain sections as industrial districts.

He gives an illustration of the difficulty of securing title to property under existing conditions. In a sub-division of twenty lots, suitable for a factory location, the first is owned by a Canadian, resident in the city; the second by a non-resident Italian; the third by a trust estate in the United States; the fourth by a Russian Hebrew; the fifth by a Pole, resident in the Yukon, etc.

"What chance is there for a manufacturer or merchant knowing for what price he can acquire such land? To secure an option that is binding a deposit must be made. Suppose the manufacturer starts with lot 1. The resident Canadian is anxious to sell and makes a fair offer. The agent of the non-resident Italian is then approached. Knowing what the property brings in as revenue, he realizes that anyone who wishes to buy has some object in view, and, wanting to secure a commission on the sale, raises the price, and perhaps a month at least is needed to get power to sell from the owner in Italy.

"To deal with the Trust Estate may take more than a month, and by this time the Hebrew owning lot 5 hears that someone wishes to buy and his price goes up still further. Few will venture to risk depositing money on options with so much uncertainty, not only on the ultimate cost, but also the impossibility of knowing when the deal can be completed.



"After a district is prescribed as an industrial district, no new residences should be permitted. Necessary alterations and repairs might be allowed to prevent slum conditions arising, if industrial expansion does not follow as quickly as estimated.

"The city council, or other specially constituted authority, should then obtain a complete record of the owners and a statement as to whether they wish to sell or not, and, if willing to sell, a fixed price for one year. If assessment were fixed by the price stated, and taxes based thereon, excessive prices would be checked. The danger of undervaluation is remote.

"Two steps have now been taken, namely, (1) classification of the district after a regional survey, and (2) the determination of owners and fixed selling price.

"With this information manufacturers would know the districts set apart for industrial purposes and the value of the sites, and, together with the possibility of speedy possession, this would be of great assistance.

"The next consideration would be the effect on the value of the property as it gradually developed. Its power of producing revenue might be decreased or increased, but the value of the land might be expected to increase as it gradually filled up with industries. As this value is built up by the industries, it would appear just that a portion of the increment should go to the land already in use, as a rebate on taxes or towards the expense of local improvements. This would check the raising of prices and so keep the cost of the land at a fair price."

The Boomerang

A cartoon by Ben Batsford, staff cartoonist of the Winnipeg Free Press, appearing in a recent issue of that paper

Industrial Statistics for 1918

FIGURES summarizing the industrial operations of the calendar year 1918 were issued last month by the Dominion Bureau of Statistics, and, while somewhat belated, are interesting as showing how manu-

facturing expanded during the last year of the war. The value of products manufactured amounted to $3,458,036,975, an increase of $442,459,035 over 1917. Employees on wages numbered 602,589, an increase of 1,284. Wages themselves jumped from $455,199,823 to $521,998,379.

In value of products, flour and grist mills held first place with a valuation of $262,537,122. Slaughtering and meat packing came second with $229,231,666. Rolling mills and steel furnaces were third with $209,706,319; munitions fourth with $186,034,920; lumber, lath and shingles fifth with $146,333,192; and pulp and paper sixth with $119,309,434.

In point of number of employees, the lumbering industry ranked first, having 60,868. Second came the munitions industry with 36,760, and third, foundry and machine shop products, with 26,463. Fourth ranked pulp and paper, with 25,863, and fifth, shipbuilding and repairs with 21,705.

So far as capital invested was concerned, first place was occupied by electric light and power, which showed an investment of $401,942,402. In second place stood pulp and paper, with $241,344,704, and in third place lumber, with $182,254,740. Fourth came rolling mills and steel furnaces, with $109,538,103, and fifth slaughtering and meat packing, with $86,969,756.

Modification of Timber Regulations

THE inexhaustibility of Canada's forest resources is a myth which is rapidly losing credit, according to a statement issued by the Commission of Conservation. The symptoms of an actual timber shortage in Eastern Canada are already being felt in the form of high prices. White pine is disappearing rapidly from our forests, and, for the most part, is not being replaced by new growth. Spruce, our most valuable pulpwood species, is steadily giving way to less valuable species, such as balsam and the hardwoods. Each year preventable forest fires still levy an enormous toll upon our forest wealth.

One symptom of the timber shortage is the increasing pressure for a modification of the regulations which forbid the cutting of timber under a stated diameter, such as are in force on Crown lands in Quebec and New Brunswick. This diameter limit is, for spruce, 10 inches in Quebec and 12 inches in New Brunswick. In both Quebec and New Brunswick, provision has been made for the local modification of the diameter-limit regulations, but only after examination on the ground and a favorable report by the Forest Service. Unquestionably, there are conditions where even clear cutting may be the best form of management. Other cases exist where a scientific modification of the diameter-limit regulation will permit of the removal of a materially greater volume of timber than is possible under a strict adherence to such a system and still leave the cut-over area in a better position to produce a second crop of timber.

After years of study devoted to the problem, the Commission of Conservation, however, takes the view that, while strict adherence to the diameter-limit lacks much of being an ideal system of forest regulation, it is incomparably better than no regulation, and should be discarded, wholly or in part, only when replaced by regulations which, after a careful study of the local conditions by a thoroughly trained and experienced forester, will insure the leaving of the forest in a better condition for succeeding crops.

The future of our forests depends upon the increased application of approved forestry methods to cutting operations and the total or material abandonment of the existing restrictions means a reversion to the system of unbridled forest devastation which has resulted in the extermination of the forests on enormous areas in Canada and the United States.

The Problem of Home Buying

A MEMBER of the Association in Edmonton, discussing the question of buying by manufacturers, suggests that the Association might very well consider the establishment of a sort of clearing house of information, through which members desiring certain articles could be placed in touch with sources of supply. To a certain extent this work is being done already by the Commercial Intelligence Department through the Canadian Trade Index, direct correspondence and other channels, but evidently it would be the intention of our correspondent to extend and elaborate the service.

The Edmonton manufacturer voices the opinion that there is a lack of knowledge about Canadian sources of supply which is driving business to the United States.

The subject is by no means a new one, and it has been discussed on many occasions, but it gathers new force to-day with a slackening of trade, a threat of unemployment, and an abnormally low exchange rate. Manufacturers should be in a receptive mood for any scheme that would tend to improve home trade. It is scarcely necessary to say that the officials of the Association would welcome an expression of opinion on the whole question and how it can best be met and handled.

Hydro-Electric Development in Nova Scotia

THE importance of hydro-electric energy as a means of promoting industrial development has been amply demonstrated in Ontario and Quebec. The growth of the industrial centres in both provinces adjacent to sources of power has given incontestable proof of this. Recognizing that, if they are to hold their own in the march of progress, their powers must

be similarly utilized, both Nova Scotia and New Brunswick have recently embarked on important programmes of development. In both cases the policy adopted by Ontario of appointing provincial commissions to undertake the work is being followed, and the principle of public-ownership applied.

In this issue of INDUSTRIAL CANADA the chief engineer of the Nova Scotia Commission tells how the power problem is being solved in that province. In a future issue we hope to publish a similar article on the work of the New Brunswick Commission. The Nova Scotia project differs from the Ontario scheme of development by reason of the fact that there are no large powers in the province at all comparable to Niagara. On the other hand there exist a considerable number of small powers, and it is the ultimate aim of the engineers to link all these powers together in a transmission system which will extend right around the province.

As the manufacturers of Ontario were back of the Ontario development, so, it is gratifying to note, Nova Scotia manufacturers are back of the development now going on in that province. This year's chairman of the Maritime Division, C.M.A., Mr. R. H. Mackay, of New Glasgow, is a member of the commission and is devoting a lot of time to its work.

A Field for Shipbuilding

DEALING with the serious falling off in orders for ships, which threatens to close down most of the shipbuilding yards in Canada when present contracts are completed, Mr. Levy McMillan, superintendent of the shipbuilding plant of the Nova Scotia Steel and Coal Co., New Glasgow, offers one or two useful suggestions.

"Nova Scotia is the best part of one of the best countries in the world for shipbuilding," he says, "and we are not without tradition as to either the building or sailing of vessels. Numerous wooden sailing vessels up to 1,000 tons are owned and operated in Nova Scotia to-day. Most of these are engaged in the lumber trade, but their cargoes include coal, fish, etc., many of the larger vessels going to South America and to the United Kingdom and European ports with Nova Scotia products. There is also a large fleet of wooden fishing schooners engaged in fishing on the Banks the greater part of the year, but which often go to the West Indies in the late fall and winter with fish, returning with molasses or salt.

"All these vessels are not only owned and operated in Nova Scotia, but are built here as well, and if steel shipbuilding is to thrive in any country or community ship owning and operating must be carried on as well —they go hand-in-hand. At best, the wooden vessel to-day, often of inferior wood, does not last many years and is often lost, unfortunately with loss of life. It is getting more difficult, too, to get insurance on a wooden vessel at a reasonable premium, which, of course, is the direct result of frequent losses. There is an opening here for the steel shipbuilder in a modest way.

"The advantages of steel over wood, especially wood such as can be secured to-day, are many. For a given dimension the steel vessel will carry 25 per cent. more dead weight and will carry more bulk cargo, such as lumber, on account of the thinner sides. Insurance rates are much less and do not increase with age as with wood, if the class is maintained.

"There is a serious disadvantage, on the surface at least—that of first cost—but we must try to get away from cheap things; it is the last cost which is important, and in this the steel sailing vessel is much cheaper."

Canada's Agricultural Implement Industry

SPECIAL interest attaches to the figures compiled by the Dominion Bureau of Statistics in connection with the agricultural implement industry in view of the prominence given to this industry, especially in the West, during the Tariff Inquiry. The importance of this particular branch of manufacturing and what it means to Canada may be gauged by the fact that the capital invested in its 86 plants amounted in 1919 to $83,276,450, or close on to a million dollars in each establishment. Dependent on the industry for their livelihood were 10,242 male and 566 female workers, whose combined salaries and wages aggregated $11,858,013. Assuming that an average of three persons were dependent on each male worker, the total number of people associated directly and indirectly with the industry would fall little short of 50,000, or the population of a fair-sized city.

An analysis of the wages earned showed that the majority of the workers earned over $20 a week. Only 837 male workers were drawing under $15 a week, and of these 112 were boys under sixteen years of age. Two thousand two hundred and forty-six male workers were reported as earning from $15 to under $20 a week, while 6,219 earned from $20 up.

The quantity and value of all materials delivered at the works was $16,250,146, and some idea of the large quantities used may be obtained from the information that 65,843 tons of steel and steel castings; 40,055 tons of iron and iron castings; 20,769 tons of malleable iron and 42,986 in feet of lumber and timber were utilized.

Turning to the output of the industry, a long list of products is supplied. Chief among these were 83,746 harrows, 70,372 plows, 41,149 cultivators, 29,949 harvesters, 28,019 mowers, 27,912 drills, and 15,375 hay rakes. The selling value of the various products was $36,703,943.

That the industry is not making heavy profits may be demonstrated by deducting the listed expenses from the selling price of the output. This works out at $4,989,696. On the capital invested this is approximately 6 per cent.

Synopsis of Proceedings Before the Tariff Commission in Ontario Cities

THE FINAL HEARINGS

Based on the Official Report

AFTER the Hamilton hearing, on Nov. 26, the Tariff Commission, comprising Sir Henry Drayton, chairman; Hon. G. D. Robertson, Minister of Labor, and Hon. F. S. Tolmie, Minister of Agriculture, proceeded to London and held a session there. They then went on to Windsor, returning for a four-day hearing at Toronto. After a session at Kingston, the inquiry was concluded with a two-day sitting at Ottawa.

This is the concluding instalment of reports of the hearings held by the Special Committee of the Dominion Cabinet appointed to hear representations with regard to the Canadian Customs Tariff. Owing to the extent of the statements made, it is impossible to do more than supply a brief outline of what was presented to the Commission, but the general character of the evidence of each person who appeared is given so that readers may judge the trend of the evidence.

LONDON.

Nov. 29.—S. Baker, city clerk of London, was the first witness to appear before the Commission. He stated that he was appearing as city clerk and not by authority of the City Council. In his statement he traced the industrial growth of London, showed how diversified were its industries, indicated the value of its market to the farmers in the surrounding country, and wound up with a convincing appeal for a continuance of the present tariff protection.

F. L. Wagner, mayor of Aylmer, appeared on behalf of the industries of that town and of the farmers in the surrounding country. He gave a list of the local industries and declared that the people were satisfied with the tariff and did not want any change in it at the present time.

J. P. Coyle, manager Carnation Milk Co., Aylmer, told of the operations of that company, stating that they had come into Canada in 1916 by reason of the tariff and that their industry was of great value to the farmers in the neighborhood. He claimed that the future of the canned milk industry was dependent upon protection.

G. H. Skinner, representing the farmers of Aylmer district, told of the increased value of farm lands in the neighborhood and stated that he thought the tariff was one reason for the prosperity of the farmers. He did not see any way in which the tariff was hurting the farmer.

M. R. Seed, Aylmer Pump & Scale Co., said he thought they should have the protection they now enjoyed and enumerated reasons for so thinking.

H. E. Armstrong, president Chamber of Commerce, Aylmer, corroborated the evidence of previous witnesses and declared that the citizens of Aylmer were practically a unit in support of the protective principle.

H. J. Pettypiece, editor and proprietor, *Forest Free Press*, was given an opportunity to reply to certain references to editorials in the *Free Press* given in Thomas Findley's brief on the agricultural implement industry. He took advantage of the occasion to refer to rural depopulation and the unfavorable results of farming operations in Lambton county.

Mr. Hall, a farmer living between Forest and Watford, gave evidence purporting to show how farmers were handicapped by the tariff.

Mr. Pettypiece, appearing again, dealt with the duty on plows and contended that it was an outrage that the manufacturers should get their mould-boards, land-sides and other parts admitted duty free as raw material and then add 17½ per cent. with 30 per cent. profit on the price of the plow. He claimed that what was wanted was a fair tariff, putting the agriculturalists on the same basis as the rest of the public.

Tariff Brought Industries.

Leonard C. Van Geel, secretary and sales manager, Tillsonburg Shoe Co., gave evidence to show how four branch industries had located in Tillsonburg as a result of the tariff and how the removal of protection would likely put them out of business.

H. A. Gilroy, farmer, Brook Township, stated that his views on the tariff question were a general equalization, letting the burden fall with equal weight upon all the people. He wanted protection on his sugar beets in the way of a bonus systems and a lowering of the duty on the essentials that entered into his labor.

Thomas McMillen, farmer, Seaforth, appeared on behalf of the general live stock farmer and read a statement. This was very largely along the lines of the original statement presented by the Canadian Council of Agriculture at Winnipeg. He was subjected to a lengthy series of questions by the Commissioners.

George Spotton, business college proprietor, Wingham, stated that he had been asked by some fourteen industries in Wingham to say that they were perfectly satisfied with present conditions.

W. H. Gurney, mayor of Wingham, asked for continued protection for the glove industry of the town.

John Stevenson, mayor of Stratford, introduced a deputation from that city and gave a general statement of the industrial growth of the place. He believed that the appointment of a permanent tariff board would do more than all else to stabilize industry in Canada.

S. J. Monteith, farmer, living near Stratford, said that his observations had led him to believe that the protective policy as now in operation had been a benefit to the farming industry and that the maintenance of some such policy was essential to the continuance of the prosperity enjoyed.

Labor Men's Views.

A. M. Davis, Trades & Labor Council, Stratford, said that as a trades unionist and wage-earner he was of the opinion that, while free trade would not solve the present business stagnation, it would have at least a tendency to reduce prices on the necessities of life. High tariff or low tariff would not, in his opinion, bring any permanent relief to present unsatisfactory conditions.

Wm. McCulloch, a representative of labor, particularly of the woodworking industry, Stratford, claimed that the former witness was not truly representative of labor in Canada. He felt that he was expressing the opinion of the majority of the workers in his city when he said that he thought the Government should take no steps at the present time to interfere with the tariff in any way. He advocated the appointment of a permanent tariff board.

C. E. Richardson, manufacturer, St. Marys, introduced a deputation from the town and read a memorandum which urged that it was essential to the continued prosperity of the town that a protective tariff, at least as high as that now in force, should continue to guard their industries.

John Dunbar, farmer, owner of 300 acres in Ontario and 320 acres in Alberta, said that he felt it would be a very in-

opportune time to lower the tariff on any articles.

F. L. Lancaster appeared for the industrial workers of St. Marys and said that anything that would tend to the demoralization of the manufacturing industry would tend to unemployment and demoralization among the men.

T. A. Stevens, St. Marys, told of conditions before the National Policy came into effect, and said that the people who were asking for a low tariff or free trade did not know what conditions under such a system would be.

J. W. Cameron, Strathroy, appeared on behalf of the handle manufacturing interests and read a statement in which it was stated that, should protection be reduced or removed, they would either have to go out of business or cross over to the United States.

C. O. E. Smith, W. E. Saunders & Co., Limited, biological products, London, stated that they had been manufacturing these products since February and that they had no protection. American producers were fully protected and were dumping goods in the Canadian market. He asked for protection for the development of the Canadian industry.

W. A. Griffiths, Nicholson Laboratories, Toronto, corroborated the previous speaker's statement.

Harold Currie, farmer, living three miles from Strathroy, said that if Canada's farms were to pay the national debt, they must have every assistance and, if the placing of tractors on the free list assisted, why should not all farm implements be placed on the free list?

Charles Phillips, Hall-Dent (Canada), Limited, glove manufacturers, said that, should the tariff be lowered, it would be inadvisable for them to operate plants in both Canada and the United States, and they would therefore close their Canadian plant.

Wm. R. Yendall, Richards-Wilcox Canadian Co., Limited, manufacturers of heavy hardware, said their plant would never have been established in Canada had it not been for tariff protection. If the tariff was reduced they would be obliged to discontinue operations.

Charles McKerlie, factory employee, speaking for himself, declared that there should be a tariff just high enough to encourage industry and at the same time to prevent monopoly.

C. H. Ivey appeared on behalf of five companies making plumbers' and steamfitters' supplies and brass castings, and appealed for a continuance of the present tariff.

R. K. McIntosh, manager of Battle Creek Toasted Corn Flake Co., Limited, London, appeared to advocate a retention of the present prevailing rate of duties.

Robert Greene, Greene-Swift, Limited, manufacturers of men's and boys' clothing advocated a change in fiscal policy. He believed the Government should get the revenue from goods that could be manufactured at home, keeping out corresponding lines and letting all goods, when ready for sale, pay the tax or toll to the Government.

W. M. Gartshore, McClary Mfg. Co., appeared on behalf of the manufacturers of enamelled ware and tinware, and read a lengthy memorandum on conditions in the industry, in which the protective principle was supported.

London From the Sky

An aeroplane photo looking north-east from about the centre of the city

WINDSOR.

Nov. 30.—The inquiry opened in the rooms of the Border Chamber of Commerce at 10 a.m. M. H. Swatman, tobacco grower and general farmer, Leamington, was the first witness. His contention was that the five cents per pound excise duty on Canadian leaf being used by the Canadian manufacturers be removed and a higher import duty be put on the imported leaf, which would bring the Government the same amount of revenue it is getting now and would further protect the Canadian tobacco growers.

John Caughill, tobacco grower, gave figures to show that whereas Ontario produced 13,000,000 lbs. in 1919, 24,000,000 lbs. was imported from American growers. He felt that if there was a duty equal to the American duty of $1.00 a pound, it would prohibit American tobacco from coming in in such large quantities and would improve the industry in Canada.

Judson Scratch, farmer, said that he had gone out of tobacco growing because he had not found it a paying proposition. He found that general farming paid better. He declared that protection on hogs was proving a benefit. The farmer was getting protection and the manufacturer should be allowed to get protection.

Delbert McNaughton, grain farmer, contended that as other industries got their machinery free of duty, the farmer should get his implements free.

F. Maclure Sclanders, Industrial Commissioner for the Border Cities, presented a general brief on behalf of the Border Chamber of Commerce. This emphasized the fact that the astonishing development of the district was explained by the number of industries which had located there as the definite and direct result of the tariff.

V. A. Clemen, Fisher Body Co., stated that, if they did not get the adequate protection they were now receiving, they would be forced out of business.

W. P. Shillington, Studebaker Corporation, said that they were in Canada purely because of the tariff and, if there was no tariff, there would be no advantage in being in Canada.

W. M. Grant, Parke Davis Co., a branch of the American company located in Detroit, also said that they were in Canada because of the tariff and that, if the tariff was taken off or materially interfered with, they would close their Canadian plant.

Col. W. L. McGregor, Ideal Fence & Spring Co., stated that they had carried on business since 1902 but that without protection it would be impossible for them to manufacture for the Canadian market.

Howard E. Blood, Canadian Products,

Limited, said that the duty on their products was the only consideration that influenced their company to put a manufacturing plant in Canada and that, if it were not for protection, they would have to abandon their plant.

Wallace Campbell, Brunner-Mond Canada, Limited, narrated the steps taken to establish their soda ash industry in Canada. Unaided by a tariff, he said, the industry could not hope to compete with outside industries. It was also doubtful whether the present duty of 3/10 of a cent per pound was sufficient.

The Automobile Industry.

W. R. Campbell, secretary and assistant general manager, Ford Motor Co. of Canada, Limited, said that the motor industry believed the present margin of protection should be continued. Mr. Campbell answered certain criticisms that had been made by witnesses appearing before the Commission with regard to Ford cars.

Dr. W. F. Parke, mayor of Amherstburg, told of the progress of Amherstburg which he attributed to the tariff.

Mr. Cudy, manager Imperial Bank, Amherstburg, showed how conditions had improved since the Brunner-Mond Co. had located there.

Dr. Doyle, mayor of Essex, asked for a continuance of protection for the industries of the town.

J. F. Taylor, Essex, a business man, said that if the industries did not get protection it would be a great handicap to the town.

R. D. Porter, farmer, Essex, spoke in favor of the home market, saying that he believed industries needed a little protection to make them successful.

L. F. Bedd, president Essex Tractor Co., said that all they expected was moderate protection to enable them to open up their own market. The present condition under which tractors having a value less than $1,400 were admitted free, was prohibitive to them.

F. A. Hough, lawyer, Amherstburg, gave evidence to show how land values had increased in the neighborhood.

W. S. Falls, banker, Amherstburg, also gave evidence to prove how real estate values had increased following the establishment of the Brunner-Mond plant.

M. G. Kelsey, president Kelsey Wheel Co., said they had located in Canada to save their customers a part of the duty.

Owed Origin to Tariff.

Major Taylor, sales manager Hayes Wheel Co. of Canada, Limited, Chatham, placed before the Commission the general case for all the industries of Canada. Most of the industries, he explained, were branches of American concerns and owed their origin and continued existence to the tariff.

J. N. Cooper, employee, Brunner-Mond Co., Amherstburg, said there had been a wonderful improvement in labor conditions in Amherstburg and stated that he had been given to understand the company would be compelled to shut down were it not for the small duty on its products.

Wm. Nesbitt, mayor of Sarnia, gave information about the progress of Sarnia.

Roderick Macdonald, tobacco grower, Kent County, said that if the growers got a fair deal in the duty, it would improve their position very much.

Alexander James appeared for the tobacco growers of Kent County and maintained that if the duty on tobacco coming in from the United States was the same as that on Canadian tobacco going into the U.S., it would be a great benefit to Canadian growers.

TORONTO

Dec. 1.—The Commission opened its Toronto hearings in the council chamber, City Hall, at 10 a.m. Thomas L. Church, mayor of Toronto, welcomed the commissioners, and gave information about the industrial development of the city. He declared that he hoped the Government would see to it that the tariff was not impaired.

John R. Shaw, Canada Furniture Manufacturers, Woodstock, chairman Ontario Division, C.M.A., presented a statement on behalf of the manufacturers of the province. This gave statistics of the industrial growth of Ontario, and showed also the extent and prosperity of the agricultural industry. It concluded with a request that nothing should be done to disturb the fiscal system which had brought the country so far in safety and prosperity.

Case For Manufacturers.

T. A. Hollinrake, chairman Toronto Branch, C.M.A., appeared on behalf of the manufacturers of Toronto, and gave information about the industries of the city, urging that, so far as the welfare of Toronto was concerned, there should be no departure from the policy of protecting and encouraging the national development of the country, which had been the fundamental principle of the country's fiscal arrangements for over forty years.

W. F. Maclean, M.P., appeared as a newspaper publisher, and complained about the price of newsprint paper. He contended that, in the light of experience, the manufacturers were not entitled to a continuance of the duty.

T. W. Duggan, business man, Brampton, said that they had built up their town by the help of a reasonable tariff, and all they asked was a continuance of the fiscal stability that would enable them to develop their business, free from the feeling that some earthquake might upset everything.

James R. Follis, farmer, Brampton, told of the industries of Brampton, and said he was anxious that these industries should be kept going. He stated that the farmers were well satisfied with conditions.

A. R. Hewitson, J. W. Hewitson Co., shoe manufacturers, secretary Brampton Board of Trade, said they had twelve industries in Brampton, the majority of them small, but all working under the protective tariff. Were they not thus protected, they would simply disappear.

Industries of Woodstock.

Harry Sykes, secretary Woodstock Manufacturers Association and Woodstock Board of Trade, told of the extent of manufacturing in Woodstock, and enumerated reasons why protection was necessary to their continued success.

W. A. Richardson appeared on behalf of the manufacturing industries of Peterborough, and made a verbal statement, urging that a reasonable protective tariff should be maintained.

Mr. Tooms, M.P.P., Peterborough, said he had been requested by a number of people to come and express the opinion that they were against a high tariff. They favored a low tariff, but not a protective tariff that would destroy fair and honest competition.

Thomas J. White, wholesale hardware, Collingwood, appeared on behalf of the Collingwood Chamber of Commerce, and stated the view that protection was necessary for local industries.

Robert J. Kirk, minority shareholder in the Auburn Woollen Mills, Peterborough, complained that, while, as a workman, he was in favor of protection, he thought protection had been abused.

B. L. McLean, mayor of Lindsay, introduced a small delegation from that town.

Wm. Flavelle, cold storage, Lindsay, said that, while Lindsay was not an industrial town, strictly speaking, they were tremendously interested in the industries they had, and believed that these industries would have left them had they not had some support.

Thomas Hickson, farmer, Lindsay, said that the farmers in the locality were well satisfied with the results of the last few years. "If we kill our manufacturers, we certainly kill our towns, and, if we kill our towns, we certainly hurt ourselves as farmers."

John Carew, lumberman, farmer, etc., Lindsay, told how of all his operations, which included sawmills, box factory, planing mill, steamboats and farms, the farming end was the best paying proposition to-day.

Free Trade a Mistake.

James Boxall, merchant, Lindsay, said he believed that Canada needed a limited amount of protection, and that it would be a great mistake to turn over to a policy of free trade.

J. C. Stewart, wire products, Milton, said the town was flourishing, merchants and farmers being fairly prosperous. His own business absolutely needed a protective tariff.

F. A. Harley, knitting machines, Georgetown, told of the growth of the town, which was due largely to the tariff, and said they did not wish to see any disturbance of it. He made a special plea for the knitting industry, claiming that machines and accessories were not sufficiently protected to bring about development of the industry.

R. J. Creelman, Creelman Bros., manufacturers of knitting machinery, Georgetown, presented a short statement, corroborating the evidence of Mr. Harley.

Joseph Beaumont, woollen manufacturer, Glen Williams, described the operations of his industry, and asked for continued protection.

George Oakley appeared on behalf of the cut stone contractors who are members of the Toronto Builders' Exchange and the Provincial Builders' Exchange of Ontario. He gave statistics of the industry, and gave reasons for asking for the maintenance of adequate protection.

Thomas Wood, journeyman stonecutter, appeared as a representative of the working-men's side of the industry, and asked that no reduction be made in the tariff on building-stone, finished, or semi-finished, that may be shipped into Canada.

Stonecutters' Views.

Douglas S. Robertson, stonecutter, said he would like to see the duty on rough blocks taken right off. If stone was allowed to come in, in the rough, there would be more work for the stonecutters.

F. J. Bailes, acting president Oshawa Board of Trade, presented a statement, on behalf of the manufacturers of Oshawa, in which it was shown that the growth of the town was due to the operation of the customs tariff.

H. Fullerton, manufacturer of cocoa door mattings and jute carpets, Cobourg, answered a series of questions regarding his industry, which showed that, with depreciated exchange, he was getting no protection at all.

A. R. Dundas, representing the business men of Cobourg, said that they were benefitting from the presence of the factories in the town, and would not have got them had it not been for the tariff.

C. E. Rehder, Bowmanville Foundry Co., Limited, Bowmanville, told of the operations of the company, and said they would not be making several of their lines had it not been for the tariff.

H. L. Quinn, mayor of Bowmanville, said that it was absolutely essential that the industries of the town be protected.

N. L. Martin, chartered accountant, Toronto, appeared on behalf of the glass trade, and asked for an opportunity later on to make representation in favor of retaining the tariff on glass as at present.

A. L. Lewis, Toronto, presented a statement on behalf of the United Typothetae of Toronto, stating that the printing industry had been wonderfully developed through tariff protection, and that the retention of the tariff was absolutely necessary if the business was to continue to prosper. Some changes in the tariff looking towards more effective protection were suggested.

Second Day.

Dec. 2.—J. Sinclair, manager Barrie Tanning Co., Limited, speaking on behalf of the business interests of the town, declared that they wanted no change in the present tariff.

C. E. Steele, president Natural Gas and Petroleum Association of Canada, asked that the duty be removed from such classes of equipment used by these industries as were either not manufactured in Canada or were manufactured on such a limited and unsatisfactory scale as to render them practically unavailable.

F. M. Kimbark, Toronto Typothetae, filed a statement suggesting certain changes in the tariff on books and printed matter.

S. R. Parsons, British American Oil Co., Limited, appeared on behalf of the chief oil refiners of Canada, and gave a comprehensive review of the industry, submitting in conclusion that any reduction in the tariff affecting their products would be unjust to those who have invested many millions in refineries and distributing stations in Canada.

H. M. Grinstick, president Canadian Piano and Organ Manufacturers' Association, appeared to present the views of the industry on the tariff and on the luxury tax. He went into great detail and declared that tariff protection was never more necessary than at present to the security and welfare of the industry.

H. A. Mason read brief on behalf of the Association, protesting against the luxury tax.

C. R. Morrison, president Canadian piano and phonograph workers, told of the danger to the workers through unemployment as a result of the luxury tax.

M. J. Cowley, vice-president Canadian Federation of Labor, pointed out that, if the tariff was lowered on pianos, the workers could not live in the social status they were at present enjoying. They were very jealous of their position socially, and he thought they were entitled to consideration as members of the working class.

E. C. Scythes appeared on behalf of the manufacturers of phonographs, and presented a brief asking for the removal of the luxury tax.

Effect on Real Estate.

Frank McLaughlin, manager real estate department, Chartered Trust and Executor Co., Toronto, gave evidence to show how the abolition or reduction of the tariff would affect the real estate business and real estate owners in the city.

W. F. Maclean, M.P., appeared again, to answer statements made in a telegram from A. L. Dawe, secretary Canadian Pulp and Paper Association.

A. W. Mercer, mayor of Galt, put in a statement on behalf of the industries of Waterloo County. This was intended to show that the presence of many widely diversified industries, distributed over the whole county, was not only to the advantage of the individuals connected with the industries, but also to all other inhabitants, and that the location of such a highly industrialized area favorably influenced the development of agricultural industry. The great majority of the people in Waterloo County believed that the chief reason for the presence of these industries in Waterloo County was the customs tariff.

Mayor Eden, Kitchener, supported the general statement for Waterloo County, and referred to the growth of Kitchener.

W. C. Shaw, farmer, Hespeler, said that farmers realized the benefit of industries to themselves as farmers, and would not like to see the protective tariff reduced in such a way as to hamper industries.

William Hortop, cloth finisher, Hespeler, said that as wage-earners they were interested in the tariff, and wanted to see manufacturing going on in the town.

James Webb, wage-earner, Galt, said that he believed in the tariff because it gave the workingman a good market for his labor.

Result of the Tariff.

C. J. Moassel, Canadian Blower and Forge Co., Kitchener, told how that industry had been established as a direct result of the tariff.

O. H. Hughes, representing the organized labor of Kitchener, said that practically all organized labor wanted the protective tariff kept on.

P. Wurstine, employee Goldie, McCulloch Co., Galt, supported the view that the tariff was necessary to the welfare of the wage-earner.

R. Smythe, merchant, Kitchener, told of the prosperity of the city, and said they only wanted to see conditions maintained.

John Fraser, merchant, Galt, said that he represented the merchants of Galt, who unanimously sent him down to say that they did not want any revision of the tariff or change in the dumping clause.

J. E. Ferguson presented a statement on behalf of the furniture manufacturers of Canada, in which the request was made that the same measure of protection as prevailed in the past should be maintained.

Charles S. Cobb, honorary treasurer of the Royal Architectural Institute of Canada, asked for a revision of the tariff on architectural work coming into Canada, so that more protection would be accorded to Canadian architects.

A. N. W. Clare, Preston, presented a statement on behalf of the manufacturers of stoves and furnaces, which reviewed the extent of the industry, and

declared that the maintenance of the present tariff was a vital necessity.

E. C. Drury, Premier of Ontario, appeared to present certain reasons why he thought there should be a material lowering of the tariff.

Third Day.

Dec. 3.—T. W. Learie, W. R. Johnston Co., Toronto, presented a memorandum on behalf of the manufacturers of men's and boys' clothing in Toronto and district, which gave statistics of the industry and demonstrated the importance of protection to its welfare.

A. A. Powers, president Farmers' Co-operative Co., gave evidence along the line of showing that farming was relatively unprofitable, and that a lowering of the tariff would be an advantage.

Mrs. G. B. Brodie, Canadian housewife and mother, claimed that the tariff made possible combines, which were responsible for high prices. "We believe that protection as we have it now is not to build up industry or secure revenue, but to enable immense private fortunes to be amassed. The man who became a millionaire is a legalized robber."

Mrs. C. B. Sissons, housewife and mother, said she believed that the tariff struck at the home and gave a number of examples purporting to support this view.

Miss Agnes C. McPhail appeared on behalf of the United Farm Women of Ontario, emphasized the importance of agriculture, pointed out its drawbacks and attempted to lay the blame on the protective tariff, which she declared did nothing but create millionaires.

R. W. Burnaby, president United Farmers of Ontario, replied to certain arguments advanced by protectionists and contended that Canada would be better off financially to bonus off all employees in certain industries than to pay the excess prices on account of tariff protection. He supported the statement of the Canadian Council of Agriculture.

J. J. Morrison, secretary United Farmers of Ontario, spoke along similar lines, declaring that no other industry was asked to carry so heavy a load as agriculture. He contended that the remuneration to agriculture should be raised to such a level that people would fly back to the land. To achieve this he proposed to lessen the cost of production by lowering the tariff and the cost of distribution by co-operation.

W. L. Smith, farmer, Orono, replied to several of the protective arguments, and asked that nothing should be done in the way of retaliating tariffs to injure the farmers' market in the United States.

L. A. Hamilton, farmer, Oakville, told how farm values had increased in that district and how returns from fruit-growing had expanded. He declared that the time had come for an increase in the tariff.

F. S. Reeves, Humber Bay, appeared on behalf of the Ontario Vegetable Growers' Association, and said that they were simply asking that the tariff on their produce be left as it was.

Thomas Delworth also appeared for the Ontario Vegetable Growers' Association and asked that the tariff remain as it was, as their business had been built up under the protection it afforded.

City Hall, Toronto

Where the Hearings of the Tariff Commission Took Place, Dec. 1-6

George B. Hellerman, Waterford, filed a statement showing the importation of blackberries, gooseberries and raspberries.

J. E. Brethour, Burford, appeared at the request of the Canadian Swine Breeders' Association and stated that the bacon industry in Canada would be in a most precarious position if the present protection were removed.

Robert J. Kirk appeared on behalf of the British Imperial Association of Earlscourt and said that he had come to the conclusion that whatever feeling there was against the tariff was caused by the abuse of it. He declared that the manufacturing industry was the second line of defense for the country.

Fourth Day.

Dec. 4.—E. C. Fox, William Davies Co., Limited, Toronto, presented a memorandum prepared by the Industrial and Development Council of Canadian Meat Packers, which reviewed the situation as regards quarantine regulation and duties on the importation of live animals, meat and meat products, and declared that "unless the farmer can assure himself that the removal of the quarantine and duties will result in expansion of this great national asset (the livestock industry), it would be disastrous from a national standpoint to interfere with the present policy."

James Harris, Harris Abattoir Co., Toronto, answered questions regarding the relative prices of cattle in the United States and Canada.

W. R. Drynan, Dominion Canners Limited, appeared for the canners of fruits and vegetables and enumerated reasons why a lowering of the tariff would seriously affect the canning industry.

J. Laing Stocks, canner, Northcote, Ontario, supported the statement presented by Mr. Drynan.

D. W. Robb appeared for the manufacturers of steam engines, air compressors, steam pumps, steam boilers and other allied lines of manufacture, and stated that they were unanimous in their opinion that under existing conditions in Canada, the present customs tariff on their products was as low as it could be made and still serve national interests. Mr. Robb also read a statement on behalf of the manufacturers of marine equipment for steamships, which asked for the repeal of the drawback on imported materials and equipment when used in the construction of ships. A statement was also presented by Mr. Robb on behalf of the manufacturers of steam and gas tractors, threshing machines, etc., asking that the order-in-council admitting tractors valued at not more than $1,400 duty free be reconsidered and rescinded.

J. H. Eaton, president board of trade, Orillia, handed in a resolution of the board which expressed the opinion that it would be a grave mistake, fraught with serious consequences, to make any material reduction in the customs tariff now in force on articles such as can with advantage be manufactured in Canada.

Miss M. Wright, milliner, Toronto, appeared to object to the luxury tax on millinery.

F. L. Storey presented a brief on behalf of the manufacturers of malleable iron in support of the continuance of the present rate of duty on malleable iron.

T. F. Moneypenny, Toronto, appeared on behalf of the manufacturers of paints and varnishes and urged the retention of tariff protection.

A. Deichelmann, the Ansco Co., asked that the duty on their products coming into Canada be reduced to fifteen per

cent., which he claimed would give ample protection to Canadian manufacturers and at the same time prevent a monopoly.

Sir James Woods appeared in the interests of the York Mills Knitting Co., and asked that a duty be placed on yarn imported for hosiery manufacture, which is now free, and that the duty be increased on light weight fabrics.

J. F. Heffron, Macbeth-Evans Glass Co., Limited, Toronto, appeared on behalf of the electrical fixture manufacturers, jobbers and dealers, and pointed out certain difficulties in connection with the sales tax.

Harold Venning, Lowe, Donald & Co., Toronto, dealt with the sales tax as affecting the business of the merchant tailor.

J. P. Richards, Richards Glass Co., Limited, manufacturers of chemical and scientific glass, asked for the removal of the duty on glass tubing which was their raw material, on the ground that their finished product had no protection.

E. B. Walker, Toronto, on behalf of his wife, a milliner, dealt with the luxury and sales taxes.

W. A. Douglas, Toronto single tax advocate, presented a brief in favor of free trade.

Dec. 6.—Vincent Massey, secretary Massey-Harris Co., Limited, presented a supplementary statement on behalf of the company in which replies were made to certain criticisms of the company's previous statement.

Thomas Delworth, vegetable grower, Weston, appeared again and gave evidence regarding prices at which vegetables were sold.

C. J. Bodley, secretary, presented a statement on behalf of the confectionery, biscuit and chocolate manufacturers, which reviewed the industry and asked for a continuation of the tariff.

J. Allan Ross, general manager, Wm. Wrigley, Jr., Co., Limited, of Canada, dealt with the chewing gum industry and showed how his company had been established as a result of protection and how protection was necessary to its continued success.

A. T. Reid, A. T. Reid Co., Toronto, appeared for the manufacturers of dresses, waists, whitewear, etc., in Toronto, and asked that present tariff rates be not changed.

John O'Connor, general manager, Murray-Kay Co., Limited, appeared to enter a protest against the luxury tax.

Frank A. Rolph, Toronto, appeared on behalf of the lithographers of Canada and asked that certain changes be made in the tariff in order to give more effective protection.

F. J. Betharriell, Glasscoat Sewerpipe & Conduits, Limited, asked that the duty on conduits and segmental sewer blocks of glazed clayware be changed to a specific duty of $8 per ton on conduits and $6 per ton on segmental sewer blocks.

E. J. Davis, Newmarket, made representations on behalf of the Tanners' Association of Canada and asked that the tariff be left as it was.

H. P. Moore, publisher *Free Press*, Acton, presented a resolution passed by the municipal council which declared its conviction that no downward revision of the tariff should be made which would cause curtailment of industrial operation.

Alfred Beardmore supported the brief submitted by Mr. Davis.

Charles M. Thompson, manager Brantford Roofing Co., Limited, put in a statement regarding the prepared roofing industry in Canada, which declared that the protective tariff had been the primary factor in the development of the industry.

H. S. McAdam, Standard Meter Co., Limited, Toronto, on behalf of the manufacturers of gas meters, asked that protection be continued.

J. B. McNeary, Canadian Meter Co., Limited, Hamilton, supported Mr. McAdam.

F. T. Bain, Dowswell, Lees Co., of Hamilton, dealt with the prices of washing machines in Canada.

B. Neilly, secretary Ontario Mining Association, suggested lowering the duties on machinery and supplies imported, of necessity, from foreign countries, but added, "we are inclined to leave with you the problem of finding the critical point of Canada's advantage with respect to the duties to be imposed on the industry's foreign needs."

Dr. C. T. Currelly, representing the Royal Society of Canada, the Royal Academy of Canada and the Royal Institute of Architects, asked that all art objects that are 100 years of age be admitted duty free.

Lionel Davis, Continental Publishing Co., appeared on behalf of the publishers of magazines and asked for some protection, suggesting a specific duty of at least six cents per pound on all American magazines coming in by mail, freight or express, or an *ad valorem* duty of 25 per cent.

George Murray, recorder, Toronto, Typographical Union, No. 91, presented a statement asking that the Government require an imprint showing the country of origin on all printed matter coming into Canada.

William Sullivan, business agent Local No. 28, International Brotherhood of Bookbinders and Bindery Women Workers, besought the Commission to maintain the present tariff.

In the Heart of Toronto

Scene at the Corner of King and Yonge Streets, Showing Royal Bank, C.P.R. and Bank of Hamilton Bldgs. on the right and Dominion Bank Bldg. on the left

H. J. Caulfield, Caulfield, Burns & Gibson, Toronto, dealt with the luxury tax.

W. H. Law, Weir Specialty Co., Limited, Toronto, submitted that the duty on flavoring extracts from England was too high, and claimed that a duty of 30 per cent. ad valorem would be ample for the protection of home industries.

KINGSTON

Dec. 20.—The inquiry was resumed at the City Hall at 11 a.m. J. M. Campbell, president board of trade, presented a statement on behalf of the board and of local industrial interests. This indicated that the board did not wish to be interpreted as suggesting that the present tariff ought to be continued in all instances, but it did endorse the principle of adequate tariff protection and asked that the policy be observed as the guiding principle of the tariff revision.

W. K. McNee, secretary board of trade, presented a resolution passed at a largely attended meeting of the board on November 29th, endorsing the principle of protection.

C. A. Eaton, manager director, Canada Cutlery Co., Limited, told of the steps taken to establish his industry in Canada and asked that the tariff be increased on pocket knives.

W. G. Meakins, representing the Ontario brush manufacturers, showed how the protective tariff had built up the brush manufacturing industry and asked for an increase in the tariff on brushes.

Mr. Stephens, Stephens-Hepner Co., supported Mr. Meakins.

Mr. Townsend, Frontenac Floor & Wall Tile Co., told of the revival of the tile industry in Kingston and said they wanted to be sure not to lose the present protection.

Discussed Binder Twine.

J. L. Haycock, representing the United Farmers of Lennox and Addington, appeared to discuss binder twine. He claimed that the facts proved that the removal of the duty on binder twine did not close a single mill in Canada, but that, on the contrary, protection induced and enabled the formation of a merger which closed all the mills in Canada excepting two. He claimed further that the facts proved that there was more binder twine manufactured in Canada under free trade than there was under protection.

Major R. D. Ponton, alderman, Belleville, appeared on behalf of the citizens of Belleville. He declared that instead of free trade, they wanted fair trade and safe trade.

W. C. Springer, president Springer Lock Co., Belleville, presented a memorandum, which was read for him by Major Ponton. It emphasized the fact that, without the protective tariff, the establishment of industries in Belleville would not have taken place.

H. Saunders, manager Belleville Hardware Co., answered questions about the lock manufacturing industry and said that if the tariff was lowered, it would be very injurious to the lock manufacturers.

W. W. Anderson appeared on behalf of the agriculturalists of Prince Edward County. He stated that the majority of the agriculturalists wanted a protective tariff in order to stimulate the market.

George E. Foster appeared for the Trades and Labor Council of Belleville and district, and stated that the council wished to go on record as desiring a protective tariff and that the tariff question be removed from politics.

J. O. Herity, secretary Belleville Chamber of Commerce, presented a resolution passed by the directors of the Chamber which declared that any successful attempt to bring about a radical reduction in the customs tariff would be most disastrous to the business interests of the country. Mr. Herity also presented a statement from Jamieson Bone, president of the Chamber, emphasizing the resolution.

Frank J. Hoag, president Retail Merchants Association of Kingston, thanked the Government, through the Commission, for the removal of the luxury tax.

W. C. Phillips, Frontenac Moulding & Glass Co., Kingston, told of the operations of his company and asked for continued protection.

A. C. Lingham, R. H. Toye & Co., fruit importers, criticized the statement of the British Columbia fruit growers that, if the duty on apples was removed, Canada would be a dumping ground for United States apples. He claimed that this was incorrect, because there was no market in Canada for cheap grades.

W. W. Sands, secretary Kingston Industries Committee, said that the principal thing in getting industries to locate in Canada was the tariff.

R. J. Vair appeared on behalf of the United Farmers of Frontenac, and argued for a reduction in the tariff.

James W. Bell, secretary United Farmers of Frontenac, supported the position taken by Mr. Vair.

J. L. F. Sproule, president United Farmers of Frontenac, also supported the organized farmers' position.

Wm. Baxter, for the Trades & Labor Council of Kingston, asked for protection for labor against the importation of foreign labor.

OTTAWA.

Jan. 3.—The inquiry was opened in the Caucus Room, House of Commons, at 10 a.m. R. L. Phillips, Phillips & Pringle, Fredericton, dealers in automobile accessories, appeared to complain that the distribution and sale of automobile assessories in Canada was being unduly restricted.

C. D. Richards, barrister, Fredericton, supported Mr. Phillips in his contentions.

D'Arcy Scott, K.C., on behalf of the National Dairy Council, presented a resolution passed by that body on October 14, 1919, which expressed disapproval of the present high customs duty on glass bottles, tinware, dairy utensils, machinery, etc., used in the dairy industry, and asked for the abolition of, or at least a substantial reduction in, such duty.

Makes Allegation.

E. H. Stenhouse, president National Dairy Council, supported the resolution, alleging that the Canadian manufacturer added to his price the duty, exchange and transportation charges to bring it up to a parity with the price of the imported article.

John Bingham, vice-president and managing director, Ottawa Dairy Co., endorsed what Mr. Stenhouse had said.

James Donaldson spoke along similar lines on behalf of the cheese and butter interests. He stated, however, that the country must have a tariff for revenue.

D'Arcy Scott, K.C., appeared again to point out that oleomargarine was admitted free, and in addition manufacturers of oleomargarine in this country were given drawbacks on the raw materials entering into its manufacture. In view of this he thought that dairymen should not have to pay duty on machinery used in making butter.

J. E. Walsh, general manager C.M.A., corrected certain prices on dairy machinery that had been given by previous speakers.

Labor's Statement.

Tom Moore, president Trades and Labor Congress of Canada, presented a brief on behalf of organized labor, which maintained that protection was needed both in the interests of the industries themselves and of the workers, and that the tariff should be taken out of politics by the creation of a Tariff Board, on which organized labor should have proper representation.

A. A. Magee, on behalf of the Anglo-Canadian Picture Plays, Limited, asked that motion picture films of British manufacture be admitted into Canada duty free under the British preferential tariff.

Lady Pope, representing the Daughters of the Empire, spoke in support of the application.

E. J. Chambers also spoke on behalf of the application, explaining how attempts had been made by the Germans to introduce propaganda through the movies.

R. C. Code, K.C., appeared on behalf of the Slate Products Co. of Canada and asked for an increase in the tariff from 17½ to 25 per cent. on crushed slate and slate slabs.

C. W. Jeffrey, manager Ottawa Truss and Surgical Manufacturing Co., Limited, asked for certain changes in the tariff on surgical appliances.

M. H. Staples, educational secretary United Farmers of Ontario, presented a

Where the Leaders Stand on the Tariff Issue

Views of the Premier, the Leader of the Liberal Opposition and the Leader of the Farmers' Party as Enunciated in Articles Written by each for Publication in Maclean's Magazine

MEIGHEN

OUR position on the tariff is clear—we stand for the protective principle. To those who, like Mr. Crerar, demand the abandonment of the protective principle, we answer "no." We answer "no" because in our judgment—and it has been the judgment of Canadian statesmen and public since 1878—the protective principle is necessary to this country. There is, indeed, no country in the world where its abandonment would be followed by disaster more swift or sure. The reason for this is clear. We have next door to us a nation which has followed protective principles for 131 years; a nation with the most powerful and highly organized industrial units in the world, and with a market of 105 millions. It is beyond imagination; it is contrary to common sense, that our own manufacturers, less rich, less powerful in organization, and with a market of less than ten millions, could compete under free trade conditions with those gigantic industries of the United States.

Still more manifest is it that with a protective tariff wall standing against the entrance of our goods to the United States, and every prospect of its continuance, if not of its elevation, the discarding of the protective principle on the part of Canada is a proposal scarcely admitting of debate. No responsible Government in this country would subject the industrial fabric of the Dominion to a menace of that kind; none will ever do it unless we vest power in men whose intellectual fidelity to economic theories outweighs their practical fidelity to their country.

Cannot Have High Tariff

This does not mean that we stand for high protection. Just as we answer "No" to those who urge the abandonment of the protective principle, so likewise do we reply to those who demand a high tariff or the effectual exclusion of outside competition. We cannot have a high tariff in this country. The Western prairies, which have to export most of their product, receive less immediate advantage from the adoption of the protective principle than does the rest of Canada. The Western prairies, on account of the geography of the country have to pay more than the usual rate of freight in getting their goods from other parts of Canada. That condition, emphasized in the early days of the Dominion, will right itself as time goes on and home production increases;

(*Continued on page* 64.)

KING

MR. MEIGHEN is striving to make the issue between the political parties in Canada one of Free Trade versus Protection. Were he in a position so to do, he would create an issue to his own liking. That the issue cannot be between Free Trade and Protection is clear from the fact that none of the political platforms now before the country, not even the platform of the Farmers' Party, demand free trade. The Liberal Party has no thought of tariff abolition. Its policy is one of tariff revision through reduction in the interests alike of producers and consumers. The Party believes that their fundamental interests are not conflicting, but are identical. All of us are consumers; all of us are, or ought to be, in the broad sense, producers, rendering some service to the community with hand or brain or both.

Downward Revision Necessary

We believe that the time has come, indeed that it is already long past, when a downward revision of the tariff is necessary. In this revision, we believe that the home and its needs should be a first consideration, that there should be substantial reductions of the duties on the necessaries of life; in other words, on those articles which go to make up the food, the clothing, the shelter of the Canadian people; that certain specific articles required for purposes of consumption, and other articles essential to production, should be free of duty altogether; and that, in regard to the implements of production in the basic industries of agriculture, mining, lumbering, and fishing, there should also be a substantial reduction and in some instances, a total elimination of duties.

Increased Production Needed

With all there has been of destruction during the period of the war, what is needed most to meet the scarcity and taxation which have ensued is increased production. If the basic industries, the key industries of Canada, are relieved as far as possible of taxation, if the instruments of production are made easier to obtain, if production is thereby cheapened and enlarged, these industries are benefited, and the whole community is benefited. Not only do secondary industries gain in the reduction in cost of

(*Continued on page* 93.)

CRERAR

CIRCUMSTANCES naturally brought the tariff to the forefront in all discussions of future policy by the farmers of the West. Selling as they do their products in the open markets of the world and buying in restricted markets, they feel its burdens more acutely than any other class. And nothing could or can to-day shake their conviction that the profits which would help to reconcile men to the climatic hardships of pioneer life on the western prairie have been seriously decreased by the toll taken by our protected manufacturers. My views and those of our organizations upon this subject are too well known to bear elaboration at any length, but one or two points I would like to emphasize.

We are quite unrepentant in our hostility to the existing tariff system. We believe that protection is morally wrong inasmuch as it permits a particular group of people to enrich itself at the expense of the rest. We deny that it is economically sound, holding that it has neither added to the aggregate wealth of the country nor improved the condition of labor. What is responsible for the disappointing growth of our population revealed at each census and for an annual exodus which reaches appalling dimensions for a new country, unless a wrong economic system? We believe that Canada like all other countries has certain basic capabilities; in our case they lie in the direction of the production of grain, livestock, lumber and minerals, and our greatest chances of permanent prosperity lie in concentrating upon those particular lines.

Artificial Industries

But the protectionist policy, which both the historic parties have sponsored and maintained since 1878, has loaded and weighed down these natural industries with the burden of sustaining a long string of secondary and artificial industries which are often merely of the fabricating type and are also often dependent on foreign countries for their raw material. These artificial industries have drained labor from the land and are largely responsible for the serious rural depopulation which is now visible.

As long as these protected industries have plentiful orders and can run full time, the workers in them can contrive an existence, but what is their lot when through adverse business conditions factories have to close down or reduce their staffs? Why are so many thou-

(*Continued on page* 93.)

How the National Association of Purchasing Agents Assists Canadian Industry

By J. L. CHARLESWORTH

THE purchasing agent for a firm that manufactures office supplies, answers the telephone; a fellow member of the National Association of Purchasing Agents was on the line.

"Have you any use for glue?" enquires the latter. "Yes, we do use a good deal," replies the purchasing agent.

"Well, the ———— Tire and Rubber Company have some they'd like to sell It's a by-product with them, you know."

"Thanks very much; I'll call them up."

He does so. The ———— Tire and Rubber Company send over a sample, which he finds to be better than the material he has been using. He buys a ton at four cents below the market price —a net saving to his firm of eighty dollars.

At a meeting of the Toronto branch of the National Association, a member happened to remark that he was finding a certain chemical product almost impossible to get. He had been buying it in large quantities from the United States, but the firm from whom he had been buying was no longer able to supply him. To his surprise, the purchasing agent of a large copper refinery informed him that the question of supplying this material was simple; the refinery had several tons of it lying on the scrap-heap.

The result is that this purchasing agent now buys one more thing in Canada, where he gets a lower price and quick delivery. The copper refinery has a profitable market for material that instead of being waste is now a by-product.

The National Association of Purchasing Agents is co-operative and educational in its aims. These two incidents may serve to illustrate the former phase of its work. The word "Educational" covers a variety of meanings, and can best be explained by a short account of the Association's history.

The Association's History

In the record of modern business one outstanding feature is the tendency to produce specialists. The salesman was an early result of this tendency, but his necessary counterpart, the purchasing agent, is a comparatively modern development. The maxim "well bought is half sold," followed in all its implications, leads to his profession, but up to a few years ago it had not been so followed. Now manufacturers are finding that costs must be carefully watched and the purchasing agent is one of the most important officials in many firms.

As the profession is modern, the organization of its members is also of recent growth. The National Association of

E. G. Donegani

Purchasing Agent for Simmons, Limited and President of the Purchasing Agents' Association of Montreal and District

Purchasing Agents was founded about four years ago in the United States. The Canadian group of the Association has been in existence almost two years.

In the spring of 1919 several purchasing agents of Canadian firms attended the Association's annual convention in Detroit. While there, they made the acquaintance of some officials of that body, and the question of forming a Canadian Association was discussed. In March, 1919, L. F. Boffey, the general secretary, visited Montreal, Ottawa and Toronto and organized branch associations in each city. In November, 1920, a branch was started in Hamilton, with thirty-four members.

In Montreal there are now eighty-three members. In Toronto, the membership has increased from twenty-two at the time the Association was organized, to eighty in January, 1921. It is probable that other branches will soon be formed, and that further increases will occur in the membership of branches already in existence.

In the Purchasing Agents' Association of Montreal and district, the president is E. G. Donegeni, of Simmons, Limited; T. P. Webster of the Dominion Textile Company is vice-president, and Thomson Robertson of Thos. Robertson & Company, Limited, is secretary. In Toronto J. I. Nicholson of Gunns, Limited; Walter F. Dodd of the Canadian Kodak Company, Limited, and Geo. P. Beswick of Boynton & Williams are president vice-president and secretary respectively. They were elected at the organization meeting in March, 1919, and were unanimously re-elected at the end of the first year, as were all the other officers. It might be mentioned that one unwritten rule of the Toronto Association forbids the withdrawal of any member from an office to which he has been elected.

The Membership Rule

Each branch of the Association has constitution and by-laws suited to local conditions, but all subscribe to the National Association's by-laws, which take precedence of local regulations. One by-law of importance is that dealing with qualifications for membership. In it a purchasing agent is defined as "a person who purchases personal property of whatsoever kind or description for a commercial, manufacturing, industrial, transportation, scientific, educational or eleemosynary person firm or corporation, or the Federal or Provincial Government, or a subdivision or department thereof; *provided, however, that no person having immediate charge or supervision of the sale of any of the above described property shall be eligible for membership.*"

The reason for the italicized clause is that there are many salesmen who make an occasional purchase for their firm and would be willing to use that fact as a means of admission to a society containing many influential customers. To admit to membership people who are really more interested in selling would defeat the object for which the Association was formed, and the membership rule is wisely framed to exclude them. It does not, however, prevent a purchasing agent from disposing of scrap material, surplus raw stock or by-products for his employer. The matters discussed at meetings of the Association are seen from the buyer's point of view, and a better exchange of ideas is possible than there would be if salesmen were also present.

Work of Toronto Branch

In all branches of the Association the procedure is similar and the work of the Toronto branch may be taken as typical of the whole. In Toronto, monthly meetings are held in the Board of Trade rooms, where the programme is a dinner, followed by an address by some prominent authority on a subject closely connected

with the profession. One of the noteworthy addresses of the past year was a lecture on "Contracts," by Thos. W. Phelan, of the legal firm of Robinette, Godfrey, Phelan & Lawson. This subject is one to which purchasing agents and business men in general are paying a great deal of attention at the present time, and further reference will be made to it in the course of this article.

Following the address there is a general discussion and reports from committees are read. Of these committees possibly the most valuable are the commodity committees, which deserve a few paragraphs of explanation.

It is obvious that no one man can keep fully abreast of market conditions in all commodities. The purchasing agent for a shoe manufacturing firm will be an authority on the leather market, while the representative of a foundry will know whatever is worth knowing about iron and steel. But, while their own particular lines are the places where they spend the largest amounts of money, they must also buy many other materials and in these they wish to get just as good value for every dollar they spend. To keep members in touch with all markets in which they buy, commodity committees have been formed and are justifying their existence. In Toronto there are ten of these committees keeping track of different commodities as shown in the following table:—

Foundry articles and machine tools; chairman, W. E. K. Wedd, Canadian General Electric Company.

Lumber, wood, piling, ties, etc.; chairman, H. Doyle, Office Specialty Co.

Fuel; chairman, R. W. Sedgewick, Standard Chemical Co.

Leather; chairman, F. S. Hall, Beardmore & Co.

Non-Ferrous Metals; chairman, W. C. Burch, Toronto Hydro-Electric Co.

Paper; chairman, A. H. Goodenow, United Typewriter Co.

Rubber; chairman, E. B. Ross, Dunlop Tire & Rubber Co.

Steel; chairman, C. S. Webber, Page-Hersey Co.

Textiles; chairman, C. S. Newton, Toronto Carpet Co.

Sand, stone, cement; chairman, J. S. Cole, Toronto Harbour Commission.

J. I. Nicholson

Gunns Limited

President, Purchasing Agents' Association of Toronto

At the monthly meeting each commodity committee presents a report on price movement and prospects for the future in the market with which it is concerned. Questions on any particular material can be asked and the whole situation thoroughly talked over. At any time in the month any purchasing agent who wishes to get information about some commodity with which he is unfamiliar can ring up a fellow-member of the Association and get the latest facts obtainable. This service alone would appear to be "worth the price of admission."

The educational and co-operative work of the Association also takes the form of discussing purchasing routine and methods with a view to improvement, promoting better standardized specifications, classifications, etc., and fostering, in the words of the constitution, whatever else may be deemed proper and advisable to secure the advance of purchasing to a higher level and the individual betterment of its members."

In the last category comes the matter of contracts, to which reference has already been made. Since the war there has been much cancelling of orders both in Canada and the United States. Fortunately, in this country the evil has not reached such proportions as in the United States, and the N.A.P.A. is trying to discountenance the practice in both countries.

"Life's too short," said Major J. R. Bell, of Business Systems, Limited, and publicity man of the Toronto branch, "to make an absolutely legal contract over every order. What we want to do is to bring about a general understanding that no one is to make cancellations or accept them. If we can do that we will have done a great deal towards stabilizing business conditions, and incidentally we will gain an enormous advantage over the United States."

The N.A.P.A. is now waging a determined campaign against the cancellation evil, and a recent issue of the *Michigan Manufacturer and Financial Record* contains an outline of their attitude on the subject. The article is entitled: "The Cant about Cancellations," and is written by Elwood Sampson, National Chairman of the N.A.P.A. Public Relations Committee. In setting forth his idea of an unbreakable contract, Mr. Sampson says:—

"When a contract is drawn up giving the seller freedom from penalty or freedom from fulfilling the contract should there be strikes, fire or other causes beyond the seller's control, then exactly the same clauses must be inserted giving the buyer freedom from fulfilling his part of the contract when there are strikes, fire or other causes beyond his control.

T. P. Webster

Dominion Textile Company, Limited,

Vice-President, Purchasing Agents' Association of Montreal, and Second Vice-President of the National Association of Purchasing Agents, Representing the Canadian Associations on the Executive

"What is granted to the one must be granted to the other on exactly the same basis. When there is a nation-wide economic change in business in which the consumer withdraws from the market, as has occurred this year, this is something beyond the control of the buyer. Therefore, he is exercising his rights in the matter when he does not take out his contract under such conditions.

"If the seller does not desire to grant to the buyer freedom from specifying and taking out material under this condition, then the seller in turn must also agree to eliminate from the contract the freedom from having to make delivery when the causes are beyond his control.

"Another way in which this could be handled would be to have a certain specified penalty to be paid by either the buyer or the seller when either did not fulfil the terms of the contract regardless of whether or not the causes for failure were beyond the control of the offending party. Whatever course of action is pursued, the one thing to bear in mind is that the burden must be equal, the penalty must be equal and the exceptions for failure to fulfil the contract must be equal. Otherwise we shall not have a contract which is true in principle, and therefore unbreakable."

It will be noticed that the idea underlying the Association's attitude on the matter of contracts is fairness. They do

not desire that a buyer should be granted any rights which are not balanced by equivalent rights on the seller's side of the bargain. In illustration of the conditions they are trying to remedy, Mr. Sampson describes two typical occurrences:—

"One firm," he says, "placed an order for material which had to be made up special to the customer's blue print and could not be used by any one else. The price, terms, delivery, etc., were agreed upon in advance, and lived up to. However, the next day after express shipment had been made, the buyer wired to cancel the order. When the shipment was received it was refused and returned to the maker. This was a clear case of contract repudiation and is most severely condemned as such.

A Typical Example

"On the other hand, a steel mill had a contract with a western customer for delivery at a schedule rate per month. It had failed to live up to the delivery specifications of the contract and was months behind. By this action it had forced the buyer to go out into the open market and procure large amounts of steel at considerably higher prices than the contract in order to keep the plant going. Then suddenly the mill started to make up all back deliveries and shipped six months' supply in one month's time. In so doing it disregarded entirely the customer's welfare, and when this customer was being forced to the verge of bankruptcy and requested the mill to hold up shipments, the seller immediately forgot about the immense monetary losses he had caused and was now causing his customer, and was very virtuous about the sanctity of the contract.

"This last is a typical example of the kind which has been so prevalent recently and which has been strongly condemned in this article.

"One of the fundamental principles of the common law of the land is that the plaintiff in any suit come into court with 'clean hands.' If he does not do this, his suit is thrown out. It is this very law which is keeping out of court so many of the loudest shouters about contract violations, because they know that their own records within the last two years will not permit any court in the land to maintain a suit in which they are the plaintiffs.

Fair Practice Advocated

"The National Association of Purchasing Agents stands for fair practise at all times to both buyer and seller. It stands for essential justice as opposed to rule-of-the-thumb justice. It is particularly opposed to high-handed methods on the part of the buyer, as is told in the first instance given above, or high-minded methods on the part of the seller, as is told in the second instance.

"During its four years of life the Association has been endeavoring to crystallize a nation-wide regard for fulfilling obligations. Its efforts have been directed almost entirely among its own members, as that is its prime duty. But it has also recognized that the buyer must be just as fair to his own company as to the source of supply, and therefore endeavor to consider every factor, then exercise the fairest judgment possible."

Another task which has attracted the attention of industry for several years has also come into the sphere of the N.A.P.A. That is the problem of standardization. The effort of the Standardization Committee in connection with catalogues have met with no small degree of success, and the same principles are now being applied to invoices and other items. For this work the Association is in co-operation with many other trade associations.

At present the Canadian Associations, while affiliated with each other through the head office of the N.A.P.A. in New York, are for all practical purposes distinct units. It is the opinion of many members that this separation is not altogether desirable and plans are now under way for bringing them closer together. The Canadian branches of the Association will hold a convention in Toronto on May 14th, and one of the principal subject to be discussed is this problem. All *bona fide* purchasing agents throughout Ontario and Quebec, whether members of the N.A.P.A. or not, will be welcome to attend, and it seems probable that the Canadian Association, if formed, will get off to a good start. Canadians have problems that do not affect members of the profession in the United States and they are untroubled by many conditions that annoy purchasing agents in that country. There is no doubt that Canadian problems can be solved more effectively if those Canadians who must study them are brought closer together.

Another feature of the May convention will be a joint meeting of the purchasing agents and leading executives. Members of the Association feel that the executives of their respective firms should know what such an organization can do to assist Canadian industries. It is thought that such a conference will prove of great mutual benefit to both classes, and accordingly an invitation to attend it will be extended to representatives of all branches of industry.

Those executives who take advantage of this opportunity may be confident that any time spent in this way will not be wasted. They will make the acquaintance of a group of men who are doing their best to advance modern industry by intensive cultivation of their own particular field. Acting, not from mercenary motives but from an honest pride in their profession, they have created a society whose aims are in harmony with all that makes for the improvement of industry in general. They are deserving of any encouragement or co-operation that others who have the same ideals may feel disposed to offer.

The Leaders on the Tariff Issue

MEIGHEN

(*Continued from page* 61.)

but while it exists, it is a strong reason why the tariff of the country must be kept as low as it can be kept with safety while serving the purpose that as a nation we must serve if we are going to prosper industrially or even exist as a substantial industrial factor among the nations of the world.

Consequently, the revision that we have under way, and which we propose bringing to Parliament this session, has for its purpose the fixing of schedules no higher than is necessary to retain well-conducted industries in this country, and makes it possible for them to grow in number and in product with the growth of Canada, and not such as to make it pay them to go elsewhere or just a few miles south and establish their works and workmen there.

We do not propose going any higher on any single line of articles, and as soon as any man in Parliament or out of it can show us that on any schedule there is a higher protective duty than is necessary to serve the purpose I have outlined, that schedule shall be revised.

I ask my readers if such a policy warrants the accusation—so frequently in the mouths of our enemies—that we are a Government of high protectionists?

The truth is that the tariff which presently exists is the lowest this country has had since 1878. Sir Wilfrid Laurier entered office in 1896, and the duties on dutiable goods averaged in the first fiscal year thereafter 29.22 per cent. When he left office, fifteen years later, they averaged 26 per cent. To-day, under the so-called protectionist Government they are running approximately 22.7 per cent. The Government of Sir Wilfrid Laurier required, even toward its close, an annual revenue of only 100 millions or thereabouts. The Government of to-day, because of war obligations and war consequences, requires 350 millions or more. Yet those who, describing themselves as supporters of a tariff for revenue only, supported a 28 per cent. tariff under Sir Wilfrid Laurier to raise a revenue of 100 millions, to-day denounce as high protectionists and as the friends of Big Business a Government which, although requiring a revenue of 350 millions, maintains a tariff of but 22.70 per cent.

Hydro-Electric Power Development in the Province of Nova Scotia*

By K. H. SMITH
Chief Engineer, Nova Scotia Power Commission

Nova Scotia has now in effect a system of power development similar to that in Ontario. In bringing about the desired legislation, an important part has been played by the Maritime Division, C.M.A. C.M.A. interest was first manifested in 1916, when Mr. Smith was invited to address a meeting in Sydney. Subsequently close touch has been established between the office of the Commission and that of the C.M.A., while more recently Mr. R. H. Mackay, chairman of the Maritime Division, has become one of the three members of the Commission. It is hoped later on to publish an article on what is being accomplished along similar lines in New Brunswick.

DURING the 1914 session of the Nova Scotia Legislature, discussions of several bills to incorporate private companies to develop water powers, revealed the fact that little or no definite information was available in regard to the amount of water power available in the province. These same discussions raised broader questions, involving the relationship of the public to the waters and water courses of the province. At this session, therefore—June 10th, 1914, to be exact—there was passed "An Act Respecting the Development of Water Powers within the Province," authorizing the appointment of a commission, not only to secure data in regard to the value and capacity of the water powers of the province, but also to formulate some general policy with respect to hydro-electric development.

The First Commission

The Commission subsequently appointed under this Act consisted of Hiram Donkin, Deputy Commissioner of Works and Mines, Chairman; W. G. Yorston, Assistant Road Commissioner; F. H. Sexton, Principal of the Nova Scotia Technical College, and A. S. Barnstead, Secretary of Industries and Immigration, Secretary. This Commission initiated negotiations with the Dominion Water Power Branch of the Interior Department at Ottawa, as a result of which the whole time of an experienced engineer of this department was made available for the province at the expense of the Dominion Government. Active investigations were begun early in 1915. Previous to this time, no actual measurements of water supply had been made in the province in such a manner, or covering a sufficient period, to be of real value. At the outset, therefore, every effort was made to get a system organized as rapidly as possible which would give these actual measurements of water supply which are the very foundation of all water power computations, and also serve in all problems involving the use of water for domestic or industrial purposes, or for navigation.

As the investigations proceeded, it became apparent beyond any shadow of doubt that Nova Scotia has comparatively large hydro-electric resources particularly suited to her needs. It has a large number of sites that are large enough to secure maximum economy in construction and operation, and yet not so large that the heavy initial capital expense involved precludes their immediate development for existing and growing power demands. While a number of the larger rivers of the province and a great many small sites have not yet been completely investigated, it is very conservatively estimated that the commercial capacity of the larger water power sites of the province is in the neighborhood of 300,000 h.p. All of these sites are so located, and of such a nature, that they may be developed under present-day conditions to supply energy at rates comparable with rates being charged in other parts of the country.

Contract prices in connection with the Margarets Bay Development of the Commission, now under construction, as mentioned hereafter, indicate that power may be generated from Nova Scotia water powers at one-third to one-half the cost of generating power under similar conditions by any other means available in the present state of the art of power generation. The present cost of generating power in the smaller towns of the province, where steam is used, can be reduced to about one-tenth of the present cost, and greater reliability of service assured. It should be carefully noted that these figures refer to the generation of power at the power house and not the rates to the consumers. Cost of distribution varies greatly with the character of the market, and a reduction of fifty per cent. in the cost of generation does not necessarily imply a similar reduction in the price to the consumer.

With this information available as to the physical capacity of the water powers of the province, it became absolutely essential that some steps should be taken to reconcile the interests of agriculture, of industrial and lumbering pursuits, and of the numerous riparian owners along the banks of the streams, in order that the development of these natural resources might be facilitated and carried out along proper engineering and economic lines. In 1918, therefore, an act was passed with a view to taking control of the waters and water courses of the province, while at the same time doing justice to riparian owners, and to those who were now or had used the water courses for one purpose or another. This act was repealed in 1919, and a new act substituted therefor. The new act was essentially the same as the original act of 1918 in principle. Briefly, it vested all water courses in the Crown, so that to-day all streams, lakes, ponds and water courses in general are the property of the people of the province as a whole, and are in somewhat the same position as the highways of the province. There are, however, provisions in the act safeguarding the rights of those who have already used water courses by way of water power development, sawmills, or for any other purpose, or have made provision to do so.

Public Enterprise Preferred

Having, therefore, cleared the ground, as it were, in regard to the rights and titles of water courses, the further question arose of how actual developments were to be carried on, either entirely by private initiative, or by some public body, organized along the lines of the Hydro-Electric Commission of the Province of Ontario. Apart from any argument as to fundamental principles underlying the development, ownership and operation of public utilities by private enterprise or some sort of public organization, there were certain peculiar conditions, physical and otherwise, in the Province of Nova Scotia, which rather indicated that the development of the water powers of the province by public enterprise in the great majority of cases was preferable.

In the first place, from an engineering and economic standpoint, it is highly desirable that the various water powers of the province should be linked together in a network of transmission lines which would supply the more important

* Part of the following article consists of extracts from an address delivered by Mr. Smith before the Union of Nova Scotia Municipalities and part of material supplied direct to Industrial Canada.

Two Views of the 10-Foot Pipe Line from Dam to Power House

On the left the picture looks down towards tidewater; on the right the view is reversed, being uphill from the power house

sections of the province with an adequate amount of electrical energy. Obviously, the inter-connection of a number of plants could more advantageously be carried out by a public body than by any private body or by a number of private corporations. It is also desirable, as power demands grow, that hydro-electric generating stations should be electrically connected with existing steam plants or plants which may be built at strategic points, utilizing the coal, oil, peat or other power-producing resources of the province, apart from water power.

Diversion of Water

In the second place, the necessity of extensive diversions of water from their natural courses, to derive the fullest benefit from the water powers of the province, as already mentioned, with all the riparian rights involved, can be more satisfactorily arranged by a public organization than by a private organization, even after everything possible had been done by legislation, as already outlined.

In the third place, the operation of the Public Utilities Act, the principle of which has long been established, and which aims to restrict capital issues and the returns on the same to a minimum, acts somewhat detrimentally to the private promotion of new public utility enterprises, and particularly those involving large hydro-electric developments. Some private promoters, otherwise interested in water power developments, think that as pioneers in this province they should be allowed a larger return than could be justified under the Public Utilities Act.

Finally, there existed situations in the province where the relations between existing public utility corporations and other corporations which desired to enter the same field were of such a nature as to seem to prevent the hope of actual development of the hydro-electric resources of the province within any reasonable length of time.

Moreover, as a result of actual experience, there seems to be no doubt but that the operations of the Hydro-Electric Commission of Ontario—a public body—had resulted very satisfactorily to the people as a whole. The recent financial statement of the Municipal Hydro-Electric Commission of the City of Toronto, operating in conjunction with the Provincial Hydro-Electric Commission, shows this municipally operated public utility to be in a most advantageous position, even after the very trying conditions of labor and materials during and after the war. As a matter of fact, a large number of electric light systems in this province are now municipally owned and operated, apparently, to the satisfaction of the communities served.

In 1919, therefore, a bill was passed, known as the Nova Scotia Power Commission Act, following the lines of a similar act and amendments thereto in Ontario, but with alterations to suit local conditions. This act provided for the appointment of a Power Commission, with ample powers to generate electrical energy, either from water power or other sources. A commission was subsequently appointed under this act, consisting of the Honorable E. H. Armstrong, Commissioner of Public Works and Mines; Mr. R. H. Mackay, of New Glasgow, and Mr. F. C. Whitman, of Annapolis. The former investigatory commission was, therefore, succeeded by this new commission, which, in addition to carrying on such general investigatory work as might be required, had ample powers to carry out actual construction work.

An Important Development

The Power Commission now has under way at St. Margarets Bay, some fifteen miles from Halifax, a power development with a total installed capacity of 10,700 h.p. The complete development of this project calls for the installation of about 15,000 h.p. Contracts for all the major portions of the initial development, including both hydraulic and electrical machinery and general construction work, have been let, and work is proceeding vigorously. It is expected that some power may be available from this development early next year, and that the complete initial development of 10,700 h.p. will be available about the middle of next year. This will be the first hydro-electric development in the Province of Nova Scotia, which, from the standpoint of magnitude and type of construction, will be comparable with modern hydro-electric developments in other parts of the world. It will represent the most approved engineering practice in matters of this kind of the present time.

Other Developments

In addition, the Power Commission has plans well advanced for a development of considerably larger magnitude on East River Sheet Harbour, intended primarily to supply the industrial section of Pictou County, but eventually to be linked up with the Margarets Bay development and other developments throughout the province. Work is now under way towards taking over and enlarging a somewhat smaller system in Lunenburg County.

The progress which has been made during the last few years in regard to the power plans of the province has been freely commented upon by those interested in matters of this kind outside of the province. It was not believed to be possible by those outside of the province, and even by some within the province, that such progress could be made, and at the present time there is probably more activity of this kind in the Maritime Provinces than in any other part of Canada. For eight years the United States has been struggling to get satisfactory legislation to enable water power projects to be proceeded with. Their Congress recently barely agreed on legis-

lation which offers some promise of success. It is only five years since these problems in Nova Scotia were attacked, and it is now believed that a fairly satisfactory solution has been reached.

There can be no question as to the necessity for the development of the hydro-electric resources of any country, and efforts along these lines are being made the world over. France, for example, a country presumably hard pressed financially, has made enormous strides during and since the war, chiefly for economic reasons. The improvement in the art of hydro-electric development and transmission, and the increasing cost of coal, together with transportation and labor difficulties, have been largely responsible for the great impetus to hydro-electric development. The adjoining province of New Brunswick, after considerable delay, has now followed the example of Nova Scotia, and at the 1920 session of their Legislature adopted legislation similar in all essentials to the Nova Scotia Power Commission Act.

The Power Commission Act.

While I have mentioned the Power Commission Act in a general way, I wish to speak of it in a little more detail, and particularly that section of it covering the relations between the Commission and municipalities.

In brief, the Provincial Power Commission is a trustee for the various municipalities of the province, which may be supplied with power under the act. The Commission builds generating stations and transmission lines, and supplies electrical energy in bulk to each municipality for distribution within its own boundaries. Instead of operating its own independent power generating station, the municipality receives power from the transmission lines of the Provincial Commission, thereby receiving the benefits of continuity and reliability of service, as well as economy arising from the operation of a larger system. The municipality otherwise is in exactly the same position as if it did operate its own plant, and entirely controls the sale and distribution of electrical energy within its own boundaries.

How the Act Works

The act provides that a municipality may apply to the Provincial Commission for a supply of power, whereupon estimates of the cost of supplying the same will be made by the Commission. If these estimates are satisfactory to the municipality, a contract may be made between the municipality and the Commission, and, until or unless such a contract is made, the municipality assumes no obligation whatever. It is also important to note that the only obligation assumed by a municipality is by virtue of such contract, which is intended to provide that the municipality shall pay to the Commission merely the actual cost of power supplied to the municipality.

The act also authorizes any municipality which has entered into a contract with the Commission to acquire lands and construct works necessary for the distribution and sale of power secured from the Commission, and to raise funds for the same by way of debentures.

Again let me emphasize the fact that the basic principle underlying the act is a mutual arrangement between municipalities desiring a supply of electrical energy, whereby the Provincial Commission acts somewhat as a trustee and somewhat as a partner, in order to secure the most advantageous development and use of the power resources of the province.

In conclusion, I can only say that the Power Commission Act, while it may from time to time need changes to make it conform to special situations as met, is based on principles which have been successfully applied for a number of years in one province of this country, and have more recently been adopted in three other provinces. I believe if that spirit of frankness and hearty co-operation, which is intended to underlie the principles of the act, is manifest in all undertakings initiated under it, it will indeed go a long way towards improving social and industrial conditions in this province, and placing it more nearly on a par in similar matters with other parts of the country. One thing is certain, that unless Nova Scotia does pursue this policy with vigor, its whole development, industrial and otherwise, will fall hopelessly behind certain interior sections of the country. While there is an acute shortage of power in upper Canadian centres at the present time, all the complications, international and otherwise, surrounding the vast powers on the St. Lawrence River, will ultimately be overcome, and the industrial development already so well established in that locality, will increase with leaps and bounds.

Even the New England States expect to tap this large reservoir of power. Such difficulties as exist cannot be overcome, or actual developments take place, for a number of years at the best, and this may be Nova Scotia's opportunity to gain a foothold in industrial development, or at least revive many of the smaller industries in which she once excelled and for which she is in many respects so admirably suited.

Description of St. Margarets Bay Development.

The St. Margarets Bay Development is now so far advanced that the general scheme of development is readily apparent. It is of a type somewhat different from the popular conception of a water power. No great falls are apparent, but

The Dam at Mill Lake

In the centre is shown the intake for the 10-foot pipe line which will run from the dam down to the power house at tidewater

by a system of comparatively small intake dams and extensive pipe lines, the rapids and falls over a long stretch of river are utilized.

This particular development has had a long and somewhat interesting history. As early as 1901 a report was made, covering a proposed development on one of the rivers now being utilized. Since that time various reports have been made from time to time, and, on two previous occasions, construction was started. It is now certain that on this third attempt, construction of the project will be completed, although not exactly along the same lines as originally contemplated.

From a practical standpoint, the interesting features are the diversion of the Indian river into the Northeast river, and the utilization of the water twice.

There are two power houses, one known as the Tidewater generating station, located at tidewater near the mouth of the Northeast river, and the other known as Mill Lake generating station, located at the head of Mill lake. The Tidewater generating station takes its supply directly from an intake dam at the foot of Mill lake, through a wood-stave pipe line, ten feet in diameter, giving a head at the Tidewater generating station of about ninety feet. There will be two power units in this station, each of 3,450 horse-power. The Mill Lake generating station utilizes the water of the Northeast river by means of an intake dam at Coon pond, and a pipe line, six feet in diameter, about 3,500 feet long, giving a head at this power house for the Northeast river water of about 156 feet. Ultimately, a pipe line will convey the water of the Indian river from an intake dam at the foot of Sandy lake to this same power house. For the present, however, the Indian river water is being diverted directly from Little Indian lake to Mill lake, so that for the time being the Indian river water is only being utilized at the Tidewater generating station. For the present, two generating units of 1,900 horse-power each are being installed in the Mill Lake generating station, while ultimately two more units will be installed to utilize the Indian river water. The total installation at present in the two power houses will be 10,700 horse-power, while the ultimate installation will be in the neighborhood of 15,000 horse-power. Reservoirs are being provided on Wright's lake, Pockwock lake, Big Indian lake, and other lakes.

Another View of the Dam and Intake at Mill Lake

Energy will be transmitted to a receiving station at Halifax at 13,200 volts, over aluminum cable, supported on steel towers. For the present, nine cables will be utilized, while ultimately there will be twelve cables. These cables consist of nineteen strands, and are nearly three-quarters of an inch in diameter. The steel towers will be thirteen feet square at the base, and will have a total height of about fifty feet. They will be spaced approximately 400 feet apart. The total distance from the Tidewater generating station to the Halifax receiving station by the transmission line is less than fifteen miles. At the present time, the Halifax receiving station and the Tidewater generating station are practically complete, with the exception of the installation of the machinery. Mill Lake dam, being the intake dam for the Tidewater generating station, is also complete, as is the greater part of the ten-foot pipe connecting this intake dam with the generating station. Wright's Lake storage dam is complete, and work on all the other parts of the development is actively under way. The aluminum cable for the transmission line is all on the ground, and material for the steel towers is about to be shipped. The illustrations presented herewith will serve to give some idea of the general scheme of development and its present stage of completion.

Furniture Manufacturers Hold an Exhibition

By J. H. SAUNDERS

AN exhibition of the products of fifty-four Canadian furniture manufacturers was held in the old Kay building on King Street West, Toronto, from January 10th to 22nd, inclusive. In the plans for this display of their goods, the manufacturers concerned had two main objectives, and succeeded in carrying both. The first was to show those retailers who attended the exhibition the advance designs for 1921, and to enable them to pass judgment on their merit and make selections for their own trade. The second was to bring about a feeling of co-operation between manufacturers and retailers, an *entente cordiale* that should react to the advantage of both.

Exhibitions by manufacturers are not new, but in this country they are possibly not so frequent as they might be. The enthusiasm shown at this one was gratifying, so much so, in fact, that the officials hope to make the show an annual event, and are already making plans for next year. Though the five floors of the building were used, the floor space was not sufficient, and next year two or three buildings will be required for to get the maximum effect from the display.

The firms exhibiting were mostly from Ontario and Quebec, but one of the oldest maritime concerns, the Windsor Furniture Company of Windsor, Nova Scotia, was also represented. It is hoped and expected that many more furniture companies will exhibit on future occasions.

The date for the exhibition was well chosen and was a factor in its success. January is the month in which most retailers are preparing for the spring's rush of business. They are anxious to get in touch as early as possible with the latest ideas in furniture, for fashions change in that line as often as they do in clothes. Two thousand invitations sent to the leading retail dealers all over the country brought replies from between six hundred and fifty and seven hundred, and those who were able to attend expressed their appreciation in the most satisfactory way, by giving orders

Another fact that made the month of January desirable was that on the 14th the Retail Furniture Dealers' Association were holding their annual convention at the King Edward Hotel. The two events dovetailed very nicely, and when the business of the convention was dispatched the manufacturers who were exhibiting and the retailers, over four hundred in all, sat down to a banquet in the hotel.

After the banquet, speeches on business conditions and problems of the trade were made by J. Acton, of the *Furniture Journal*, G. E. Gruetzner, of the Hespeler Furniture Company, Limited; J. S. McKinnon and J. R. K. Bristol, of the C.M.A.; J. R. Shaw, of the Canada Furniture Manufacturers, Limited, and others.

One speech of the evening, that of Guy O. Luke, president of the Retail Furni-

ture Dealers' Association, expressed a sentiment that was corroborated by all who attended the exhibition whether as buyers or sellers. His subject was the good feeling existing at present between manufacturers and retailers. There was now a spirit of co-operation between them, he said, and the retailers appreciated the manner in which manufacturers were doing away with real or fancied grievances.

Prices Are Cut

"In twenty-five years' experience of the furniture business," said W. J. Craig, of the Hespeler Furniture Company, and organizer of the exhibition, "I have never known such friendliness between manufacturers and retailers as exists today. Prices in furniture have been cut from 15 to 25 per cent. below those of 1919, and the retailers appreciate that we are doing our best for them. There are very few complaints now, and we are pulling together splendidly."

One sign of this co-operation was particularly prominent in the course of the exhibition. The manufacturers felt that the occasion offered a good opportunity for advertising their wares to the general public. To facilitate the transaction of business only members of the trade were admitted during the daytime, but on Tuesday and Thursday evenings of each week the building was thrown open to all who cared to attend. Local retailers were induced to announce this in their regular advertisements, and to urge their customers to visit the exhibition. The advertising was effective, for on some evenings as many as twelve hundred came. They showed a great deal of interest in the articles on view, and inquired about prices. As these could not be given out, they made notes of the pieces of furniture they admired and of the shops where they could be bought.

Tasteful Arrangement

It is safe to prophesy that a stimulation in trade will result from these open evenings. No visitor could fail to be impressed by the tasteful arrangement of the exhibits, and the beauty and fine workmanship of individual pieces. Everything that adds to the charm and comfort of a home was to be seen, from kitchen cabinets to phonographs. Some excellent lighting effects were secured by the use of shaded floor lamps, many of which were novel in design and coloring. A collection of reed furniture suitable for a porch or summer home had a room to itself and was the subject of many favorable comments. Many of the wooden pieces were copies of antique models or adaptations of their designs to modern requirements.

Much Business Done

Those who were in charge of the exhibition may well be proud of its success. Practically every manufacturer did more business than he had expected to do before the exhibition opened. With prospects so favorable in goods which are generally considered as luxuries, manufacturers of other lines may reasonably look forward to a resumption of normal business conditions.

An Attractive Club Room

For the convenience of their out-of-town visitors, the Canadian General Electric Company, Limited, have opened this room at their headquarters in Toronto.

Making Life Pleasanter for the Worker in a Frontier Industry

By W. L. EDMONDS

THOSE who would care to see a good example of what a manufacturing company can accomplish in the way of making life pleasant for its employees should visit the town of Espanola in New Ontario. Here the Spanish River Pulp and Paper Mills, Limited, are creating a model town, where already many features are to be found conducive to the comfort and wellbeing of the workers and their families.

Do not let anyone, in passing through the uninviting hamlet on the Soo branch of the C.P.R. which bears the name of Espanola, imagine that his eyes are resting on the Espanola of the Spanish River Pulp and Paper Mills, Limited. The latter is as different from the former as cheese is from chalk, and to see it one has to journey about three miles by road after detraining.

The situation of the town is ideal, resting as it does upon a plateau a hundred feet or more above the surface of the Spanish river, and encircled by towering rocky ridges, such as are characteristic of that part of the country.

In area, the town is a square mile in extent. It is owned in its entirety by the company. Being unorganized as a municipality, it is also managed by the company. The streets are laid out at right angles, with provision here and there for crescents, and all are wider than those in Toronto, if we except Spadina, St. Clair and Danforth avenues. While most of the homes, as erected by the company, are of the usual working class type, they are gradually being superseded by those which approximate to the suburban type. The extent to which transformation in this respect is going on may be gathered from the fact that since June, 1919, over one hundred new dwellings have been erected, any one of which would grace a Toronto suburb. There have also been erected since then four as attractive-looking boarding houses as one might see in a day's march. In all, there are over two hundred homes in the town, and while these are all at present owned by the company, arrangements are being made to permit workmen to purchase lots and erect their own homes if they so desire.

The town has its own sewage, water and electric light systems, with all three of which nearly every home and building in the place is connected. The water is pumped from the river, and, to ensure its purity, is chlorinated.

But the company has not been satisfied with merely providing homes and domestic conveniences for its employees, who number about 650. It has also provided, on a most liberal scale, ways and means for the spiritual, intellectual, and physical welfare of the employees and their families.

Since June, 1919, two schools have been erected, both of which, in structure and in equipment, would do credit to any organized municipality in the country. The one is a public and high school in combination, each school occupying a separate part of the building. The public school consists of three rooms, and the high school of three rooms, with a domestic science department. The other is a separate school. It has eight rooms and is a decidedly imposing structure. Both school buildings are of brick and heated throughout by hot water radiation.

The Local Hotel is Up-to-the-Minute

Besides these public, separate and high schools, there is a well-patronized night school, for the benefit of employees sixteen years and over. The purpose of this night school may, in brief, be designated as threefold. In the first place, the object is to teach English to the foreigners employed; in the second place, to impart knowledge on elementary subjects, and in the third place, to provide technical education. No tuition fees are charged, the only levy being for textbooks, which are supplied at cost. A similar school is also in existence at t Sault Ste. Marie and Sturgeon Fa plants of the company.

As a further addition to the provisio of the company for the educational w fare of its employees and their famili Espanola has its public library. For t spiritual welfare of the community, t churches are provided, one being Protestant union church and the oth a Roman Catholic. The latter was co pleted about two years ago, and has seating capacity of six hundred.

"movie" theatre is, course, in operation in t town.

One of the most rece ventures of the compa for the general welfare the inhabitants of the to is the erection of community hall, with seating capacity of five hu dred. It is of brick, co crete and steel, and w formally opened about year ago.

For the physical welfa of the place, ample pro sion has been made. F summer sports there is extensive fenced-in athle field. Even a grandstand provided. A large, cover building provides for sk ing, hockey and curling d ing the winter months, wh near the factory site is well-equipped gymnasiu and quarters for the boy scout organi tion which the town posseses.

The town has both a hotel and a partment store, each of which is own by the company. Both are most crec able institutions. The hotel is of bri is modern in style of architecture a in equipment, and is so well patroni that guests have to be turned away most every day. In fact, although th are over one hundred rooms, it is pr tically impossible to secure accommo tion unless it is arranged for well ahe The department store is generally c sidered to be the best between Toro and Winnipeg. It is a large, three-sto brick structure, and is in every way w equipped. It has its own refrigerat plant, with a cold storage room on ea flat. The store's customers are not c fined to the inhabitants of the to among its patrons being a number farmers from the surrounding country

One thing that impressed me dur a recent visit to Espanola was the *es de corps* which existed among the e ployees. It was in the atmosphere, a

was apparent at every turn. The plant is run on the eight-hour shift system, there being three shifts per twenty-four hours.

The mills are running on the "closed shop" principle, and the principle of plant councils is being embodied into the system, so that the management can get every possible assistance from any and all who have good ideas. Apparently the "closed shop" has not had a detrimental effect upon the operations, as everything was running with great smoothness, and the best records of quality and quantity have been secured throughout the year.

That the attitude of the company toward the unions of its employees is friendly, I had further evidence in glancing over a few issues of the "house organ," which is published weekly from the head office at Sault Ste. Marie, a good deal of space being devoted to union news and reports of union meetings. This weekly is called the *Spanish River News*, is a model of its kind, and is well worthy of an examination by manufacturers who are in the habit of issuing such a journal, or may contemplate doing so. It contains practically little of what is generally termed as "uplift stuff" news, and much of it is of a personal nature, being its outstanding feature.

Type of Cottage Built for Employees

Another good use to which this "house organ" is put is the stimulating of competition between the staffs of the different plants of the company in respect to quality of production, a tabulated statement being published each week showing the percentage of standing at each mill, both for the week and for the year up to date. As a still further incentive, a statement is also furnished regarding the result of tests of paper manufactured by competing firms, thus stimulating the staff at each mill not only to secure a better percentage of quality over its fellow, but over that of competing firms as well.

Although so much of that which the Spanish River Pulp and Paper Mills, Limited, are doing at Espanola for their employees may well be termed welfare work, they refuse to recognize it as such. To quote the manager of manufacturing: "It is business. Our plant," he explained, "is situated far from any centre of population, and we had to adopt

Substantial Brick Dwelling for Company's Employees

Community Hall at Espanola

The Centre for all Social Activities of the Employees of the Company and their Families

some such policy as that we now employ if we were to keep our staffs complete. Therefore, it is a distinctly business, and not a so-called welfare, proposition. In other words, it is just as much a business proposition as the running of our plant. At our Soo and Sturgeon Falls plants the conditions are not the same. They are situated in an organized municipality, where the schools, churches, etc. —which we have to provide at Espanola —are already in existence."

But if the company refuses to recognize as welfare work what it is doing at Espanola for its employees, its actions are impelled by something beyond purely business motives. If this were the case, there would scarcely be the studied effort on the part of the management for the creation of a town replete in those factors which contribute to the comfort and the moral, intellectual and physical welfare of its inhabitants.

Denatured Alcohol--An Opportunity

By THEO. H. WARDLEWORTH

National Drug & Chemical Co. of Canada, Limited

WELL-KNOWN is the fact that alcohol is the universal solvent that is utilized by the chemist and manufacturer. The directions in which it can be employed are so manifold that it is impossible to give a complete list. It may be safely stated that additions can be made almost every week to the list of purposes to which it can be devoted as the result of the researches of chemistry and the new applications of industry. The great obstacle to the general employment of alcohol as a solvent has been the opposition of Governments to its employment in the manufacture of various products on the claim being put forward that it was necessary to 'protect the revenue." This policy in England has much to do with the loss to that country of the value of the discoveries of Perkins in relation to aniline dyes, to say nothing of the many investigations which have been crushed in England and other countries by the inability to obtain alcohol free of duty; the tax in many cases being prohibitive to the investigators, who were generally men of big ideas and small means.

Germany may be said to be the first country which took a decided stand with regard to the matter, and the policy adopted by that country with regard to duty free alcohol has contributed in an enormous measure to the development of the German chemical industry which has been so marked during the past generation. England resisted for many years all efforts to provide duty free alcohol for industrial purposes, but finally gave way and after several Acts, which were encumbered by much red tape, they have finally adopted a measure which gives comparative freedom for the application of duty free alcohol for industrial purposes.

The United States, although it took action only in 1906 and brought in amended bills in 1911 and 1919, have now undoubtedly the widest range of formulæ and the most liberal interpretation of what is meant by denatured alcohol for industrial purposes, and they have published a list of no fewer than thirty-two formulæ which are permissible for the denaturing of alcohol for industrial purposes. The Dominion Government in July, 1920, passed an Act which removed from Government control the denaturing or methylating of alcohol for the purposes of fuel, light and a limited number of industrial purposes. At the same time power was given to the Minister of Inland Revenue through his officers to approve of any special denaturents for alcohol which might be required for any industrial, pharmaceutical or scientific purpose in the Dominion of Canada, free of duty, but subject to such regulations as the Minister from time to time might prescribe. The provisions of the Act are sufficiently wide to meet all requirements of industries which employ alcohol.

The industries affected are very numerous indeed, and apparently Canadian manufacturers have not realized fully that they are entitled to enjoy a privilege which has been extended to them, namely the opportunity of obtaining alcohol duty free, denatured for their own special business, thus enabling them to turn out their product without the heavy tax which has been laid upon alcohol for beverage purposes.

No doubt it will take time for the manufacturers to realize fully the advantages of the concession which has been made by the Government, but gradually many products which are now dependent upon the use of duty-paid spirit will be manufactured from duty free alcohol, thus effecting a great economy to all concerned. It is, therefore, incumbent upon all manufacturers who employ alcohol in their business to see whether it would be possible to secure from the Government a specially denatured alcohol which they could employ. Application will have to be made to the Department of Inland Revenue for the acceptance of the various formulæ required, but the Department is willing to give full consideration to all applications.

Furthermore, it must be borne in mind that not only can denatured alcohol be used for articles which are now being made in Canada, but the privilege opens up a very wide field, as a large range of products can now be made in Canada which hitherto could not be produced and no doubt considerable improvement can be effected in the quality of those now made, provided alcohol is required in the manufacture. The following is the list of the manufactures in the U.S. which are benefited by the opportunity of using duty free denatured alcohol in their industries:

Pharmaceutical extracts and preparations in the manufacture of which Denatured Alcohol can be employed, barometers and thermometers, brushes, artificial feathers, cutlery, cutting oils, composition billiard balls, compasses, hats, gas mantles, imitation ivory goods, jewellery and watches, colors and bronze powders, lacquers and japans, mirrors, mouldings and pictur frames, photographic plates, films, papers and enlargements, soaps, transparent and liquid, alkaloids and alkaloidal salts, confectioners' colors, imitation leather, enamel, digestive ferments, dental alloy, leather substitutes, leather goods finished, mica insulators, mucilages, non-scattering able glass, polishes, refining mineral oils, refin

(*Continued on page* 93.)

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Made-in-Canada Campaign being Revived

RECOGNIZING the urgent need of stimulating the purchase of home-manufactured products, if widespread unemployment throughout Canada is to be avoided, the Association sent out, on January 21st, an appeal to the members, signed by the president and general manager, urging them to do all in their power to bring before local dealers and consumers the desirability of buying Canadian goods.

The letter set forth that for the year ending November, 1920, Canada's adverse trade balance amounted to $425,499,373. Out of importation of $1,345,582,300, over 68 per cent. came from the United States. On these imports Canadians paid exchange reaching as high as 17¼ per cent.

"Canadians," continued the letter, "are still sending their money to the United States and paying heavy exchange in spite of the fact that thousands of Canadian workers, who are willing and able to produce the most of these imports, are out of employment because Canadian factories are running part time or closing down because they lack orders for goods. The unemployed men and women and their families are being supported at the public expense, involving an additional burden to tax payers. If Canadians united in a resolve to buy Canadian-made goods as far as possible instead of imported goods, most of the problems of trade depression and unemployment would be quickly solved."

The letter suggests seven ways by which the manufacturers can help to promote the campaign:

(1) Call your travellers together and ask them to talk the "Made-in-Canada" idea wherever they have an opportunity.

(2) Arrange addresses to local business or other organizations.

(3) Discuss the matter with your own employees.

(4) Enlist the support of local women's organizations.

(5) Help to organize a local "Made-in-Canada" committee and campaign.

(6) Feature the following ideas in all your advertising, and particularly so in the local newspapers, where your factories are situated:

(*a*) Urge the public to buy your own products, pointing out that, in addition to special merits of quality and price, they are made in Canada by Canadian workers.

(*b*) Urge the public, through your national advertising, to buy Canadian goods, which will help to provide employment and to relieve the exchange situation.

(*c*) Urge that Canadian money should be spent in Canada instead of abroad, as far as possible.

(7) Don't forget the influence of the merchants and their clerks in this campaign. Keep them constantly informed as to the merits of your goods and show them that it is in their interests as well as their customers' to buy lines made in Canada.

Our Branch Chairmen for 1920-21

Louis A. Letourneau

President, Quebec Preserving, Limited

Chairman, Quebec Branch

MR. LETOURNEAU was born in 1873, in Ste. Famille, Island of Orleans, where he also received his early education. His commercial career began at the age of fourteen, and two years later he started a business for himself in the grocery line. His success in this brought the Quebec Preserving Company into existence in 1893. Mr. Letourneau has been president of this firm, now Quebec Preserving, Limited, since its formation.

Another business enterprise of Mr. Letourneau is the brickyard of Paradis and Letourneau, which he founded in 1897. He has also taken an active interest in politics, being alderman of his ward in 1906, and representing Quebec East in the Legislature in 1908, 1912, 1916 and 1919. He became chairman of the Quebec Branch of the C. M. A. in 1918, and is now enjoying his third term of office.

Alberta Manufacturers Hold Meeting

ON January 4th a meeting of members of the C.M.A. in Alberta was held in the Macdonald Hotel, Edmonton, with Mr. C. G. Robson, chairman Alberta Executive Committee, in the chair. Mr. Robson stated, in welcoming the visiting members, that such good results had followed the interview with the Premier of Alberta and his cabinet, prior to the last session of the Legislature, that it had been decided to follow the same practice this year, and an interview had been arranged for the following day.

The first subject discussed was workmen's compensation and, after a full expression of opinion, it was moved that Mr. Keniney, member of the Compensation Board, be asked to come and address the meeting on the subject.

The next item of business was a consideration of the report of the Commission appointed under the Factories' Act to investigate and recommend minimum wages, hours of labor and regulations *re* apprentices. This report recommended—1st, a minimum wage for any person under 18 years of age; or for any female employed in any factory, shop, office or office building of $13 per week, except that apprentices should be paid not less than $8.50 per week; 2nd, that hours of labor be fixed by legislation rather than by order-in-council; 3rd, that the proportion of apprentices should not exceed 25 per cent., and 4th, that legislation be enacted providing for the appointment of a minimum wage board.

At the afternoon session, Mr. Keniney was present and explained the working

of the Workmen's Compensation Act. answering numerous questions from the members. A vote of thanks was extended to him for his courtesy. A committee was then appointed consisting of Wm. Innes, Calgary; J. H. Taber, Medicine Hat, and the secretary, to draft a minimum wage Act along the lines of the discussion on this subject.

At the evening session, the foregoing committee presented its report and the draft bill was considered clause by clause. Before adopting this, it was suggested that it would be well to confer with Mr. H. Milton Martin, the employers' representative upon the Factory Act Commission and he was accordingly invited to attend. At this session an executive committee was appointed to represent the manufacturers of the province, this committee consisting of C. G. Robson, chairman and the chairmen of the Edmonton, Calgary and Medicine Hat branches.

A fourth session was held on the morning of January 5th. Mr. Martin attended and explained the difficulties that had been encountered on the Factory Act Commission as the employers' representative and the action taken by him in protecting their interests. The draft bill was then gone over clause by clause.

Interview with Alberta Government

MEMBERS of the C.M.A. in Alberta. who had been attending a meeting of the Association in Edmonton on January 4th, interviewed Premier Stewart and his cabinet on January 5th at 3 p.m.

William Georgeson addressed the cabinet, stating that Alberta manufacturers had the previous day had the advantage of meeting Mr. Keniney and, after a full discussion with him, had come to the conclusion that, should the Government decide to change the scale of compensation from flat amounts to a percentage basis, manufacturers were prepared to give the same a trial even to the extent of 66 2-3 per cent., as mentioned by Mr. Keniney, but that after thorough consideration they were strongly opposed to a minimum of $12.50 per week advocated by Mr. Keniney. In reply the Premier stated that he had not considered any changes; that he felt the Government had better stick to the provisions of the present Act, under which the Government knew where it stood.

R. J. Hutchings addressed the cabinet upon general manufacturing conditions in Alberta, pointing out that, while the province had many natural advantages for manufacturing, particularly with respect to cheap fuel, and a large market right at its doors, industry was still in its infancy in Alberta. He urged that every care be taken by the Government and expressed the hope that the Government would, in considering legislation, take no action which might retard the natural growth of industry in the province.

The secretary stated the position of Alberta manufacturers with respect to the minimum wage and presented the draft bill which had been drawn up. The Premier replied that the Attorney-General had a minimum wage bill under advisement and promised that the draft submitted by the manufacturers would receive consideration.

The secretary then dealt with the question of general hours of labor and requested that no legislation should be enacted by the Government restricting hours of labor beyond those applying in any other province or in the United States.

In closing the Premier thanked the manufacturers for appearing and giving the Government the benefit of their ideas. He complimented them upon the fair position they had taken, stating that he had unbounded faith in the future industrial growth of the province and adding that the Government would do all it could to encourage this growth.

Workmen's Compensation Act in Quebec

THE General Manager and Legal Secretary attended by request a conference with the Montreal branch on January 13th at Montreal, with respect to proposed amendments asked by labor to the Quebec Workmen's Compensation Act. The Province of Quebec was the first province in Canada to adopt a workmen's compensation law, this law being placed on the statute books in 1909 and becoming effective in 1910. It is now claimed by representatives of labor that taking advantage of the experience of others, a change in the Quebec Industrial Accident law is desirable. The Legal Department will render such advice and assistance in the matter as may be desired by our Montreal branch.

Prairie Province Branches Hold Meetings

DURING the past month meetings of the local branches at Edmonton, Calgary and Medicine Hat were held. G. E. Carpenter, secretary of the Prairie division spent several days in each city and visited the members prior to the meetings. At Edmonton the gathering was held on January 7th. At this meeting C. A. Graham, president Great West Garment Co., was elected chairman, and C. R. Weaver, Capital City Box Co., honorary secretary.

Mr. Carpenter spent the 8th, 9th and 10th in Calgary, and on the evening of the 10th a meeting of the members of the branch was held. In the absence of the chairman, R. J. Hutchings, C. J. Williams, Alberta Box Co., presided, and Mr. Kitely, Metal Shingle & Siding Co., Ltd., was elected honorary secretary.

On January 11th, Mr. Carpenter visited the members at Medicine Hat and a meeting of the branch was held at which George Preston, manager Lake of the Woods Milling Co. presided, in the absence of the local chairman.

At each of the three meetings, the members spoke in the highest terms of the services rendered by the C.M.A., and referred to the useful results that had been secured since the manufacturers of the province had become organized and were able to take up matters with the provincial Government as a unit.

Meeting of the Toronto Branch Executive

ON January 20th a meeting of the Toronto branch executive was held in the Association's offices, with the chairman, T. A. Hollinrake, presiding. Reference was made by the chairman to the change in circumstances which had occurred since the last meeting with respect to the ownership of power systems in Toronto. He stated that no complaints had been received from the industries of any shortage of power and so far as appeared, the manufacturers were being served with electric energy to their full requirements.

By consent of the meeting Dr. Gordon Bates addressed the executive on the subject of social hygiene in the factories. It was unanimously resolved that the executive give its general approval to lectures being delivered in the factories on this subject, satisfactory prior arrangements being made with the responsible officers of the corporations. Dr. Bates was at the same time informed that it was desirable that copies of any literature desired by his organization to be distributed in the factories should first be submitted for the approval of the executive. It was believed the workers appreciated the educational value of the propaganda, but it was thought that at the present stage the matter should be approached with discrimination.

The following were appointed representatives of the Toronto branch on the Advisory Industrial Committee of the Board of Education for the ensuing year: George Brigden, Bridgen's Limited; W. H. Shapley and W. C. Coulter Booth Coulter Copper & Brass Co. Limited.

Early Workings of New Bankruptcy Act

THE Bankruptcy Act, which became effective on 1st July, 1920, as yet is comparatively new, and its full effect on business has not been felt. For the first few months to the end of November last notices of 274 failures under the Act appeared in the *Canada Gazette*.

Bankruptcy proceedings usually apply only to the estates of individuals. Under our Act, however, companies which are insolvent may be wound up (except banks, insurance, trust, loan and

way companies, and building societies having a capital stock).

In the period under review only 21 receiving orders were made. In other words, nearly all of the cases were voluntary assignments. Most of the receiving orders—15—were made in the Province of Quebec. Four companies, six partnerships and five sole traders were so adjudged bankrupt. Two receiving orders were made in British Columbia, one in Alberta, and three in Ontario. In the first two weeks of December, five receiving orders were granted in Quebec.

So far as uniformity of procedure is concerned, the Bankruptcy Act has accomplished this: The same law now prevails all over the Dominion. Uniform rules of practice have also been drafted and put into effect. It is believed that the Act will tend not only to the keeping of better records but to the promotion of a spirit of genuine honesty in business.

Accident Prevention and Safety Work

A CONFERENCE of safety supervisors and engineers was called at Halifax on January 6th, under the auspices of the Nova Scotia Accident Prevention Association. The meeting was held in the board room of the Halifax Shipyards, Limited, and about thirty were in attendance. The delegates reviewed the activities of the safety organizations in the individual plants during the past year and very encouraging progress was reported. In the case of perhaps the largest industry in the province, a reduction of 30 per cent. in accidents during the year was reported. In another large industry the report showed a reduction of 75 per cent. in the number of cases treated at the first aid room. In other cases substantial reductions were also reported.

A pleasing feature in the remarks of one of the representatives, was that while his company has lately refused to approve requisitions for improvements to the plant on the plea that industrial conditions do not justify such, they have never yet refused to grant an expenditure for safety work. Another pleasing feature was that during the conference only one representative referred to the saving in dollars and cents accruing from safety work.

In conjunction with the accident prevention work, we are promoting first aid classes in the various industrial centres, in order that each industry will have competent first aid men immediately available. Where one plant will not have a sufficient number to form a class of from twenty to thirty, we get the other plants in the community to co-operate to make up the required number. In some localities we expect to have a number of classes, as we are urging the employers to send at least one man from each of his departments. In order that the student will have some particular recognition we have him take the course as prescribed by the St. John Ambulance Association, and when he successfully passes the examinations, he is awarded a certificate. The expenses in connection with this work are paid collectively and proportionately by the employers who co-operate in making up the classes. One coal company alone expects to have at least 500 certificated first aid men by early spring. Classes are now under way in Sydney, Glace Bay, Halifax, New Glasgow, Trenton, Stellarton and Amherst.

NOTE.—The Nova Scotia Accident Prevention Association was formed by the employers taking advantage of Section 80 of the Compensation Act, and all legitimate expenses are paid from the accident funds set up under the Act, although the employers directly supervise the work of the Association. The secretary of the Maritime Division C.M.A. also acts as secretary for the N.S.A.P.A. Although the Association has adopted rules and regulations governing safety conditions in the various groups of industry, we do not depend as much upon the carrying out of these regulations for the prevention of accidents, as we do upon converting the individual employer to a realization of the benefits accruing from safety work. Once the man at the top is converted, he will do a great deal more to rectify conditions than all the regulations you can put on the statute books, or from the casual or periodical visits of the factory inspectors.

H. R. THOMPSON.

Hamilton's New Mayor

George Charles Coppley

Coppley, Noyes & Randall, Limited, Hamilton

THE election of Mr. Coppley as mayor of Hamilton is a fitting reward for continuous activity in all civic matters which had for their object the bettering of community conditions. Among the several responsible positions he has held are the offices of secretary-treasurer of the Hamilton Civic Improvement Society, president of the Board of Trade, president of the Chamber of Commerce, and chairman of the Legislation Committee, C. M. A. Mr. Coppley recently retired from Coppley, Noyes & Randall, Limited, the firm which he established and served as managing director for eighteen years.

Meeting of Members held in St. John, N.B.

THE St. John members of the Association held a meeting on Wednesday afternoon, January 19th, to discuss informally a number of matters of more or less importance, including proposed labor legislation, unemployment, transportation, etc. The chief matter, however, to receive consideration was the question of extending an invitation to the Association to hold this year's annual general convention in St. John. After discussing the matter from all angles, it was unanimously decided that a hearty invitation be extended. The members hoped that the invitation would be accepted as a special opportunity would then be afforded for the members in the other provinces to become acquainted with the maritime members, and learn more about these provinces by the sea. In anticipation of the visit, a competent committee was appointed to take care of the local arrangements.

Canned Fish Section Elected Officers

AT the recent annual meeting of the Maritime Canned Fish Seection, the officers for the year 1920 were re-elected for the year 1921. They are as follows: Hon. F. Magee, chairman; R. H. Williams, vice-chairman; H. R. Thompson, secretary. These together with the following directors will comprise the Executive Committee: W. F. Tidmarsh, Prince Edward Island; J. A. Neville, Nova Scotia; R. O'Leary, New Brunswick.

Numerous matters of direct interest to the lobster packers were discussed, but perhaps the most important one was regarding the desirability for standardizing the conditions and methods under which lobsters are secured, packed and put on the market. Owing to the prevailing market conditions, the buyers of canned lobsters have become more discriminating and critical as regards quality. Heretofore, it has been comparatively easy to dispose of the full pack at sufficiently remunerative prices and the question of quality has perhaps become of secondary

consideration to that of quantity. This did not permit the working out of a definite programme or plan of action and another meeting is to be called in the very near future to give further consideration to the matter.

Labor's Demands in New Brunswick

THE New Brunswick Federation of Labor held its annual convention in St. John, on January 11th and 12th, and resolutions were adopted to urge the local Government for the enactment of legislation affecting the employers. The following proposals were adopted:—

(1) Department of Labor to be created —the Bureau of Labor Act, 1915, and amended Acts to be repealed and legislation providing for a Department of Labor with a Minister of Labor, who shall be a member of the Executive Council of the Government.

(2) Workmen's Compensation Act—Act to be amended to provide for a minimum weekly compensation of $9.00 or, in case of employee receiving less than that amount, then full pay, and a maximum of 55 per cent. of $166.66 per month. That the monthly allowance to children be increased from $7.50 to $10.00, and in case of children being left motherless that the monthly allowance be $15.00. Where a workman leaves no widow or the widow dies and it seems desirable to continue the home for the children, and some suitable person such as an aunt or sister acts as foster-mother in keeping up the home and looking after the children in a manner which the Board deems satisfactory, she shall be entitled to receive the same monthly payments on behalf of the children and herself the same as the widow of the deceased.

(3) Factories Act — Act to be amended to provide for the application of the Act to all industries: Employment age of children to be sixteen years; Hours of labor to be not more than eight per day or forty-eight hours per week; That women, girls and boys shall not be employed before six o'clock in the morning nor more than ten hours in any one day including overtime; overtime to be limited to thirty-six days in any twelve months, and that the proviso in subsection A of section 3, providing for the non-application of the section to certain employers, be repealed.

(4) Minimum Wage Act—Legislation to be enacted to provide for a minimum wage board appointed by the Lieutenant-Governor in Council, board to be empowered by the Act to make enquiry as to wages, hours of labor, and working conditions for the male workers. Findings of the Board to be binding under penalties on all industries involved in the enquiry.

A resolution was also adopted recommending a change in our present economic system, that is to the production for use instead of for profit. The resolution in part reads as follows:

"Whereas the workers of Canada have produced more value than their wages allow them to buy back, and for the reason our social and economic system should be changed so that we could own and produce collectively for use and not for profit as we are now doing; Therefore, be it resolved, that we call upon our Federal, Provincial and Civic Governments to have this matter of unemployment investigated with the view of having the above-mentioned system made effective, and be it further resolved that owing to the time that will be required to have said investigation made, that this New Brunswick Federation of Labor would urge upon the aforesaid Governments as well as the employers of labor to do their utmost in promoting employment whenever possible; and be it further resolved, that copies of this resolution be forwarded to the Federal and Provincial Governments; Executive of the Trades Congress of Canada, and the Minister of Labor, and also given out to the press."

Resolution on University Finances

THE Executive Committee of the Ontario Division, on the invitation of the Provincial Royal Commission on University Finances, gave careful consideration to the general question of financial aid to the universities of the province and transmitted the following resolution to the Commission:

"That the Executive Committee of the Ontario Division of the Association recommend that it is desirable that the universities be maintained at a high standard of efficiency for under-graduate work; that the provincial university should be maintained at a standard equal to the best university standards on this continent, with regard to under-graduate, post-graduate and research work, and that with respect to the higher branches of university work the resources available should be concentrated in one university."

Federal Income Tax Law Amendments

IN view of the stringent changes made in the Federal Income Tax Law by the Statutes of 1920, the Legal Secretary issued on January 14th a general explanatory circular letter to all our members. The tax-payer must now calculate what amount of money he is to pay and must send at least one-quarter of the amount he will pay in 1921, to cover 1920 taxes, not later than April 30th, 1921. The rest is payable later, with 6 per cent. interest added, in three two monthly instalments. All corporations are required to send in a list of employees. All companies must also file statements, showing dividends and bonuses paid to shareholders before 31st March next. All these returns must be lodged with the District Inspector of Taxation. Heavy penalties are imposed for non-compliance or neglect, the severity of which will undoubtedly evoke public criticism when its full import is realized.

The Legislation Committee at its January meeting endorsed the action taken, and in view of the importance of the matter, directed the Legal Secretary to issue a supplementary circular in due course again drawing attention to the stringent requirements of the law.

Montreal Branch Active in January

THE new year opened quite auspiciously for the Montreal branch and during the past month no fewer than four new trade sections have been organized and are now in working order. J. M. McIntosh, manager of the Trade Sections Department of Toronto, spent a few days at the Montreal office assisting in the formation of the sections. An Electrical Apparatus Section has been formed with M. K. Pike, of the Northern Electric Company, as chairman, and R. Moncel, of the Devoe Electric Switch Company, as vice-chairman.

A Food Products Section was formed with W. H. Dunn, of the Borden Milk Company, as chairman, and John Ritchie, of Rose & Laflamme, as vice-chairman. This section has been broken up into several sub-sections, according to the type of food product manufactured by individuals in the section.

Some years ago the manufacturers of wooden boxes in the city of Montreal had an organization of their own, but of late it has not been active. Last week it was re-organized as the Wooden Box Section of the Montreal branch with N. P. Martin of Martin Freres, as chairman, and S. F. Rutherford as vice-chairman. This section decided to meet on the second Tuesday of each month. Considerable work lies ahead of the new section.

A Fine Shirt Manufacturers Section embracing the manufacturers of fine shirts all over Canada, was also formed recently. This section will have a membership of some ten or twelve firms when finally rounded out. F. W. Stewart, of Cluett Peabody Co., and chairman of the Montreal branch of the Association, has been appointed chairman of this section.

The foundries and machine shops are yet to be organized and it is hoped to have this work effected some time this month. When this is done there will not remain in the Montreal branch a single group of manufacturers of sufficient numerical strength which has not already been organized or has not already some special local or Canadian wide organization to look after its special trade interests.

One of the most important matters now before the Quebec division is the

with respect to amendments to the Workmen's Compensation law of this province or the drafting of a new Workmen's Compensation Act. In this effort the manufacturers are acting in co-operation with the leaders of the various labor organizations in the province, and it is hoped that some common ground will be found upon which the two parties may be able to take a stand before the Provincial Legislature.

At the last meeting of the Montreal branch executive a committee composed of Julian C. Smith, chairman; T. P. Howard, ex-president of the C.M.A., and R. H. McMaster was appointed to go into this matter and confer with the labor leaders. It is proposed to bring about legislation similar to that now in effect in the Province of Ontario but with several modifications.

The Montreal branch of the C.M.A. took a leading part over the holiday season in the organizing of a Citizens' Unemployment Committee similar to that now in operation in Toronto. F. W. Stewart, chairman of the Montreal branch, was a prime mover in the matter and is a prominent member of the Citizens' Unemployment Committee.

Two meetings of a consolidated committee of manufacturers, wholesalers and retailers have been held during the past three weeks with respect to the application of the excise tax and the present method of collection. The committee has forwarded a letter to Sir Henry Drayton, Minister of Finance, congratulating him upon the recent removal of the luxury tax provisions.

Business in the various manufacturing lines throughout the Province of Quebec is steadily picking up. Local manufacturers believe that we have seen the crisis of the recent depression and that from this time forward conditions will improve. The retailers, it is believed, have come to a point when they must replenish their dwindling stocks and orders are being received daily, and this is taking care of the unemployment situation to a considerable extent.—R. W. Gould, secretary.

Association of Record Officers formed

ON the evening of January 20th, in the offices of the Canadian Manufacturers Association, Toronto, a new organization was formed, to be known as the Canadian Association of Record Officers. The objects of the new Association, as set forth in the constitution and by-laws, which were adopted at the meeting, are: "To promote the study of the science of filing and indexing, the development of efficient methods, and the solution of problems which may arise in this connection."

The chairman, in his opening remarks, outlined a programme which, if carried out, should be of great aid to the business world in general and to the members of the Association in particular. Amongst the activities suggested was the formation of an Education Committee, which will report to the membership on the courses in filing and like subjects given in the various schools and business colleges in the city, a committee which may provide expert advice and assistance to any of the members of the Association in connection with their filing problems. It is also suggested that this committee will make a study of the various systems which are at present in existence and will, if required, report on the adaptability of systems or filing equipments which are now manufactured and offered to business houses.

The election of officers and executive committee was held. President, Dalton J. Little, Wm. Davies Co., Limited; 1st Vice-President, Miss W. G. Barnstead, Chief of Cataloging Department, Reference Library; 2nd Vice-President, W. L. Fleming, Central Registry Department of Soldiers' Civil Re-establishment; Secretary-Treasurer, A. M. Irwin, of the staff of the C.M.A. Executive Committee: Miss C. A. Rowe, International Nickel Co. of Canada, Limited; A. J. Milner, Robert Simpson Co., Limited; H. O. Asman, Archivist of the Canadian Bank of Commerce; W. H. Hughes, Central Registrar, Vocational Branch, D.S.C.R.

There are two classes of membership in this Association: active, which consists of those who are charged with the supervision of filing and indexing; and associate, those who are concerned with the routine work of this department of business activity.

The office of the secretary, for the time being or until suitable quarters are obtained, is 962 Dufferin Street, Toronto.

In addition to the firms whose representatives are listed above, the following were represented at the meeting: Consumers Gas Co., Limited; Canadian National Railways; Works Department, City Hall; Firstbrook Brothers, Limited; Canadian Westinghouse, Limited; Wm. Wrigley, Jr., Co.; Toronto Harbor Commission; Confederation Life Association; Canadian Packing Company, Limited; Canadian Chewing Gum Co.; Toronto General Trusts Corporation; Murray-Kay Co., Limited; Lever Bros., Ltd.; Bank of Nova Scotia; Hydro-Electric Power Commission of Ontario.

[Mr. Dalton J. Little, the first president of the Association, will be remembered by readers of INDUSTRIAL CANADA as an occasional contributor. The secretary, Mr. Irwin, has been a frequent contributor. Miss Barnstead, vice-president, has lectured on "Cataloging" before various organizations. Mr. W. L. Fleming was for some years in the Civil Service at Ottawa. Of the executive, Miss Rowe has had about ten years' experience with filing systems; H. O. Asman has charge of all the archives of the Canadian Bank of Commerce, amongst them documents dating back to the establishment of the bank; W. H. Hughes has charge of the records of all disabled soldiers re-trained in Ontario.]

Our Branch Chairmen for 1920 - 21

CHARLES PRATT

Chairman, Medicine Hat Branch

MR. PRATT was born in Aberdeen, Scotland, in 1875. He learned the general store business in his father's store, in Heathcote, Ontario. In 1901 the business name was changed from "John Pratt" to "John Pratt & Son," and later it was changed to "Chas. Pratt." Mr. Pratt moved to Medicine Hat in 1907, and went into the retail lumber business, under the name of "The Gas City Lumber Company." He was engaged in this business until he sold out to the Riverside Lumber Co., of Calgary, in 1913. In 1915, in company with Messrs. H. H. and M. A. Brown, he farmed successfully four thousand acres of land. In 1916 he purchased the controlling interest in the Medalta Stoneware, Limited, of which business he is now the president and manager.

1921 International Labor Conference

COMMUNICATION has been received from the Department of Labor containing the following agenda for the second International Labor Conference, which will be held at Geneva, Switzerland, beginning on April 4th, 1921:

1. Reform of constitution of the governing body of the International Labor Office.

2. Agricultural questions:—

(a) The adaptation of the Washington decisions to agricultural labor:—

1. Regulation of the hours of work.
2. Measures for the prevention of or providing against unemployment.
3. The protection of women and children.

(b) Technical agricultural education.

(c) Living-in conditions of agricultural workers.

(d) Guarantee of the rights of association and combination.

(e) Protection against accident, sickness, invalidity and old age.

3. (a) Disinfection of wool infected with anthrax spores.

(b) Prohibition of the use of white lead in painting.

4. The weekly rest day in industrial and commercial employment.

5. (a) The prohibition of the employment of any person under the age of 18 years as trimmer or stoker; and

(b) Compulsory medical examination of all children employed on board ship.

Industrial Accidents in 1920 in Ontario

THE Workmen's Compensation Board of Ontario reports a total of 54,851 accidents during 1920. This was 10,591 more than in 1919. The fatal accidents reported during 1920 were 452, as against 429 in 1919, being an increase of 23. The daily average was 183 accidents, or one accident every three minutes of the working day.

The amount awarded for compensation during the year was $7,076,439.59, and the amount for medical aid $703,705.66, making a total of $7,780,145.25, as against a total of $4,192,659.93 during 1919, and $3,883,994.84 during 1918. The increase is largely by reason of the increased benefits provided for under the amendments to the Act, including the increase in death pensions for accidents happening in previous years.

The total number of cheques issued by the Board during the year averaged 494 per day, and the benefits awarded $26,000 a day.

About half a million workmen are now under the protection of the Act, and, including the pensioners from former years and the families of workmen and pensioners, it is estimated that over 100,000 people every year are receiving some part of their maintenance from the benefits provided for by the Act.

The total yearly wage roll of industries covered by the Act is estimated at $450,000,000.

Annual Meeting Ontario Shoe Manufacturers

THE annual meeting of the Ontario Shoe Manufacturers' Association was held in Toronto on January 12th. The following officers were elected: Hon. chairman, A. Brandon, Brandon Shoe Co., Limited, Brantford; chairman, F. H. Ahrens, Chas. A. Ahrens & Co., Kitchener; vice-chairman, S. H. Parker, Solid Leather Shoe Co., Limited, Preston; directors, F. W. Manson, Canadian Shoes, Ltd., Toronto; W. C. Ackerman, B. F. Ackerman, Son & Co., Limited, Peterborough; W. H. Duffield, John McPherson Co., Limited, Hamilton; J. A. Walker, Walker, Parker Co., Limited, Toronto; E. C. Van Geel, Tillsonburg Shoe Co., Limited, Tillsonburg; secretary-treasurer, Alex. Marshall, Toronto.

Ontario representatives on the executive committee of the Shoe Manufacturers' Association of Canada are: Messrs. F. H. Ahrens, S. H. Parker, G. W. McFarland, A. Brandon and J. A. Walker.

By unanimous resolution, the following letter was authorized to be sent to the Prime Minister of Canada and the Prime Minister of Ontario and other members of the Cabinet:

"As a result of world-wide unsettled market conditions and many local causes, there is considerable unemployment in various trades at different points in Canada. While business men are practically a unit in agreeing that fundamental conditions in Canada are sound and hope for the future bright, there is sometimes found an undercurrent of pessimism brought about by the present process of deflation and concurrent unemployment.

"There are also some evidences that conditions might readily become more serious if this pessimism gained much headway, and which, if it became prevalent, would tend, by causing further timidity on the part of buyers, to render much more serious the unemployment situation.

"Just after the armistice was signed a similar wave of pessimism began to rise, but prompt action on the part of Dominion and Provincial Governments in advancing their buying programmes helped to dispel this pessimism, created opportunities for returned soldiers and bridged the gap between the war basis and the peace basis in industry.

"It would seem that just such another situation has arisen, in which public opinion is looking to the Government for tangible expressions of its faith in the soundness of conditions and of its faith in the future of Canada.

"May we, therefore, suggest that one of the forms that this expression may take be the placing by Government departments of orders or contracts for necessary materials and supplies required for the carrying on of the Government's business.

"As shoe manufacturers, we are only interested in an indirect way, but we believe that it will be greatly to the advantage of the whole country if these orders, as suggested, were placed for delivery in advance of the time actually required.

"On the adoption of such a policy, publicly announced, unquestionably a steadying effect would soon be felt, with resulting improvement to all forms of industry and commerce.

"In the event of such a policy being adopted, we venture to say that the confidence exhibited by the Government in the industrial and commercial community will be fully justified."

Another resolution on the remission of the Luxury Tax follows, copies of which are also to be sent to the Prime Minister and members of the Cabinet:

"Whereas the Government of Canada has seen fit to remit, as of date December 20th, 1920, the so-called Luxury Tax on shoes;

"And whereas, in our opinion, an unearned stigma and deterrent to business have been removed from the shoe trade by reason of its remission;

"And whereas the remission of the tax will undoubtedly be followed by increased trade in shoes, to the ultimate benefit of the thousands of employees engaged in the trade;

"Be it therefore resolved that the Ontario Shoe Manufacturers' Association, in annual meeting assembled, record its approval and appreciation of the action of the Government in this respect.

"Further resolved that a copy of this resolution be sent to the Prime Minister and other Cabinet Ministers."

The Association is also preparing to compile a good deal of statistical information which will enable its members to be fully conversant with the conditions of the shoe trade in Canada, and is making a number of recommendations along similar lines to the convention of the Shoe Manufacturers' Association of Canada.

Special provision was also made at this meeting to enable the Entertainment Committee to finance the convention expenses. Last year the Ontario members were royally entertained at Quebec, and they now wish to reciprocate in the best spirit of the "bonne entente."

Preference Given to Canadian Goods

IN a communication from A. E. Howard acting chairman of the Purchasing Commission of Canada, he states that the duties of the Commission, which supersedes the late War Purchasing Commission, are in part to supervise the purchase of all supplies for all departments of the Government throughout Canada, and the policy is to purchase direct from the best source of supply. In so far as possible, all supplies demanded are purchased by tender and the business given to the lowest tenderer for goods required.

"The Commission is of the opinion, says Mr. Howard, "that supplies should be purchased in the districts where they are required. As you will appreciate that statement will have to be modified according to the kind and quantity of goods required.

"I would also draw your attention to the fact that the Commission is strongly of the opinion that Canadian goods should be purchased in preference to foreign, which fact makes it all the more necessary that Canadian firms should realize their responsibility in this respect."

The Executive Council at Hamilton

The January Meeting of Council Takes Action on Annual Meeting and Hears and Discusses Reports from all Departments of the Association

THERE was a representative attendance of members at the January meeting of the Executive Council, held at the Royal Connaught Hotel, Hamilton, on Thursday, January 27th. The president, Mr. J. S. McKinnon, occupied the chair, and reports were presented from all departments of the Association, reviewing the work of the past month.

The Executive Committee, which met in the morning, recommended in its report that the annual general meeting be held at the Chateau Frontenac, Quebec, on June 7th, 8th and 9th, and this recommendation was endorsed by Council. Arrangements will accordingly be made to hold the meeting at that time and place.

Ontario Division Lunch

Prior to the holding of the Executive Council meeting, a luncheon of the Ontario Division took place, presided over by Mr. J. R. Shaw, chairman of the Division. There were over 150 members present, Hamilton manufacturers being largely represented. It had been announced that Dr. A. B. Macallum, chairman of the Advisory Council of Industrial and Scientific Research, would be the guest of the Division, but, owing to the death of his brother, Dr. Macallum was unable to be present. The breach was filled by Mr. J. S. McKinnon and Mr. Lloyd Harris, both of whom delivered effective addresses.

Accident Prevention Associations

Before the speaking began, the chairman announced that at a meeting of the Ontario Division Executive, held during the morning, important action had been taken with regard to the Accident Prevention Associations of the province. This was summarized in the following resolution:

"That this meeting of the Executive Committee of the Ontario Division of the Canadian Manufacturers' Association, having received and considered report by its special committee appointed to investigate and report with respect to the re-organization of the Industrial Accident Prevention Associations, instruct the said special committee to consult with the directors and committee of the said Industrial Accident Prevention Associations, with a view to the taking over of the functions of the said Accident Prevention Associations by the Ontario Division of the Canadian Manufacturers Association, and that the Executive recommend the thorough re-organization of the said Industrial Accident Prevention Associations in order to secure the necessary efficiency."

Mr. Charles Pratt, Medalta Stoneware, Ltd., Medicine Hat, and chairman of the Medicine Hat Branch, C.M.A., was welcomed, and in a few words expressed his appreciation of the welcome tendered him. He told briefly of the manner in which the members of the C.M.A. in Alberta brought their side of all questions affecting the industrial interests of the province to the attention of the Government.

Another visitor was Mr. English, of Harding, Man., a western farmer, who in a light and laughter-raising vein, dealt with the relations between manufacturers and farmers, and said that all must work together for the good of Canada.

The President Speaks

Mr. McKinnon prefaced his remarks with two or three appropriate anecdotes and then proceeded to deliver a highly patriotic address on the glories of the British Empire and the obligation which rested on the manufacturers of Canada to maintain the reputation of the Dominion.

He was followed by Mr. Lloyd Harris, who dealt first with the necessity of building up Canada's export trade and afterwards with the need of re-organizing the Industrial Research Council on broader and more practical lines. In the latter connection, he outlined a plan which he had devised and which he hoped would receive the hearty support of the manufacturers.

Report on Membership

In its report to the Executive Council, the Membership Committee showed that from May 1st, 1920, the beginning of the Association's fiscal year, until January 15th, 1921, 238 applications for membership had been received, and there had been 143 resignations, a net gain of 95. Reasons given for the resignations were as follows: Out of business, 41; no longer manufacturing, 20; amalgamations, 19; arrears, 33; deceased, 3; financial difficulties, 4; additional representatives, 21; no reason, 2.

Last year was the most successful year in the history of the Association so far as increase in membership was concerned. Six hundred and sixty-two new applications were accepted and 131 resignations, leaving a net gain of 531 members. The second most successful year was 1901, when the net gain in membership was 485, and the third most successful year was 1905, when the net gain was 328. In only two years has the Association's membership suffered a net loss, namely, 1908, which showed a net loss of 4, and 1916, which showed a net loss of 78. The net loss in both cases, it may be observed, occurred in a year when there was a serious trade depression.

The services rendered by the Insurance Department during the month of December are illustrated by the following summary, showing the subjects on which the department was consulted and the number of inquiries under each subject: Marine insurance, 1; sprinkler equipment, 3; rates, 10; standing of companies, 2; group life insurance, 1; inspection service, 4; policy wording, 5.

Reporting on the National Research Institute, the Legislation Committee outlined the history of the movement looking towards the foundation of such an institute.

National Research Institute

The Research Council, early in 1918, presented to the Sub-Committee of the Privy Council for Scientific and Industrial Research, and to the Reconstruction and Development Committee of the Government, an urgent recommendation that a National Research Institute for Canada be established at an early date, with the function of a Bureau of Standards, and to provide facilities for research carried on and maintained by associations or guilds for research formed in the various lines of industry in Canada. This recommendation led on April 24th, 1919, to the formation of a Special Committee of the House of Commons to consider the matter, under the chairmanship of Mr. Hume Cronyn, whose report was adopted by the House of Commons on July 3rd, 1919. The committee was reappointed on March 23rd, 1920, and has reported, recommending the establishing of a National Research Institute for Canada, and that an appropriation be made of $600,000 to meet the cost of the site of the institute, of the construction of the building required, and of the scientific equipment of the same, and of $50,000 for the salaries of the staff during the first year. The report was unanimously adopted by the House of Commons on May 7th, 1920.

In pursuance of these proceedings, your Legislation Committee has considered and recommend to the Council draft proposed "Research Institute Act," designed to give statutory effect to the recommendations of the Special Committee, subject to the following amendment of sec. 1 (3) thereof, which reads: This Institute shall have charge of:

"The investigation and standardization of the materials which are or may be used in the industries and of the products of the industries."

Your Legislation Committee advises that, in its opinion, this provision of the proposed Act in its present form does not furnish proper safeguards to the industries with respect to the standardization of the materials and of the products of industry. It is accordingly recommended that the clause should be amended to read:

"The investigation of the materials whch are or may be used in the industries and of the products of the industries, with a view to making recommendations to Parliament as to the standardization of such materials and of the products of the industries."

The proposed National Research Institute does not come directly under any department of a single Minister of the Crown, but will be represented in Parliament by a Sub-Committee of the Cabinet.

Transportation Department

Well-attended Meeting of Transportation Committee —Canadian Freight Rate Enquiry next Important event — Proposed Revision Freight Classification

THE meeting of the Transportation Committee, held in the offices of the Association on the 19th of January at 2.15 p.m., was one of the most interesting and best attended meetings of this committee for some time. Those present were as follows—W S. Campbell (chairman), Canadian General Electric Co., Toronto; A. H. Thorpe, Wm. Davies Co., Ltd., Toronto; A. D. Huff, Riordon Pulp & Paper Co., Ltd., Montreal; F. W. Dean, Steel Co. of Canada, Ltd., Hamilton; F. L. Hawes, Rubberset Co., Ltd., Toronto; Alex. W. Bell, General Motors, Ltd., Oshawa; R. P. D. Graham, Goodyear Tire & Rubber Co., Toronto; W. R. Dunn, International Harvester Co., Hamilton; S. R. Parsons, British-American Oil Co., Ltd., Toronto; G. W. Robinson, P. B. Yates Machine Co., Ltd., Hamilton; C. R. Brown, Canadian Drawn Steel Co., Ltd., Hamilton; Chas. O. Shaw, Anglo-Canadian Leather Co., Huntsville; Geo. T. Dunn, Canadian Steel & Wire Co., Ltd., Hamilton; N. Boyd, Gutta Percha & Rubber, Ltd., Toronto; F. A. Nancekivell, Ford Motor Co. of Canada, Ltd., Ford; W. Gordon, Steel Trough & Machine Co., Ltd., Tweed; W. R. Breyfogle, DeLaval Co., Ltd., Peterborough.

One of the most important questions dealt with was the general inquiry into freight rates in Canada, which is referred to in greater detail elsewhere in this issue. The discussion in connection with this question and the various other matters up for consideration was intensely interesting and showed not only a great interest by the members of the committee, but also a very good understanding of the questions involved.

The committee is fairly well balanced, being composed partly of industrial traffic managers and partly executives of other branches of industrial organizations, so that any views expressed are based on both technical and general business knowledge, which is very desirable, especially in forming policies to be adopted by the Association.

Meeting of Canadian Traffic League

THE monthly meeting of the Canadian Traffic League for January was held in the offices of the Association, Toronto, on January 5th. Among those matters considered were the following:— Express Claims; General Freight Rate Enquiry; Proposed Canadian Classification No. 17.

The February meeting of the League was held in the Association offices on February 2nd, at which the freight claim agents of the Grand Trunk and Canadian Pacific Railways were present and addressed the meeting in connection with the very important subject of freight claims.

Canadian Freight Rate Enquiry

ONE of the most important questions that has been before the shipping public for years, is the general enquiry into freight rates applicable on all shipments moving between points in Canada.

The Board of Railway Commissioners, who will conduct the enquiry, will, generally speaking, take evidence in regard to three main allegations:—

1. The complaint alleging that rates west of Fort William are higher than those east thereof, and that such higher rates constitute an undue discrimination.
2. The complaint alleging that the higher scale of rates applicable in British Columbia unduly discriminates against that section of the country, and further that the rates in that territory should not be any higher than those applicable in the Prairie Provinces.
3. The complaint of various interests in the Maritime Provinces alleging that the arbitraries applicable on shipments moving between that territory and all points in Canada west of Montreal are excessive and should be reduced to the basis in effect prior to the Eastern Rates Case (1915).

The third complaint has been broadened to include consideration of freght rates locally between points in the Maritime Provinces, both export and domestic; from the Maritime Provinces to points in the United States, and special services, such as milling in transit, etc., within the Maritime Provinces.

At the hearing in Ottawa on December 14th, these various questions were discussed in a general way before the Board of Railway Commissioners, and the Chief Commissioner made it clear that the Board wanted evidence showing very clearly that the allegations which have been made are proper.

The provinces of Manitoba and Saskatchewan have retained counsel, H. J. Symington, K.C., acting for the province of Manitoba, and D'Arcy Scott and Alex. McDonald, acting for the province of Saskatchewan. The provinces of Nova Scotia and New Brunswick have retained counsel and will act in co-operation with E. M. McDonald, K.C., who has been retained by the commercial and industrial interests of the Maritime Provinces. So far, the provinces of Alberta British Columbia, Ontario and Quebec have not retained counsel, although it is understood various interests within these provinces will take an active part in the enquiry through boards of trade, chambers of commerce, etc.

The enquiry, it will be seen, is based upon alleged territorial rate discriminations. The question as to whether or not these allegations are correct, or what are reasonable rates, is a matter for the Board to decide. In order that an intelligent decision may be rendered, it will be very necessary to give these questions the very fullest examination. It means that everyone interested should have an opportunity of presenting facts and pertinent information in support of the allegations.

It is expected that a general hearing in regard to this enquiry will be held in Ottawa early in March, to be followed by hearings from coast to coast, beginning at Vancouver early in April.

These various questions being matters which the Board must decide, the Association cannot assume any position in regard to any of the particular complaints. The Executive Council and the Transportation Committee have accordingly stated the Association's position in the following words:—

"Your Committee is of the opinion that so far as the Association as a whole is concerned, it can only act in an advisory capacity, assisting members wherever they are located in securing information for the purpose of showing what are reasonable rates."

In connection with the supplying of information by the Association, it would be well to point out that action has already been taken in regard to this feature by communicating direct with the divisional secretaries, outlining certain features of general interest to all concerned which would have to be considered at the various hearings. This information is to be followed by further particulars as to rates in the different localities, so that all members may have a knowledge of the rates as they exist to-day. In a general way the divisional secretaries have been advised that any evidence submitted should consider rates under the following general headings, these general headings, of course, being subdivided to meet the particular interest where necessary:—

1. Class rates.
2. Commodity rates.
3. Special arrangements, such as stop-off and milling in transit.

It has also been pointed out that at the hearing in Ottawa on December 14th. the Montreal Board of Trade stated that they consider Rule 2 of Canadian Freight Classification (mixed carload rule) would have to be considered in connection with this enquiry, as they feel that equalization of freight rates as between the east and the west should carry with it equalization of rules and regulations governing those rates.

Interested members desiring to submit any evidence in connection with this case should get in touch with their divisional secretary, and the Transportation Department at Head Office will be glad to give any information pertaining to this case.

Payment of Freight Charges on International Shipments

A QUESTION which has caused considerable dissatisfaction among the shipping public, has been settled by the Board of Railway Commissioners by issuance of its General Order No. 326, dated Ottawa, January 14th, 1921, which, in a few words, permits the payment of freight charges on international shipments in Canada with Canadian funds, plus a surcharge of 60 per cent. of the governing rate of exchange, the governing rate of exchange being that quoted by the Bank of Montreal at noon on the 14th and last day of each month. That quoted on the 14th governs from the 15th to the end of the month inclusive, and that quoted at the end of the month governs from the 1st to the 14th of the next month inclusive. Circular No. 293 has been issued by the Association, and sets forth the plan in more detail.

The very highest commendation is due the Board of Railway Commissioners for its action in the adjustment of this question. While there was some delay in having the matter finally adjusted, it will be appreciated that there were certain features in connection with this question which were not cleared up until the hearing in Ottawa on December 1st, 1920, after which it will be remembered the Board informed the railways that a solution of this question would have to be found at an early date.

Proposed Revision Canadian Freight Classification

A FORWARD step has been made in connection with handling freight classification matters, by the recent appointment of a joint committee composed of traffic representatives from industrial and commercial organizations, and traffic representatives of the Canadian railways. The personnel of the committee is as follows:—

G. C. Ransom (chairman/, Canadian Freight Association; J. E. Walsh and S. B. Brown, Canadian Manufacturers Association; W. S. Tilston, Montreal Board of Trade; T. Marshall, Toronto Board of Trade; W. B. Lanigan, Canadian Pacific Railway; Geo. Stephen, Canadian National Railways; F. J. Watson, Grand Trunk Railway.

The work of this committee will be directed, for the time being, to a revision of the present Canadian Freight Classification, at the same time considering the proposals outlined in what is known as Proposed Classification No. 17. The formation of this committee does not, of course, abrogate any arrangements which are now in effect through orders of the Board of Railway Commissioners, but it is felt by handling the question in this manner a revision of the Classification can be arranged which should be acceptable to all concerned. It is, of course, possible that some questions cannot be agreed to by the full committee. Arrangements have been made that wherever such cases arise, the question involved will be set aside to be submitted to the Board of Railway Commissioners and those interested will be given full opportunity of presenting their views before that body. Early consideration of this question has been requested by the carriers.

There is one feature, however, which cannot be lost sight of and should be given careful consideration; that is the question of ratings. In the very near future the Board of Railway Commissioners will launch into the general enquiry of all freight rates in Canada. The result of that enquiry may mean a revision of certain class rate scales, both as to general level and as to relationship between classes. That being so, any attempt to consider the rating in the Canadian Freight Classification without knowledge as to what the Board will do with the class rates, is impossible. The Transportation Committee of the Association, at its meeting on January 19th, considered this question, and were unanimous in the opinion that so far as the Canadian Manufacturers Association was concerned, we could not consider proposed ratings in the Canadian Freight Classification until we knew what our class rate fabric was going to be. This, of course, will not prevent consideration of some of the rules or consideration of description of items, and it is possible that early consideration will be given to the features just referred to.

In this connection, it is interesting to note what has been done in the United States in a co-operative way between the railways and the shippers. Recently at a very largely attended meeting in Chicago, the traffic representatives of various organizations throughout the United States passed a resolution calling upon the National Industrial Traffic League to inquire into the attitude of the United States carriers in connection with a number of questions which the meeting felt were being forced upon the shipping public without proper consideration. At the annual meeting of the National Industrial Traffic League at New York, November 18th and 19th, 1920, Mr. Lewis J. Spence, Director of Traffic, Southern Pacific Company, New York, stated as follows: "The National Industrial Traffic League and the railroad officers of the country must not drift apart. Never has there been so much in common between the railroads and the users of the railroads, and their mutual co-operation is indispensable. If you will undertake on your part to perpetuate and strengthen this co-operation, I pledge you my support of your effort." These remarks concluded his speech in connection with various features, including the resolution referred to.

Since that time, a joint committee has been appointed, representing the National Industrial Traffic League and the American Railway Association, which will consider all questions of general interest before any action is taken in regard thereto. One of the first questions submitted to this committee was Proposed Consolidated Classification No. 2, which is being checked by the Classification Committee of the National Industrial Traffic League before it becomes effective.

Tariff Department Bulletin

Board of Customs Decisions.

Three, four, five and six horse steel hitches or eveners, per illustration, declared to be dutiable under item 454 at the rate of 30% under the general tariff.

Hay carriers, per illustrations, declared to be dutiable under item 454 at the rate of 30% under the general tariff.

"Monopole Brilliant Oil 48%," per sample submitted, declared to be dutiable under item 711 at the rate of 17½% under the general tariff.

Departmental Rulings

From information before the department, it appears that spools or bobbins of all types, for the manufacture of woollen, cotton and silk fabrics and carpets, are now made in Canada, and such articles are therefore not admitted under tariff item 468.

Matrices for newspaper or other advertisements are dutiable under tariff item 432 (at the rate of 1½ cents per square inch under the general tariff), and the outside measurements are to be taken in determining number of square inches therein.

New Tariffs in B. W. I. Colonies

New Customs tariffs have recently been adopted by Trinidad, Grenada, British Honduras and British Guiana. Under the new tariffs a substantial preference is granted to goods which are the growth, produce or manufacture of Canada or other parts of the British Empire. Generally speaking, the preference amounts to one-third of the duty charged on importations from foreign countries, though certain commodities, dutiable when imported from outside the British Empire, are free under the preferential schedules.

The tariff of Trinidad, effective November 5th, 1920, was published in Weekly Bulletin No. 880, dated December 13th, of the Department of Trade and Commerce; of Grenada in Weekly Bulletin No. 884, dated January 10th; of British Honduras in Weekly Bulletin No. 878, dated November 29th.

Copies of these tariffs are on file in the Tariff Department of the Association, and information respecting rates of duty and certificates of origin may be obtained on application to the manager of the Tariff Department.

The new tariff in British Guiana, which became effective on December 7th, 1920, has not yet been received, but the Tariff Department hopes to have a copy very shortly.

Some Supplementary Reports on Business Conditions in Canada

Continued from January Issue

OWING to the belated arrival of a number of the reports on business conditions sent by manufacturers for publication in our Canadian Products Annual Review Number, it was found impossible to include them all in that issue. Those omitted at that time are now published on this and the following pages, and should be taken in conjunction with the reports already appearing as giving a fairly complete estimate of the business situation at the first of the year.

The Paint Industry

By George Henderson

Brandram-Henderson, Limited, Montreal.

A YEAR ago the manufacturer and the man in large business generally constantly referred to the uncompromising attitude of labor and to the great difficulty or almost impossibility of securing supplies of raw materials as the two considerations which made profitable business impossible. To-day labor is showing signs of becoming distinctly more reasonable, and the slow delivery of raw materials is a thing of the past. It is only right, therefore, to take some satisfaction from the elimination of these two considerations which a year ago were described as the greatest handicaps that could exist. It is a fact that there is some falling off in demand; but is not this likely to turn out for the best? Does it not give the manufacturer an opportunity of adopting methods which will more positively assure uniformity of quality? Does it not give him an opportunity to investigate more thoroughly the sources and qualities of his raw materials? Does it not also give him time to perfect the equipment of his plant and to ensure an efficiency among his workmen which has been conspicuously absent for a number of years?

I believe an opportunity presents itself during the years in the immediate future of making as much money on a somewhat reduced turnover, if a reduced turnover it is to be, as it was possible to make until recently on a greater turnover, which was associated, in the last few years, with an inefficiency it was impossible to avoid.

So far as the white lead, paint and varnish business is concerned for the coming year, I anticipate an excellent Dominion-wide demand for our products. I believe the public more and more realizes that buildings, old and new, must not be allowed to remain naked in our rigorous climate. A time of economy and restriction of expense which might cause some falling off in the consumption of our materials for construction work, should produce more than an offset in causing the public to protect, by the application of paint films, the surface of such construction as has already been raised.

As to the foreign demand for Canadian paints and varnishes, the improvement in the value of the pound sterling, which seems to be now assured, would seem to indicate that this demand should again assert itself.

The pressure of production, intermittent and spasmodic as it has been in the last few years, incident on cabled orders and the arrivals of the necessary raw materials at the last moment, is a condition which will no longer confront us. One day should be more or less like another from this time forward, and one week's production pretty similar to that of the next week, with a steady, regular, uniform demand permitting more efficient production with less overtime, fewer interruptions and much less labor agitation.

Looks for Brisk Business

By John G. Lind

St. Mary's Cement, Limited, St. Mary's.

FOR the year 1920, the supply of raw material such as coal, and other raw material that we have to purchase, was very scarce and the price for same was abnormally high. Labor also was scarce, but fairly efficient. For the last month or two, there appears to be a surplus of men seeking employment.

The market for our commodity was extremely good and the price slightly advanced over last year, due to the excessive price of coal and also what we consider abnormal freight rates.

The process of deflation in a great many lines has just commenced, and in other lines we believe that the process has been completed. Taken as a whole, we believe there will be considerable deflation through 1921.

As to the outlook for 1921 business, while we expect it to be rather slow in the winter and spring months, we believe it will be exceedingly brisk during the middle and latter part of the year, due partially to the good roads movement and railway betterments, which in our judgment will absorb all the portland cement that can be manufactured in Canada in 1921.

The Cordage Industry

By R. F. Shurly

Shurly & Derrett, Limited, Toronto.

WE find that our raw materials are still somewhat difficult to get, that is, in the better grades, particularly high-grade hemps, but the price in our opinion must go to a lower level. At the present, of course, due to the business stagnation, which we presume will continue till on in the spring, there is practically no market, or any staple prices for manufactured goods, as the demand is very limited.

As regards labor conditions, for the next year, we will undoubtedly have plenty. As to the efficiency, we believe that will be very much improved. At the present time we have practically our full staff going, but unless business improves very materially this cannot be continued very long.

The market for our goods during the bulk of 1920 was good, with the exception of the last two months, which have been decidedly bad, with practically no demand, and considerable falling off in price of the commoner grades, and this condition of affairs will undoubtedly continue, for the process of deflation is, in our opinion, far from complete.

We do not think the prospects for development in the export field for twine and cordage from Canada are favorable for a permanent thing. Most of the fibre will have to be imported from Europe. We have been doing some little exporting ourselves, but we do not feel that when things reach normal in Europe and U.S. that we would be able to increase to any great extent, or probably maintain what little we have.

The outlook, in our opinion, for 1921 is good, though we feel that, owing to the mental attitude largely of the average buyer, this is a decidedly downward market, and will make the consumer rather cautious as to purchases, but there appears to be little or no stock of manufactured goods on hand, and with the opening up of spring, there will undoubtedly be a fair and healthy demand.

Saddlery and Harness

By E. F. Hutchings

Great West Saddlery Co., Limited, Winnipeg.

THE trend of the leather market is decidedly downward. The market has already dropped to a considerable extent, and on account of the low price of hides it is liable to drop still further. Prices of metal goods in our line are remaining steady and there is practically no decline as yet, although we expect between now and July next there will be quite a decline in the price of saddlery hardware, etc.

We do not expect a big trade in 1921 unless a very heavy immigration sets in; but if we can get into the three western provinces 100,000 to 150,000 new settlers this would create a ready demand for goods suitable for the western farm and

ranch, and this would help business amazingly and would bridge over the period of deflation in prices. The best thing for the West now is immigration of the right class.

The price movement is downward and cannot be otherwise until we get from abnormal back to normal conditions. Therefore all business men and manufacturers must look forward to a declining market for the next twelve months to come and they will have to do business with little or no profit until the bottom prices have been reached. We do not think the process of deflation has been completed. We think it has only started and we believe that the price of all commodities has got to get back to about the level of the market previous to the war, and if it does not sink a little lower we will be very lucky. Therefore we have a long way to go yet.

In Western Canada we have a great many things to look forward to, especially in the way of natural resources. First of all, we have had a very open fall and the farmers have been able to do a lot of ploughing, and there is a great acreage of black land ready for spring seeding. There is plenty of fodder for our ranchers, and with the mild winter up to date the rancher will likely come through with little or no loss. There are a great many irrigation projects being put forth in order to put larger quantities of land on the market for farming purposes, which heretofore has been considered the dry belt. There are a great many large immigration schemes being put forward in the interest of immigration, and from all reports we get from the outside it looks as though our schemes will be very successful, and a large number of immigrants come into the country.

Paper and Lumber Industry

By E. W. Backus

President, Fort Frances Pulp & Paper Co., Limited.

THE supply of the principal items of raw materials entering into the manufacture of paper and lumber—namely, pulpwood, coal and logs, is far from plentiful. In fact, all of the reserved stocks of these commodities were used up in 1920. These items for use in 1921 will cost the manufacturers more than ever before. The labor supply in the paper and lumber industry is fairly adequate for its needs. The efficiency has improved somewhat during the last sixty days, but the wages of organized labor in and about the mills is at the same high level as heretofore, and will be during the existence of present contracts with the unions.

The market for our product during 1920 was good, but our entire output was sold under contract in December, 1919, at a flat price for the year, which proved to be unfavorable and entirely out of line with general market prices before we had passed the first six months. Lumber prices were good during the first six months of 1920, but during the last half of the year the decline went to the extreme, with the result that the market situation in that commodity is now in a deplorable state.

In my opinion, the process of deflation as a whole has not been completed. In some commodities the price has already gone too low, lower than can be maintained at a profit on any reasonable basis of production.

In others much lower levels will be seen. In other words, I believe if a fair average could be worked out of present prices to the manufacturer, high and low, the figures would represent a fair average for the coming year. I cannot comment on the export field, excepting in paper and lumber. In these commodities I believe past conditions will prevail, governed only by the volume of business on this continent.

In summarizing, I believe business during the early months of 1921 will be unsatisfactory as a whole. It will take time to find out where all the weak spots are. As soon as this is done I think confidence will be restored and business will work around and become normal in volume, but not in dollars and cents. Much, of course, depends upon how readily labor is willing to adjust itself to these new conditions.

The Stationery Industry

By Geo. H. Scott

Barber-Ellis, Limited, Toronto.

THE past year has been, we believe, throughout the whole trade an abnormally busy one. Our raw material, paper, has been difficult to secure in quantities sufficient for our needs and prices advanced steadily from the first of the year until June. Since that time they have remained practically stationary, with supplies coming in more freely toward the end of the year.

Wages have been maintained at the 1919 level and until the last two months of the year, the supply of trained employees was below our requirements. The wave of careful buying which has been in evidence has brought with it a slowing down of production and shorter hours, although we still maintain our complete staff.

From the information that we have, we believe that nowhere in Canada among the retail trade are to be found any very heavy stocks of our manufactured lines, and on this account we look forward to a good deal heavier buying in the spring.

The period of deflation for paper commodities is just beginning, and, although we look for a drop in the price of paper during the coming year, we believe that values will readjust themselves very gradually. The mills are still running behind and large quantities of paper are being exported.

Although at the present writing business is not so brisk as it was earlier in the year, there is a known world shortage of paper, and this fact alone should keep business at a high level. Taken into consideration with the shortages that exist in many other lines, the tendency should be toward good business, for at least the year 1921.

The Machinery Industry

By D. W. Coe

Canadian Mead-Morrison Co., Limited, Montreal.

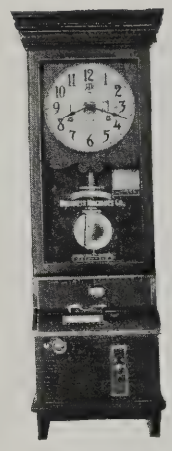
WE have not found any great reduction, so far, in the price of raw materials, although some commodities have recently made a slight downward move, but not sufficient to lower the cost of production to any extent. We have experienced very great difficulty during the past year in securing the exact materials required, but lately we find the supply of such materials is improving, and we anticipate a considerable decrease in price during the coming year.

The fluctuations in prices or the lack of stability in the market has had a tendency to limit the purchases of equipment, as prospective customers have, during the entire year of 1920, been holding off in anticipation of lower prices.

There has been no material reduction in the price of finished products, and cannot be until there is a reduction in the price of raw material and labor. We do not believe that the process of deflation has been completed by any means, but we believe that this will now be brought about very rapidly.

The outstanding feature which would inspire confidence in business for the year 1921 is stability in prices. The necessity for houses, buildings, railroad improvements, public works and replacements is very great, and this work has been held off on account of high prices. Just as soon as the buying public reaches the belief that prices have become more or less standardized we believe there will be a big demand for machinery such as we manufacture.

Scarcity of Materials

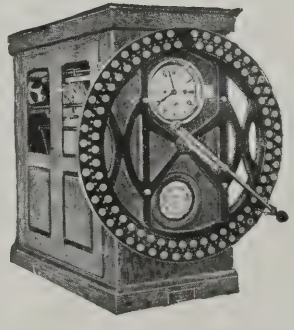


By J. Herbert Hall

President Conduits Company, Limited, Toronto.

RAW materials are still very difficult to obtain. Prices are very firm, and, due to the acute shortage, likely to remain so for some time to come. The efficiency of labor is considerably increased. Wages have been increased through the year and we have no present intention of reducing same. If we were able to obtain more raw materials, we would take on more help. Market conditions have been very acute, due to the shortage of raw materials. There was an advance in prices in the United States during the year, but no change in Canada since April 15th last. We look for a firm market for some time. We have been unable to take on export business on account of shortage of material. The outlook is better for 1921 than for 1920, as

(*Continued on page* 93.)



WHEREVER THERE IS A PAYROLL There Should be INTERNATIONALS

ACCURACY is the first requirement of time-keeping and payroll systems. The clearly printed records produced by International Time Recorders provide a reliable means of obtaining that accuracy.

Wherever there is a payroll there should be Internationals.

INTERNATIONAL TIME RECORDERS

Are manufactured in electrically and spring-driven models designed to meet every time-keeping and cost-keeping requirement of any size and kind of business.

Through unfailing accuracy and fairness Internationals put the interests of both employer and employees on a basis of guaranteed protection and profitable harmony. May we tell you about the adaptability of Internationals to your specific needs?

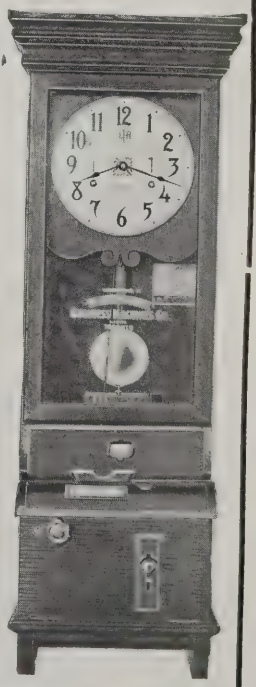
"Seventy Minutes to the Hour from Now On"

NO—we don't mean that an employee is to work 10 minutes for nothing.



But we do mean that 50 minutes working time to the hour "doesn't go" any more. Lost minutes must be paid for by those who lose them.

The times are too serious to permit of the loss of working time. Every minute paid for must be delivered. "Ringing in" at 8 a.m. and starting at 8.15, must stop. Quitting work at 5.15 instead of the proper stopping-time, say 5.30, must stop. Costs must be reduced. One big important way is to be sure you are getting full value for every cent you spend—for working time or anything else.

International Time Recorders at the department or shop door will cut down waste in "walking time" or loitering between factory door and bench.

International Job Time Recorders in the department will give accurate, unchangeable, ***printed*** figures for every working minute put on a job or process. No trouble then to find out ***exactly*** what your costs are.

The moral effect of cold-blooded, impartial, unfailing, accurate, ***mechanical*** time recorders is immense. Every employee makes his own time record. Discipline is self-imposed. Production must and does improve.

Ford THE UNIVERSAL CAR

TAX REVISION RECOMMENDED

t the Fifty-fourth Annual Meeting of The Canadian Bank of Commerce, Sir Edmund Walker, the President, emphasizes the desirability of replacing the Excess Profits Tax by a Sales Tax to encourage the establishment and expansion of industry

The year has been as full of highly important events as er recent years, but while much that has happened is very tressful indeed, many of our experiences have been natural d remedial even if disagreeable. War and famine are still sent, although in a lessened degree, but assassination and er forms of murder, by men associated for that purpose, ve grown to alarming proportions. As against these bad ditions, there have been fewer strikes and some improve- nt in the attitude and in the efficiency of workers gener- y. It must also be a source of genuine satisfaction to all r-minded people that we are now fully entered upon that ustment of prices, both for commodities and labour, upon reasonable settlement of which all hope for our future ppiness and prosperity rests.

The Strain on Credit

A year ago, we were still in the full tide of high prices, h wages, supplies unequal to the demand, inefficient labour, fficient transportation, reckless spending and all the other ncomitants of a world-wide inflation, based not on indus- al enterprise, but on the creation of so-called wealth from evidences of debt issued by Governments living beyond ir means. Warnings that continuance meant ruin were wanting, but they met with little more response than rnings usually do. There was widespread unrest, as our did not remain satisfied with any strike adjustment ich immediately met higher prices for commodities. Bank- found it impossible to grant credits which were steadily de larger by two proportions, larger quantities and higher ces. Thus, with the efforts of Governments to economize, ne the lessening of the stream from which deposits are ived, and hence a curtailment of bank credits.

The Effect

This seriously affected the stock markets in the latter t of 1919, and as bank rates in Great Britain and the ited States began to rise and the collapse in raw silk took ce in Japan, other commodities began to follow, and raw i, rubber, hides, sugar, cotton, manufactured textiles, hing, boots and shoes, field products and meat in certain ms, one by one, have had declines in price, often sensa- nal beyond anything in recent years.

Our Foreign Trade

Reviewing as usual our own foreign trade, we find the ul of exports and imports for 1920 to be $2,351,174,000, as pared with revised figures for 1919 of $2,188,471,000, and 1918 of $2,549,681,000. Unfortunately the increase over 9 is almost entirely in imports, so that the increase in me, far from being gratifying, is distinctly the reverse. h a slightly larger total of exports, we imported nearly 150 lions more than in 1919. Thus the excess of exports fell he lowest point reached in the last four years. The fiscal er ends in March, but the unfortunate tendency of our ign trade is much more evident when we compare the six ths' period ending in September. During that period in 9 our surplus of exports was $151,037,000, while in 1920 have actually imported $151,145,000 more than we have xported, a change for the worse of over 300 millions and a plete reversal of our trade position. The position of our xports for the fiscal year, taken alone, is quite satisfactory. ring the war our exports were swollen by the item of ex- losives, but this has now been reduced to small figures. It mounted to 386 millions in 1918, to 251 millions in 1919, n to only 12 millions in 1920; so that to keep our exports re diminishing we had to find new merchandise to export n 1920 amounting to about 240 millions, and we actually so to the value of about 257 millions. The increases ner the general headings are as follows: grain, flour and vegetable products (except chemicals, fibres and wood), millions; animals and their products (except chemicals fibres), 69 millions; fibres and textiles, 6 millions; wood wood products and paper, 59 millions; ships, 28 millions. gainst this we have important declines in copper, nickel, oil, silver and other metals and metallic products of about 25 millions. In the six months' period ending September, we have, however, a great change. In grains, flour, etc., we have a loss of 45 millions; in animals and their products, 53 millions; in fibres, etc., 3 millions; in various other items, 15 millions; while in wood, paper, etc., there is a gain of 63 millions, and in iron, other metals and non-metallic minerals, there is a gain of 13 millions. The total shows a falling off of 40 millions.

Increase in Imports

It is in our imports that we have exhibited a most unfortunate lack of appreciation of individual and national responsibility. Our imports for the fiscal year ending in March were 145 millions larger than in 1919, but since one item connected with the war, articles imported for the Army and Navy, amounting in 1919 to 50 millions, has practically disappeared, we have gone wrong to the extent of nearly 200 millions. The excess of 83 millions in vegetable products covers such items as distilled beverages, 7 millions; fruits, 11 millions; rubber, 5 millions; sugar, 34 millions; tea, coffee, etc., 12 millions. The excess in animals and their products is 53 millions, of which the large items are: furs, hides, leather, etc., 30 millions, and meat, 16 millions. The excess in fibres, textiles, etc., is 53 millions, of which the large items are: cottons, 14 millions, silks, 11 millions; wool and its products, 23 millions. In the various forms of machinery and material coming under the heading of iron and its products, there are large increases and large decreases in individual items, the net result being an increase of less than 5 millions. In coal products there is a decrease of 16 millions. The whole result is bad, but it is trifling when compared with the six months' period ending in September. For this half year, in which our exports declined under each general head except wood, and metals and other minerals, we actually imported 152 millions worth of merchandise in excess of our exports. Except in the one item of animals and their products, there are increases of from nearly 50 to over 100 per cent. under all general headings.

Exports to Great Britain

The excess of exports to Great Britain, which in 1918 was as high as 779 millions, was in the fiscal year 1920, 370 millions, still a very satisfactory figure. For the six months' period, however, it fell from 236 millions in 1919 to 28 millions in 1920. The excess of imports from the United States for the fiscal year was 300 millions, against 272 millions in 1919. For the six months' period it was 210 millions against 135 millions in 1919. When we look at the third set of figures now supplied by the Government, that is, from September, 1919, to September, 1920, the full force of our extravagance is evident. In that period we exported less by 23 millions than in the previous twelve months, and we actually imported 440 millions more.

Fatuous Extravagance

It is painfully evident, however, that we waste our breath by setting out these figures year after year. Nothing but inability to buy will check such fatuous extravagance. Is it to be wondered at that people coming to Canada from Great Britain are shocked and profoundly astonished at such lavish expenditure of money at a time when the world is so full of real trouble.

The New United States Tariff

If we turn to the figures for our foreign trade we find that our exports consisted in value of 639 millions in manufactured articles and 648 millions in foodstuffs. These foodstuffs were shipped to Great Britain to the extent of 368 millions and to the United States to the extent of 134 millions. Foodstuffs thus form a most important part of our power to pay for imports of 801 millions from the United States, of which, by the way, 126 millions represent foodstuffs bought by us from them. Trade between countries, however much confused with foreign exchange and postponed settlements by sales of securities, is a matter of exchanging merchandise. How could we have imagined, therefore, that the United States,

THE CANADIAN BANK OF COMMERCE—Continued

the creditor nation of the world at the moment, while awaiting a revision of their tariff looking to higher protection, would pass in Congress a bill placing an embargo for ten months upon foodstuffs shipped by Canada and other countries, all of whom are doubtless depending on these products to pay for the products they are buying from the United States? These are the days of embargoes, tariff revisions, and newly devised schemes to preserve prices, which are doomed to readjustment, but we can only hope that the Senate will not approve of such unfriendly and destructive legislation. It is evident, in view of the present relations of the American and the Canadian dollar, that our rejoinder must be to put an end to an equal amount of purchases from the United States.

The Cattle Embargo

Reflection on the markets for our exports brings up the question as to how long the British embargo on Canadian cattle is to last. For about thirty years, during which time Great Britain has been supposed to be a free-trade country, our live cattle have been excluded from the British market, unless immediately slaughtered, on the pretext of the necessity of keeping British herds free from disease. No proof of any danger from our cattle has been shown, and it is generally admitted that the embargo is simply a case of extreme protection for British cattle breeders against the interests of the meat consumers of Great Britain, and particularly against the business interests of about 40,000 British butchers who wish it removed. May we not hope that in this day when the problem of feeding the people of Great Britain is so difficult, such an irritating obstacle may be removed? If the British meat consumer understands that there is nothing whatever the matter with Canadian live stock as such, and still desires this protection for cattle breeders at home, we of course have nothing to say, but we should like to feel sure that he does understand.

Our Field Crops

The value of the field crops of Canada for 1920 is estimated by the Dominion Bureau of Statistics at $1,636,664,000, as against revised figures for 1919 of $1,452,437,000. An important change has been made in the preparation of this report. Hitherto it has been prepared by the Bureau, for Canada as a whole. Now it has the benefit of consultation with each of the nine provincial departments of agriculture. The prices also are taken from those current in the respective localities, and in view of the falling tendency at present, the total estimate may therefore turn out to be too high. The increase in the estimate of about $184,000,000 is derived from increases in wheat of $172,000,000, in potatoes of $21,000,000, in hay and clover of $16,000,000 and in roots of $4,000,000, with decreases in oats of $10,000,000, in barley of $17,000,000 and in other grains of $2,000,000. We have about 100 million bushels more wheat than in 1919, so that the accuracy of the estimate depends much upon the price of this grain. We have 148 million bushels more of oats, the largest yield on record, yet the price has fallen so that the money value of the whole crop is $10,000,000 less than in 1919. On the other hand, hay and clover, while less in quantity, yield more, the price for hay being the highest in our history. Saskatchewan, with $412,000,000, and Ontario, with $396,000,000, provide about one-half of the value of all the field crops in Canada.

Mineral Production

From such information as we can obtain the total value of the mineral production of Canada for 1920 is probably $200,000,000. This compares with the great year of 1918, when the total was $211,301,000, and is well above 1919, when it fell to $176,686,000, because of the reaction following the war. In the rebound from this reaction there has been an increased production of coal, asbestos and other non-metallic products, and of pig-iron and steel, of copper, nickel, zinc and, in a slight measure, of gold. There has been a falling off in silver and lead. The production of coal, asbestos and zinc has been larger than in any previous year. The prices of metals, except silver, were well maintained during the first nine months of the year, and the decline later has not reduced the average below that of 1919.

The National Debt

The public debt of the Dominion, which at 31st March, 1919, was estimated as being under $2,000,000,000, is at 30th November, 1920, eighteen months later, stated to be $2,298,784,000, but against this are held certain non-active assets, consisting chiefly of railway loans and amounting to $284,015,000, which were heretofore deducted from the total. During the fiscal year ending March, 1920, expenditures chargeable to the war, amounting to $346,612,000, were made, followed by only $8,963,000 during the six months ending 30th November, 1920. We may therefore hope that the back of our direct war expenditure is broken. There is still due by Great Britain $162,000,000, and by foreign governments $45,000,000, but the amount due by Great Britain has been deducted in estimating the net debt. As the heavy payments caused by the war are now nearly at an end, we can, having regard to established systems of taxation, begin to estimate our actual position as to debt and our capacity to deal with it.

Sale of Securities

The sales of Canadian securities for 1920 have, of course, fallen to lower figures because of the absence of popular Dominion Government loans in Canada. The figures are as follows:

Security.	Amount.	Canada.	United States.	Great Britain.
Government	$113,455,500	$39,035,500	$74,420,000	
Municipal	58,994,728	49,312,496	9,682,232	
Railway	96,500,000	.....	96,500,000	
Public service corporation	11,500,000	200,000	11,300,000	
Miscellaneous	38,381,853	16,106,853	22,275,000	
Total, 1920	$318,832,081	$104,654,849	$214,177,232	
	100%	32.82%	67.18%	
Comparative figures for 1919	$909,383,728	$699,291,095	$204,987,500	$5,105,133
	100%	76.89%	22.54%	57%

We have again been given, by a most competent authority, an estimate of the amount of our securities held abroad. These are now estimated at $2,189,000,000 held in Great Britain and European countries, and $1,441,000,000 held in the United States. If we calculate the interest on the former, which were financed before the war, at 4¾ per cent., and on the latter at 5½ per cent. the total of our interest payments would be about $183,000,000 annually. Doubtless there are securities held abroad which are not included in this calculation, and the high rates lately paid for loans may increase the average beyond the rate of 5½ per cent., so that the actual amount we have to pay is doubtless midway between 183 millions and the sum of 190 millions suggested a year ago.

Shrinkage of Credit

A year ago the cry in every direction was for more production and more efficiency in labor, better and less costly conditions in transportation, and a cessation of Government borrowings and of credit inflation. The enormous quantities of unsold commodities at the present time seem inconsistent with the cry for greater production at that time, but it is doubtful if there is any real inconsistency. Except for stocks of certain commodities held by Governments who continued to exercise control over trade and did not liquidate these stocks at the close of the war, it is questionable if there are more commodities than the world needs for its ordinary comfort. The trouble does not arise from over-production, except as to luxuries, but from a sudden shrinkage of credit operations, a vast psychological change in the middlemen who buy and sell between the producer and the consumer, and following these factors, and to some extent because of them, from a sudden falling away of the buying power, and a distinct change in the desire to buy, of the people generally. From a period of expansion marked by the most extravagant buying ever known, we have entered upon a period of liquidation. We are just as bent now on finding a sure bottom as we were on finding the dizzy top a year ago.

Decline in Prices

The Monthly Review of the Federal Reserve Bank in New York at the close of November quotes the decline in commodity prices from the peak as about 10 to 14 per cent, in Great Britain, 11 per cent. in Canada, in the United States various estimates from 14 to 33 per cent., in France 14 per cent., and in Japan 28 per cent. The decline of the past six months in the United States is said to be more abrupt than anything since the same period at the close of the Civil War. While there must have been countless perplexing and grave problems, often involving totals in money which were enormous relatively to past experience, it is greatly to the credit of modern banking in most countries that we have been able to meet these situations as they have arisen. Embargoes and moratoriums are still necessary, and the foreign exchange difficulties are not always subject to settlement by a mere premium or discount in the rate.

THE CANADIAN BANK OF COMMERCE—Continued

Cancellation of Orders

Trade with countries other than distressed Europe has been threatened with stoppage until bankers devised new expedients for bridging difficulties not met with for many years, if ever before. The stoppage in buying and, what is much worse and not creditable to modern conditions of trade, the cancellation of orders, have so disturbed the calculations of manufacturers and merchants that borrowings from the banks, and by note and bond issues from the public, have been necessary in the United States on a scale never known before. The liquidation which has set in will bring about easier monetary conditions as the natural accompaniment of less active trade and the decline in prices, and, unfortunately, we can already see that many will be out of employment during the coming winter.

Unemployment

In the United States, as usual, movements are more acute than in Canada, and in some branches of trade, such as motors and clothing, employment has fallen as much as 50 to 75 per cent. On the whole, what with some trades in a better condition and with labor needed in farming and lumbering, heretofore very short of workmen, the lessening of employment is not very prevalent as yet. The unemployed of course congregate in the cities and raise grave questions which had better be met by public works, where labor is given in exchange for pay, than by doles which tend to break down the individual effort on which our society is based.

Immigration Increases

It is unfortunate, although quite natural, that at such a moment immigration shows its first great movement since the war. In 1913 a trifle over 400,000 immigrants came to Canada, and in 1914 about 385,000, so that, but for the war, 1914 would clearly have been a record year. During the war the immigration was nominal, only 50,000 to 75,000 annually, but in 1920 the figures reached about 120,000, with the promise of a much more active movement as soon as rates are lower and passages more easily obtained. In 1913 immigrants came from the following sources: Great Britain 150,000, United States 139,000, and all other countries 113,000. In 1920 the proportions were 59, 49 and 8. In both years the immigrants spread themselves reasonably well over Canada, Ontario, however, receiving twice as many as any other province. The proportion of immigrants from the United States who are farmers is about the same as before the war, and doubtless many others from that country are land seekers, but the proportion of farmers or farm workers from other countries, including Great Britain, is much smaller than before the war. We must hope that the present readjustment going on throughout the world will increase the number of land-seekers, because although we must prevent undue immigration while our own people want work, we shall always desire as many as possible to go on the land for a living.

The Soldier Farmer

In connection with the land settlement and post-war work for our soldiers, a recent report of the Soldier Settlement Board is encouraging. The plan provides for loans for buying land up to $5,000, or 90 per cent. of the value, in each case, amortized over 25 years on the basis of five per cent. interest per annum, and for loans up to $2,000 for stock or equipment, payable in six amortized payments on the same interest basis, and of $1,000 for permanent improvements payable in the same manner as the land purchase. Over 57,000 soldiers have applied under the plan, over 41,000 have qualified and 20,000 are already on the land, while over 1,000 are in training with farmers. To settle these 20,000, slightly under 80 million dollars has been necessary, as against a possible 160 millions under the Act. Soldiers have made first payments amounting to four millions, while crops have already enabled further payments of nearly two millions to be made. In the prairie provinces alone, the soldier farmers have produced about 20 million bushels of grain.

The care taken in estimating the qualifications of each applicant for successful farming, in selecting the land, in buying stock and implements, the latter at wholesale prices, in counselling and aiding in many ways those who have not yet made good—all suggest an admirable effort to carry out a plan of land settlement, the importance of which reaches far beyond the mere aid to the returned soldier, although that is the prime consideration. Where there are applicants who cannot make the initial payment, the various bodies aiding distressed soldiers are appealed to, and, of course, there are failures after all precautions have been taken. In 150 cases, involving an investment by the Government of $575,000, only about $10,000 was lost. The report closes with suggestions regarding land settlement generally, which it is hoped will have the consideration due to such an important question

Pensions to Soldiers

Perhaps no new form of national expenditure caused by the war interests us so widely as the pensions paid to our soldiers. On the one hand there is an intense desire that justice be done to those who fought for us, while on the other hand there is a grave sense of the weight of the obligation falling upon the new generation to pay such a huge sum annually, in return for which there is not, directly or indirectly, any relative production of national wealth. At the end of 1919 there were 86,429 pensions being paid, at a cost of about $1,800,000 monthly. During the year, by the payment of $5,710,000, pensions were commuted to the extent of 14,292, and the number of pensions in force at the end of 1920 was 73,278. Further commutations are expected, bringing the total to about 18,000, on which about $7,200,000 will have been paid. At the moment our monthly outlay for pensions is about $2,500,000, but commutations will probably reduce this to about $1,850,000.

Taxation

In speaking last year about the manner of distributing the taxation necessary to carry our debt and to administer the Government, we expressed the opinion that if the annual payments are obtained by reasonably fair taxation, so levied that the taxes do not become a cause of restraining our industries, we shall not fail to win through, but to accomplish this much study of the subject is necessary. It must be admitted that the war has imposed upon Governments the necessity for collecting an amount of taxes beyond any past experience, and it should be evident that the total required can only be obtained by contributions on some scale from practically the whole body of the people. It is quite true that regard must be had to the capacity of the individual to pay, but in levying super-taxes no folly can be greater than to overlook the effect of excessive taxation on our industrial activities, not only as to future growth, but as to the present power to give employment to the wage-earner. We do not hesitate to say, now that the war is over, that some of the present forms of Dominion taxation, while justifiable during the war period and the period immediately succeeding it, are in danger of becoming destructive of enterprise and perilous to our future if not altered. As the forms of taxation to which I shall allude are similar to those of other countries in which the same evil results are apparent, and in which the tide of opposition is rising rapidly, I trust my remarks will not be regarded as a criticism of our Government, whose tasks during the war and since have been most difficult and onerous. We must suppose that these forms of taxation are experiments which are subject to speedy change if found to be too burdensome and unfair.

Tax on Sales

As against the "luxury" taxes now happily at an end, we have steadily urged a turnover tax of one per cent. on sales of commodities. We are aware that criticism, only however regarding certain details, of this form of tax have been made in the Tentative Report of the Tax Committee of the National Industrial Conference Board of New York, but these have been answered by the Chairman of the Business Men's National Tax Committee. One of the arguments made in the United States against it is that any tax which bears in the same rate upon the small earner as upon the large is unfair. But this is accompanied by the belief that a turnover tax would provide such a revenue as to displace the excess profits tax. I beileve it would only provide a substratum of tax revenue, in which it is true that all would join alike, paying in precise proportion to their expenditures for commodities, but the manner in which those who have larger incomes would be taxed through the income tax would provide for that difference in treatment which modern taxation recognizes. A small tax on the sales of commodities and real property in Canada would hurt so little, would be so fair, would be so easily collected, and would produce such a very large sum, that to fail to levy it seems excusable only if it can be shown to be impracticable.

THE CANADIAN BANK OF COMMERCE—Continued

Surplus Profits Tax

We are levying heavy surplus profits taxes, and many well-intentioned people think that we are justly punishing the so-called profiteer, but we are really killing the goose that lays the golden egg. When he can do so, he doubtless passes the tax on to the consumer, and escapes punishment himself, and the tax thus becomes a boomerang as far as the public are concerned. If we clearly know what we mean by a profiteer and can find him, let us punish him in such manner that the penalty imposed cannot be passed on to the ultimate buyer. But in ordinary cases, which affect by far the greater part of the business community, we are taking from enterprise the profit with which further enterprise would be created. It is from the accumulated profits of a business that growth both of plant and scope of operations mostly becomes possible. What do we think will happen if we steadily take such a large share of that profit away? It will be said that some concerns make too much money. But, as we argued a year ago, that should be demonstrated by the relation not of profits to capital but of profits to turnover, measured again by the proportion of possible turnover to capital. The manufacturer who turns his capital over many times, serving the public for a trifling profit on each sale, but making a large return on his capital because of his skill and activity, should surely not be punished by excessive taxation for being an excellent servant to the people. The tax is universally admitted to be unscientific and will do incalculable damage if continued. It was justified only by war conditions and only for the period of their duration.

The Income Surtax

The surtax features of the income tax when carried to the extreme percentages now in effect, are little less unwise and unfair than the excess profits tax. Those who are large shareholders in business enterprises should be ready to take up new share issues in such enterprises, as extensions may prove necessary. Taxation which first takes a large share of the profits from the company, and then a large share of the dividends of the same company because they happen to be part of a large private income, may seem to be sound policy to many, but if what we seek is the general good, it is deadly in its effects upon business enterprise and industry. I believe every good citizen in Canada wishes to pay for part of the cost of the war. He only desires that his ability to pay shall be regarded. A tax on the turnover of all business transactions would punish no one, and yet would mean the reaching of a most important sub-stratum of the national income, in the creating of which everybody has joined. Upon real luxuries an excise tax might well be placed without resulting injury to trade. The articles selected should manifestly be luxuries in the strict sense of the term and clearly recognized as such by the general public.

Profits and Taxes

We are at the moment having illustrations both of the injustice and of the unreliability, as a form of Government income, of the excess profits tax in Canada and the United States. Business men who in a time of high prices would not regard whatever value they might put upon merchandise in stock at the close of their financial year as anything but a *pro forma* method of closing their books, and who would keep large balances in Profit and Loss Account as a contingency against a fall in prices, are forced to fix a price for such merchandise, and also to fix, to the satisfaction of the Government, the reserves to be kept against such re-valuation. As a result, in the United States at the moment, countless firms who in the great fall in commodity prices have lost a large share of all that has been made in several past years, look in vain for that so-called "excess profit" which the Government exacted from them, and I fear that there are at least a considerable number of business establishments in Canada in the same predicament. The Government is to be a partner in the business when profits are made, but not when losses are made. It is obvious that such a form of revenue must be subject to too great contingencies to be reliable. In the interest of all we must find a system of taxation which will do the least possible mischief to enterprise, instead of making men unwilling to take new risks because the Government seizes so much of the results when there are any and does not share either the risk or the loss.

Increase National Income

While we must for the time being levy enough taxes in some form to pay our interest charges, and to make, as we hope, some steady if slow reduction of the national debt, we should always bear in mind that it is only by the growth of our national income that we can expect again to reach a time when taxes will not be a drag upon our prosperity. We need more people upon the land, but we need more industries as well. We pay away yearly vast sums for imports, many of which should be unnecessary. We have untouched stores of raw material for many kinds of manufacturing, the non-use of which is even more serious to Canada from the point of view of national finance than unploughed land. We export food by which our foreign debts are partly paid, but we import what we should make ourselves, and thus create foreign debt. The present high rate of exchange on New York is the concrete expression of this debt, not only of that being created to-day, but in the form of annual interest payments, of all the foreign debt we have created in the past.

Research Work Imperative

We have iron ores in plenty, but we do not spend enough on research to ascertain their status in relation to other ores in the United States on which we steadily depend. We have about 15 per cent. of the coal areas of the world, so far as such areas are accurately known. It may be that science cannot remove impurities and reassemble the coal so as to make transportation charges possible, and thus relieve Ontario of its great drawback, and the nation of its vast expenditure for the importation of this article, but research should be persistent until we are assured that such is the case. We have lately developed manufacturing processes in which chemistry is the main feature and others dependent on cheap water-power, and through these the triple benefit comes to us of giving employment, of enlarging the market for those who sell food and the other necessaries of life, and of offsetting or lessening by the selling value of the home-created product, the cost of those imports which are the main cause of our present difficulties. We are very glad indeed that our Dominion and Provincial Governments all spend large sums of money in educational and other ways, to aid agriculture. The Dominion Government and some of the provinces also do something in the way of research for other industries, but we have come to a juncture where, along with the ordinary desire for progress, comes the heavy pressure of national debt which can only be relieved by increased production. For this we need research in countless directions, and in addition to what is now being done, I hope liberal aid will be given to all of our universities and that the scope of our Government research work may be enlarged.

Trade with West Indies

A very interesting convention took place in May and June, at which representatives of the West Indies and British Guiana met the Canadian Government in an effort to increase our trade with each other and improve our means of intercommunication. It is said that this is the first time that representatives of all the islands and of the adjacent mainland have met together, and it is gratifying to record that these colonies, which form in one sense a unit of the empire, came together to discuss Imperial questions with Canada. As a result, an agreement between Canada and some of the West Indian group came into force on 2nd June, and a further agreement, which included the remaining members, was made on 18th June, subject to ratification by all the parties thereto, and in which all of the delegates present at the conference concurred. These agreements are based upon an increase of the mutual preference now granted, an enlargement of the list of products to which the preference extends, and on co-operation in procuring and maintaining better steamship transportation and, if possible, better cable communication. If we consider the adjacency of the United States to the West Indies and the special relations to the latter of the great fruit company with its lines of steamers, we can readily understand that our hope of a large and reasonably quick development of trade with these parts of the Empire depends on the steamship and cable services we are able to create and maintain. Nothing but the best, both in kind and in administration, will be of much use. In addition to this West Indian Convention, we had the Imperial

THE CANADIAN BANK OF COMMERCE—Continued

ress Conference and the Congress of the Chambers of Commerce of the Empire. We cannot doubt that such meetings f men important in Imperial affairs will both widen our outook and strengthen our determination that the British people nall merit the leadership in the world's advancement.

A Year Book

Over thirty years ago this Bank began the, at that time, uite unusual practice of presenting at the annual meeting, the addresses of the President and the General Manager, review of the industrial conditions of the area in which e Bank was interested. As this widened from Ontario to her parts of Canada, then to the whole Dominion and to arious parts of the United States, later to Great Britain nd Newfoundland, and now to the West Indies and South merica, it has been necessary to change the manner of nparting this information to our shareholders and to the ublic. Until 1913 the effort to incorporate it directly in the ddresses was continued. Then it was decided to present in what has been called a Review of Business Conditions, the extended form in which it reaches us from the Superintendents and other officers who make these annual reports Head Office, and this has been supplied with the annual port to the shareholders and the public. About four years o the bank found it desirable to establish its Monthly Commercial Letter, which has made for itself a very extensive rculation, and it has now been concluded to publish as early as possible after the annual meeting, a Year Book, in which the Review of Business Conditions, now grown to larger proportions than ever, will appear, together with material of special interest gathered from the Monthly Commercial Letter and from other sources.

The Sin of Extravagance

Among the lights and shadows of the world there are at the moment too many shadows to warrant anything but anxious care. You have heard from the General Manager the results of the best year the Bank has ever had, and thus far we have not much evidence of a decline in the spending habits of our people or that hard times are ahead of us. We know, however, that here as elsewhere all prices, whether of commodities or of labor, must be reduced to a more reasonable basis, and the effect of the world's lower price for farm products is already plain to all. When this readjustment has reached the retail shop and a new basis of values has been generally accepted, a genuine prosperity will arise throughout the world in which we shall have a large share. We shall merit and we shall secure that prosperity in proportion to our good sense in realizing now that our particular sin is extravagant expenditure and willingness to incur debt.

The report was adopted unanimously. Messrs. T. Harry Webb, C.A., and Douglas Dewar, C.A., were appointed auditors, and the usual votes of thanks to the directors and staff were passed. The meeting then adjourned.

ynopsis of Proceedings Before the Tariff Commission

(*Continued from page* 60.)

eral brief on behalf of the organized ners. which reiterated former arguits.

n. 4.—Louis Simpson appeared to uss the suggested alteration in the of employment of young persons in ories. He also dealt with the tariff, king in favor of protection, but urgthat the tariff should be made more ntific.

H. Houson, vice-president Dominion r Co., Limited, Chatham, submitted tement containing facts relating to sugar-beet industry of Canada. This supplemented by a number of affivs from Belgians, who had settled in County and were growing sugar . They showed how prosperous Belgian farmers had become.

J. Horsfield, president John Layton Inc., importers of frozen and dried egg yolks and egg albumen, nted a statement in which he asked tall these products be placed on a ic rate of so much per pound.

N.L. Martin, chartered accountant, rcto, presented a brief on behalf of ass merchants of Canada, in answer memorandum of J. W. Hobbs, askr an increase in the tariff on glass.

W. Gladstone, representing the a Ingot Iron Co., Limited, Guelph, for a separate tariff item classifiIo for their raw material, a suggested g being:—"Galvanized iron or heets, eighteen gauge and heavier, mported by manufacturers of cor- iron or steel pipe for use only in nufacture of corrugated iron or ipe in their own factories." This e on a duty free basis.

Norman Guthrie, K.C., appeared on behalf of the Miller Saw-Trimmer Co., of Pittsburgh, and asked for certain changes in classification of their press-feeders. He was supported by C. G. Cope, who explained the nature of the machine.

J. R. Harrison, on behalf of Pilkington Bros., Limited, glass manufacturers, Thorold, dealt with the tariff on glass and asked that the general tariff on window glass be 15 per cent., instead of 12½ per cent., as at present, but that the other items of the tariff covering flat glass remain as they are.

George B. Kidd, K.C., on behalf of the owners of iron ore properties in the eastern portion of Ontario and in the counties of Wright and Pontiac, Quebec, asked for assistance in developing these properties.

Ship Repairing Industry

By E. W. Izard

Yarrows, Limited, Victoria, B.C.

IT would appear to us that there is a downward trend in the price of raw materials. Deliveries are better and dealers pay better attention to our orders; all of which is due to the supply of materials becoming equal to the demand. There has also been a slight tendency for wages to come down and the efficiency of the workmen is improving.

During 1920 there was a decided decrease in the amount of shipping orders, but towards the end of the year there has been a slight improvement, and in our particular line, which is ship repairing, we have been fairly busy, but competition has been keen and prices low.

I do not think that the downward trend of prices is complete, as there is every sign of wages being reduced, and also the cost of raw materials are likely to go lower.

The outlook for 1921 appears to be fair, but on this coast we are likely to be handicapped by the recent great increase in the freight rates, as most of our stuff has to come by rail; also it is causing the slowing down of the lumber business, which is one of the main industries of British Columbia.

St. Thomas Industries

TWO new companies. the Nobility Chocolates Company. Limited. and the St. Thomas Box Company, Limited, have been incorporated to take over the interests of Nobility Chocolates. Limited, and St. Thomas Boxes, Limited, respectively. Of the two new companies the former is capitalized at $1,000,000 and the latter at $40,000. The officers and directors of both are, Geo. D. Fisk, formerly of the Rockland Chocolate Company, Limited, president; Peter H. Kolb, St. Thomas, vice-president; William G. Seigner, St. Thomas, secretary-treasurer; Thomas Agar and Frank Hughes, of Toronto, directors.

The plant of the Nobility Chocolates Company, Limited, is 60 x 150 feet, four storeys and basement. All lines of candy package goods and solid chocolates will be manufactured. The company will import and grind their own cocoa beans. Operations have already commenced, and when the plant is running to full capacity from one hundred and fifty to two hundred will be employed.

UNION BANK OF CANADA

56th Annual Statement—30th November, 1920

Fifty-sixth Statement Reveals Very Strong Cash Position Built Up During Past Year—Total Assets Increased $60,000,000 Since 1916—Savings Deposits Again Show Marked Increase—Quick Assets to Liabilities Increased from 47.23% to 54.35%—There are Now 393 Branches and Agencies.

The Fifty-sixth Annual General Meeting of the Shareholders of the Union Bank of Canada, was held at the Head Office of the Bank, in the City of Winnipeg, at twelve noon, on Monday, January 10th, 1921.

The President, Mr. JOHN GALT, in the chair.

DIRECTORS' REPORT

The Directors have pleasure in presenting their report, showing the result of the business of the Bank for the year ended November 30th, 1920.

During the year 15 branches and agencies were opened, and 10 were closed, as follows:

Offices Opened

Province of Ontario, 6—Honeywood, Mansfield, Minesing, Oshawa, St. Ann's, Toronto (Dawes and Danforth).

Province of Manitoba, 2—Benito, McConnell.

Province of Saskatchewan, 5—Birch Hills, Carmel, Mossbank, Pinkham, Saskatoon (West Side).

Province of Alberta, 2—Calgary (Stock Yards), Edmonton (Stock Yards).

Offices Closed

Province of Manitoba, 5—Graysville, Homewood, Margaret Roseisle, Winkler.

Province of Saskatchewan, 2—Kyleville, Scott.

Province of Alberta, 3—Alcomdale, Grassy Lake, Loyalist.

The number of branches and agencies in operation at the close of business on November 30th was 393.

The number of staff employed at close of business on November 30th was 2,303.

The usual inspection of all branches and agencies has been made.

In accordance with an announcement made by him at the last Annual Meeting, Mr. R. T. Riley, Vice-President of the Bank, has recently resigned from the Board to devote more time to his own affairs, and Mr. W. R. Allan has been elected Vice-President to succeed him.

To fill the vacancies on the Board, Messrs. G. M. Black and D. N. Finnie, of Winnipeg, have been elected Directors.

JOHN GALT,
President.

PROFIT AND LOSS ACCOUNT

Balance at credit of account, 29th November, 1919	$198,222.87
Net profits for the year, after deducting expenses of management, interest due depositors, reserving for interest and exchange, and making provision for bad and doubtful debts and for rebate on bills under discount, have amounted to	1,603,842.39
	$1,802,065.26
Which has been applied as follows:	
Dividend No. 132, 2½ per cent., paid 1st March, 1920	$198,247.45
Dividend No. 133, 2½ per cent., paid 1st June, 1920	199,988.80
Dividend No. 134, 2½ per cent., paid 1st September, 1920	199,996.30
Dividend No. 135, 2½ per cent., payable 1st December, 1920	200,000.00
Bonus to Shareholders of 2 per cent., payable 1st December, 1920	160,000.00
Transferred to Rest Account	400,000.00
Written off Bank Premises	150,000.00
Contribution to Officers' Pension Fund	50,000.00
Contribution to Sick Benefit Fund	15,000.00
War Tax on Bank Note Circulation to 30th November, 1920	79,536.24
Balance of Profits carried forward	149,296.47

UNION BANK OF CANADA—*Continued*

Report of the Auditors to the Shareholders of the Union Bank of Canada.

In accordance with the provisions of subsections 19 and 20 of Section 56 of The Bank Act, we report to the Shareholders as follows:—

We have audited the above Balance Sheet with the books and vouchers at Head Office and with the certified returns from the Branches.

We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

In addition to our verification at the 30th November, we have, during the year, checked the cash and verified the securities representing the investments of the Bank at its chief office and principal branches and found them to be in agreement with the entries in the books of the Bank relating thereto.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank, according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

T. HARRY WEBB, E. S. READ,
Auditors of the firm of
GEORGE A. TOUCHE & CO.

Winnipeg, 20th December, 1920.

JOHN GALT,

H. B. SHAW,
General Manager.

upplementary Reports on Business

(*Continued from page* 83.)

ilization of prices and lower labor s will undoubtedly lead to a better dition in building lines. A great deal uilding during 1920 was suspended, to the scarcity of materials. This dition is slowly righting itself and y buildings urgently needed will un-tedly be started this spring. The e does not apply to house-building in h our materials are not used to any t extent, but to the larger type of coustruction, such as hotels, office buildings, etc.

Improvement by Spring

By W. A. Brophey
Tooke Bros., Limited, Montreal.

WE have a plentiful supply of raw materials and at lower prices than prevailed six months ago. We have a fair supply of labor, but at the present time wages are at the highest. The state of employment in our industry is that the employees are more efficient than they have been for some months past. There are quite a number of operators laid off by some of the factories, but we have not laid off any to speak of as yet.

Demand has been greater than the supply up till October. Since then, with the cancellations, etc., we have been able to get partly caught up with our orders. The spring 1921 demand for shirts has been fair, but there are a great many large buyers that have not placed for spring as yet. The price movement of finished products is on the downward grade. We, ourselves, have passed on to our customers revised prices, and will continue to do so whenever we have a revised price from the mills. We hope the process of deflation is complete, and we think we have seen the worst of it.

The outlook for 1921 looked fairly bright when our representatives started out with spring samples, and the orders were quite plentiful, but when the *buying strike* of the consumer became so marked, it makes the outlook for spring not very encouraging, although we feel that a big improvement should start in with the early spring. We have no reason to become pessimistic on the future outlook, as Canada has a wonderful future before it.

CRERAR

(*Continued from page* 61.)

sands of hard-working people on the border-line of starvation to-day in this country of such natural riches? Go to Prince Edward Island, the most purely rural community in Canada, and then cross over to the industrial area in Cape Breton and judge which is the healthier and happier society. Can it be seriously argued that John Thomson, growing grain, and Marie Guerin, making butter on an Eastern Township farm, are not both happier, healthier and greater contributors to the national wealth than the same pair of people making tire fabrics or cheap jewelry out of imported raw material in a Sherbrooke factory?

There is great lamentation about the amount of our imports and the state of the exchange, but it should not be forgotten that raw materials for our manufacturers comprise a large part of our imports. Does anyone think our fiscal position healthy? Our imports far exceed our exports and we have to send millions yearly abroad to pay interest owed to external creditors for bonds, mortgages and other forms of their investments. The fact is that as a nation we cannot hope to reach a stable economic basis until a change in our fiscal system gives freer play to our natural industries. When they are allowed to flourish as they might, our export figures will increase and our urban industries will prosper as never before.

Denatured Alcohol

(*Continued from page* 72.)

ing precious metals, soldering flux, stains, stencil paper, tin foil and bottle caps, transparent paper, water colours, wool fat, wood finish, wood filler, celluloid and similar products, synthetic camphor, white petroleum oils, cigars, cigarettes, smoking and chewing tobacco, deodorants, fulminate of mercury, purification of rubber, photo engraving, milk products, smokeless powder, vinegar, artificial ivory, tooth paste, meat branding inks, etc.

There are many other purposes to which denatured alcohol can be employed to advantage. The manufacturers of Canada have now a privilege in their hands which should contribute very considerably to their efficiency and profit, and there is in their hands the power to make full use of one of the most useful pieces of legislation which has beeu passed for the benefit of industry in a great many years, or it is possible for them to neglect it and lose one of their best opportunities for development.

AUDITORS' REPORT TO SHAREHOLDERS

We have compared the above Balance Sheet with the books and accounts at the Chief Office of The Dominion Bank, and the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on December 31st, 1920, we certify that, in our opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs, according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us at another time during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank.

G. T. CLARKSON
R. J. DILWORTH
(Of Clarkson, Gordon & Dilworth, C.A.)

Toronto, January 20th, 1921.

Increased Construction

Total Construction Contracts for 1920 are Greater than for 1919

Statistics compiled and issued by MacLean Daily Reports, Limited, show that the total value of construction contracts awarded in Canada during 1920 were $65,784,200 greater than in 1919. The total for 1920 was $255,605,500, compared with $189,821,300 in 1919, being an increase of 34.6 per cent. The gain over 1918 reached the tremendous total of $155,763,200, or 156 per cent., indicating that construction is rapidly attaining pre-war volume. The Dominion record of 1920, compared with 1919, is as follows:

	1920	1919
RESIDENCES:		
Frame	$18,073,900	$11,721,600
Brick	36,817,200	35,291,500
BUSINESS BUILDINGS:		
Frame	6,475,900	4,165,500
Brick	72,960,400	48,183,900
Concrete	6,636,900	7,157,000
INDUSTRIAL BUILDINGS:		
Frame	1,608,300	750,700
Brick	37,185,800	30,314,200
Concrete	25,831,800	26,026,400
ENGINEERING CONSTRUCTION:		
Steel Bridges	3,634,400	1,953,800
Concrete Bridges	1,658,100	566,300
Miscellaneous	44,722,800	23,590,400
Total for Dominion	$255,605,500	$189,821,300

Repaired in 5 hours

MAINLY through the portability of Prest-O-Lite it was possible to weld the base of this heavy railroad crane in a few moments less than five hours.

That's the usual quick way in which it is possible to weld with Prest-O-Lite and the oxy-acetylene process.

Through the use of Prest-O-Lite it is possible to weld, build up and cut metals without bringing the work to be done to a workshop.

Thus Prest-O-Lite, the Universal Gas with the Universal Service provides the means for moving an oxy-acetylene welding outfit anywhere and everywhere.

You will be interested in the Nation-wide Service of our conveniently located plants and warehouses.

OFFICE AND FINANCE

Don't Write To The "Dead Ones"

Why Circularize Those Firms Who Are no Longer Prospects? — Postage, Time and Printing Costs May be Saved by Properly Supervised Mailing Lists

By ALAN M. IRWIN

The sum of three hundred million dollars was spent on direct-by-mail advertising in Canada and the United States during 1919. Every advertiser who uses this method will admit that much of this money was wasted, and that the waste was largely due to faulty mailing lists. A mailing list poorly selected is bad; a list that is inaccurate is worse. Careful checking and intelligent supervision of the addresses to which advertising material is sent must be the rule if this medium is to yield returns commensurate with the outlay. This article will furnish some suggestions for keeping mailing lists at maximum efficiency.— EDITOR.

YOU would not thinkingly write a selling letter to a firm who had gone out of business, would you? Then why keep on your mailing list those firms who have "gone out of business," into liquidation," "amalgamated," or have in some other way become dead ones? Five hundred inquiries from a list of five thousand prospects seem like an average good return—a ten per cent. showing usually satisfies a sales manager—but for all he knows that return may be in reality twelve and one-half per cent. Perhaps one thousand of the names circularized come into the category of "dead ones," the direct result of $20 waste postage, 20% waste time in printing, folding, inserting and mechanical costs. Amount this up for every time in the year you send out direct mail advertising. Isn't it an appalling waste? From another angle it is 20% of your direct mail advertising appropriation going to waste as surely as if it had been thrown down a drain. The reason for all this waste is not hard to seek—it lies in faulty checking or in *failure* to check the mailing list. An unchecked mailing list is not only wasteful, it is a sign of inefficiency in the operation of this aid to the sales force. Because the work of cutting stencils is given to a junior typist is no reason for not making the work of *keeping the list in order* the job of someone who is well enough equipped mentally, and therefore well enough paid to carry it out properly. Many of these so-called routine jobs, to digress a little from our heading, are considered to be in the overhead class; but if many cases, as in the present, they will be found to be producers to the effect that they may save considerable sums of money during the year. In 1919 in Canada and the United States one billion and fifty million dollars was spent in national advertising through the mediums of newspapers, magazines, and direct by mail. Of this large sum six hundred million was for newspapers, three hundred million direct by mail, and one hundred and fifty million for magazines, showing a percentage of 28.5 of total advertising appropriations spent for direct by mail advertising. If we find a 20% waste is caused through improper methods of preparing and supervising mailing lists, with a consequent loss of sixty million dollars, it will easily be seen that adequate arrangements for the checking of the mailing list are a necessity. How is a mailing list to be prepared? What source shall we use in obtaining our prospects? How shall we check this list when it is in operation? These three questions are the main points which we now have to consider.

Preparing a Mailing List

The outstanding requirement of a mailing list is naturally *accuracy*. With this watchword always in mind the first step in the compiling of a list should be the customers on the books of the firm. These names can be secured from the sales department reports, ledger accounts, or the files, etc. If the list is to be largely a local one such authorities as the city directory, telephone directory, mercantile directory, Board of Trade membership list, voting lists, membership lists of churches, societies, and other lists of like nature should be consulted.

For mailing lists which are to be provincial in scope we have in addition to the lists given in the preceding paragraph, which, of course, may be used where obtainable in every town and village of sufficient size, the records maintained by the provincial departments; for instance, labor reports, records of incorporations of companies, lists of directors, and automobile registrations. All these sources, of course, should be steadily supplemented from newspaper columns, clipping agencies, reports and publications of commercial information houses, and a careful study of the advertising carried by trade, class, society and other magazines. Some life insurance companies watch the marriage and birth announcements. One enterprising company in England, in fact, circularize proud fathers in the Dominion as soon as notice of the new arrival is published in the newspapers, offering the particular form of insurance which is payable at such time as to provide for the education of the before-mentioned little stranger. It is only by such aggressive and up-to-date methods that a firm may maintain an efficient mailing list.

How it is Kept and How it Works.

There are several different systems in vogue in connection with the mechanical operation of mailing lists. To definitely pick out one of these and say that it would be equally workable in all cases would be about as sensible a procedure as buying a silk hat for a school boy just because he needs a hat. The mailing list is in this respect like the hat, it has to not only fit its wearer, but should be the most sensible and serviceable type which is readily adapted to the business which it serves. In some cases the list may be small owing to the nature of the business, and would not warrant the overhead expense of purchasing an addressing machine. On the other hand if the list grows larger a card system is found to meet requirements. If this card is to contain very little more than the name and address of the prospect, the standard 3" x 5" is useful. Where the reference card embodies not only the name and address, but financial rating and other data which is more or less important, some of the larger sized cards will often be required. The stencil trays are the only mailing list of some firms, noticeably those with a very large list of persons to be circularized. This arrangement, of course, saves duplication of effort in the mechanical operations of compiling the list, and with those firms who use a particular type of stencil a large amount of necessary information can be included on the stencil itself. The cross-indexing of the names on the list, the ease with which different trades or other distinctions may be separated, and the possible growth of the list must be thoroughly considered when the original list is made up. The method of filing stencils or cards, as the case may be,

will, of course, be governed by the nature of the business making direct use of mail advertising. The four main divisions of filing in general may be used to advantage in the mailing department. These divisions are: Straight alphabetic, numeric, geographical and subject. Perhaps the most general system is a combination of geographical and alphabetic. By means of this plan the territory covered, whether it be the whole Dominion, the Western Provinces, certain counties, or a single city, may be divided alphabetically into geographical divisions; i.e, Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario, Prince Edward Island, Quebec and Saskatchewan. Behind these main divisions may be filed, if necessary, counties; behind which sub-division will be filed cities, villages and towns in alphabetical order; the names of the individual prospects in these last sub-divisions being filed alphabetically, as in the telephone directory. By this method it is then a very simple matter to pick out any particular section of the Dominion or province, as the case may be, and circularize it without loss of time.

Checking.

When once the list has been compiled and properly filed in the order in which it is required to be used, the main problem is checking. In order to avoid the enormous amount of potential waste outlined in the opening paragraphs, a thoroughly efficient and accurate mailing and checking system must be operated. The person in charge of the mailing list should first be made thoroughly conversant with post-office requirements. He must then be instructed to supplement the list accurately and carefully with new names obtained from the various sources outlined above and to delete therefrom all names of those reported as being no longer active. He should establish friendly relations with the local postmaster and find out from him the best ways in which he may co-operate with the post-office. Mailing circulars and large quantities of second-class matter at five o'clock, when the rush hour is on, means not only additional work for the sorters and other employees of the post-office, but also tends to delay the despatch, and, therefore, the delivery, of your mail matter. Co-operation with the sales department in order that the effectiveness of this advertising may be checked up is another very necessary item. Above all, do not place the mailing list in charge of an inexperienced person.

The common method of checking mailing lists is to send out a postcard bearing a notice on the back in approximately the following wording: "The address on the reverse side of this card is the one we have on our records for you. If this is not correct, please make alterations and return. If correct, please O.K. and return." The postmaster will generally be glad to take a copy of your mailing list and check it over. Post-office superintendents in Canada gladly co-operate with firms who are constantly using mailing lists to the extent of correcting the list and marking each name with the official abbreviated designation of the district to which mail matter is addressed. Lists, after being checked, are returned to the sender with the request that in order to facilitate delivery, he make the changes suggested by the post-office. Then follows

"1. It will enable the post-offices mentioned above to treat your publication almost as promptly as first-class matter, owing to the fact that *one*, and in several instances, *two* or *three* rehandlings will be eliminated.

"2. It will prevent accumulations of quantities of daily, weekly and monthly publications at certain times of the day, also at the end of each week or month, particularly on Saturday afternoon, Sunday or legal holidays, as it must be borne in mind that a limited number of our employees are on duty on Sunday, legal holidays and Saturday afternoon.

"Should it be necessary for you to change the street address on any copies of your publication, I would advise you to enclose same in a package labelled:

"Miscellaneous, ———————— City."

A third way is to mail your circular

matter in a properly sealed envelope under first-class postage. If for any reason it cannot be delivered, it will be returned by the post-office, with a notation as to the reason. A list which is allowed to grow and continue to carry the names of unprofitable addresses is an unwarranted expense. A properly checked mailing list, while it may appear to cost more in salaries, is in the long run the most economical of all. Direct mail advertising depends entirely upon the mailing list, and if this adjunct to the advertising and sales department is not kept in proper order and up to date, considerable loss has to be borne by these two departments. Just as the success of direct mail advertising hinges upon the success of the mailing list, so does the successful mailing list depend upon accurate checking.

An Interesting Review

Sir John Aird Addresses Bank of Commerce Annual Meeting

Some of the problems of business, of which the present has its full measure, were elucidated by Sir John Aird, general manager of the Canadian Bank of Commerce, at the annual meeting of its shareholders. Of these problems, one perhaps of most general interest to the public is the price of New York funds. The cause of it being so high was due, Sir John said, in part, to speculation by Canadians in New York stocks. Sudden calls for margin have, on more than one occasion, caused the price of New York funds to advance sharply. Obviously if that was the case the volume of such trading must be considerable and may at times be the cause of inconvenience to merchants. The general impression has been, and is to-day, that the chief cause of the adverse trade balance with the United States, and the consequent high premium on New York funds, was our extravagant purchases of commodities from that country—a condition referred to in very plain language by Sir Edmund Walker at the same meeting. That the speculation referred to by Sir John is an important factor will come to many as a surprise.

The position which this bank holds in the development of Canadian trade and commerce is indicated by the fact of its having current loans in Canada aggregating $231,114,772. So large a volume of loans brings the bank into the most intimate touch with business trends and developments on a national scale. Its branches increase in number annually and the year just closed was no exception to the rule as applied to Canada, but was exceptional as to the increase in the bank's activity in foreign fields. Sir John dealt fully with this expansion and with the earnings of the bank which are higher than they have been before. "Conditions," Sir John pointed out, "which have prevailed in the markets for all staple commodities since the war ended—the extra demand for goods and the high prices—have caused a strong demand for money." But it is realized by Sir John that a very different state of affairs exists at the present time—one of lessened activity in business and falling prices—and in consequence a conservative attitude has been adopted by the bank. The shareholders have received a regular dividend of 12 per cent. and a bonus of 1 per cent., substantial appropriations were made on pensions and building accounts, but there was still left to carry forward out of profits $1,783,979. Carrying forward so large a sum is justified as "a safeguard against unexpected contingencies." The internal affairs of the bank were reviewed by Sir John at greater length than usual. His explanation of the changes in the various items of the bank's statement shows how sensitive the bank figures are to change in conditions in business.

No attempt was made by Sir John to obscure in any way the exact condition of the country's business affairs. He did not, however, look upon them pessimistically. Such a condition as exists to-day cannot in his opinion be of long duration. He expressed the hope that before the winter has run its course depression may be a thing of the past. But, in order to change things, Sir John reiterated his firm belief in the gospel of hard work and frugality as the only way to repair the damage caused to property and credit by the late war.

Union Bank of Canada

Fifty-sixth Annual Statement shows the Bank to be in Satisfactory Position

The report of the Union Bank of Canada for the year ended November 30, 1920, indicates that the bank has been able to strengthen its position considerably during the year. The 1920 balance sheet is the strongest statement in quick assets and cash holdings since the bank commenced business, fifty-six years ago. Quick assets totalled $82,203,563, being 54.35 per cent. of the total liabilities to the public comparing with 47.23 per cent. in 1919.

During 1920 savings deposits increased nearly $1,250,000, and on November 30th totalled $85,610,464. The progress this institution is making is plainly evidenced when it is stated that savings deposits in 1916 only totalled $60,144,940. Deposits not bearing interest show an even greater percentage of increase when compared with 1916. The following totals demonstrate the marked upward movement:—1916, $29,122,-148; 1920, $49,714,051.

Two new headings appear in the statement this year which were included in 1919 under "Current Loans in Canada." One of these, "Demand Loans in Canada, Secured by Grain," amounting to $10,732,755.47, shows plainly that the bank has been rendering valuable services in assisting the marketing of the grain crop. The other new heading is "Loans to Governments and Municipalities" and amounts to $7,648,176.39. These items, when totalled with "Current Loans and Discounts in Canada," show $88,230,716.79, or 1.96% increase over 1919.

The total assets now amount to $169,205,445, as compared with $109,040,223 in 1916—an increase of over $60,000,000. Paid-up capital totals $8,000,000, and, in addition, the bank now has a rest account totalling $6,000,000. Profits earned during 1920 were on a very satisfactory basis and enabled the directors to pay a bonus of 2% to shareholders on December 1, in addition to the regular dividend at the rate of 10 per cent. per annum.

During the past month or so the personnel of the directorate has been added to by the inclusion of two prominent western business men—G. M. Black, of the firm of Black & Armstrong, general financial agents, Winnipeg, and D. N. Finnie, of Finnie & Murray, Limited, Winnipeg. W. R. Allen, who has been elected vice-president, is very well known in the financial circles of Western Canada, being the senior member of Allan, Allem & McKay, and a director in many other organizations.

Profits Have Decreased

Financial Statement of Canadian Consolidated Felt Company, Limited, is Published

The financial statement of the Canadian Consolidated Felt Company, Limited, for the ten months ended October 31, 1920, show a decrease in profits. The decline in commodity prices began some time before the end of the period under review and loss of earnings so much feared in the future should be reflected to some degree in the statement published. Yet for the ten months, the enterprise shows net profit of footwear about $160,000 in excess of that for the full three months of the preceding year. Expenses and other charges, however, have grown by $150,000, so that the actual net profits fell short of last year's by $9,000. Net sales for ten months amounted to $1,390,655, and profits to $127,420. After interest on bonds and other interest had been deducted the surplus for the ten months amounted to $72,398 or slightly in excess of that for the full preceding year.

In the balance sheet of the enterprise, current assets for the period at $944,446 are ahead of those for the preceding year. On the other hand, loans have increased from $350,000 to $500,000 and current liabilities by $130,000.

Valuations

A Lockwood, Greene valuation takes in more than the dollar-and-cent values of the actual material comprising your buildings, equipment and machinery.

It gives you their worth as units of production in your particular field of industry; their values are based upon their ability to produce in competition with the best of their kind known to the business world.

A LOCKWOOD, GREENE valuation or appraisal tells you whether you have a 50%, an 80% or 100% perfect plant for your purpose. Write for information and the booklet, "Building with Foresight."

A Satisfactory Year

nada Iron Foundries, Limited, Publish Annual Report for Year Ended September 30th, 1920

A satisfactory business for the year ended September 30, 20, is shown by the annual report of Canada Iron Foundries, nited. The total sales for the period exceeded both in nage and in value the total of any previous year. The in- ase in value as compared with last year was approxi- tely 38 per cent.

Costs, both of labor and material, advanced during the r, and though selling prices also advanced, the percentage profit to sales was less than for several years past. Never- less, as a result of the increased volume of business, the l foundry profits earned were greater than in any pre- us year of the company's history. The largest percentage increase in business done was shown by the Three Rivers nt, which was reconstructed two years ago. The same nt also shows the largest advance in manufacturing profit.

During the year approximately $418,000 was spent on im- vements and extensions to various plants, the greater t of this expenditure being made at Fort William. Fur- improvements are still to be made at the Hamilton and Thomas plants.

The profit and loss account, after providing for depreciа- , debenture charges and dividends declared during the , shows a balance of $194,855.25. Of this amount, $50,000 been transferred to reserve and the balance of $144,855.25 ied forward.

To facilitate the purchase of the company's stock by or employees who desired to acquire an interest in the pany a trust fund was created at the commencement of financial year. Through this agency about $102,000 of erred and $71,000 of common stock have been acquired mployees during the year. Both preferred and common es of the company have been listed on the Montreal k Exchange in the course of the year.

Dominion Bank

rtitution's Jubilee Year Sees Stronger Cash Position and Increase in Savings Deposits

The jubilee anniversary of the Dominion Bank is sig- ntly marked by the largest net profits earned during ne of the fifty years in the bank's history. These profits, cding to the annual statement covering the year ending ember 31, 1920, amounted to $1,166,511, an increase over revious fiscal year of $18,807. On the bank's capital and e they are 9.14 per cent., a gain of .14 per cent. over rresponding period of 1919.

A a result of this satisfactory showing the bank, after ig $780,000 in dividends and a bonus, $35,000 for offic- ension fund, and writing $200,000 off bank premises, nabled to carry $669,218 forward to profit and loss ac- n a sum in excess of the previous year by $173,511. e to Dominion and Provincial Governments, which are u ed from the gross profits, amounted to $158,500.

A particularly pleasing feature of the statement is the r covering the cash assets of the bank, the total value wich stands at $34,661,000. This is an increase of 5 000 for the year, and is the largest in the history of itution. Compared with the bank's total liabilities to blic, these cash assets show a proportion of 27.65 per or an increase of 3.06 per cent. for the year. Total iately available assets, at $64,320,000, are equal to er cent. of the bank's liabilities to the public.

Interest-bearing deposits, the savings of the Canadian pub- show a gratifying increase of $10,563,782, or 14.20 per The amount on deposit at the end of the year being 8 439. Owing to the gradual withdrawal by the Domin- Government of the proceeds of the last Victory Loan, e was a decrease of $17,000,000 in non-interest bearing ts, the amount standing at $20,051,616. In this par- a the experience of the Dominion Bank is similar to the other leading banks of the country.

Commercial loans increased slightly during the year, the amount outstanding on December 31 being $66,740,000.

MANAGEMENT

AUDIT YOUR COST METHODS

Your annual statements resulting from the financial audit may disclose a disconcerting inventory adjustment. How much of it has been due to pricing at "cost or market" and how much has been due to inaccurate cost methods?

You must rely on your cost figures now more than ever before. Are they dependable? Do they tell you the whole truth from month to month?

As experienced industrial consultants, we can analyze your inventory and financial statements to determine the extent of the errors in your costs, then turn to your cost methods and devise the necessary remedies. Incidentally, we can tell you whether your inventory itself has been set up to the best advantage.

You will secure constructive counsel in connection with this service.

Canada's Industrial Expansion

A Record of Progress

Producing Wire Rope

nnia Wire Rope Company, Limited, Open Plant on Granville Island, Vancouver

e first factory of its kind in Western Canada, manufac- g a commodity essential to the development of the al resources of British Columbia, the Britannia Wire Company, Limited, commenced production at Vancouver tly under circumstances that presage for it a speedy and anent success. An all-British concern, having a director- mposed of men who have spent a life time in the produc- nd sale of wire ropes and cables, and a plant manned by men who have become experts in their trade in the larg- nd best known industries of their kind in Great Britain, ew firm starts off on a most substantial basis, with no of experimenting in methods of business or of manufac- a proceeding which has brought disaster to many onic Western industries.

Britannia Wire Rope Company, Limited, is allied to a group of English manufacturing firms, which, while each nent company carries on its separate business, form a nation of all the operations connected with the produc- f the finished iron and steel material, from the mining l ore and coal to the last stage of manufacture.

nuded in this group is the famous firm of Armstrong, worth & Company, Limited, who have a world-wide tion as shipbuilders and manufacturers of armament eel products. Other big companies in the allied group e Warrington Wire Rope Works, Limited, makers of a nown brand of logging ropes; Rylands Bros., Limited, a at produce 50,000 tons of wire annually; the Pearson & es Coal & Iron Company, Limited, of Warrington, who nufacture approximately 175,000 tons of iron and steel and collieries producing about 1,750,000 tons of coal annually, e Partington Steel & Iron Company, Limited, at whose near Manchester many thousands of tons of coal, ores limestone are handled daily in the manufacture of steel.

hCanadian directors of the Company are—Robert Gibson, sident of Gibson's Limited, Vancouver, the modern logging ipment concern, and C. S. Rollston, also associated with Gibson's Limited. The English directors are:—W. Peter Rylands, managing director of Rylands Bros., Limited, Warrington, and H. H. Field of the same firm; J. Howard Temple, managing director of the Warrington Wire Rope Works, Limited, Liverpool, and Charles H. Gill, an officer of the same company.

Mr. Gill, who spent five months on the Pacific Coast assisting in supervising the installation of the machinery, which was brought from England, presided at the official opening of the factory. In a brief address he made mention of the modern equipment of the plant and its excellent prospects of success, which had induced such large British industrial concerns to invest heavily in the enterprise. He expressed the belief that the product of the British Columbia factory would be of such a high quality that it would compare favorably with any wire rope manufacturing plant in any part of the world.

Power was turned on by Mrs. Robert Gibson, and instantly all machines were in operation producing strand and wire ropes for the requirements of the lumbering, mining and shipping industries of the Pacific Coast.

The factory is located on Granville Island, the industrial tract reclaimed by the Board of Harbor Commissioners from the bed of False Creek. It occupies one of the most favorably situated sites on the area. The building covers an area of 200 feet by 120 feet. It has four bays each 200 feet long and 30 feet span. The bay on the east side is carried to a clear height of 28 feet 6 inches under the roof. The other bays are 18 feet high. Construction of the building has been so designed as to permit of further extensions being made.

The roof is constructed on the saw-tooth principle, giving a maximum amount of lighting during the day. In addition to commodious general offices, there are separate offices for the manager and foreman, while the dining room and wash rooms are conveniently situated for the workmen.

The loading of the closing machines, one of which will close ropes weighing up to 22,000 pounds and having a diameter of 2½ inches, is facilitated by an overhead travelling crane which commands the full length of the East bay.

The motive power for the factory is obtained from four big Canadian General Electric motors, which operate an overhead

Plants of Britannia Wire Rope Company, Limited, and Gibson's, Limited, Granville Island, Vancouver

line shafting from which the machines are driven. The machines are arranged in batteries according to their size, each battery having an independent motor drive, which allows any machine to be employed without the necessity for operating the whole plant.

The wires used in the factory are imported from England. In order to test their reliability, a big test room has been fitted with a tensile tester capable of ascertaining the strength of individual wires to a breaking strain of 6,000 pounds. The room also contains a torsional tester and wire bender.

While the production capacity of the factory has not been announced, it will be sufficient to care for the needs of the trade in Western Canada for some years to come, it is stated.

Gibson's Limited, which is allied with the Britannia Wire Rope Company, Limited, have erected a commodious logging equipment plant immediately adjoining the factory. Mr. Robert Gibson can in this way keep in close touch with both of the concerns in which he is interested.

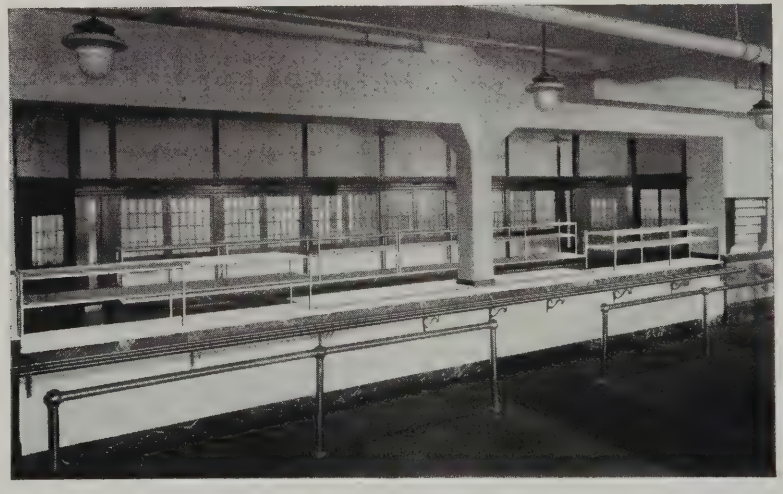
Construction Progressing

Main Building of Fort William Paper Company's Pulp Mill Almost Finished

The Fort William Paper Co., Fort William, says the *Canada Lumberman*, are making good progress in construction work at Fort William. The main building of the pulp mill is pactically finished. The machinery is starting to arrive and will be installed and in operation by the middle of March or early April. The company report that they can get all the labor, both skilled and unskilled, that they require, and there has been no delay in the matter of obtaining material. H. J. Wehman, assistant general manager, says that so far as pulpwood is concerned, they have been offered practically about five times as much as they will need in the first years' production. The company's wood for 1921 wi be furnished by contractors, but for cutting next winter th company intend having its own woods department.

New Spinning Mills

Milton Worsted Yarn Spinning Mills Will Soon be in Operation at Milton, Ont.



A new industry which should prove a distinct asset the town of Milton, Ontario, and the surrounding distri is the Milton Worsted Yarn Spinning Mills, who are no engaged in fitting up a plant for the manufacture of worst yarns, and will shortly begin operations. Various newspape have recently referred to this company as being a bran of R. G. Long & Company, Limited, of Toronto. This repo is erroneous, as the latter company have no interest in t Milton Worsted Yarn Spinning Mills.

The new mills will have an initial output of 3,000 poun a week, and it is probable that this figure will shortly increased. In addition to the manufacture of yarns the co pany will also dye their own products in a new dye hou which they have equipped with all the latest and mo modern machinery.

The building which the company are now occupying h been renovated and rebuilt and has been found barely lar enough for the machinery which they have installed. As th own a prominent corner on the main street, there is amp room for expansion and it is their intention ultimately extend their present building to the corner.

The superintendent of the Milton plant is Willi Gamble, who for twelve years was superintendent of similar department in the Simpson Knitting Mills. Pri to that he had several years' experience in this branch the textile industry with the Guelph Carpet & Worst Spinning Mills at Guelph, Ontario.

Oneida Community, Limited

Additions to Plant at Niagara Falls, Ontario, Are Nearly Completed

Additions to the plant of Oneida Community, Limited, at Niagara Falls, Ontario, are almost completed, and consist of three one-storey buildings, erected at an approximate cost of $42,000. The first of these is 40 x 130 feet, of sectional steel construction, and has corrugated iron sides and roof with plenty of light and perfect ventilation. Temporarily it will be used for manufacturing purposes and will alleviate slightly the present congested condition existing in the old buildings. It will be used for blanking the sheet metal silver and will contain a knife department for refinishing knives, storage space, wrapping department, shipping room, etc.

The second building, erected by the Norman McLeod Company of Toronto, measures 40 x 20 feet. It is of brick and steel construction with Fenestra steel sash and monitor roof, and is to be equipped with electric furnace, pickling tank, etc., for annealing and cleaning the nickel silver before it is rolled and dropped.

Building number three, for which the Norman McLeod Company were also contractors, is 40 x 70 feet and of a type of construction similar to the second with the exception that the roof is saw-tooth. This building is for the quarter finish and will contain drops, rolls and presses. Hitherto the company have been importing their lines from their United States factory in quarter finished state, but they will now be able to manufacture them direct from the sheet metal. For this reason the additions will have little immediate effect on the output of finished products. Both the second and third buildings, however, have been built with temporary ends so that additions may be made as business expands.

Oneida Community, Limited, report good business up to August of last year. Since then a general tendency to buy in small quantities has been noted. "We foresee," they state i a letter to INDUSTRIAL CANADA, "a continuation of careful bu ing on the part of the consumer, retailer and jobber for a least two months of 1921. After that we have every reaso to believe that business will open up and gradually increas to the point where each manufacturer will feel safe to mak plans for the future."

New Twine Factory

Sterling Twine Company, Limited, Will Commence Operations at Walkerton this Month

The Sterling Twine Company, Limited, a new industr at Walkerton, Ontario, is expected to be in operation som time this month. Their plant is a one-storey brick buildin 45 x 200 feet with brick warehouse 50 x 100 feet and an add tion thereto 20 x 70 feet. Part of the machinery has bee installed and the remainder has been promised for early i the month. The class of goods to be manufactured consis of all kinds of commercial twines of various sizes, grade and qualities from shoe thread to clothesline.

For the first few months the company expect to spen their time in producing samples and filling initial order Employees will be few at the start, but in a short time wi number about 50 or 60. The plant has a daily capacity from three to five tons of twine.

Incorporation of the Sterling Twine Company was mad under a Dominion charter, and they are capitalized a $100,000. Of this $75,000 has been subscribed and is in th hands of about a dozen people. There is no intention of o fering the stock for public subscription.

Duncan M. Kerracher is president of the Sterling Twin Company, John Rowland is vice-president, and Geo. D. Ma Kay is secretary-treasurer.

Moving to Goderich

New Plant of Huron Specialty Casting Company to be Completed Next Spring

The Huron Specialty Casting Company, now located at Clinton, Ontario, will move to Goderich when their plant now in course of construction there is completed. The present plant commenced operation on June 20th, 1920. It is a building 40 x 200 feet with a capacity of three tons or more of grey iron castings a day. There is floor space in it for about fifteen moulders; at present, eight are being employed.

The plant to be erected in Goderich will be one of about the same dimensions as that at Clinton. It should be ready for occupation in the spring of 1921. The company will continue to specialize in the manufacture of high-grade grey iron castings, of which they have produced about forty-seven tons in the last three months.

The Huron Specialty Castings Company are a partnership concern, with a capital of $4,000. The partners are John Aitken, manager; Frank Phalen, assistant manager; Reginald Burrows and James Phalen.

Have Rebuilt Plant

Tilbury Brick & Tile Company, Limited, Operating New Factory at Tilbury, Ontario

A new building, 200 x 50 feet, has replaced the plant of the Tilbury Brick & Tile Company, Limited, which was destroyed by fire last March. It is built of brick, steel, concrete, and steel sash, and has a gypsum block roof, so it is now absolutely fire-proof. The cost is close to $30,000.

The machinery destroyed by fire has been replaced by machines of greater capacity and the daily output of the plant is increased to 18,500 four-inch drain tiles, or 24,000 bricks. The plant runs the year round, and with a thoroughly modern dryer the company are able to produce drain tile in any size from four to fifteen inches, red wire-cut face and common brick building blocks and hollow ware. Several labor-saving devices, such as a gasoline driven clay shovel, a gasoline locomotive, conveyors, a car system tunnel dryer, etc., have also been installed. At the present time about twenty hands are employed.

Now Under Production

Hitch Bros. Company of Canada, Limited, Making Universal Paper Hangers

Hitch Bros. Company of Canada, Limited, one of the new industries located in St. Thomas, Ontario, were organized about a year ago for the manufacture of Universal Paper Hangers. There was some delay in receiving the dies for these machines, and manufacture was not commenced till the beginning of December. Last May they added wooden toys to their products, but did not get the plant in satisfactory running order until the middle of September.

The plant occupies approximately 10,000 square feet of floor space. Half the first floor is taken up by the office, wareroom and shipping-room, and the other half by the planing-room and the machine-room, in which the Universal wall paper trimming and pasting machines are made. Among other equipment in this latter room are two Loshbought punch presses for the manufacture of the paper machines. These presses give an output of 300 machines a day.

The second floor is used for the manufacture of wooden toys, and includes a large machine-room, assembling-room, painting and finishing department, and storeroom. Only a few men are working in this department at present, but the company expect to open it up with about a dozen employees in a week or two, and they will then have an output of between 300 and 400 toys a day.

An Acid Test of Quality is the Repeat Order

IT is a significant fact that in most Canadian mines, shipyards and industrial plants, where careful performance records are kept, Canadian Ingersoll-Rand Compressors have become "standard equipment".

Starting ten, fifteen, or perhaps twenty-five years ago, with one of our old "Rand" compressors, new machines have been added to meet the increased demand for air and, as a result of the good service rendered by the original machine, later additions have been of our make.

Our experience in compressor building has been so varied and extensive that it qualifies us as leaders in this line of manufacture and has enabled us to place before the compressor buyer a line of machines that will meet every need efficiently and economically.

Write for bulletins.

The 2,230 cubic foot Direct Connected Motor Driven Class PRE-2 Compressor illustrated herewith is one of five C. I. R. Co. Machines installed in the Longue Pointe Plant of the Canadian Steel Foundries during the past ten years. In speaking of their performance their chief engineer said: "I have been eight years with this Company and your machines and am very well satisfied with them."

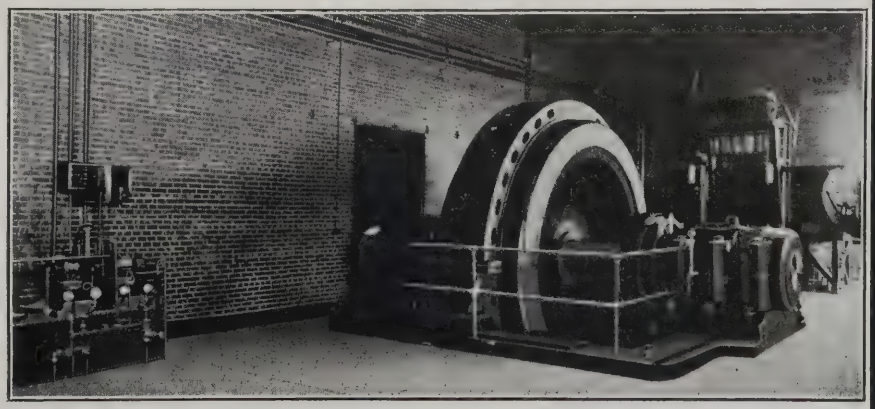
CONSERVATION OF OIL



THE consumption of mineral oil products is increasing faster than the production. Consequently Engineers and Industrial Executives are beginning to realize how important and necessary it is to conserve these oils.

A BOWSER OIL FILTRATION SYSTEM will assist you in doing this.

By filtering oil with a Bowser System it can be used over and over again—or indefinitely. The installation of a Bowser Complete OilFiltering and Circulating System generally results in a saving of over 50 per cent. on your oil bill.

The picture on the right shows a practical application of a Bowser 6-F Oil Filtering and Circulating System.

Write for our Booklet on Oil Filtration.

CORRESPONDENCE SOLICITED

For Full Information Write for Catalog I

Canadian Mathews Gravity Carrier Co., Ltd.
PORT HOPE, ONT.

Negotiations have been made with some of the leading mail order houses to catalogue the paper hangers, and the company are confident that they will have a market for approximately 15,000 machines yearly. The apparatus is designed to trim paper to any desired width and at the same time to apply the paste and make the paper ready for hanging.

Hitch Bros. Company of Canada, Limited, were originally capitalized at $50,000, but application has been made to increase this to $100,000, as their charter was for the manufacture of paper hangers, and they are now making toys and metal stamping work. The directorate of the company is composed of the following members: —Albert J. Hitch, president; Dr. Charles E. Green, vice-president; Charles H. Hitch, secretary-treasurer; Daniel A. Hitch and H. Gordon Smith.

Austin and Nicholson

Erect New Mill at Dalton, Ontario, to Start Operations With Season of 1921

Austin & Nicholson, lumbermen and general contractors, of Chapleau, Ontario, are erecting at Dalton, Ontario, a new sawmill. The mill will be 48 x 181 feet with one wing 32 x 48, one wing 14 x 33, and a boiler-house 40 x 40 feet. It is of standard timber construction on a concrete foundation. The roof is of corrugated steel. In the boiler-house, a building of concrete, brick and iron, there will be three 150 h.p. boilers and one pair of high speed rotary valve engines to furnish the power.

The mill is of double type, with double cut band on one side, twin circulars opposite and a horizontal band resaw. All machinery necessary to take care of the output from these main machines will also be installed. The plant will begin operations at the commencement of the season of 1921.

Acquire New Factory

Brantford Computing Scale Company, Limited, Purchase Plant in West Brantford

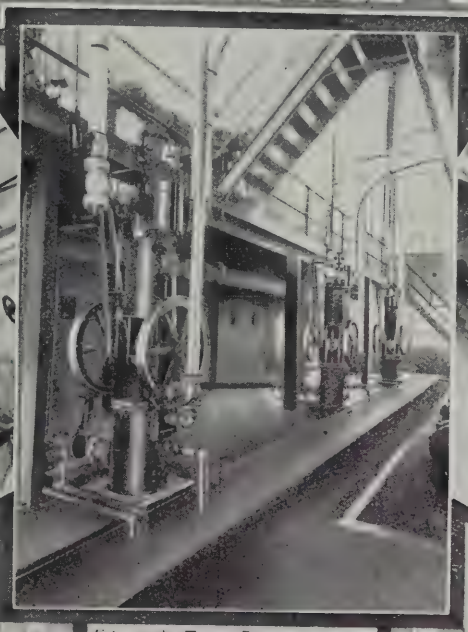
The Brantford Computing Scale Company, Limited, have acquired the Ker & Goodwin plant in West Brantford and will move their business there. The building was originally built for munition purposes and is 100 x 360 feet, with about 15½ acres of land. The company intend to make such additions as are necessary to take care of the large volume of foreign business offered. The manufacture of small motors and cream separators is under contemplation, but has not been definitely decided upon. Jigs and tools for the manufacture of these lines are available in the new plant.

The Brantford Computing Scale Company will offer their present plant for sale. It contains 22,000 square feet of floor space and is well adapted for manufacturing purposes. There is also certain land, owned by the company and adjacent to the present buildings, which could be used for further extensions.

New Brockville Industry

Machinery and Foundries, Limited, Commence Manufacturing Pumps and Castings

A new industry, which will be in operation early this month at Brockville, Ontario, is Machinery and Foundries, Limited, recently incorporated to manufacture hand and power pumps and gray iron and brass castings. The plant of the company consists of a machine shop 275 x 50 feet and a foundry 150 x 60 feet. Forty hands are to be employed at the commencement of operations, and this number will be gradually increased to one hundred and twenty-five.



Machinery and Foundries, Limited, are organized under a Dominion charter with an authorized capital of $250,000, of which $100,000 is paid up. On the directorate are: J. Gill Gardner, president; C. M. Rudel, vice-president; W. McLeod Gardner, managing-director; Geo. E. Purkis, secretary-treasurer; Hon. Geo. P. Graham and L. J. Belnap, directors.

Ruskin Operations, Limited

British Columbia Company Will Operate Shingle Mills at Stave Falls and Ruskin

Ruskin Operations, Limited, are a British Columbia company, capitalized at $200,000, to manufacture red cedar shingles. On October 1st they completed one five-machine mill at Stave Falls, and operated it for one month, when it was closed owing to market conditions. This mill has a capacity of 150 M shingles a day single shift, or 300 M shingles a day double shift.

The company will shortly proceed with the construction of a second mill at Ruskin, B.C. It will be at least as large as the Stave Falls plant, and probably larger. Outside of construction work a force of from 25 to 30 men is employed in manufacturing, while from 40 to 50 men are employed in logging operations. This figure is for the first mill when working on single shift. When it is reopened the company expect to be on double shift and will employ about 75 hands. The same number will probably be required at the Ruskin plant when it is completed.

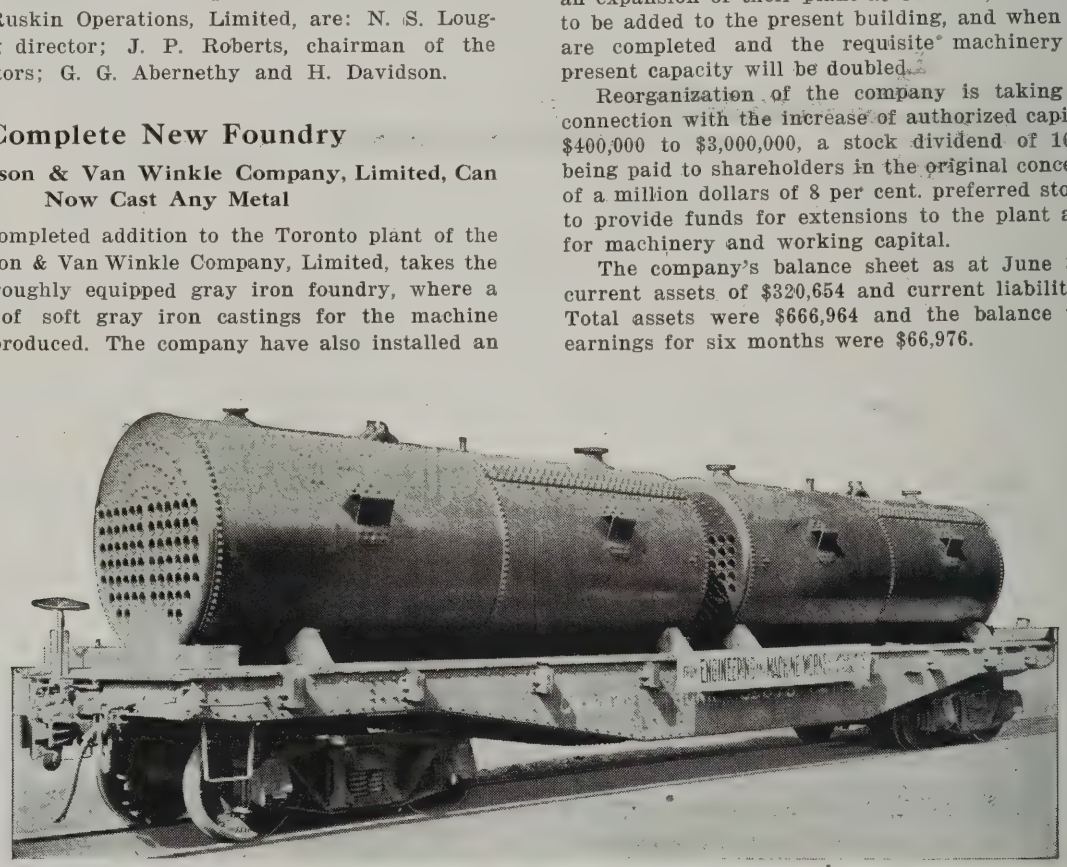
Officers of Ruskin Operations, Limited, are: N. S. Lougheed, managing director; J. P. Roberts, chairman of the board of directors; G. G. Abernethy and H. Davidson.

Complete New Foundry

Canadian Hanson & Van Winkle Company, Limited, Can Now Cast Any Metal

A recently-completed addition to the Toronto plant of the Canadian Hanson & Van Winkle Company, Limited, takes the form of a thoroughly equipped gray iron foundry, where a special grade of soft gray iron castings for the machine trade will be produced. The company have also installed an up-to-date sand blasting equipment, where these castings wi be treated to put them in shape for the requirements of the customers. All work has now been completed and they a operating the new foundry.

The company report that they are now in a position cast any metal, and have one of the most complete foundri in Canada. Although the volume of business has fall slightly, present indications are very encouraging. From the investigations they find that while the greater part of t metal working industry in Canada is not working to t maximum, most concerns are running along quite satisfa torily. Conservative buying has reduced sales to some e tent, but on account of inventories being usually made arou the first of January, this condition is quite in order at th time of the year.



Expansion of Plant

Oak Tire and Rubber Company, Limited, Doubling Capacity of Oakville Plant

The Oak Tire and Rubber Company, Limited, have fou that increasing business during the past year necessita an expansion of their plant at Oakville, Ontario. A storey to be added to the present building, and when the alteratio are completed and the requisite machinery installed, t present capacity will be doubled.

Reorganization of the company is taking place, and connection with the increase of authorized capitalization fr $400,000 to $3,000,000, a stock dividend of 100 per cent. being paid to shareholders in the original concern. A quar of a million dollars of 8 per cent. preferred stock will be s to provide funds for extensions to the plant at Oakville a for machinery and working capital.

The company's balance sheet as at June 30 last show current assets of $320,654 and current liabilities of $187,9 Total assets were $666,964 and the balance $106,823. earnings for six months were $66,976.

We use multiple electric drilling machines

to drill rivet holes from the solid when required, ensuring absolute accuracy and uniformity. In all respects our shop practice is essentially modern ensuring highest grade product. We build Boilers to conform to the various Provincial boiler codes.

Will Make Disc Wheels

National Engineering Company, Limited, of Sarnia, Ontario, To Manufacture New Product

The National Engineering Company, Limited, of Sarnia, Ontario, who manufacture air compressors, automobile tire pumps and machine tools of various types intend to add disc wheels to their list of products in the near future. The National Engineering Company are one of Sarnia's newer industries. Their plant has been in operation since April, 1920, and at present from twelve to fifteen men are employed. The company's capitalization is $150,000 and the officers are: J. W. Lawrence, president and general manager; W. A. Swan, vice-president and factory manager; and J. E. B. Phelps, secretary-treasurer.

Waterproof Garment Factory

Co-operative Rainproof Garment Company, Limited, Establish Plant in Sorel, Quebec

A new manufacturing concern for Sorel, Quebec, is the Co-operative Rainproof Garment Company, Limited, who have purchased a plant there and expect to be in full operation within a few months. They will employ about two hundred hands, of whom about 40 per cent. will be male and 60 per cent. female, and they count on paying over $150,000 yearly in wages. The products will be rubber goods, especially rainproof garments.

Will Make Wheels

Canadian Perfect Wheels, Limited, Will Manufacture Wheels at Listowel, Ontario

Canadian Perfect Wheels, Limited, are a recently incorporated company operating at Listowel, Ontario. They have acquired a plant there with 30,000 square feet of floor space and are remodelling it to meet the requirements of a modern wheel factory. The goods to be manufactured are automobile wheels, disc, wire and wood, and a general line of accessories, stamped work, etc. The company expect to be manufacturing early in April. At present they are employing from fifty to seventy-five hands, and this number will be increased to 150 as required.

The capitalization of Canadian Perfect Wheels is $100,000. They propose to enter both the domestic and export field with their products. The officers are: G. McIlrose, president; M. K. Becker, vice-president; C. M. Kolbenstetter, secretary-treasurer; John Gabel, Aaron Ringler, Henry Bender, Dr. James Moore, F. H. McCallister, R. Oliver, directors.

Add New Building

Addition to Plant of Pacific Roofing Company, Limited, Vancouver, Approaches Completion

The new building which the Pacific Roofing Company, Limited, are adding to their plant on Granville Island, Vancouver, will be completed about the 15th of this month. It is a two-storey building of mill construction, with corrugated iron sides and roofed with "Never Leak" roofing, the company's own product. The dimensions are 40 x 125 feet. The cost will be about $5,000.

This part of the plant will be used for the manufacture of wallboard, under a new process, which includes sawdust and hydro-magnesite as principal ingredients. The company are developing their own magnesite property at Tatlow, B.C., on the P.G.E. Railway and will be supplied with raw material from there.

The Pacific Roofing Company report a good year's business. Things are quiet at present, but they expect that building and a consequent demand for their product will soon be stimulated.

The Diamond State Fibre Company of Canada, Limited, now located at 455 King Street West, Toronto, have outgrown their present warehouse and factory, and are looking around for larger premises.

To the Buyer of Equipment for Industrial, Hotel, or Institutional Kitchens

As a buyer of the above equipment, you are held responsible for its efficiency and stability. This is a large responsibility. Moreover, there are very few organizations who are in a position to advise and help you. Equipment of this nature is highly technical. It requires experienced mechanical judgment and skill to execute it. You may devote your best brain in the formation of the plan. Its acceptance, however, is only the first step.

Catalogues of various equipment are on your desk. They receive your consideration. You may do one of two things. Order each individual item from different firms or place your confidence in one firm to furnish you with the entire equipment. The latter is not only the most satisfactory from practically every point of view but it also relieves you of a mass of detail. In either capacity, that is, in supplying one piece of equipment, or, in the furnishing of the entire equipment, we offer you our services. Our experience is manifold. Write us so that we may send you our literature. Our experts are at your command in submitting layouts and prices. Write us when you need us.

Steel work for Steam Power House recently erected for
The Dominion Power and Transmission Co., Hamilton, Ontario

New Building Completed

Chatham Malleable and Steel Manufacturing Company, Limited, Extend Their Plant

An addition to the plant of the Chatham Malleable and Steel Manufacturing Company, Limited, manufacturers of automotive and hardware specialties and sanitary stable equipment at Chatham, Ontario, is now complete, and the necessary machinery is now being installed. The addition is a one-storey, heavy timber frame building, 36 x 100 feet, constructed on a cement foundation, and with a cement floor. Its principal use will be for assembling room and stock-room, but some manufacturing processes will also be carried on in it. The estimated cost is in the neighborhood of $5,000. It will mean a material increase in output as lack of room has hitherto been something of a handicap.

The company report satisfactory conditions in their business. Their plant has been working on full time all winter and orders in hand and prospects seem to warrant the expectation that this will continue for the balance of the season.

Another Branch Plant

Elcaya Company of Canada, Limited, to Manufacture Toilet Preparations at Aylmer, Ont

The Elcaya Company of Canada, Limited, manufacturers of toilet preparations, will occupy a building at Aylmer, Ontario, where they expect to begin operations by March 1st. The building is 2½ storeys high, 34 x 66 feet, with boiler house and sheds for storage extra. The goods to be manufactured are cold cream, rouge, face powder and any other Elcaya preparation that may be found suitable for the Canadian market. The capacity of the plant is unlimited, but the time being it is planned to have an output of about gross a day. There will be only a few employees require

Make Vulcanite Roofing

Mill Superintendents Organize

New Section of American Pulp and Paper Mill Superintendents Association Formed

At a meeting held in Niagara Falls, Ontario, at the Clifton Hotel, on January 8th, the Canadian pulp and paper mill superintendents were organized as part of the American Pulp and Paper Association. The new organization has for its official title the "Eastern Section of the Canadian Division of the American Pulp and Paper Mill Superintendents Association," and will be all Canadian as far as membership is concerned. The parent society includes members from both Canada and the United States.

On the executive of the new division are William A. Anderson of the Kinleith Paper Mills, chairman; W. E. Ziemann of the Abitibi Power & Paper Company, vice-chairman, and C. Nelson Gain of the Don Valley Paper Company, secretary. The meeting was well attended and several papers were read on subjects connected with the work of the members. M. J. Argy of the Cliff Paper Company, Niagara Falls, was temporary chairman when the gathering assembled and outlined the aims of, and the work to be accomplished by, the Canadian Branch.

Buy at Home

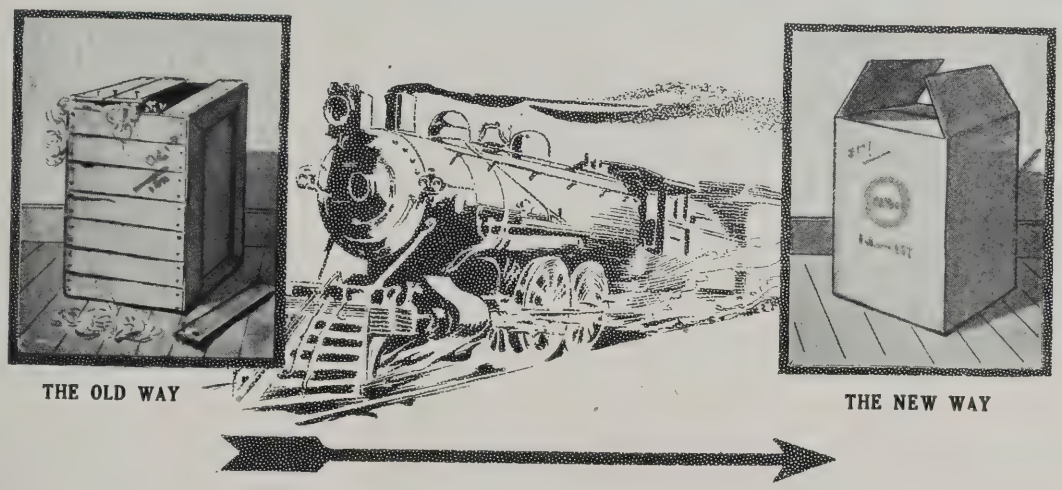
Canada Foundries and Forgings, Limited, Present New Made-in-Canada Argument

An envelope received at the office of INDUSTRIAL CANADA early in January contained a new presentation of the argument for buying Made-in-Canada goods. While the envelope bore the name of Canada Foundries and Forgings, Limited, Welland, Ontario, the enclosure was a bill from Washington, U.S.A., in which "You commercial slaves, Dominion of Canada," are shown as debtors to Uncle Sam, General Merchant, for $100,000,000. This, in the terms of the invoice, is "for exchange only, for 1920, on goods you could have bought at home." The account is receipted.

Cost of Welfare Work

Financial Statement of McClary's Employees' Welfare Department is Published

The annual financial statement of McClary's Employees' Welfare Department for the year ended August 31st, 1920, is published in the November number of *McClary's Wireless*. It includes receipts and expenditures for hospitals, stores and cafés run by the department. Receipts for the year, divided mainly from sales in stores and cafés, amount to $77,372.88. This includes a grant of $1,565 from the company, but other expenses, such as repairs, alterations, proportion of taxes, insurance and interest on capital tied up, etc.—items that for the past year amounted to nearly $8,000—are not shown.



As the company's aim is to sell food at the actual cost of provisions and labor of preparation, the profits are small. For the store a cash balance of $79.73 is shown, while the cafés have a profit of $65.65. The largest disbursements were for food supplies, goods for the store and wages.

A Handsome Calendar

Brigden's, Limited, Use a Canadian Scene for New Year's Greeting

A handsome calendar for 1921 has been received from Brigden's, Limited. It is decorated with a three-color reproduction of a painting by F. H. Brigden, O.S.A., the scene being the upper Don Valley near the city of Toronto. The effect is one sometimes seen in the late afternoon of a hot day in August.

Steel for Permanence

The All Steel Elevated Water Tank is the most economical installation for Automatic Sprinkler systems for fire protection, general mill supply, or Municipal Water Works systems.

Its first cost is not excessive, the maintenance expense is very low, and there is no danger of leakage, falling ice, or possibility of the tank bursting or catching fire.

Hundreds of our All Steel Elevated Water Tanks now in service throughout Canada bear witness to these facts.

Book Reviews

Advertising Art Work

Toronto, the Capital of Ontario. Eleven reproductions of etchings made in the art department of Rous and Mann, Limited, Toronto.

The publishers of this exquisite little book have always maintained a high standard in printing and art work, and all who are fortunate enough to receive a copy will agree that this recent production is in accordance with the best traditions of the firm.

The scenes reproduced are all familiar spots in the City of Toronto. The charm one finds in the reproductions lies in the touch of the artist. His skill has caught the beauty of structures that thousands of citizens pass unheeding every day, and even to the scenes which familiarity has not yet spoiled for us, such as Hart House and the Bloor Street Via duct, something has been added. The view of the latter is a curiously fascinating study in perspective. The effect does equal justice to the strength and the grace of that engineering triumph.

There is not one of the etchings that does not deserve individual mention and praise. Lovers of London will have their sympathies stirred by the pictures of Massey Hall and Queen Street. There is also something of an old-world touch in the classic outlines of Osgoode Hall, while modern commercialdom is well represented by the sky-scrapers that mark the intersection of King and Yonge Streets. the new Union Station and the Harbor Commissioners' Building at the foot of Bay Street. A touch of humor is revealed by the figure of the spectacled art student who stands in the foreground of a winter view of the Grange, and that other link between past and present, the Old Fort, is treated with a clear sense of the spirit of romance that lingers there.

"Perfection is finality; finality is death." There are one or two faults that might have been avoided. In the first place, the historical and descriptive notes which face the reproductions are printed in Roman capitals, quite in keeping with the general style of the work, but rather tiring to read; and, secondly, these notes are marred by a few glaring mistakes in English.

For the rest, the book is perfect. The heavy cream colored paper, pleasant to touch and to see, gives it the proper note of richness and dignity. It is certain that the avowed intention of the publication, to advertise the artistic resources of Rous and Mann, will be crowned with success.

An encouraging word comes from the Nonsuch Mfg. Co. Limited, manufacturers of shoe dressings, Toronto: "Never in the history of this company have we found business conditions as good during the month of January as they are now," they state. "These conditions do not apply to business in any one section of Canada but to all parts, and we anticipate that 1921 will be a banner year. Buying for spring delivery is brisk and we are finding no lack in demand for our products."

W. R. Ingram, assistant manager, Swift Canadian Co. Winnipeg, has been appointed General Traffic Manager in Canada for the company and will have jurisdiction over traffic matters pertaining to all their plants in Canada. Mr. Ingram was chairman of the Prairie Division, C.M.A. in 1915-16 and has been a member of the Executive Committee for some years. For the past four years he has served as chairman of the Division's Transportation Committee. Members of the Winnipeg branch will give Mr. Ingram a suitable send-off.

Canadian Exports—a Answer to Critics

By ALEX. MARSHALL

Manager, Commercial Intelligence Department, C.M.A.

IN various quarters recently views have been expressed t Canadians have not been closely attending to the deve ment of export trade. It has also been suggested that t have refused, forsooth, to sell goods to Russia and the r Middle European countries. There must be some fundame misunderstanding as to the proper basis on which export tr can be successfully operated. This is a modest attempt outline some fundamental conditions and to show the ac progress of Canadian export trade in manufactured goods.

In the first place it can be stated as actual fact that in two years since the signing of the Armistice there has b more money spent by Canadian manufacturers in endeavo to develop export trade than in any ten years previous to war. Not only has more money been spent, but more pe have been engaged. Where there were probably between hundred and three hundred manufacturers doing consider amounts of export trade before the war, this figure will easily exceed one thousand. Supplementing the manu turers' effort, there have been many export organizati formed to facilitate trade between Canada and various o countries. Many branches of Canadian banks have also b established in foreign countries to assist in developing tr and we may be sure that the banks would not pursue policy if they were not assured that the manufacturers Canada were putting forth great efforts to maintain the t for the future. Increased Canadian shipping facilities gra by the Canadian Government Merchant Marine and pri companies are another voucher for the earnestness of C dian manufacturers in export trade.

Surely it can be taken for granted that no one will advo filling up mills and factories with export business take prices that mean a loss to the manufacturer in each tran tion. Such a course would not only be folly from a pu export point of view, but would be unfair to the Cana consumer and would bring down to failure many dome businesses rather than help their expansion and developm

The Basis for Export Trade.

The basis for all good export trade is the ability of customer to pay. In a large area of the world to-day m business firms have neither the cash to finance the tra tions nor the requisite credit to enable the seller to assis financing. And in many cases where the cash is available seriously adverse exchange rates put a normal Canadian p beyond the economic limits on which re-sales can be mad the importing country. Immediately after the Armistice t were great essential requirements that had to be fulfille most regardless of price. Many of these transactions conducted during the period when exchange was pegged were, therefore, on a purely fictitious level exchange bas

The changing over of British and French industries fro war to a peace basis has enabled the manufacturers of t countries, not only to produce many of these requirements their domestic market, temporarily imported, but also to duce for the export trade in competition with Canada and United States, and coupled with the adverse exchange now in force have as a natural consequence serio diminished Canada's export trade with those countries.

A comparison of the export records of the six months ing September 30th, 1919, and the same period in 1920, sh that, if the natural diminution of export to Great Britai omitted, Canada's export trade to other parts of the Br Empire has increased in the 1920 six months' period

$23,000,000, the greatest increases being noted in British West Indies, British South Africa, New Zealand, Australia, Hong Kong and Newfoundland, and the total Canadian trade with these countries is largely in manufactured goods.

The approximate figures showing the *increases* for the six months in 1920 over the same six months in 1919 are as follows.

Country.	*Increase.*
British West Indies	$2,500,000
British South Africa	5,000,000
New Zealand	2,500,000
Australia	3,500,000
Newfoundland	2,500,000

These represent in some cases almost a doubling up of Canadian trade with the specified countries and together with the increases noted in foreign countries given below may contain a suggestion to manufacturers not now exporting as to the most prolific fields for Canadian endeavor.

The total decrease in exports to the United Kingdom amounted in the same period to $123,600,000. While some reduction in the shipment of manufactured goods must be admitted the serious source of falling off is found in the fact that the total decrease in export of agricultural produce for the period was $92,000,000.

In trade with foreign countries, France omitted, an increase of exports amounting to $77,000,000 for the six months ending September 1920, over the same period in 1919 is shown. The principal increases occurred in trade with Argentine, Belgium, China, Cuba, what was formerly German Africa, United States, Greece, Italy, Norway, Spain and Sweden. Even assuming that all our increased exports to United States were raw materials or foodstuffs, a fine balance of the total increase is left to represent manufactured goods entering the other countries named.

Although there was a falling off in shipments to France amounting to $17,000,000, this is largely due to the partial re-establishment of French industries and to the economical policy now being pursued by the French Government and people. On the other hand the following increases show how active Canadian industries have been in developing other fields.

Country.	*Increase.*
Argentine	$300,000
Belgium	12,000,000
China	800,000
Cuba	1,000,000
Former German Africa	2,225,000
Greece	7,500,000
Italy	7,400,000
United States	47,000,000
Norway	3,000,000
Spain	600,000
Sweden	3,000,000

These figures certainly show that much has been done in spite of the many obstacles in the way and should be most encouraging to Canadian manufacturers now catering to export markets and should in addition be an urge to manufacturers who have been considering export plans. Much yet remains to be done and with domestic business in some lines not being what it might be, makes it no time to be resting on our oars waiting for some favorable turn of the tide.

The proportions of manufactured goods forming the exportations of Canada has steadily risen. In 1880, the proportion was only five per cent. of manufactured goods to the total volume of exports. In 1890, the proportion of manufactured goods was seven per cent. In 1910, it had increased to thirteen per cent., in 1916 to thirty-two per cent. and in 1919 to forty-three per cent. This analysis cannot yet be made for

If You Make a Half Car-Load Sale

and have prospects for another half car-load in the same district, you would save money by shipping a whole "car" wouldn't you?

That's where we come in. You ship the "car" to us with consignment instructions. We distribute the half already sold and stock the remainder in one of our three modern warehouses. Then, as you sell it, we deliver it.

This is only an illustration but there is a lot more to Howell service, as many firms have found out. Have you? If not, send for full and free particulars to-day.

WORKS AT
INGERSOLL

1920, but taking all things into consideration, it is safe to say that Canadian manufacturers need not be ashamed of the record that the figures will show. The record given here effectually disposes of the charge that Canadian manufacturers have not been diligent in seeking export trade.

It should be remembered in discussing export possibilities with countries where financial and business conditions are not more or less stable that it is practically suicidal for individual companies in Canada to attempt to trade with individual companies in many of the countries to which Canada is not now exporting.

One source, and possibly the only source, for better conditions and better economic relationship is the setting up of some administrative organization which can superintend credit operations based on bonds issued by individual countries now in financial straits covering the national assets which undoubtedly exist in each. This may be the only means of bringing goods and consumers together with anything like speed. Otherwise, in many of the countries, there will be a long siege of destitution and want until they can straighten things out on a national basis and enable the producing and commercial enterprises to get running again on something like a normal basis. The longer this process takes the more adversely it will affect nations more happily placed.

It seems more or less incongruous that manufacturers should be blamed for not selling goods to Russia, Poland, Czecho-Slovakia, the Serb-Groat-Slovene States and other countries when in those very places millions of people are starving and the Canadian and American agricultural interests are having difficulty in finding a market for their wheat and other foodstuffs. If it is as simple a matter to develop export trade in manufactured goods with these countries and get payment for them, as some critics allege, surely it should be far easier to find abundant markets for foodstuffs among the starving nations in Middle Europe, yet the export figures do not reveal any considerable movement of foodstuffs from Canada to those countries.

The Bonus System

John Morrow Screw & Nut Company, Limited, Find Their Plan Satisfactory

The bonus system introduced in the plants of the John Morrow Screw & Nut Company, Limited, at the beginning of 1920 has, in the opinion of the management, proved successful, and for the present will be continued in the company's plants. It was instituted with a twofold object in view: First, to secure increased production, and, secondly, to find a method that would make possible a basis for a fair division of the earnings of the plants as between employees and shareholders of the company.

In a letter from the company to the employees the following tribute is paid to the plan:

"The board of directors and the management desire at this, the opening of another year, to express to every employee of the company their appreciation of the heartiness with which the workers entered into the spirit of the new plan, and also their gratification at the results obtained. Not a complaint worthy of the name has been heard against either the basis upon which the bonus has been paid or against the administration of the system.

"The increased pay received by every employee sharing in the distribution during eleven months (the figures for December not yet being available) has averaged 22½ per cent. on the wages earned, and the total amount contributed during twelve months will amount to over $77,000.00."

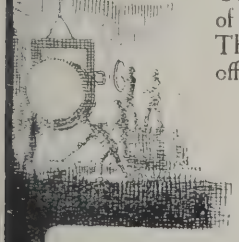
Municipal Paving

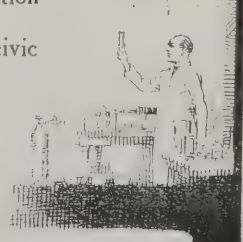
An Interest of Every Manufacturer

From the point of view of a tax payer and a public-spirited citizen you have a deep personal interest in local highway and street improvements.

You readily grasp the fact that permanent roadways, properly constructed, are an asset to the community and to your business, and that they require the minimum of repair and upkeep charges.



Local requirements are best decided upon in consultation with expert paving engineers, who will, after a study of local needs, suggest the best material to employ.



Our Paving Engineers will not only render this service but will supervise the construction of highway and street.

Then, in your own interest, and for the good of the community, why not advise your civic officials to consult with us in regard to their Spring and Summer work?

Such service is an insurance against faulty material and workmanship, and prolongs the life of your pavements. It has saved hundreds of thousands for the communities that are numbered among our clients.

Write for a copy of "Paving Economy"—it's interesting and instructive.

THE LATEST STATISTICS

THE Dominion Bureau of Statistics has prepared a general review of the statistics of the manufacturing industries in the Dominion for the calendar year 1918, covering the operations of 35,797 establishments, located by provinces, as follows: Ontario, 15,365; Quebec, 10,640; Nova Scotia, 2,125; British Columbia, 1,786; Manitoba, 1,441; Saskatchewan, 1,422; New Brunswick, 1,364; Alberta, 1,252; Prince Edward Island, 484, and the Yukon, 15.

Principal Statistics of Industry

A table showing the comparative statistics of industry for the years 1917 and 1918, and also the increases during the years mentioned is given below:—

Statistics.	1918.	1917.	Increase over 1917.
Capital investment	$3,034,301,915	$2,786,649,727	$247,652,185
Employees on salaries	75,198	73,605	1,593
Salaries	107,462,484	94,992,246	12,470,238
Employees on wages	602,589	601,305	1,284
Wages	521,998,379	455,199,823	66,798,556
Cost of materials	1,900,252,314	1,605,730,640	294,521,674
Value of products	3,458,036,975	3,015,577,940	442,459,035

Statistics by Provinces

The following summary shows the amount of capital invested, the cost of materials and the value of products in Canadian industry by provinces, arranged in order of the value of production:—

Provinces.	Capital Invested.	Cost of Materials.	Value of Products.
Ontario	$1,508,011,435	$1,008,824,704	$1,809,067,001
Quebec	860,468,768	472,444,599	920,621,171
British Columbia	244,697,241	109,403,517	216,175,517
Nova Scotia	133,262,649	93,540,657	160,409,890
Manitoba	105,983,159	92,600,183	145,031,510
Alberta	61,405,933	54,740,907	82,434,422
New Brunswick	74,470,879	34,513,640	68,333,059
Saskatchewan	39,476,260	30,614,183	50,009,635
Prince Edward Island	2,886,662	3,547,800	5,693,878
Yukon	3,638,929	22,124	260,882

Employees, Salaries and Wages

The number of persons employed on salaries and on wages by provinces is presented below, in order of the value of production:—

Provinces	Employees on Salaries Number	Salaries	Employees on Wages Number	Wages
Ontario	39,212	$56,802,691	294,724	$264,357,523
Quebec	20,835	29,667,542	186,678	146,132,433
British Columbia	4,588	6,902,901	39,451	43,519,262
Nova Scotia	2,163	2,548,097	26,873	22,266,132
Manitoba	3,222	4,809,254	20,665	18,580,427
Alberta	1,881	2,524,699	8,013	7,724,766
New Brunswick	1,792	2,453,825	18,096	11,793,563
Saskatchewan	1,291	1,588,665	6,775	6,907,507
Prince Edward Island	194	124,789	1,273	652,278
Yukon	20	40,021	41	64,488

Fuel Consumption

The total cost of the fuel consumed in Canadian industries during the year 1918 was $77,858,434. By classes of fuel, the quantities and values were as follows:—

		Value.
Bituminous coal	6,307,267 tons	$45,115,147
Anthracite coal	463,111 tons	3,477,609
Lignite coal	247,553 tons	884,562
Coke	823,522 tons	8,670,134
Gasoline	2,294,347 gals.	1,142,841
Fuel oil		12,600,747
Gas, artificial and natural		1,898,997
All other fuel, unspecified		4,068,397

Miscellaneous Expenses

The total outlay for all items of miscellaneous expense during the year amounted to $327,433,047, the cost of the separate items comprising this total being:—

Rent of offices, works and machinery	$15,840,308
Rent of power	25,315,418
Insurance premiums	13,556,416
Taxes, municipal, provincial and federal	45,155,232
Royalties, use of patents, etc.	2,768,879
Advertising expenses	10,342,465
Travelling expenses	13,852,704
Ordinary repairs to buildings and machinery	46,722,320
All other sundry expenses	153,881,305

GASOLINE TANKS

COPPER-STEEL
WELDED
TESTED
HIGH-CLASS
TANKS

For Underground Storage of Gasoline
Any Fittings to Suit Supplied

A high quality tank steel welded throughout, making it practically a one-piece tank. Treated with an odorless, anti-rust oil, and then painted on the outside with anti-rust acid-proof black paint. They are practically rust and corrosion proof. We are tank builders. We make a specialty of tanks. Anything we turn out in this line you can depend on. They are made by expert workmen. We put our best efforts into tank building; it is our specialty. Our tanks are built to conform to the requirements of the National Board of Fire Underwriters. They are all tested before leaving our works under air pressure by a competent superintendent and then crated and shipped so they will reach you in good condition. We believe our prices will appeal to you as being very reasonable. Nothing but the best will do for handling gasoline. If not as represented when it reaches your station, fire it back at our expense. Can we do fairer? Any size made to your order.

MOTOR TRUCKS

Velvet Smooth—Giant Strong

That describes the Clutch in a Mapleleaf Truck.

It doesn't grab with a jerk which threatens to strip the gears—they shift as quietly as a whisper. Its 12 to 16 discs being small, are very easy to slow down.

Two other important things:

1. A Mapleleaf Clutch, being of the dry plate type, **does not gum up.**
2. The surfaces being unusually large, the wear is evenly distributed over good honest metal.

A clutch smooth in action, powerful in performance.

A Large Outpu

Consolidated Mining & Smelting Company, Limited, Have a Good Year

The output of the Trail Smelter of the Consolidated Mi ing & Smelting Company, Limited, for 1920, was the thi largest in the history of the company, being exceeded on by the war years of 1917 and 1918. The value of the outp of metals for the year is estimated at $8,161,200, as co pared with $7,942,191 in 1919. Considering the drawbacks the year, including labor troubles in portions of the distri and the decline in metal prices, the showing is particular good.

The approximate of the various metals made from t weekly statements (the month of December being estimated is as follows:—

	Output.	Value.
Gold	42,636 ozs.	$900,000
Silver	1,098,014 ozs.	1,281,000
Copper	4,750,000 lbs.	913,000
Lead	25,723,000 lbs.	2,130,000
Zinc	37,131,000 lbs.	2,939,000

Sales Staff Reorganized

John Morrow Screw & Nut Co., Limited, Announce Some Important Changes

The management of John Morrow Screw & Nut Compan Limited, Ingersoll, have recently re-organized the company selling force. For the convenience of the patrons in Easte Canada the company have established at 489 St. Paul Stre West, Montreal, an office and warehouse where a comple stock of Morrow products will be carried. This branch wi be in charge of F. J. McCarty. Mr. McCarty is an expe enced tool maker, and has had, in addition, a large busine experience, having been intimately and favorably known the trade of the Montreal territory for several years past.

In Central Ontario a change has also been made. J. Adams, Toronto, now represents the Morrow Company this territory. He, too, has the advantage of having h actual shop training. After leaving the bench he was for se eral years connected with the Vokes Hardware Compan Toronto, and since being demobilized from the Royal A Force has been in the service of one of Canada's large manufacturing concerns.

H. P. Stoneman, assistant general manager, has been Western Canada completing arrangements whereby the M row Company will be adequately represented on the prairi and the Pacific coast.

In a recent interview J. F. MacKay, who assumed the du ies of vice-president and general manager of the company November 1st last, stated that the Morrow Company h been running at capacity practically throughout the enti year, sales showing substantial increases over the corr ponding months of the previous year. Mr. MacKay furth stated that from orders already on the company's books, a from inquiries being received daily, he was of the opini it would be a matter of but a few weeks when the full equi ment and force of the company would again be required keep up with the demand.

In an interesting letter addressed by the company to ea employee at the close of the year, the announcement w made that by means of a bonus system inaugurated one ye ago, the wages of every employee—excepting the executi officers—had been increased by 22½ per cent. during t year, and that the total amount so distributed was ov $77,000. The same system will be continued for some tir to come.

Brussels Commercial Fair

Second Official Commercial Fair to be Held in Brusse Next April

From the 4th to the 20th of April next, there will held in Brussels the Second Official Commercial Fair. Th exhibition is held annually with the object of establishi direct communication between producers and buyers; e hibitors must either be genuine manufacturers or produce or, when agents and importers are exhibiting, they can on exhibit goods bearing the name of the producer or man facturer. Exhibits are restricted to products from alli and neutral countries, and goods of a dangerous charact such as explosives, are prohibited.

The rental of stands has been fixed as follows: for closed stand of 3 x 4 meters, 750 francs, for space in hall, 50 francs per square meter, for space in open a 30 francs per square meter and for a stand for two firr exhibiting together, 800 francs. The form of applicati for space must reach the committee, 19 Grand Place, Brusse not later than February 15th. These forms and copies regulations governing the fair may be obtained from t Consul General for Belgium at Ottawa.

Publicity by Canadian Cities

WINNIPEG, Dec. 20, 1920.

EDITOR, INDUSTRIAL CANADA:

Thank goodness someone is concerned about Canada's lack of up-to-date publicity abroad.

Your editorial "Up-to-date Publicity" on page six of the December issue is timely and very much to the point. We trust it is but a forerunner of more articles that will bring home to Canadian citizens our indifference to this most important factor in our development.

The Dominion Government *does* maintain agencies in various parts of the world for dissemination of information about Canada. With Canadian cities themselves rests the responsibility of keeping these agencies well supplied with facts and photos of the present day.

It may interest you to know that Winnipeg, at least, has done her share in telling her story of progress to the people of other lands. There is not a Government agent in any part of the world to-day without photographs of Winnipeg, taken *this year.* There is not a library, club, university, Government office, travel bureau, statistical bureau or chamber of commerce of any importance in the United States or the British Isles that is not regularly supplied with up-to-date facts about Winnipeg and Western Canada.

More than 750 photographs and half-tone plates are constantly kept in service by the Publicity Bureau of this Board —a free service to magazines and newspapers that is doing much to advertise Canada abroad. As this letter is written, a mounted display of thirty photographs of Winnipeg is touring the leading cities of the Mississippi Valley, and ten others are at Seattle to be used in trade magazines of the Pacific Coast and the Orient.

"A million eyes will wonder at the wealth of Winnipeg half a million brains will whirl with new thoughts of i greatness and half a million people will start talking abo the richness of the Canadian West," said a leading Journ last May. "Why? Because the Winnipeg Board of Trad is making it possible for half a million people to view an a vertising display of Winnipeg and the wealth of the West the Annual Convention of the Associated Advertising Clu of the World which takes place at Indianapolis, June 6 to 1 The Winnipeg Board of Trade is showing a display of no le than 60 square feet, which will contain historic photos Winnipeg and its surroundings; panoramic views of th present day city, with its factories, industries and resource The display will also contain folders, giving detailed inform tion about the Prairie Provinces and a table of facts a figures about the markets of Western Canada."

Winnipeg was the only Canadian city represented at t Associated Advertising Clubs of the World Convention la year and the year before. We were proud to represent Cana at these great gatherings. We will be proud to do so again 1921. But why should we be alone? Why should not Can dian cities occupy a prominent place at every such event international importance?

Never in the history of this country has there been great need for powerful, well-directed publicity by Canadian citi Never has Canadian information been more eagerly soug and more eagerly read by peoples of other countries, than the present time.

Combined with the efforts of the Department of Trade a Commerce, the Department of Immigration and the new organized Western Canada Colonization Association, the could be welded together during the next two years the gre est advertising campaign in Canada's history.

Let us not be steeped in apathy and doubt, but let us forward *together*—for Canada!

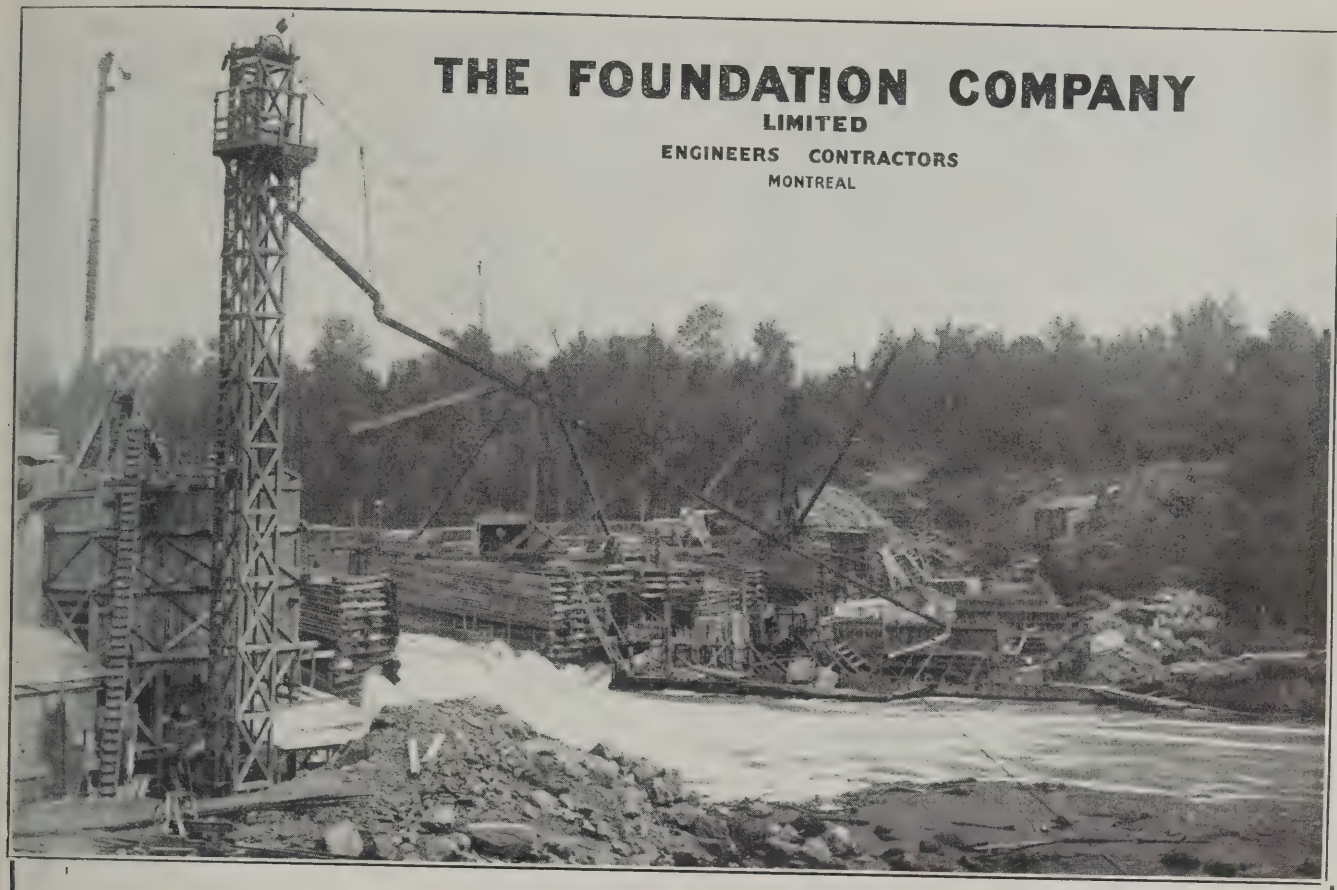
Winnipeg Board of Trade,
Per J. M. DAVIDSON.

The Fire Pail That Protects

EDDY'S

You always know where to look for the Eddy Fire Pail.

Because of its construction it will not stand alone—it must be placed on a rack or hook, ready to your hand when the call comes.



Made of ***Eddy's Indurated Fibreware,*** it cannot warp, split or fall apart. Lighter than wood, and wears like iron.

Ask to see it at your dealer's

Metric System in South America

Its use not as General as it is often Represented to be in South American Republics

There has been recently issued in the interest of the metr system a series of statements by the British consular officia throughout South America, by business men and others, a tending to show the universal use of the metric system, say the American Institute of Weights and Measures. To co firm or correct these statements on trade conditions, inquiri have recently been made among resident South Americans i New York banking and commercial houses. An intervie with a business man from Venezuela is quite typical of all.

"Yes, the metric system is our only system. It is the leg one and we have to use it."

"But when the ladies go to the dry goods stores, do th make their purchases by the meter, or by the yard or t vara?"

"Oh, the vara of course."

(This is the old Spanish vara of 36 Spanish inches or Spanish feet; approximately 33 English or American inches the unit which corresponds to our "yard" as used in t same trade).

"Is coffee sold by the kilogram or by the quintal of o hundred pounds?"

"Oh no, the plantation sends in its coffee in 'cargas' of arrobas equal to 250 pounds and each carga is put up in t bags of 125 pounds each. These are Spanish pounds too, ea 1,000 pounds being 1,012 pounds English or 460 kilos."

"And is your land measured in hectares or caballerias?"

"My plantation is measured in 'cuadras.' A cuadra is 1 varas by 100 varas. We also speak of the acre, the same here in the States."

These data apply to the strictly native conditions of trad When we begin to talk of materials imported into those cou tries we speak of "board feet," "8-inch I beam," "24-inch ca iron pipe," etc.

We do not question the intention of these people to do oth wise than make correct statements as to the exclusive use the metric system. Officially, the meter and kilo are the un to use. But the incidents related above tell the actual sto and show how universally used are the old Spanish units a how closely they resemble our English units.

Sales Force's Convention

Salesmen of International Business Machines Company Meet in Toronto

Optimism was the keynote at the convention of the Int national Business Machines Company's sales force held their offices, Royce and Campbell Avenues, Toronto, in t week of January 3rd. Assembling just after the close of record business year, the salesmen were proud of th achievements in 1920 and confident that they would eclipsed by the record of 1921. The Canadian organizati has now beaten all other branches in sales based on perce age of quota for four successive years.

About seventy-five salesmen attended the convention, rep senting the three divisions of the company, Internatio time recorders, Dayton scales, and tabulating and sorti machines. They were addressed by Thomas J. Watson, pre dent of the Computing Tabulating Recording Company New York; Joseph E. Rogers, general manager of the Ta lating Machine Company of New York, and others. Monday, January 3rd, a theatre party was given, and Tuesday, F. E. Mutton, vice-president and general manag entertained the members of the I.B.M. clubs at the Ki Edward Hotel. On Wednesday evening a supper dance the entire organization took place at the Masonic Hall a a banquet on Friday closed the convention.

Message to Maritime Province People*

By H. R. THOMPSON

Secretary, Maritime Division, C.M.A.

I HAVE been asked to make some observations with refe ence to the past and present business conditions in t Maritime Provinces and the outlook for the future. A remarks I can make will necessarily have to be more or le general in nature, inasmuch as the prosperity of these pr vinces is dependent to a large extent upon the business co ditions obtaining in Canada and throughout the world. seems unnecessary to review what has transpired in t past, but it might be well for us to recall the captio initiated by the Maritime Merchant, "Behold, what a goo thing it is to live in the Maritime Provinces, where times a never very bad," and bolster up our courage and look to t future wth a little more optimism than perhaps we are wo to do with the present business outlook.

Value of Diversified Industries

There are fundamental reasons why the Maritime Pro inces have had more stable conditions than has been the ca in other parts of Canada where they are dependent to a lar extent on the success of one or perhaps two branches industry. A territory with diversified industry is not near as liable to violent fluctuations. In these provinces we ha four important basic natural resources, namely—farmin fishing, mining and lumbering—and even in themselves th are more or less diversified. With diversified raw materia procurable locally, together with what we have secured els where by water and rail, a diversified manufacturing indu try has sprung up. The times indeed must be abnormal whe all of these branches of industry experience a depression the same time.

World-wide Adjustment

We are now feeling the effects of a world-wide trade rea justment and a totally abnormal condition, inasmuch as thr of our basic industries—fishing, lumbering and mining—a experiencing a falling off in the demand for their materia at the same time. The dominating factor in the immedia situation, as far as the local markets are concerned, is t so-called buying strike on the part of the general public a due to the anticipation of a rapid fall in prices of comm dities. If the people refuse to buy, the merchants cann buy from the wholesalers, and in turn, the wholesalers ca not place orders with the manufacturers, and they in tu have to cease buying raw materials, and so it goes on dow the line. The local condition is aggravated by the depr ciated currencies of European countries, which causes unfavorable exchange situation, and makes it practically i possible for us to sell to Europe. On the other hand, t exchange situation makes conditions more favorable for t dumping of goods from these foreign countries into Canad The only immediate relief for the present situation, is f the public to buy "Made-in-Canada" goods in sufficient qua tities to make it possible to keep our factories operatin even if only on part time. It is inconceivable that Can dians will continue buying foreign goods of a kind that ca be made at home. Yet they are doing this very thing a thereby aggravating the unemployment situation and at t same time wondering what can be done and why someboc else is not doing something to relieve the situation. *It*

* Mr. Thompson was asked by the editor of the *Amherst Ne* to write a New Year message for that paper, and this is what he pr pared. The article appeared in the issue of the *News* for Decemb 31, 1920.

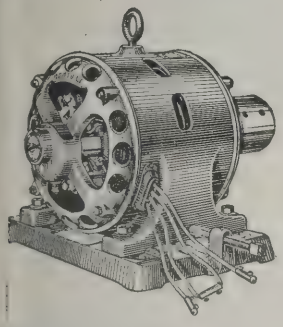
stimated that the average yearly imports of articles which ould be made in Canada, would furnish yearly employment or about 140,000 people. If we are really honest in our vish to see our factories operating continuously, we should t least practise consistency and buy the products of these actories.

As to the future of the Maritime Provinces, I think we ave reason for optimism. Nature has endowed the provinces with rich and varied resources and an advantageous eographical position for the development of trade with foreign ountries. Our present limited development is probably due o our lack of initiative and delay in adopting aggressive and rogressive policies and tackling the problem in an energetic, ystematic and businesslike manner. While other provinces ave been developing cheap power and otherwise encouraging industries to locate there, we have neglected our opportunities. Capital is necessary for the development of our sources, and there are fundamental principles involved in e attraction of capital for investment in industry. These nditions must be recognized and provided for. If we wait r capital to come of its own accord, we may expect some lay in the expansion of industry. No matter what structure we wish to build, we follow carefully prepared plans we are wise. We must do likewise if we wish to see a althy, well rounded, economic development in these proinces. Possibly it may be fitting for us to take a leaf from books of the Alberta Industrial Development and Colonization Associations, who are systematically studying how pital can be secured, people be attracted to, furnished with ployment and made reasonable prosperous in that province. If these same problems receive the united consideration, co-operation and whole-hearted support of all of our zenship, we should have no fear of the future.

As a start, let us all make a New Year's resolution to buy ade-in-Canada" goods and thus encourage home industry ill assist in alleviating the present serious condition of mployment.

Lockwood, Greene Calendar

Engineers Illustrate Their Calendar with Photographs of Their Work



The 1921 calendar of Lockwood, Greene & Company of Canada, Limited, is illustrated by photographs of buildings which they have designed. These include the plant of the Holeproof Hosiery Company of Canada, Limited, at London, Ontario; the brush factory of T. S. Simms & Company, Limited, St. John, N.B.; the Imperial Cotton Company's mills at Hamilton, and the homes of other Canadian industries. The figures are clear, making the calendar as useful as it is ornamental.

The greetings of the Christmas season have been received from the Hartt Boot & Shoe Company, Limited, Fredericton, N.B. "The relations of this company," reads the card, "with its producers and distributors, have been closer during 1920 than ever before, and we have reason to be grateful for their cheerful co-operation and goodwill."

The new condensed catalogues of the Mason Regulator & Engineering Company, Limited, 135-153 Dagenais Street, Montreal, has just been issued. It contains illustrations and short descriptions of the company's products arranged in a manner convenient for quick reference.

The Toronto Transportation Commission anticipates the growth of the city to a population of 2,000,000 people, and plans on hand provide transportation for a city of this size. It is stated that the city is growing enormously, and authorities have no doubt that a population of this size will eventually be reached.

Williams Company in the British West Indies, Great Britain, and other European countries. He is a past chairman of the Canadian Manufacturers Association's Winnipeg Branch, and was on the council of that city's Board of Trade.

In February, 1918, Mr. Fallis was appointed by the Manitoba Government as chairman of a Royal Commission, known as the "Fallis Commission," to investigate the operations of the Workmen's Compensation Act. The judgment delivered in this connection was considered most fair and equitable.

Mr. Fallis will continue to direct all operations of the Sherwin-Williams Company from their headquarters in Montreal.

David Nicholson Finnie

Member of Winnipeg Manufacturing Firm Elected to Union Bank Directorate

Announcement was made on Saturday, December 11th, of the election of David Nicholson Finnie, of Finnie and Murray, Winnipeg, as a director of the Union Bank of Canada. With Mr. Finnie's election, immediately following the election of W. R. Allan, of Winnipeg, as vice-president, and G. M. Black, of Winnipeg, as a director, the bank's directorate is complete.

Mr. Finnie is an Ontarian, a native of Arnprior, Ont. He is a son of a former general manager of the Bank of Ottawa, and himself received his early business training in a banking institution. Becoming identified with Canadian industry he was made secretary-treasurer of Woods, Ltd., Ottawa, and in 1907 was appointed managing director of Woods Western, Ltd., at Winnipeg. In 1910 he became a partner in the firm of Finnie and Murray, manufacturers of clothing, tents, etc., at Winnipeg.

Death of Manufacturer

Sir Frank Baillie

Death of President of the Burlington Steel Company Limited, Occurs in Toronto

Sir Frank Baillie, president of the Burlington Steel Ltd., of Hamilton, and head of a number of other manu turing and financial concerns, died on January 2nd at Wellesley Hospital, Toronto, following an operation abscess. Sir Frank was born in Toronto in August, 1 and commenced his career as a clerk in a financial inst tion, later becoming private secretary to Senator Cox. the age of twenty-seven he was general manager of Metropolitan Bank, which position he resigned in 1903 w he formed the financial firm of Baillie, Wood & Croft, became largely interested in industries in Hamilton. Dur the war he won distinction by his excellent organization manufacturing facilities for the production of aeropla He acted on behalf of the British Government as Direc of Aviation in Canada, and was knighted in January, 1 for his outstanding services in that position.

At a recent meeting in St. Catharines, of the Linc Paper Mills Company, Limited, Vice-President A. S. Woodr was appointed president in succession to the late W. Woodruff, whose death took place a couple of weeks ago. Thomas A. Woodruff was made vice-president and Mrs. D. Woodruff was added to the board of directors.

Another change in the organization of the Gillette Saf Razor Company of Canada, Limited, has also taken place the appointment of H. S. Beecher to the position of sales a advertising manager.

is now suffering. Towards the end of 1913, the volume construction dropped below the normal amount for a coun like Canada. Since the close of the war the situation shown as slightly improved, but there is still much defer building to be done, and great activity in the constructi field is needed if there is to be an early return to norm conditions.

Trade Returns

SPANS THE WORLD

¶ The Canadian Pacific Railway passes through five hundred miles of the most majestic mountain scenery in the world, reaching every important city and all the principal agricultural, industrial and commercial districts of Canada, and has direct connection with many in the United States. It has a total owned or controlled mileage of 18,860, while the Canadian Pacific Ocean Services provide large fleets of fast, luxurious passenger steamers on both Atlantic and Pacific Oceans.

¶ The reason why you should utilize any of the Canadian Pacific's features—such as its splendid passenger service, fast, frequent and luxurious, connecting our big cities and reaching our beautiful holiday resorts—its magnificent hotels that span Canada from Atlantic to Pacific—its highly-efficient freight service, with 87,500 cars in constant transit across the Continent—its telegraph system—its express service (Dominion Express) —or its Ocean Services to Europe and the Orient —is because the service throughout is

Ocean Shipping News

New Service to Italy

Canadian Pacific Ocean Services will co-operate with an Italian Line

A short time ago the announcement was made that t C.P.O.S. had purchased an ex-German liner, the *Konig Frie rich August.* This steamer, now being overhauled, will renamed the *Montreal*, and will be employed in a new dire passenger and freight service between Canada and Itali ports.

An arrangement with the Navigazione Generale Italian has been entered into, and the N.G.I. will employ one of the finest ships in conjunction with the C.P.O.S. S.S. *Montrea* The Italian ports will be Genoa and Naples.

This service will be of great benefit to Canadian manufa turers and merchants, enabling the former to place the goods on the markets of Southern Europe by a direct shi and the latter to obtain goods direct, doing away with t necessity of trans-shipment and the various delays an annoyances incidental to shipments coming through oth countries.

The connections between Italy and ports in the Medite ranean and Adriatic are very frequent. Egypt can reached from Naples in 65 hours, Greece in three day Turkey in four days.

For the business man and tourist wishing to visit Ital and Southern France the service offers excellent facilitie Rome is less than five hours' ride from Naples, Sicily can b reached in twelve hours, Florence can be reached in si hours, Venice in eleven hours, Milan in six hours fro Genoa, while points on the Riviera are within seven hour ride. Genoa is the nearest seaport to Switzerland, the jou ney from the port to the frontier being made in six hours.

With the opening of the St. Lawrence navigation th C.P.O.S. will resume the direct freight service to Norwegia ports in conjunction with the Norwegian-America Line.

Recent Trade Inquiries

A List of Inquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC.

647. Agency in Canada: Two young men, one of whom is a qualified engineer, are commencing business as manufacturers' agents and wish to get in touch with any Canadian firms who would be interested in representation. The articles they intend to handle are engineering materials, soft goods and textiles.

648. Western Representation: A well known manufacturers' agent in Vancouver is making a trip through Eastern Canada with a view to securing representation of Eastern firms throughout the Western Provinces.

FOREIGN.

649. Cuba: A manufacturers' agent in Cuba who forwards references desires to get in touch with exporters of the following merchandise: flour, canned goods of all kinds, condensed milk, cheese and general food stuffs, boots and shoes and hosiery.

650. Brazil: A well-known firm of London, England, with considerable South American connections, request the name of a firm established in Canada who might wish to be represented in Brazil for the following lines: railway stock, engines and locomotives. One of the members of this firm is an Ex-President of the British Chamber of Commerce in Brazil.

651. British Honduras: An agent in Belize, British Honduras, wishes to represent Canadian grocery and dry goods houses inthat island.

652. England: A chain of stores in London, England, wish to buy food stuffs, including canned goods and condensed milk, direct from a Canadian manufacturer.

653. India: A large firm of manufacturers' representatives in Northern India would like to make connections with Canadian manufacturers considering exporting to that market. They forward bankers' references.

654. South Africa: A firm in Johannesburg, South Africa, desires to correspond with some Canadian exporters to South Africa who might desire an agent in Johannesburg.

655. Paper: Large Glasgow firm of stationers would like quotations from Canadian exporters of all kinds of paper.

656. Resistance Wire: A Birmingham company manufacturing electric appliances ask to be placed in correspondence with Canadian manufacturers of resistance wire suitable for heating purposes.

657. Representation in Brussels: A commercial agent, with best references, having office, telephone, and commercial organization in central Brussels, desires to enter into relations with Canadian firms of good standing with a view to representation. Correspondence in English, French, German, Italian, Polish and Russian.

658. Foodstuffs: Established Belgian trader desires to enter into relations with firm handling food products. First-class references and security.

659. Food Products, etc.: Antwerp firm, agencies, commissions, first-class references, solicits representation of sound firms for food and other products.

660. Saw-mills: A mercantile house in Port Antonio, Jamaica, wish to get into touch with Canadian manufacturers of saw-mills for sawing rough timbers into boards.

661. Barrels and Drums: A Liverpool dealer in barrels and drums would like prices and catalogues from Canadian manufacturers with a view to making importations.

662. Stationery lines, Envelopes, etc.: The South African branch of a world-wide organization, with head office for the Union in Cape Town, and business extending throughout the Union and Rhodesia, desires correspondence, samples, and export prices from Canadian stationery houses with a view to direct import and not representation.

663. Automobiles: A Transvaal commission house, prepared to buy Canadian-made automobiles for cash against bill of lading, desire to get in touch with manufacturers ready for export. Factory price not to exceed $1,050.

664. Leather for Boot Uppers: A Durban firm of importers make inquiry for sample prices and correspondence from Canadian manufacturers of glazed kid, box hide, and other leather suitable for boot uppers. This firm have several warehouses throughout the Union.

665. Bakers' and Confectioners' Supplies: A Johannesburg firm with branch warehouses in four other centres of South Africa request correspondence from Canadian firms manufacturing any article suitable for the baker, confectionery, or mineral water trade.

666. Agencies in West Indies, etc.: A general agent in Havana, Cuba, who has been travelling through the West India islands for a number of years and is intimately acquainted with all the reputable importers, is desirous of representing Canadian manufacturers in Cuba and the British, French, American, and Dutch West Indies, also Central America and the following South American countries: Columbia, Venezuela, Dutch Guiana, French Guiana, and British Guiana. He handles all classes of dry goods, perfumery and soaps, boots and shoes, foodstuffs and animal feed.

The value of Canada's exports of automobiles and their parts for the year ending August, 1920, amounted to $19,420,000 as compared with $3,054,453 in 1915. The automobiles imported into Canada during the year ending August were valued at $36,054.000.

Main building of Wabasso Cotton Co., Ltd., Three Rivers, Que. Eng.: T. Pringle & Son, Ltd., Montreal. Genl. Cont.: C. E. Deakin, Montreal. Roofers: G. W. Reed & Co., Ltd., Montreal.

Where Staunch Roofs are Imperative

ONE of the leaders in Canada's fast-growing textile industry is the Wabasso Cotton Company, Limited, which operates large plants at Three Rivers and Shawinigan Falls, Quebec. The main building of the Three Rivers mills is shown in the accompanying illustration.

Barrett Specification Type "AA" Roof
20-Year Guaranty Bond

The Barrett Specification Bond which protects you against all maintenance costs.

The machinery required in the manufacture of fine cotton fabrics is expensive and intricate. A leak in the roof could easily cause thousands of dollars worth of damage and seriously interfere with the operation of the plant. For this reason, the Wabasso Companies are standardizing on the Barrett Specification Roof for its factory buildings.

These roofs not only provide absolute protection from the elements, but, cost and durability *both* considered, they are by far the most economical roofs it is possible to construct.

Barrett Specification Roofs successfully withstand the test of time.

Bonded Against Repairs

Any Barrett Specification Roof of 50 squares or larger, in towns of 25,000 or more, *and in many smaller places where our inspection service is available,* will be guaranteed against repair expense by a Surety Company Bond. This bond, issued by one of the largest Fidelity and Guaranty Companies, runs for 20 or 10 years, depending on the type of roof, and is issued without cost to the owner. Our only conditions are that The Barrett Specification, *revised April 15, 1920,* shall be strictly followed and that the roofing contractor shall be approved by us and the roof laid subject to our approval.

Important Notice

The Barrett Specification Type "AA" 20-Year Bonded Roof represents the most permanent roof covering it is possible to construct, and while we bond it for twenty years only, we can name many roofs of this type that have been in service over forty years and are still in good condition.

Where the character of the building does not justify a roof of such extreme length of life, we recommend The Barrett Specification Type "A" Roof, bonded for 10 years. Both roofs are built of the same high-grade materials, the only difference being in the quantity used.

Full details regarding these Bonded Roofs and copies of The Barrett Specification sent free on request.

Editorial Comment

siness on the Upgrade

VHILE here and there a disquieting note is struck, the general tenor of reports on busi- s conditions throughout Canada, as supplied by rd of trade officials, is encouraging. There is evi- tly a slow but perceptible increase in industrial rations; orders for goods are growing in numbers in size; unemployment is gradually abating. ile there is not much to enthuse about in the situa-, the outlook is becoming more hopeful, and it is vell to dwell on all possible favorable features and d securely for better times.

pparently, if only some loosening up in the build- industry could be brought about, there would be a ked improvement in other lines of activity. That e is a vast amount of construction work tied up iting a lowering in the cost of building, is pretty known. Just how to get operations started is a lem, to the solution of which the best brains in country might well be directed.

the meantime, the Made-in-Canada campaign is loping strength. The newspapers of the country been taking action and Canadian citizens as a t are hearing more to-day than ever before of the sity of buying goods of Canadian manufacture sperity is to be restored to the industrial centres e country.

Gold Coast Contract

was the powers of Canadian railroad builders hind the lines in France that commended our ers to the attention of the Governor of the h Gold Coast and led to their being selected for tant development work in that African Colony. tting of a seventeen million dollar contract to Jack" Stewart, of Vancouver, may, and quite likely will, be an epoch-making event for Canada. Not only will Canadian engineers do the work but Canadian materials will be extensively used. Other contracts will quite probably follow and, if it is insisted that the materials to be used are of Canadian origin, then all this work will have a reflex action on our industries that will be of lasting benefit.

The Iron and Steel Industry

AT least two thought-provoking facts stand out in Mr. John McLeish's review of the iron and steel industry of Canada for the year 1919. One is that not since 1900 was the quantity of iron ore derived from Canadian mines so small as in 1919; the other, that the Canadian metallurgical industry supplies less than half of the tonnage of Canada's requirements in iron and steel products.

The quantity of iron ore shipped from the mines amounted to 197,170 short tons, comparing with 211,608 short tons in 1918 and a high of 404,003 short tons in 1902. There was charged to blast furnaces, 78,391 short tons. These are small figures when contrasted with the amount of imported iron ore so charged, viz.: 1,674,194 short tons, of which 1,154,472 came from the United States and the rest from Newfoundland.

The necessity for devising some means whereby Canadian ores can be more extensively utilized is obvious. It is well known that both Ontario and Quebec are richly endowed with deposits of iron and the only obstacle to their use is the expense involved in refining them. Here emerges the great need for the prosecution of research work and it is to be hoped that the efforts of such men as Lloyd Harris, who are keenly alive to the situation, will bear fruit in a more intensive campaign on behalf of the development of such resources as these.

So far as imports are concerned of iron and steel goods, while these indicate a reduction over 1918 and

the years immediately preceding, they are yet of such proportion as to raise the question whether Canadian manufacturers are doing all in their power to substitute goods of domestic manufacture. We would suggest a close study of the figures given in Mr. McLeish's review, for the purpose of ascertaining what lines might advantageously be produced in Canada.

The Real Reason for Protection

ONE of the jibes frequently levelled at the protective tariff by its opponents is that the industries which it fosters never seem to grow out of the "infant" stage. The claim is, of course, very largely a fiction designed to suit the ends of these hostile critics of the tariff. It would have no point whatever were it not assumed that tariff protection is invariably designed for the one purpose of enabling an industry to get on its feet.

However much the tariff may be needed to encourage the establishment of industries, its continuance is quite as necessary for another purpose There is such a consideration as a standard of living. So long as Canadian workmen are faced with the competition of European and Asiatic labor, whose scale of wages and manner of living are on a lower scale, it would be folly to throw open our markets to the unhampered entry of cheap foreign goods. Some industries may have passed the "infant" period and may have grown large and prosperous, but they and their workers still need protection against the competition of foreign countries where standards are not as high as with us.

Delays in the Parcel Post

NOT long since we had occasion to refer to the exasperating experience of a Canadian stove manufacturer in shipping electric ranges to Norway. There were delays of such a serious nature and transportation charges so heavy that the manufacturer was greatly discouraged and felt that he would get no further business from Norway.

Now comes a somewhat similar story from a correspondent in British Honduras. This time it was a shipment from Canada by parcel post of safety razors and blades. The importing firm received word on December 6 last, that the goods had been forwarded. Not receiving them in due course, they wrote to the suppliers, who took the matter up with the postal authorities. The latter advised that the goods might be expected to reach their destination shortly, sufficient time not having elapsed to permit of their doing so. On February 2 the shipment was evidently still transit.

"From our long experience in business through the United States and England," declares our corr pondent, "this delay seems unwarranted and e under the preferential tariff it will be more profita for us to obtain these supplies from the U.S.A. heretofore, and receive shipment from New Y within a week rather than wait indefinitely for supplies from Canada."

It is all very well to chide Canadian manufactur with lack of enterprise in going after export busin but experiences like this are an indication of some the almost insufferable obstacles that are being countered. Without efficient means of transportati the best-intentioned manufacturer cannot make mu headway.

Possibilities of Sales to the United States

WHEN Mr. T. P. Webster, of the Dominion T tile Co., Limited, was elected second vice-pre dent of the National Association of Purchasing Age at the Chicago Convention of that organization, created somewhat of a sensation by telling his Unit States confreres that Canadian purchasing age were combing the markets of the world in an effort purchase their requirements elsewhere than in t United States. He further assured them that t condition would exist as long as the exchange situati remained unfavorable to Canada and suggested th as a matter of loyalty to the United States and order to retain their biggest customer, it would be well for them to make every effort to beco acquainted with the products of Canada and whene possible to purchase from Canada.

The sequel was not a display of resentment at t outspoken comment but a fervent assurance on the p of many of his auditors that they would gladly b Canadian products if they knew what Canada had sell and where to get it. Unfortunately they had ne been called upon by Canadian salesmen nor had th received any advertising matter that would enal them to become acquainted with Canadian products.

There is food for thought in this incident. Obvious the United States, which finds Canada so good a c tomer, is not going to prejudice business with t Dominion by deliberately refusing to buy our goo The adverse exchange rate is a strong argument Canada's favor, first by reason of the discount it allo and second because no reasonable American is goi to view the situation in any other light than as unfa to Canada. It is plainly a good time for Canadi

manufacturers to see what they can do to find markets across the line. That they will likely meet with a favorable reception seems fairly clear.

Just what can be done, where an effort is made, is attested by the experience of a Canadian implement manufacturing industry which started two years ago to ship threshers into the United States. The business has grown nicely. Last year over two hundred carloads were sold and this year large orders have been received. It may be that Canadian manufacturers cannot compete in many lines with the large-scale production of United States manufacturers but the possibilities of developing business across the line should be carefully canvassed at the present opportune time.

Immigration

WRITING in a recent number of *The Canadian Railroader*, George Pierce takes issue with the attitude of many labor leaders on the question of immigration. He declares that he has never been able to understand why they regard immigration as a very bad thing, to be throttled at all costs. To his mind, and as he says, at considerable risk for his own reputation in labor matters, such a policy is very short-sighted.

"The presumption of labor on this issue," writes Mr. Pierce, "is that there is a certain amount of available work and that there are already more than enough men to perform the work, and that, therefore, it is highly desirable to exclude other men from other parts of the world from coming to do the work or any part of it. It seems so simple to demonstrate that, if there is only work for one, if two men apply the work will be done cheaper, and both will suffer privation."

After pointing out that even with restricted immigration there is unemployment, and that the flow of immigration cannot be regulated so nicely as to balance on a supply and demand basis, Mr. Pierce shows how the coming of immigrants increases business.

"The immigrant arrives with the purpose of working and producing something. He must work in order to live. At the very first opportunity he marries and rears his family. Very soon there are three, four, perhaps five to provide for. The children must have shoes. They must have hats and caps, suits and coats and the foods to keep them alive. Some merchant has to stock these things in order to provide them for the immigrant. Some wholesaler must provide the retailer and some factory must manufacture the goods with which to supply the wholesaler, and if the factory must make the goods, it must employ the immigrant or one of his brother immigrants, and the farmer must raise the food to feed him, and the banks must finance, and the railroads must carry the merchandise, and as prosperity blesses the home he has built that immigrant writes to others far away who seek to emulate the success that he has won, and others come out as he came, to do as he did, which in its last analysis simply means that he came where the earth was rich, where the air was clean, where the skies were friendly, where men were hearty and warm in their welcome, and where Mother Nature was ready and willing to furnish the means and the needs, the joys and the blessings of life to the man who was willing to work. This is the way that all the great nations of the earth have been builded into their greatness.

Canada, a Poor Fish

How A. G. Racey depicted this country in the Montreal Star on National Fish Day

"Our fathers before us, and they were good men, were immigrants. Whenever there is something great and big and grand to do, the pioneer will come to do it. The day may have been when they called him an alien immigrant, but history, in a kindlier tone, speaks of him with proud reverence as a pioneer.

"The moral of the story is this. Those shoes, the hats, the caps, the coats, the shovels, the tools, we could make for him will not be made, simply because we would not allow him to come. The presumption of all the logic that I have seen on the subject is that the immigrant does not come to work. He travels from abroad, over strange seas, through dark distances to our bleak shores, just to pick dandelions."

Canada's Trade with Cuba

A SUGGESTION made by a correspondent in this issue with reference to the development of Canadian trade with Cuba is deserving of attention. Our correspondent points out that dockage facilities at the port of Havana are inadequate and that, by making certain arrangements with a local company, suitable accommodation could be provided for the ships of the Canadian Government Merchant Marine.

With Canadian trade with Cuba during 1919 in excess of $6,000,000 and with exchange in Canada's favor, it would seem to be worth an effort to place our trade with the Island on a more favorable basis. We are getting the ships; we are spending large sums on dockage in our own Canadian ports and it stands to reason that adequate provision should be made for expediting the handling of our shipments at ports of destination.

Possibly a little energy at the moment, when conditions are so bad at Havana in the matter of dockage accommodation, may give Canada an advantage that will prove permanent. It is a matter that at least merits some investigation

A Warning About South African Trade

ASSISTANT Canadian Trade Commissioner P. W. Ward, Cape Town, asserts that the situation, as regards the future trade of Canada with South Africa, is critical owing to the fact that Canadian exporters are unable, for the time being, to obtain "cash against documents," either in Canada, London or New York. He advises an immediate change in the basis of payment to "sight draft at 60 or 90 days," and adds that the average manufacturer's agent, representing Canadian exporters in South Africa, will safeguard his principals thoroughly if shipments are made on this basis. He further urges Canadian manufacturers to get into cable communication with a view to coming to some agreement along these lines, to tide over the present situation.

The point is that connections once lost may not be recovered. Other countries are reported to be making financial arrangements with South African buyers which will prevent their losing any available business and it is most desirable that Canada should not be behind other exporting nations in giving whatever facilities may be desirable to South African buyers at this time.

Two Metric System Arguments

ADVOCATES of the metric system are accustomed to use two arguments in particular in support of the system. One may be summed up in the term, "World Uniformity" and the other in the term, "Foreign Trade." They start with what they consider an indisputable assumption, that the metric syste users form an overwhelming majority and that th bulk of trade is carried on in their system.

But facts are stubborn things, and the facts indicat that the nearest approach to world uniformity i manufacture and trade has been achieved by no metric England and America. The overwhelming pr ponderance of British and American foreign an domestic trade and the dominating position held b their system of weights and measures in every com mercial port have secured for them a universalit through natural processes, which no amount of com pulsory legislation could have made possible.

We have only to remember that:

(1) 70% of the world output of steel is manufa tured in the United States and Great Britai on the inch and pound basis.

(2) Approximately two-thirds of the world pr duction of machine tools in made to the inch

(3) 80% of the world production of screw thread is made to the inch.

(4) The United States and Canada consume fo manufacture about 75% of the world produc tion of crude rubber.

(5) The United States manufactures 90% of th world production of motor vehicles.

(6) The standard unit by which lumber i measured the world over is the board-foot being a board one foot square by one inc thick.

(7) Ninety-five per cent. of the world's cotto spindles are spinning to the yard and pound only 5% are spinning to metric.

(8) The denier-aune is the world standard for raw silk, and all efforts to substitute the metri standard have failed, even in metric countries

(9) Approximately two-thirds of the commerce of the world in manufactured products is o the basis of the English-American syste of weights and measures.

Salesmanship Urgently Needed

SPEAKING at a dinner of the Association of Stock Exchange Firms in New York last month, James S. Alexander, President of the National Bank of Commerce, declared that "normal activity must come from within business, rather than from without. Business cannot idly wait for the public to resume active buying. It must stimulate buying by establishing a wide prevalence of substantially reduced prices for goods, which must be based on increased efficiency in production and distribution, and the acceptance of reasonable margins of profits."

This is on a par with the saying quoted by Lloyd Harris at the Hamilton meeting of the C.M.A. in Janu

ary: "For the past few years we have been buying with enthusiasm and selling in cold blood; now we must buy in cold blood and sell with enthusiasm." Mr. Harris declared that Canadians had very largely lost the art of salesmanship. They must endeavor to recover the loss and put energy into the task of building up business. It rested very largely with merchants and manufacturers themselves to bring about a change for the better.

The Factor of Immigration

A FACTOR in the business situation in Canada that should not be overlooked in forming an estimate of future developments is immigration. Last year approximately 200,000 new citizens were added by immigration to the population of Canada, according to the estimate of Hon. J. A. Calder, Minister of Immigration and Colonization, based on the returns of the first ten months of the year. Of these about 50,000 came from the United States, bringing with them wealth in the shape of cash and effects to the value of over $18,000,000. The flow of immigration from Great Britain and Europe was only limited by the facilities available for transport, and Mr. Calder reported on his return from overseas that all transatlantic liners were booked up solidly for the next year, and that the tide would not begin to be stemmed until the spring of 1922. Col. J. S. Dennis of the C.P.R. corroborated this, stating, on his own return from a tour of investigation, that availability of transport would be the only limitation to European immigration in 1921.

Generating Station of the Electrical Development Company

This handsome building at Niagara Falls, has been taken over by the Hydro-Electric Power Commission of Ontario as part of the big power deal of last December

"Agricultural and Industrial Progress in Canada," published by the Canadian Pacific Railway Company, states that "it has been variously estimated that Great Britain has a population in excess of pre-war years of from 600,000 to 1,200,000. Whilst in the years before the war the country had an annual emigration of about 250,000, this ceased practically entirely during the years of hostilities, and statistics show that the birth-rate rose in the same period. Figures recently published go to point out that there are at least 250,000 men in Great Britain out of employment, and, in addition, some 46,000 women without positions. In view of these facts, the congestion and unemployment, it is plainly seen that the only solution lies in emigration."

"Since the termination of the war, the activities of the Dominion have been directed largely towards the establishment of her ex-service men, the transportation of the dependents of many of them from across the sea, the settlement on the land of a certain number of Imperial soldiers and the encouragement of girls for domestic service and like work. During the present year, however, it is confidently expected that conditions in Canada will make it possible to broaden this policy, throwing open the doors wider and permitting entry to other classes of British settlers who are clamoring for passages across the Atlantic."

The effect of such large-scale immigration as this is far-reaching. In the first place it provides needed business for the transportation companies. Following upon that, it involves the provision of housing accommodation and furnishings; the supply of food and clothing; the equipment of farms with implements and utensils, and the general distribution of instruments of production. The new settler becomes not only a producer but a consumer of all sorts of manufactured goods, and his advent helps to stimulate business. It was the flood of immigration in the first ten years of the century that contributed so much to the prosperity of that period. Is it not reasonable to assume that immigration from the congested centres of the British Isles and from Europe will prove a helpful factor in the next few years?

Turn of the Tide Reported From Canada's Principal Industrial Centres

A SERIES OF ENCOURAGING REPORTS

Sherbrooke in Good Shape

By J. H. Brosseau

Commissioner of Industry, Sherbrooke.

SHERBROOKE has experienced such a big boom during the year 1920 that the general business depression felt all over the world was hardly noticeable in Sherbrooke. The business situation pertaining to the retail trade, labor and manufacturing is in good shape, and ready to take advantage of the good times coming, which ought to be about May next. We have had only one factory closed and this is on account of being a by-product of the automobile industry; said industry, as you know, came to a dead-line about two months ago. The worst of the depression being over, business is now starting up both in the United States and in Canada. Orders are coming in and increasing in number every day, which is a good index that we are now laying the foundation for another era of prosperity.

The unemployed labor, which has been limited in this city, is on a decrease every day. We are also looking for a number of new industries to establish their plants in this city during the year 1921.

As aforesaid, the boom experienced in Sherbrooke during the year 1920 was felt in every department of business, such as new retail stores, new banks, new factories, etc. Though not wishing to be a prophet, I will venture to say that the great majority of our industries will be so busy within six months that they will not be able to fill their orders. We are looking forward to good business from July on.

Improvement at Oshawa

By J. A. McGibbon

Secretary, Oshawa Board of Trade.

OSHAWA factories are not closed down but are working shorter hours, and in some cases with a slight cut in wages. The automobile industry seems to be picking up again and the dealers are looking for a good season, while more men are being taken on every week at the various plants of General Motors. There is still some unemployment, but this is gradually decreasing and should be almost done away with in the course of a month or so. There is very little or no building going on and no new industries are being established. The next month will show a marked improvement in all lines of our industries and factories.

Asked for a frank bulletin on conditions in their respective cities, secretaries of boards of trade and chambers of commerce throughout the Industrial East have favored INDUSTRIAL CANADA *with the accompanying reviews of the situation and outlook. They all speak most hopefully, pointing to increasing activity throughout the industrial fabric of the country and a gradual but sure return to more normal conditions. Read their contributions and imbibe some of their spirit of optimism.*

—The Editor.

Kitchener Coming Back

By E. J. Payson

Secretary, Kitchener Board of Trade.

BUSINESS conditions in Kitchener are slowly, but surely, getting back to normal. Factories which had suspended operations for a few weeks are resuming manufacturing, although on a restricted scale. Some which started up the latter part of January, and later, are taking on additional employees.

There was some unemployment here, though not so acute as was reported in many other industrial communities. The re-opening of the factories has relieved the unemployment situation little, if at all, from the fact that the plant of the Dominion Sugar Company, which heretofore has operated only until the latter part of December, this year had sufficient beets to keep up operations until the 27th of January. On the latter date some 300 employees were let out and it may be some weeks before they are again absorbed in industry.

As yet very little new building is in sight and unless there is a decided lowering of building costs no great amount of construction work is anticipated. An attempt is now being made to float the capital for an arena company, and if it succeeds, as it is confidently predicted it will, the arena will be built during the summer. Its estimated cost is about $200,000. It also is planned to build this year a $200,000 Young Men's Christian Association building. Tenders for this are now being prepared and unless they are abnormally high the erection of this splendid building will be proceeded with.

Little Unemployment at Guelph

By H. Westoby

Secretary, Guelph Chamber of Commerce.

THERE has not been any abnormal depression in the City of Guelph, and on the contrary two new industries have been secured this year, and another one that had formerly been closed down for some time past has resumed operations, and is now employing close to 100 men.

The basic industries of Guelph are largely foundry and textile, and whilst it is true that the textile industries which were abnormally busy until the fall of last year, have suffered a slump in their business, I am informed by managers of the iron industries that they have actually added to their employees of late, whilst the textile men are very hopeful of a revival of business this spring.

There is very little unemployment in Guelph, and what little there is, is being employed by the city itself, to construct roads and drain certain areas.

There is a considerable amount of building pending in this city. One large manufacturing industry has plans out for a $280,000 addition, and another, the International Malleable Iron Co., are expecting to establish a drop forge foundry very shortly, and for which they have recently purchased 12½ acres additional ground. The Moncrief Furnace & Mfg. Co. are expecting to erect a new foundry some time this year, and a number of the other industries are already building additions. There is also expected to be a considerable number of new houses erected.

Outlook at Galt Encouraging

By Henry J. Foster

Secretary, Galt Board of Trade.

THE industrial outlook in Galt at the present time is not without its encouraging features. The iron and steel industries are still working on short time, but an improvement in the number of orders being received is noted by some firms. A textile manufacturer, who is still taking care of a normal number of employees, said he looked for greater activities in the placing of orders by March. The boot and shoe industry has shown a more active tendency during the past few weeks.

The unemployed situation shows little change although those actually needing work are being taken care of by the municipality. The public works provide

most of the buildings in prospect. The Galt Hydro-Electric Commission will commence shortly on the construction of a new central sub-station, which, with its equipment, will cost in the neighborhood of $150,000. The Public School Board plans the remodelling of Victoria school at a cost of $60,000, and an addition to St. Andrew's school to cost $60,000.

A by-law recently passed provides for $55,000 to be used in improvements and extensions to the General Hospital and other by-laws are to be submitted to raise $25,000 for a stone quarry and its equipment, and also to raise funds for extensive alterations to the city hall.

The Board of Works expects to lay this year on the initiative a mile of concrete asphaltic pavement on Water Street, the necessary motion and the by-law being already put before the City Council. One architect says that if building costs show any reasonable decrease compared with last year, a number of better class residences will be erected during 1921.

Stratford Industries Resume

By A. W. Deacon

Secretary, Stratford Chamber of Commerce.

WHILE industrial conditions are not overly active at the present time, I feel that there is some sign of improvement. Our large woollen mill has commenced working full time with 75 per cent. employees already back, and the manager states that the full staff will be on by the end of the month. Our furniture industries are all working, but with somewhat reduced staffs.

With regard to building operations, I would say that there is nothing at present under contemplation, but we are looking forward to some activities in this line this coming summer.

Collingwood Industries Resume

By J. F. Zimmerman

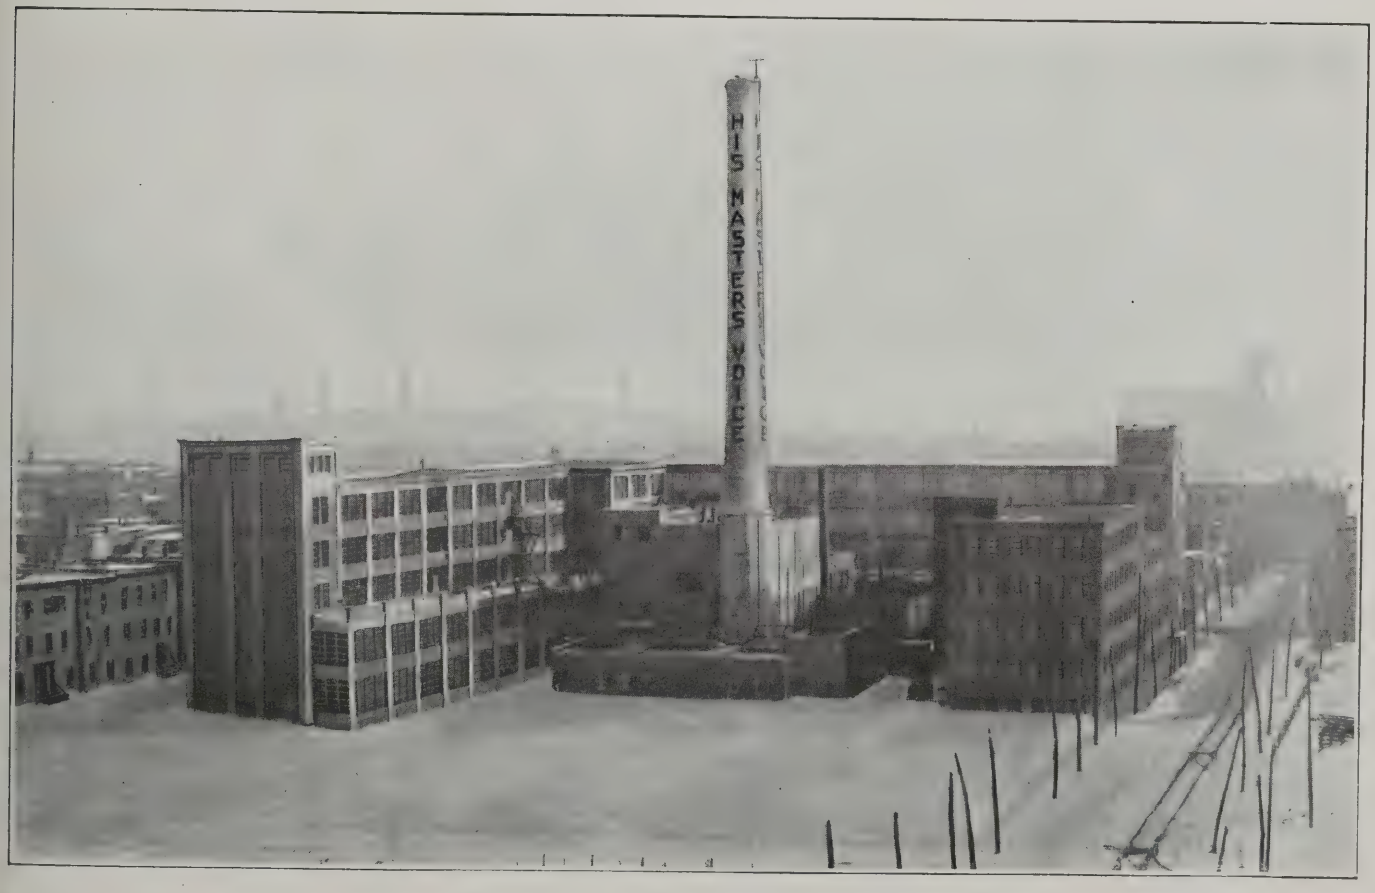
President, Chamber of Commerce.

THE labor situation in Collingwood, while it is not good, is not of a critical nature. Industries are about to resume activities in a few weeks; unemployment is decreasing; business generally in this locality is improving, and it is believed that the outlook for building is more promising this year than it has been for several years' past. Architects seem to have more prospects than for some time.

One new industry, a large one, is now under construction, and will employ from three to four hundred men. We expect that this will be in operation by the end of March.

The value of real estate here is improving, in fact it is the opinion of the town authorities that prospects are more bright than for the past several years.

Industrial Conditions in Peterborough



By Leonard Fraser

Secretary, Board of Trade, Peterborough.

ON reviewing the present industrial conditions in Peterborough, one wonders whether the general trade depression has touched this Central Ontario city or not. The diversified nature of its industries has undoubtedly proved the substantial nature of the city's development, and a particularly welcome asset to any city during a general trade depression.

To be prepared in case of a marked trade depression in Peterborough, a City Relief Committee was appointed, which, fortunate to relate, has had no serious work to consider. In co-operation with the preparations of this committee, the Industrial Welfare Committee made a detailed survey during the latter part of January of trade conditions in the local industries, and prospective conditions over the winter season. This report was more encouraging than was expected; practically the only line of production not working under normal conditions was that of textiles, and the prospects of this line show orders coming in, and

NEW INDUSTRIAL PLANTS

View of the factory of the Berliner Gram-o-phone Co., Limited, which has been considerably enlarged of late. The New Part of the building is to the rear and left of the picture

NEW INDUSTRIAL PLANTS

Textile Plant at St. Hyacinthe, Quebec

The building of the Canadian Manhasset Company, Limited, which is described on page 102

within all probability will be in normal operation by March 1st. Two firms have been in operation twenty-four hours a day for the past month, and will continue so for a period yet.

The relief work instituted by the city has been practically negligible, although a considerable amount of construction work was planned for in case of necessity, but these expedients have been found unnecessary.

The report from the retail trade is encouraging from all angles. The turnover since the beginning of the year has been greater than that of 1920, and the January Dollar Day proved an outstanding record.

Building operations have not yet commenced, but in all probability with the existing decline in price of building materials and the stabilizing of labor conditions and an assured adequate return on the money invested, Peterborough will have a record year.

Owen Sound Outlook Encouraging

By Geo. Menzies

Secretary, Owen Sound Board of Trade.

THE industrial prospect in Owen Sound is very good. Our factories are resuming operations and gradually taking on more men, and while orders are not coming in with a rush yet, enquiries are being made and our manufacturers are quite optimistic.

During the year 1920 some five or six new industries located in Owen Sound and commenced operations, and one of our established industries, the Owen Sound Chair Company, is getting ready to build a large addition to the present factory.

The prospects are also encouraging for building operations in the line of dwelling houses in Owen Sound this coming summer, and taking it altogether the prospects for the future in Owen Sound are encouraging.

Border Cities Hopeful

By F. Maclure Sclanders

Commissioner, Border Chamber of Commerce.

COMPARATIVELY few of our industries shut down entirely, and most of such have either re-opened or will do so in the immediate future. Of course the re-opening has not been on the "full swing" basis; nevertheless, the circumstance is very encouraging. As a matter of fact, things were never really serious with us; and, as you are aware, a shutdown or some condition approaching thereto was absolutely necessary in industry. A lull was imperative. We needed it as the cause calculated to induce certain effects devoutly to be wished.

As a result of enquiries among a number of our leading plants, we are glad to report that business seems to be flowing in very nicely indeed—in fact, none of our people find their outlook tinged with pessimism; rather is it the reverse.

As to the building outlook, this is exceedingly hopeful. Of course the volume of 1921 operations will depend largely upon considerably lower construction and material costs than now prevail. Manufacturers flatly decline to build at present prices, even although these indicate a material reduction on those of six months ago. Meantime, we find many industries anxious to come in; and last year we stowed away no fewer than thirty-one in such mostly inadequate premises as we were able to provide, and in which they will operate, for the time being, on a small scale and feel out their Canadian demand until they think the time ripe to build at a cost that will not need to be seriously written off subsequently.

In conclusion, and if I remember aright, it was the Apostle Paul who said, "I glory in my tribulations"; and it would seem to me that, if ever the manufacturers of this or any other country had cause to glory in their tribulations, they certainly have such cause now, in the most emphatic degree. Unquestionably, such tribulations as we suffer now are but the price of infinitely sounder, saner and more substantial business in the very near to-morrow.

Quiet in Fredericton

By J. A. Reid

President, Board of Trade.

WHAT few factories we have in Fredericton have been running most of the time, although not up to capacity on account of business being quiet. As near as I can judge, while there are always a few orders coming in, they are far from being up to normal and there is very little change for the better to be noticed.

As to unemployment, this not being what you would call a strictly manufacturing centre, there does not seem to be any great amount of unemployment. If a man is laid off in one employment he seems to be able to take up something else.

There does not seem to be any prospect of much building going on. It seems to be the idea of every one that the costs of materials and wages must decrease before we can look for much building activity.

As to prospects of new industries, I do not look for any just at present as

one cannot expect much development in this line when conditions are so uncertain. However, I feel that it is only a matter of probably a year or so until things must pick up, and until that time comes we will have to be prudent and careful.

Niagara Falls Report

By H. H. Bean

Secretary, Chamber of Commerce.

NIAGARA FALLS is not feeling the effects of the general depression to the same extent as most Canadian cities. The wages paid to the large number of men employed in the construction of the Chippawa-Queenston Hydro-Electric canal have to a very appreciable extent kept the local financial conditions in a very satisfactory state. The merchants have had the usual amount of trade, and payments are made promptly. A few of the industries have reduced the number of employees, and others are working shorter hours, but there is practically no actual unemployment. A number of dwelling houses are in course of construction, and many more will be built as the season advances. Several English and American manufacturing firms have expressed a preference for Niagara Falls for the location of their Canadian plants, as they realize the marked advantages of cheap power, unexcelled railway shipping facilities, and many other inducements that but few cities can offer. No doubt as soon as normal conditions prevail, many new industries will be added to the list of successful manufacturing concerns now operating in the city.

Hopeful Report from Sydney

By F. C. Kimber

Secretary, Sydney Board of Trade.

THERE is no gainsaying the fact that times are dull in the industrial world in Sydney, but in spite of the fact that old orders have been filled and that new business has been slow in coming in, there has been no shutting down on the Dominion Steel plant this winter. Many of the mills have been worked on broken time, and the company's management has spared no effort to provide work for their employees.

The industrial situation has not been helped by what seemed a very ill-timed strike on the part of the company's railway hands to be accorded the privileges granted by the McAdoo award. This award was to apply to the employees of railways operating as public carriers and not to men employed in industrial plants. The Sydney men have, however, stuck to their demand and have been drawing strike pay from the Railway Brotherhood all winter. On account of the slackness of the times, this has not hampered the company's operations to any appreciable extent.

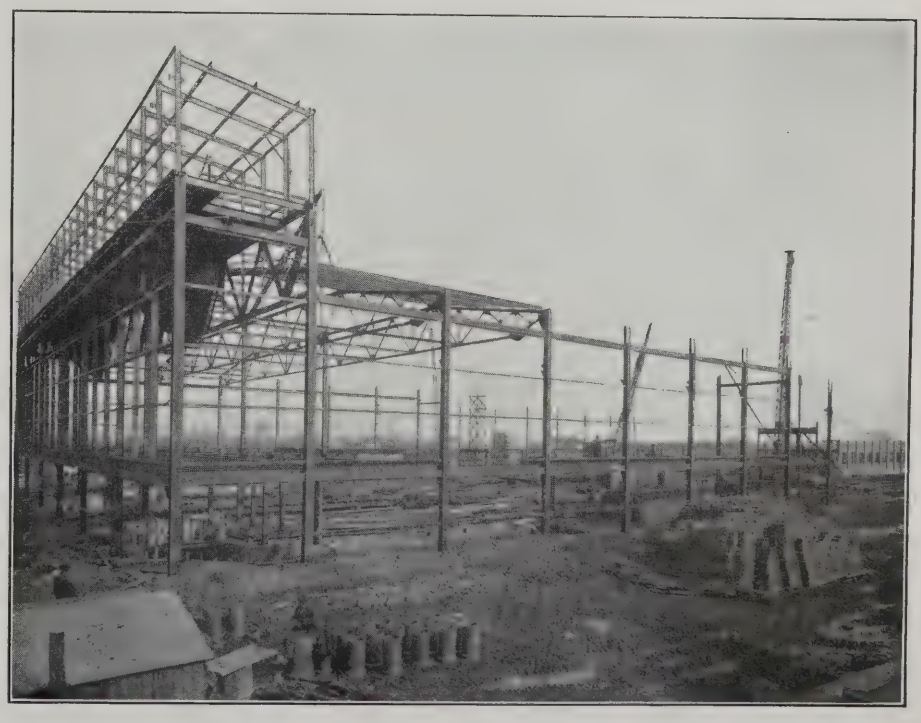
In spite of the dull times only those who are constitutionally pessimistic are feeling apprehensive as to the future. The feeling is that we have seen the worst, or that, at least, things are not going to get any worse, and that with the opening of another year of activity in the spring, we shall see a gradual, if slow, revival of business. The cut in values which we read of in the papers as taking place in various important centres has not struck Sydney yet to any degree that can be felt, but no doubt it will reach the city in its own good time.

It is confidently expected that the cost of construction of houses, which in 1920 was practically prohibitive, will be lower next summer, and, with labor more abundant and less independent, contractors will have more confidence in tendering on construction.

There has been no new industrial development in Sydney during the past year, with the exception of certain sections of the steel plant which have seen the completion of work commenced prior to 1920. The cement manufacture from slag, which has been taken over and re-started by the Steel Company, is proving to give very satisfactory results, and the extension of this business should mean that our local contractors will be encouraged to largely substitute concrete for wood in their building operations.

London Industries Improve

By Gordon Philip



Managing Secretary, Chamber of Commerce.

I HAVE interviewed a number of leading manufacturers in our most important lines in this city, including manufacturers of iron and steel, biscuits and candy, hosiery, concrete products, chewing gum and paper boxes, washing machines, etc., and they are a unit in their belief that the worst of the recent depression is past and that the very near future holds promise of much better things.

The outlook would seem to be particularly bright in the biscuit and candy trade, as the public are commencing to buy again in something like the old volume. The largest factory in this line here is running full time at present. Iron and steel concerns report that there is "no great stir" in the matter of incoming orders but that a slight improvement is noted. The largest of these concerns is now operating on a basis 75 per cent. of normal in the confident expectation that the market will be opening up soon. Manufacturers of hosiery, etc., note an encouraging increase in the volume of orders and are operating five days a week. A large concern manufacturing washing machines, churns, wringers, etc., which has been closed for several weeks is commencing operations again and reports that while local orders continue slow there is an increase in demand from the west, notably Winnipeg and Vancouver.

The unemployment situation has been, we believe, as favorable in London throughout the recent depression as in any city of similar size in America. We have had of course a certain amount of unemployment, but with the bulk of the factories coming back to normal, this is gradually decreasing.

NEW INDUSTRIAL PLANTS

Construction is Rapidly Progressing

Steel skeleton work for front part of the Canadian Libbey-Owens Sheet Glass Company's building at Hamilton, Ontario

The building outlook, in the opinion of some of our leading architects and contractors, is bright. There is considerable building actually planned and a lot more in contemplation. The situation is complicated, however, by the feeling that building costs both in respect of materials and labor have not decreased in proportion to other commodities, and this it is thought may have a restraining effect unless there is a decided drop.

Perhaps the most encouraging feature of the whole situation is the fact that inquiries by American firms seeking locations for branch factories in Canada have been steadily increasing in number. These have been more numerous in the past two months than ever before and would seem to indicate that there has been no diminution of confidence in the future of this section of Canada.

Business Good in Winnipeg

By J. M. Davidson

Winnipeg Board of Trade.

OUTSIDE of the usual shut-downs of limited periods at this time of the year, no Winnipeg factories have been closed for want of business, and very few factories have placed their help on part time. The Employers' Association of Manitoba has just completed a survey, and last week questionnaires were sent to 1,250 employers in Winnipeg, representing 24 different groups of trade and industry, which employ in the neighborhood of 20,000 workers. Of the 167 firms replying, 91 show that no reduction in either hours or wages has taken place. These 91 firms represent the groups including wholesale, financial and others not directly concerned in production. Of the other 76 firms reporting reductions in the number of employees during December, the average was 12¾ per cent., and during January 11½ per cent. The reduction in hours averaged 8 per cent. with a reduction of wages over the whole 76 firms from 2½ to 4½ per cent.

Retail trade appears to be opening up very well and wholesalers report orders coming in in increased quantities.

The City of Winnipeg, in our opinion, has handled the unemployment situation better than any other city in Canada, and we believe, quite as well as any other city of its size on the continent. There has been no marked unemployment. The situation is well in hand, and we believe labor will have no cause for complaint for the balance of the winter.

Information in our hands up to the present time would indicate that the 1921 building season will equal, if not surpass, that of 1920. The building supply organizations are preparing a display of building products, to be held the last week in March, one of the features of which is a drawing for a $4,000 bungalow. It is hoped that this will attract large numbers of people from both Winnipeg and the surrounding towns and will create interest in home building.

Winnipeg should have no cause for complaint. The West produced a very valuable crop during 1920; bank clearings for January, 1921, were $32,000,000 in excess of January, 1920; building figures for 1920 were over eight and a half million dollars; we have unlimited hydro-electric power for manufacturing purposes, unexcelled transportation facilities, the world's fastest growing market practically at our doors, and an organization with a million dollars ready to assist in settling 20,000,000 acres in the Western provinces. If business is good anywhere, it is good in Winnipeg.

New Brunswick Situation

By R. E. Armstrong

Secretary, St. John Board of Trade.

NEW BRUNSWICK has not escaped the business depression that is affecting Canada, but it is standing up better under it than many other sections of the country. There have been fewer failures, and while the evidences of an improvement in general business are not very marked as yet, the situation is not awakening a spirit of pessimism in the future. There is a feeling that the dawning of a brighter era cannot be far distant, and with the valuable natural resources which the province possesses, and with the splendid export opportunities that it has at hand by reason of having one of the most strategically located, all-the-year-round ports on the Canadian Atlantic coast, there is a strong undercurrent of sentiment that when that brighter era does come, and when it brings, as it must bring, a broader development of the port of St. John, New Brunswick will then make real progress.

The lumber situation, owing to overseas conditions, has not brightened very much yet, though some lumber dealers note an improved demand from United States markets. As the United States situation improves, the New Brunswick lumber industry is bound to show marked improvement.

Construction work has not made much advance yet, as prices have not dropped to the level that is necessary for successful building development. When that point has been reached, and with the great demand that exists for better housing, there should be satisfactory progress.

The farming situation in this province, being largely dependent upon conditions in the United States and in Cuba, has not improved greatly, but there is a feeling that this condition cannot be of long duration.

Wholesalers are still complaining of short sales and of cancellations, but they are holding their ground well and are not giving way to pessimism. The general feeling is that with an early spring in prospect buying will improve.

The Atlantic Sugar Refinery has reopened its plant and is gradually working up its large stock of the raw article. The Maritime Nail Works, which closed down a few weeks ago, has opened its plant again. Other metal industries that have been held up from one cause or another, are arranging progressive plans when the situation warrants it. Several new industries are expected. The Ford people are impressed with the export advantages that St. John possesses and are considering the establishment of a larger plant here than they now possess. Another industry, involving the develop-

ment of one of our most valuable natural resources, is also receiving consideration.

Machinery is being installed for the new fibre plant of the Clarke Bros. Paper Mills Company in the eastern end of the city. The construction of the new dry dock, and the development of Courtenay Bay are proceeding, and there is a well-defined expectation that an extensive programme of development will be shortly started by the Canadian National Railways.

The Canadian Pacific Railway has entered upon the construction of a new bridge across the reversible falls at the north-western end of the city and the company is also formulating other progressive plans for the future.

While the business of the port during the present winter has not come up to expectations, owing to world depression, it has been considerably in advance of other competitive ports. A strong feeling is being aroused in favor of a comprehensive scheme of development for the port of St. John, in order that it may be in a position to lend stronger aid to the building up of Canada when the present period of depression has passed away. That Canada needs such a port goes without saying.

Conditions at Welland

By George Day

Industrial Commissioner.

ONE iron-working plant state that they have been fairly busy during the past winter, but add that the winter months are always their busiest ones. They expect their operations to slacken up some during the next two or three months, but probably not more than they usually do during this period. They say they expect trade to be a little slower than for the past two or three years, but on the whole they expect a fairly satisfactory season.

A concern using a limited number of operatives, making working garments, tell us that business is on the increase and at the present time they have 30 per cent. more operators employed than they had at any time during the past year. They say they are very optimistic about the future and believe they will have a prosperous year.

One of the metallurgical plants, making a special product, say that the outlook for their business is very bright indeed. They are endeavoring to increase their output to double or treble what they are doing at the present time. This concern, like the others, hesitate to render an opinion as to when affairs in general will settle down.

A foundryman writes like this: "My judgment as to when affairs in general will settle down to normal is about 1922. Before business will come back, confidence must be restored, particularly as it applies to the relation between the employer and employee. This means, good old-fashioned house-cleaning, where all foolish and silly notions about easy living without much work are relegated to the rubbish pile, and good old-fashioned furniture representing honesty, industry and reasonableness are in place."

One of the textile mills tell us that their business is very quiet indeed just now, and that it is difficult for them to give an opinion as to just when conditions will improve.

One of the biggest employers of labor here at the moment, manufacturing steel products, injects a cheering note into the discussion. They say at the present time they are running 100 per cent. and believe they will be able to continue, as their judgment is that business is going to pick up considerably in the spring, and they don't anticipate any slacking off in their own line.

Another of the metallurgical plants are working their usual number of men, but are making their product faster than they can ship it. In other words, they are not getting sufficient orders right now to cover their output and so are stocking it. They feel though by the coming of spring, or early summer, this condition will be straightened out.

Our forging plants here, due largely to the depression in the automobile and truck business, are working at considerably under capacity. A revival of business in this field will put these plans into full operation again. One of the new concerns locating here last summer is starting up on a production basis this week. The parent company of this concern in United States has been virtually closed, but they are getting under way again and they have quite a few orders for the Canadian plant at Welland. Our iron foundries and machine shops are all working, although not at full capacity.

A generous programme of construction work by the Dominion Government, such as the letting of additional contracts on the Welland Canal, the building of the pipe line which is to parallel the canal, and works of similar nature throughout the country, would be a boon to the machinery manufacturer who makes a specialty of contractors' equipment. The Government would be well advised, I think, at this time to carry on all such works. We have either got to find work for many of our men, or else keep them in idleness. The Government probably feel they cannot spend the money on public works, but if they don't they will spend it in charity anyway, and nobody will contend but that it is better to let men earn their living rather than to dole it out to them.

One of the firms which we secured for Welland last fall will be starting to build their plant just as soon as spring comes, and this will provide work for quite a few of our unemployed, as well as spread quite a bit of money for materials around the country.

NEW INDUSTRIAL PLANTS

New Tire Industry at Kitchener

The recently completed plant of the Ames Holden Tire Company, Limited

---

Industry in Three Rivers

By P. E. Piche

Secretary, Three Rivers Board of Trade.

INDUSTRY in Three Rivers is going through the readjustment period. Although production has not stopped in any of our factories, still it has been reduced strictly to filling orders. As anywhere else, nobody here wants to be caught with surplus stock, when prices drop, but the situation as a whole, presents a cheerful outlook.

The Wabasso Cotton Mills are running full capacity, night and day. The Wayagamack Pulp and Paper Co. has stopped production to effect important extensions and improvements to its plant and will resume operations by the beginning of March, 1921, with a doubled output.

The St. Maurice Lumber Company, recently installed in Three Rivers, has started operating the pulp end of its mill and is actively engaged in completing the construction of its newsprint plant.

A new company, The Three Rivers Pulp and Paper Co., capitalized at $4,000,000, will start building a 100-ton plant in early spring. The construction work should employ some 200 men at the start. The new plant will yield bleached kraft paper by the sulphate process, with an estimated payroll of 2,000 men.

The Brown Corporation, of La Tuque, has bought property in Three Rivers and across the river from our city, for a big pulp and paper mill, and rumors are that the company will start building this spring.

Construction in Three Rivers has been idle for a few months, contractors and customers waiting for a drop in the price of materials, but unusual activity in real

estate transactions tends to indicate that houses will be built in great numbers this year, as soon as circumstances permit, which should be early in the spring.

Three Rivers does not have to worry about the unemployment problem so far. There is work for everybody and those who have to wait for re-employment in their specialties, have saved money enough to be able to manage. The local charitable institutions report an important decrease in poverty and in requests for assistance. Labor conditions are very gratifying. Although wages have been reduced in some industries, still the workingman stood prepared and has accepted courageously his share of the readjustment task.

Conditions in Quebec City

By O. H. Cote

Industrial Commissioner, Quebec.

IN the City of Quebec, with the exception of the shoe factories, all others were kept running on fairly good time. At the end of December, the Canadian National Railway work-shops at St. Malo and Limoilou wards were closed for a few days, but these are now running on the same time as last summer. The Dominion arsenal which was closed on July the 15th last resumed operations again on December 15th and is now working with a fairly good staff. The clothing industry, which had been working on reduced production, seems to be getting back to normal again. The corset, tobacco, preserves and can goods, lumber, machinery, iron and steel industries are working on regular output. In the boot and shoe and leather industries there does not appear to be any changes, although manufacturers are looking forward to better conditions in the early spring.

Appearances do not indicate that there is a material change in volume of orders from last fall, although business is certainly improving.

After a careful investigation we have come to the conclusion that the unemployment situation has been greatly exaggerated for our city. Excepting for two or three weeks at the end of December and beginning of January, when some of our establishments were closed for the holidays, the labor situation has been very good. The boot and shoe and leather industries, which employ when working on normal time about 4,000, have been employing about 1,500. Some of these have been absorbed by the other industries or have left the city for the winter, but others are still unemployed and are waiting for the opening of the shoe shops.

Building trade is at a standstill for the present. Indications are that we shall have a very busy season. It is rather early yet to see if all the prospects that are now being studied shall materialize. Last year building permits issued amounted to over two million dollars. This figure I can assure you is far below the actual value of the building operations for last year, as we came to nearly that amount with five or six large constructions. The indications for this year are much brighter.

Chatham Manufacturers Optimistic

By M. M. Maxwell

Manager, Chatham Chamber of Commerce.

TWO factories which have been running somewhat slack are slowly increasing their operation. The Gray Dort Motors and the Hayes Wheel Co. have taken on a few men in the past two or three weeks, but the increase is not bringing them anywhere near normal. The Dominion Sugar Co. has just completed the sugar-beet run, and some 300 men were laid off, at the end of January. Other factories in the city are running about normal capacity for the most part, except the International Harvester Co., which has reduced the number of working hours per week, but has not reduced the number of men employed. Unemployment as far as Chatham is concerned has increased since the first of February, but prior to that time we had comparatively little unemployment compared with what has been the case in a great many other places. Local manufacturers are optimistic and they anticipate that there will be a comparatively early resumption of business, but for the time being they see very little ahead, and appear to anticipate another sixty days of comparative slackness.

Outlook for building in the city seems fairly good, particularly along residence lines, as a number of contracts have been let, and others are being discussed.

Two new industries are opening up in the city, but neither of them has yet reached the point where many hands are being employed. They are doing preliminary work in arranging their buildings and equipments and expect to be running to almost normal capacity within the next thirty to sixty days.

While this statement of conditions in Chatham appears to be somewhat pessimistic and dark, the people in general do not seem to feel that the condition will last for any great length of time. The city, as well as employers throughout the city, is making every effort to keep unemployment down to the minimum, so far as it possibly can, and as a result conditions are not very serious, although if the present conditions should exist for any length of time, some of the unemployed will be finding themselves in serious financial condition. On the whole we believe that optimism is the proper spirit, and the people of Chatham are looking to the future with that spirit absolutely, and are very hopeful that conditions will right themselves in a very short time.

More Orders for Hamilton

By C. W. Kirkpatrick

Commissioner of Industries and Publicity.

ALTHOUGH employment conditions have not yet returned to normal, a gradual improvement has become noticeable in Hamilton since early in the New Year and there are many indications that the coming of spring will bring with it active resumption of practically all lines of industry. Owing to the great diversity of its 700 industries, Hamilton did not feel the unemployment pinch as greatly, in proportion to its size, as some other places. In fact, it is doubtful if unemployment has been much more acute or conditions much worse than during the average winter prior to the war, but the affluence in which the majority of people lived during the war period and two succeeding years made things appear, by comparison, much worse than they really were and caused much more noise to be made about and publicity given to the unemployment question than would ordinarily have been the case.

But that there has been some real suffering this winter, due to unemployment, is not to be denied and employers and employed are alike breathing easier now that there is a break in the clouds and that the "silver lining" is again visible. Some industries that were practically closed down for a time, have during the past month or so resumed operations while others that have been operating on a more or less limited scale all winter are, with the approach of spring, gradually bringing their working forces up to normal strength. Orders are being received by manufacturers in greater numbers than for some time and there is every indication that the back of the "buying strike," which was largely responsible for the unemployment, has been broken.

The outlook for the immediate, as well as the more distant future, is very promising. Last year came nearly being a record-breaker in Hamilton in value of

A QUEBEC NUMBER

As announced last month, the Annual General Meeting of the Canadian Manufacturers Association takes place in Quebec City on June 7, 8 and 9. In order to post members of the association on the industrial progress of the Province which they will be visiting at that time, it is our intention to issue, early in April, a Quebec Number of Industrial Canada, in which there will be featured several articles dealing with the natural resources and industrial development of that part of Canada. This will be followed by other special material in the May and June issues, all working up towards the big convention in June.

building permits issued, but everything points to even greater building activities this year. The building permits for January exceeded in value by more than 200 per cent. the permits for the corresponding month of 1920, and thus far the February record is far ahead of that of a year ago. Many people refrained from building last year expecting a big drop in prices, but apparently they are now satisfied that prices are not going to come down with a thud as they anticipated and they are preparing to go ahead with their building programme this spring. The Libbey-Owens Sheet Glass Company is proceeding as fast as possible with the erection of its $2,000,000 plant and the Firestone Company, which put in foundations last year for a mammoth rubber plant and then postponed further operation, is expected to resume work this spring. Other large manufacturers who temporarily deferred their extension programme have also announced their intention of going ahead this year so that the building outlook is unusually bright.

Hamilton is also looking forward to considerable industrial expansion this year. During last year 27 new industries were secured, but power shortage and other abnormal conditions which will not have to be contended with this year, kept a number of American industries from carrying out their Canadian expansion programme; but many of them will do so this year. At no time in its history has the civic industrial department been actively negotiating with so many American and British industries for the location of Canadian branches as at present, and one would indeed have to be a pessimist of the worst kind to fail to see signs of activity and prosperity for the immediate future.

The "Made-in-B.C." Campaign

By HUGH DALTON
Secretary, B.C. Division, C.M.A.

SENTIMENT has been discarded in the movement initiated by the manufacturers of British Columbia to develop the market for their goods in that province. They are not asking the purchasing public to buy their products simply because they are manufactured in B.C., but because of the worth of the goods, and the individual benefit that will accrue to the purchaser by reason of the development of the province as an industrial centre.

Nor are the manufacturers actuated by selfish motives entirely, for their aim is not only the increasing of their own sales, but the upbuilding of Canada and the Empire. While, of course, anxious to keep the markets of the coast province supplied with the goods that they manufacture, they are asking the public to look for the products of Canada if those of British Columbia are not to be obtained, or fail to satisfy. If the Canadian product fails to meet the requirement of the purchaser, those of the Empire are advised for consideration before accepting the offerings of another country.

The movement which is being directed by the manufacturers bureau of the Vancouver Board of Trade, received the unanimous endorsement of the Associated Boards of Trade of British Columbia. A manager has been engaged, with offices in the Board of Trade Building. The campaign is to be continued throughout the year. It was considered that similar campaigns to increase the sales of commodities manufactured in British Columbia and other localities, while successful during the excitement of the period for which they were planned, failed to accomplish permanent development because they were not followed up. It is intended to follow up the initial publicity with an educational campaign.

The first activity of the campaign was to organize a "Made-in-B.C. Week," from February 7th to 12th in the city of Vancouver. This was held at a time when the Associated Boards of Trade of British Columbia and several other important organizations were meeting in convention. The retail merchants, wholesale houses, labor organizations and newspapers co-operated whole-heartedly to make the event a success. Every opportunity was given by the majority of the merchants to the manufacturers to display the products of the province, with the result that the week was pronounced to be a success from every standpoint, and laid the foundation for a larger organization for further activities. The Provincial Government co-operated by hiring a theatre and putting on a free showing of motion pictures of the industrial activities of the country. Special films were taken for the occasion, Dr. A. R. Baker, the director of moving pictures for the Government, having Mr. J. B. Thomson, chairman of the Canadian Manufacturers Association; Mr. J. H. Falconer, president of the British Columbia Manufacturers Association; Mr. W. E. Payne, secretary of the Associated Boards of Trade, and Mr. B. A. McKelvie, the campaign manager, taken as showing the unanimity of business interests in working for the success of the movement.

Following the "week" the manufacturers were asked to address their employees on the necessity of giving preference to the products of all British Columbia factories. The workers were impressed with the fact that the stability of their employment rested upon the market for the goods that they helped to manufacture, and that it was in their own interest to bring prosperity to the province by patronizing British Columbia manufacturers.

Community committees are being organized in different centres of the province to carry out the objects of the campaign, while a news-service, of an educational nature, is being inaugurated for the weekly press.

The school boards and educational bodies are being asked to assist in the work by informing the children of the possibilities of development for the province by a united effort to capture British Columbia's market for British Columbia.

The farmers of the province who have to compete with the producers of the neighboring states, are lining up with the manufacturers in an effort to educate the purchasers to the necessity of buying at home, while the organizer for the United Farmers of B.C. is devoting a portion of his lecture to the propaganda of the campaign.

The fact that British Columbia is a province rich in natural resources, but in great need of highways, is being used as an illustration of what can be accomplished by united effort in support of the products of the country. It is pointed out that the 555,000 residents of British Columbia have to bear the cost of the highway extensions of the province; that fertile valleys are closed to farmers, and rich mineral veins are untapped, owing to lack of transportation facilities. In explaining the need for better inter-community communication, the people are being told that they are building roads for localities far removed from British Columbia, and are being impressed with the fact that every dollar spent for merchandise pays its toll to the expenses of some public works—why not those of British Columbia, Canada and the Empire, rather than for the peoples of foreign lands to enjoy.

In selecting a manager to conduct the campaign, the committee chose Mr. Bruce A. McKelvie, a native son of British Columbia, a young man who had been engaged for a number of years in newspaper work in different centres of the province, and who was for eight years on the staff of the *Vancouver Daily Province*. He is working under the direction of a strong committee composed of some of the leading manufacturers of the West. They are: Frank Parsons, J. B. Thomson, J. H. Falconer, A. B. Weeks, J. W. Curran, J. H. Hamilton, W. A. Hunter, A. Nelson, Duncan M. MacDonald, R. H. Arnott, L. A. Walker, Oliver Phillips, H. Rolston.

Canada Hasn't Even Scratched the Surface of Possible Overseas Markets

By A. N. LAWRENCE

Manager of Sales, Ford Motor Co. of Canada, Limited

This is a portion of Mr. Lawrence's now famous address on "Darkest Canada," which it has been thought desirable to bring more directly to the attention of the manufacturers of Canada. It was delivered originally before the Border Cities Chamber of Commerce.

IN the space of sixteen months I covered something better than 62,000 miles through South Africa, Rhodesia, Portuguese East Africa, British East Africa, British India, Ceylon, Burma, Straits Settlements, Dutch East Indies, Australia, New Zealand, Philippines, China and Japan.

Most of us who take a trip of this kind are so bound down by our business interests that we touch the high spots only, visiting the principal ports such as Bombay, Calcutta and Madras of India. As a matter of fact, I was fortunate to find it a necessity to cover each of the countries visited more thoroughly and I was, therefore, actually able to cover more mileage within the countries themselves than on the high seas. Wherever it was possible to travel by motor car that means of transportation was selected in preference to rail, and through this means I was perhaps able to get a better first-hand knowledge of the country and of commercial and industrial conditions than would have been the case under other circumstances.

A Real Message.

My whole trip has been something of a kaleidoscope, and it is only since my return from abroad that I have been able to get time for a survey or a proper perspective of my experiences. I have the temerity to believe, however, that I have a real message which contains ample food for thought.

Perhaps some of you have been rather curious as to the caption: "Darkest Canada," but frankly I consider it particularly apt. One outstanding fact as the result of my experiences is that none of the Overseas British possessions have any knowledge whatsoever of the industrial or commercial possibilities of this great country of ours—CANADA—and in turn I believe I am safe in saying that Canada knows little, if anything, of the possibilities of trade with her sister dominions. The one is of necessity a corollary of the other.

As a matter of fact, during my entire sixteen months abroad, I never met a single representative of any Canadian enterprise. On the other hand, the activity of American representatives in these same countries is so decidedly marked that one could safely say that to-day American industries are invading the whole of the British overseas' possessions.

Some of you who have had more or less export trade in some of these countries may say that you are after business in these outlying possessions, but figures don't lie, and I make the statement that collectively Canadians are not alive to the trade possibilities with these sister dominions. Before I get through I am going to give you some very pertinent facts to prove this statement is not relative but exact.

The Author in South Africa

Mr. Lawrence (right) with a business associate at Potchestrom S.A.

The Ford Motor Company of Canada for many years have been cultivating an export trade with these countries, and to-day we have a mighty good volume which we look upon as more or less the backbone of our business. But after my experience abroad I am satisfied that we haven't even scratched the surface of possibilities, and I can safely say that the indictment applies equally as well to us.

Conditions in South Africa.

I am going briefly over the conditions in some of the countries I have visited.

Union of South Africa.—I know it is the general impression of those who have never travelled this country that the greater source of wealth is from their gold mining and diamond industry. As a matter of fact, these two mean little to the nation from the standpoi of revenue, in that the shares of the concerns are held very largely abroa with the result that their earnings a not distributed to any great extent wit in the Union.

South Africa is essentially an agricu tural country but one of enormous u developed possibilities. Anything th will grow any place in the world wi grow within South Africa, and they a fortunate in having a combination tropical and temperate climate withi their own borders. Their princip trouble is the severe drought they ha to contend with, due largely to the dr ing-up of their many large water cours during the season when they are mo needed. At other seasons of the ye these same courses have a surplus water and there are really big possibil ties for the country, through conserv tion and irrigation schemes to mak productive land out of what to-day more or less arid waste. That the Go ernment realizes this is evidenced b the fact that one or more large conse vation and irrigation schemes are unde way I having personally viewed a bi scheme of this character to harness th Sunday River and its tributaries directl behind Graff Reinet, in Cape Province

The Native Population.

One of the biggest assets of the cou try is its native population, of whic there is something like 5,000,000 Th blacks in South Africa are a particularl moral, industrious and intelligent rac and are really a large factor in solvin the labor problem of the country fo manufacturing and industrial purpose

Africa, with its wonderful resources o all kinds, should some day be a big facto in the manufacturing power of th British Empire. They are slowly bu gradually developing this side of thei activity, which in the course of tim should strengthen their position from a exporting standpoint.

British India.—India is essentially a agricultural country but one widely di ferent from Africa or our own. A bi percentage of the growing power of th country is in the hands of millions o natives (of which there are somethin like 270,000,000 Hindoos) working on ex ceedingly small plots without a pice t their name.

They are, as is well known, religiou fanatics who follow the tenets of thei religion more closely than we Christians This takes money. They have no re

A Canadian Automobile in India

A Good Prospect for a Motor Truck

On the road from Kuala Lumpur to Spoh in Federated Malay States

sources of their own and the result is that they are mortgaged to the eyes, usually to Arab money lenders, to an extent which makes it impossible for them to ever get ahead of the game. They are serfs in fact as well as in principle, and in the native States somewhat the same condition prevails—i.e., the natives are working on a rent basis, the land belonging to the native princes, and it is this source largely from which the enormous revenue of these princes is derived. The result of these conditions is that the large trade of the country is done mostly in the urban centres.

India has gone far further than they have in South Africa, in that the Government has accomplished much in the way of irrigation schemes, providing moisture for land that would otherwise be arid. This in itself has provided for the native population a means of livelihood, which has undoubtedly been a very large factor in keeping millions of natives employed and therefore less likely to foment trouble.

The Indian Native.

The native lives on the smell of an oil rag and really works only to provide enough on which to live and then mostly a meagre pittance. So that without having an opportunity to grow his own food products, which would be the case were there less effort at irrigation, he would be a burden on the country with nothing whatever to keep him busy at all and it would be a wonderful feeding ground for agitators.

The Indian native is possibly one of the finest artisans by natural instinct in the whole of the world, and much could be done in that country to develop these talents. If more effort were directed along technical lines of technical and industrial schools and some forcible regulation for attendance put into effect, the producing power of the country would be enormously increased, as such education would be the foundation for industries which would be able to utilize their enormous wealth in raw materials to better advantage.

India to-day practically monopolizes the jute industry and its amazing wealth of raw materials, such as leather, cotton, wool, timber, coal, iron and manganese, should make it a source of industrial activity as great as anything in the world. It is already one of the richest markets and should be able to develop its exports to an enormous extent.

Manufacturing is Increasing.

They are gradually going more extensively into manufacturing, as is evidenced by the fact that many large sugar plants are being erected in India for the purpose of producing refined sugar, and they should take quite a prominent position in the markets of the world, for this product in a very short time to come.

My remarks in reference to the invasion of American industries are possibly more true in the case of India than in the case of South Africa.

Straits Settlements.—This is probably one of the most sensitive markets in the whole of the British Empire, if not in the whole world. It is a good market—at the same time its prosperity depends largely upon the production of rubber and tin and the condition of the markets for those products.

The native population, who are Malays, are a particularly intelligent race, are industrious and at the same time free spenders, so that in prosperous times it makes one of the easiest catered to markets in the whole East.

Factors in Prosperity.

During the past few years when the price of rubber and tin has been at a good figure, this country has been particularly prosperous, but any particular slump in these lines will undoubtedly cause the shutting down of many of the plantations and mines, which would have its effect on the trade of the country as well as its buying power.

It is a market that has to be watched very closely by anyone trading therein, and for that reason is not on as sound a foundation as some other sections of the British possessions.

Australia.—Australia has undoubtedly gathered unto itself a somewhat unenviable reputation around the world for its labor conditions. Labor in Australia has industry by the throat and there is little inducement for manufacturers from this side of the world, where capital is able to meet labor more or less on an even footing, to take the gamble that is necessary within this Commonwealth under conditions as they now exist.

It is a country with enormous possibilities in natural resources, but owing to the "white policy" of the country there is little opportunity for these resources to be developed into an asset. The populated section of Australia is practically a fringe around the West, South and East coasts, with the balance undoubtedly more or less of an undiscovered and undeveloped country. The heart of Australia is essentially tropical, and therefore calls for working under conditions which the white man cannot contend with. In my humble opinion this country needs black immigration to make it the nation that it should be.

Industry in Australia.

The Australian has not the same angle on industrial problems as the rest of the Anglo-Saxon world. There is little if any encouragement given immigration even for agricultural purposes, and as the Government is essentially a Labor Government, this is directly attributable to the stand taken by the labor organizations. In fact, I believe that resolutions were passed and made public, in which the labor organizations have expressed themselves flat-footedly against immigration as long as there are any unemployed among the labor element in the country.

There is a marked preference among Australians for British-made goods, but for some reason or other Canadian product is stamped as American rather than

A Busy Harbor Scene

Scene on the Hooghly River, in the Harbor of Calcutta, India

A Big Indian Industry

Dhobies (washermen) on the Gumti River at Lucknow

British. This is possibly our own fault. Australia today is importing largely in many lines from America, and I have seen many public criticisms of this practice, which undoubtedly is the result of Britain not being prepared immediately after the war to re-establish their old trade connections. There is rather a keen feeling in the country against these large imports from the United States—not, however, that they have any antipathy against American-made goods in themselves, but they feel that preference should be given the British products. This feeling has gone so far that I have even seen editorials in the newspapers condemning importation of American films as against British product of the same character.

Australian Customs Policy.

The Customs policy of the country is not a logical one. It started out with the idea of being protective, but it is undoubtedly to-day a prohibitive tariff. It is one thing to protect an industry that is capable of supplying its own country's requirements, but it involves another principle when the tariff is made so high, even at the inception of infant industries, as to make importations impossible. I know of several instances where absolute embargoes against importations have been placed on certain articles although there was only one manufacturer of such article within the country and these nothing like big enough to take care of their own home consumption. This is carrying the principle of protection to the extreme and works more harm than good.

The same might be said of many legislative enactments passed in Australia within the past few years, which have been so drastic as to be destructive.

The stable element of Australia has done much in an effort to develop the manufacturing powers of the country but has received little encouragement from the element that controls the country.

Briefly, this is a country in which little will be accomplished until the yoke of labor is thrown off and they can accomplish some sane and sound legislation.

New Zealand.—This is a country which is more generally productive in every way than Australia. The New Zealander is in a way more alive and alert and more keen for new angles on industrial problems than his Island brother. There is supposed to be more wealth per capita in New Zealand than in any country on the face of the globe, and one has but to travel both of these Islands to realize that perhaps this is the case. It is more generally settled and more fully developed by far than the Commonwealth of Australia. They perhaps have more socialistic legislation than any country on the face of the globe and yet they are not socialists. They have wonderful co-operative societies and wonderful hospitals, and all public services are Government-owned and efficiently operated.

It is a country in which there are reputed to be no millionaires and no poverty, and I was impressed with something of this nature from my observations even before the statement was made to me that such was the case.

They have their labor troubles, but very few in comparison with the Commonwealth of Australia. It is a peculiar fact that it is against the law to strike in New Zealand, and while at times this Act is enforced, it is apparently done only with the idea of stimulating respect for the law rather than carrying out the letter of it, and then only occasionally. This is perhaps due to the fact that the Government is largely dependent on the labor element for their power, although it is not in any sense a Labor Government. It is an unusually rich market and one well worthy of development.

Some General Conclusions

The following is a brief but decidedly superficial summary of conditions as I observed them.

To get down to the real point of my address, I want you to note the following:

Each of these countries has come out of the war immensely wealthy.

Each, with the exception of the Union of South Africa, has an excess of exports over imports. This excess of exports means credits abroad with which to liquidate their imports.

None of these countries are within themselves self-sufficient.

Aside from the above, the situation is economically sound, for whereas the purchasing power of a country depends on its selling power derived from the production of merchantable commodities these countries are immensely rich in natural resources and raw commodities and are making themselves stronger slowly but surely by producing manufactured commodities from these same raw materials.

And Canada Hasn't Scratched the Surface of these Markets

Since the war started our volume of exports has gradually increased until to-day it is a mighty presentable figure, yet I want to give you some figures to confirm the above statements.

Table showing imports into certain British Dominions for several classes of goods and what Canada supplies these same countries:

Class.	Total Imported Into	Canada Ships To
Apparel.		
India	$7,000,000+	.....
New Zealand	4,700,000	326,000
South Africa	14,700,000	7,000
Books, Paper, etc.		
India	10,500,000+	126,000
Australia	14,500,000+	3,000,000
Foodstuffs.		
India	107,000,000+	9,000
Sts. Settlements	45,000,000+	74,000
Australia	12,800,000	1,234,000
New Zealand	8,325,000	540,000
South Africa	23,600,000	133,000
Furs, Hides, Leather.		
India	2,000,000+	.....
South Africa	9,000,000	51,000
Metals, Minerals and Machinery.		
India	73,000,000+	641,000
Australia	38,000,000+	3,800,000
New Zealand	13,000,000	1,500,000
South Africa	23,000,000+	3,289,000
Paints and Varnish.		
India	6,500,000	22,000
Australia	2,200,000	184,000
Textiles.		
India	231,000,000+	.....
Australia	108,000,000+	86,000
New Zealand	24,000,000+	78,000
South Africa	41,000,000+	28,000
Wool, etc.		
Australia	8,000,000+	336,000
South Africa	5,000,000+	637,000

In these Overseas Dominions we have a market of over 400,000,000 people with

imports of a value exceeding $2,000,000. On the other hand, out of the total export figure for Canada for the fiscal year 1919 of slightly over $1,200,000,000, only 5½ per cent. or a little more than $64,000,000 has gone to these Overseas Dominions.

I say again: Canada hasn't scratched the surface of these markets.

Trade Policy Needed.

It would be a short-sighted policy and one working for unstable trade conditions were we to invade these markets with a determination to sell without an equal determination to buy. Where one country exports largely to another and takes little in return, exchange becomes a factor of serious import and works for unstable trade connections. We have a mighty good example of this in our trade relations with the United States, where to-day every article that we import from that country is costing us 15 per cent. for exchange, owing to the fact that we are large importers from this country and export little in comparison in return. We have a somewhat similar situation as a parallel in the exchange situation between the United States and Great Britain. The placing of national loans has some effect for or against exchange relations between two countries, but the really one big factor involved in this situation is naturally the ratio between exports and imports. The ideal situation, of course, is where no money passes and the transactions between two countries becomes solely an exchange of commodities.

So I say again, that if we take advantage of our opportunities and seek export connections with these Overseas British Dominions, we should also make an equal effort to divert part at least of our import trade from the United States to these Overseas Dominions.

We now purchase three-quarters of our imports from the United States. Much that we buy from them can be purchased from these Overseas Dominions as evidenced by the following figures:

Purchases of Raw Materials Only.

	By Canada from Dominions listed.	By Canada from U.S.	By U.S. from Dominions listed.
'urs, hides, etc.—	1,900,000+	5,900,000+	92,800,000
'otton—	.....	34,000,000	104,000,000
ute, flax, hemp—	7,200,000	3,256,000	74,800,000
'rain—	Not over ½ mill	16,000,000	
eef and Mutton—	1,200,000	7,000,000	
ugar—	500,000+	12,000,000+	

There are possibly dozens of other nes in which similar comparisons can e made, but I believe these are enough r our purpose.

There is one other pertinent fact that ands out in the above figures, i.e., while many lines we are buying largely from he United States instead of our British ster Dominions, the United States, in turn, buys such enormous quantities of these same materials from these Dominions, it is almost a self-evident conclusion that the United States is simply acting as a middleman for Canada.

Note that out of total imports into the Dominion of Canada during the fiscal year 1919 of over $900,000,000, only $50,000,000 of these came from our sister Dominions.

No comments are necessary from me to convince you that inter-Dominion trade is an obligation that we cannot avoid. To-day Canada is commercially and industrially on the other side of the globe an unknown factor. As one of the larger units of the British Empire we cannot lay this at anybody's door but our own, and surely the remedy is within our own hands.

Owing to the present condition of world finances this is perhaps not a favorable time to actively seek this connection, but at least it is a good opportunity to get our house in order. There is no doubt that a determination to buy and sell in these British markets would materially modify the American exchange, which is now decidedly against us. We have, on the other hand, a decided advantage to-day in the higher value of the pound sterling in Canadian dollars as against the U.S. dollar, which should give us the thin edge of the wedge to get a foothold in these markets.

The Exchange Factor.

It is a fact needing no demonstration that a one-sided trade relation leads to a depreciation in currency, which if allowed to go far enough eventually curtails the country's buying power, so that if we are going after this export trade in a way that is going to make our connection lasting, we want to insure against any depreciation of the pound against the Canadian dollar by the only recourse available—to build up a business import trade along with export activity.

We have many things in Canada in the line of raw materials and manufactured articles that all of our sister Dominions require, and they, in turn, have much that we can make use of that we now purchase from the United States.

There is another fact of importance which should not be overlooked. Our Government to-day has a large investment in railway lines and equipment. They have recently seen fit to provide us with a Mercantile Marine, which in the course of time should take its place with the best on the high seas, and therefore we owe them an obligation to support these enterprises in the only way possible—*i.e.* by the development of export and import trade with our sister Dominions.

In my own business capacity I know as a matter of fact that the Merchant Marine is having its troubles in securing enough outgoing cargo from this country to keep these vessels properly loaded. Little if anything is being done by us to insure them a return cargo, whereas an active and aggressive campaign on the part of the manufacturers of this country to develop our exports and imports with these sister Dominions could do much to insure the success of the Mercantile Marine undertaking and make it profitable enough for them to gradually but surely extend these lines to all parts of the trading world. It would be a case of criminal neglect on the part of the citizens of this country were our Government through lack of proper support forced to curtail or discontinue entirely the Merchant Marine service which is now being offered us, and therefore I say to you that the day is not far off when willy-nilly we will be forced to cultivate these markets if we as individuals do not wish to absorb as a loss the enormous investment that is represented by the marine service which is now established.

Personal Contact Advisable.

This development of our export and import trade can't be done by chair work. It will require active, personal, first-hand contact with the actual markets in every one of these countries.

I know to-day that many manufacturers are trying to establish trade connections through the medium of Canadian Trade Commissioners in the various centres, but to my mind this is a waste of time and effort. These gentlemen are placed in overseas berths solely for the purpose of disseminating information that might be required from time to time. They are not salesmen—are not intended to be salesmen—and with a big, active staff of salesmen in every one of these countries representing American industries, it is a foregone conclusion that we are not going to establish any trade connections unless we place our own representatives on an equal footing with them.

A campaign of this kind needs a wide-awake, clear-sighted vision on the part of manufacturers and willingness to loosen up their purse strings and make an investment that is just as sure of dividends as if the money were put into Government bonds. And it means, further, concerted action on the part of every Chamber of Commerce in the Dominion of Canada.

It isn't often that one is fortunate enough to have the opportunity that I have had in the last year and a half, and I would be failing in my duty as a citizen if I did not bring to you the message that is to me so outstanding.

Note.—The statistical figures used herein have been compiled from the latest Government Trade Reports and should, therefore, be reasonably accurate.

The following were appointed representatives of the Ontario Division to the Western Fair Association for the ensuing year: A. W. White, The George White & Sons Co., Ltd., London; W. N. Manning, Sherlock-Manning Piano & Organ Co., Ltd., London.

Parliamentary Proceedings of the Month at Ottawa Reviewed

By INDUSTRIAL CANADA'S SPECIAL CORRESPONDENT

Ottawa:—The fifth session of the thirteenth Parliament of Canada opened on Monday, February 14th, with all the gorgeousness and pageantry of the pre-war period. The Speech from the Throne, which may be described as the Parliamentary Menu, after making the usual references to prevailing conditions, industrial and commercial, referred to the remission of the luxury taxes and the arrangement whereby a substantial share of the expenditure in connection with general unemployment is being borne by the Dominion Government. Announcement was made of the investigation which is being conducted by the Department of Labor into systems of unemployment insurance and old age pensions. No statement regarding legislation on either of these subjects was made, and it is altogether likely that before the Government pronounces its policy on either subject, organizations representing the employers and organizations representing the employees will be given an opportunity of presenting their views as to what action should be taken in connection with these matters. The agreement concluded last year between Canada and the Government of the British West Indies for the purpose of improving trade relations and means of communication and intercourse between the two countries will be submitted to Parliament for approval. Announcement was made of the intended introduction of bills relating to copyrights, and to the establishment of a Bureau for Scientific Research.

Revision of Tariff

The most important item coming before Parliament during the present session is the revision of the tariff and the general basis upon which this important subject will be dealt with is outlined in the Speech from the Throne in the following words:

"In such revision regard must be had to the necessities of revenue and as well that the principle of protection to Canadian labor and legitimate Canadian industries, including agriculture, which has prevailed for more than forty years in this country, must be consistently maintained; but that the customs duties imposed to that end should be no higher than is essential to ensure good standards of living among our working population and to retain and make possible the normal expansion of the industries in which they find employment."

Judging by the Speech from the Throne there is not likely to be a heavy legislative programme. The Government has already introduced a new Patent Act and there will likely be a bill in connection with oleomargarine, the manufacture or importation of which after September 1, 1921, will be illegal unless legislation providing relief is enacted before that date.

It is our intention to furnish readers of "Industrial Canada" each month with a careful review of proceedings at Ottawa. This material will be prepared by a special correspondent who is in close touch with affairs at the capital, and who will interpret developments from the standpoint of the industrial interests of the country. The first of the series commences with the accompanying contribution.

—The Editor.

Gave Interesting Figures

Mr. McIsaac, of Prince Edward Island, who moved the address in reply to the Speech from the Throne, spoke in an optimistic vein. He called attention to the fact that—

"The assets of Canadian banks amount to more than two-and-a-half billion dollars, and our national wealth per capita based on bank figures, is $2,500, as compared with $2,400 in the United States. Canadians have a per capita investment in Victory bonds of $86, while the investment in Liberty bonds in the United States is only $65.80 per capita. Canada leads the world in her per capita production of food material, and we still have 441 million acres of untilled arable land. Canada's foreign trade amounts to about $300 per head of population, whereas the per capita proportion of the foreign trade of the United States is only $87."

Based on National Policy

And in speaking of the coming tariff revision he said:

"The revised tariff will be based on the principles of the national policy, having for its essential qualities the requirements of revenue and the principle of protection to Canadian labor and Canadian industries, including agriculture. This is the manner of customs tariff inaugurated by Sir John A. Macdonald, and which has prevailed in Canada for over forty years. Under this tariff, Canada's industries have developed and Canadian work people have found abundant and lucrative employment. This tariff assures commercial stability and affords a guarantee of security to investors in new enterprises. Our cities and urban centres have grown great and populous under the aegis of this tariff, and outside capital has sought investment within our national bounds. In consequence of this tariff, no fewer than six hundred branch factories have been established in Canada by American manufacturers, representing a capital investment of approximately $400,000,000 and affording employment to about 87,000 people. Surely a tariff that produces such results as these is the best and the only tariff for Canada, and should be perpetuated."

The seconder, Mr. J. A. MacKelvie, a newspaper man from Vernon, B.C., who defeated the Independent candidate by 381 votes last November, made his maiden effort in which he showed himself to be a valuable addition to the debating strength of Parliament. It is usual for private members to pay special attention to the needs of their own particular constituency, and it is therefore not surprising that Mr. MacKelvie devoted a portion of his remarks to the fruit-growing industry in Yale, and the importance of protection to that industry. He said in part:

5,000 Cars of Fruit

"I can recall the days, sir, probably about twenty years ago, when the first full car of fruit was shipped out of the Okanagan, and it was an occasion for celebration. This year I hope that we will be able to send forth an output of fruit exceeding 5,000 cars. The course towards this phenomenal growth and measure of success has been by no means an easy one. The road we have traversed was full of obstacles and difficulties, which at one time seemed almost insurmountable; and I am firmly convinced that had it not been for the well-advised action of the Borden administration in raising the duty on apples from 13 to 30 cents a box, the industry in the Okanagan to-day would have been extinguished. I have no desire to enter largely at this time upon a subject which I know is fraught with so many contentious issues, but I know full well that my constituents would consider me a traitor to their interests did I not upon all occasions endeavor to combat with whatever energy in me lies any attempt to reduce or eliminate the duty on fruit, without which protection our industry could not live.

"There were times during the lean years in the fruit-growing industry when

ny office used to be invaded time and again by men who came to me for advice and who were in absolute despair. They thought that I was responsible for their coming to that country and investing their all in fruit lands, and perhaps in some instances they were right. Up to 914 the industry was in such a languishing condition that nothing but ruin eemed to stare these men in the face. South of British Columbia lie the two reat fruit-producing States of Washington and Oregon, and extending east of hese States are large and populous American cities affording the orchardists he best possible market for their No. 1 r fancy fruit; and it was their ystem to sell their fancy grades n that market and to send in heir other grades on consignent to our prairie markets—hich are naturally the markets or the Okanagan fruit—at prices hich meant ruinous competion for our growers, and which lutted the prairie markets until n some occasions not a box of ritish Columbia fruit could be old. It was under these circumstances that the fruit-growers that district approached the overnment as I have indicated nd were successful in getting e tariff raised. In 1910 the proction of fruit in British Colnbia amounted to $250,000. By 19 this had grown to such an tent that out of the Okanagan alley alone was shipped fruit d its by-products, including nned and evaporated goods, mounting to over $7,000,000—an most phenomenal growth in mething short of ten years, due, I have said before, to the protion given our industry by te tariff."

The Hon. William Lyon Mackenzie King, leader of the Opposition, devoted most of his me to an effort to show that the Government has no mandate to ntinue in office, and ended his ddress with the following moth:

We respectfully submit to Your Excellency that Your Excellency's present advisers do not possess the confidence of this House or of the country, and that their retention of office constitutes a usurpation of the powers of popular government."

The Hon. Mr. Meighen in his first address before the House of Commons since his elevation to the position of Prime Minister, criticized the arguments of the leader of the Opposition. He based the right of his Government to continue in office upon the majority which it enjoys in Parliament, and speaking of the inadvisability of an election at present said:

"The West is undoubtedly entitled under the census to from ten to twenty-five—no one knows how many—seats in this Parliament. If this House is dissolved before redistribution that representation is denied. If this House is dissolved nothing can be gained except a confused and utterly uninterpretable verdict on the tariff issue that can get no Government anywhere and can be a mandate to no Government at all. Indeed, there can be no result whatever except the return of at least one consistent body to this House, large or small, and the deception of both wings of the other body. That is the only verdict that could be given under the conditions that obtain to-day. Consequently, I submit to you, Mr. Speaker, that under the circumstances that prevail now; under the conditions of public policy and the discussion of public principle that to-day obtain by reason of the statements and speeches of public men, the clear duty of this Government, for the present at all events, is to carry on and to carry out its policy so long as a majority of the members of this House support the Government and repose confidence in the administration."

Rt. Hon. Arthur Meighen

Who delivered his first speech in the House of Commons as Premier of Canada on February 15

The debate, which covered the usual broad field, touched on everything from parochial affairs to international relationships.

From the standpoint of public interest, on account of his break with the party led by Mr. King, the utterances of Mr. Gauthier are worthy of special attention. The gist of his speech was that during the period he had been a follower of Sir Wilfrid Laurier his party had adhered to protection; that for the past two years he had within his own party pointed out the danger of departing from the policy of protection; that within his party he had raised his voice against any alliance with the Farmers' party pledged as it is to Free Trade, and finding that his efforts were without avail, and believing that a continuation of such an alliance with a Free Trade party would be inimical to the interests of the country, he had no honest alternative but to separate himself from his former political friends.

Already notices have been given of a number of proposed resolutions. Mr. Hocken wishes to discuss a scheme under which the Government of Canada will appropriate ten million dollars annually for a period of five years to buy land and build houses for such men of good character as can make a small initial payment and undertake to liquidate the balance by monthly instalments, such opportunity to be confined for the first year to men who served overseas. Mr. Lemieux wishes to discuss the advisability of letting Ministers of the Crown sit in either chamber whenever measures and policies are introduced affecting their respective departments. Mr. McCoig desires to discuss the expediency of the standardization of certain parts of agricultural implements. Mr. Brien has a proposed resolution that more adequate protection should be given to the growers of tobacco in Canada, and Mr. Steele wishes appointed a special committee of the House of Commons to inquire into the future fuel supply of the Dominion. Before prorogation much eloquence will be poured forth and many pages of *Hansard* will be covered with remarks on these subjects, and other matters of which notice has not yet been given.

Gossip is rife regarding pending cabinet changes; these may not materialize until the close of the present session. The Government has decided to stick to their guns, and if they continue to control the majority of the votes in the House of Commons no election is likely before the autumn of 1922.

Orders totalling $14,000,000 are reported to be on hand with the National Steel Car Co., Limited, Hamilton, and the outlook for the company is much brighter. The costs of raw material and labor now show considerable decreases enabling more economical operation of the plant. It will be remembered that in 1915 the company contracted with the Paris, Lyons & Mediterranean Railway Co. for a large order of cars, but war conditions rendered the contract unprofitable. This difficulty is now being overcome.

Value of Industrial Councils is Stressed at Conference in Ottawa

REPORT OF PROCEEDINGS

A conference arranged by the Department of Labor and attended by representatives of the welfare department of several large industrial corporations, was held at Ottawa on February 21 and 22. The accompanying report gives a resume of what transpired at this conference.
—The Editor.

ON the invitation of the Department of Labor, Ottawa, a conference on industrial relations was held in the Senate Railway Committee room on Monday and Tuesday, February 21st and 22nd. It was attended by the following:

Hon. Senator Gideon D. Robertson, Minister of Labor (Chairman); F. A. Acland, Deputy Minister of Labor; Gerald Brown, Assistant Deputy Minister of Labor; Harry Hereford, Industrial Engineer, Department of Labor; E. McG. Quirk, Department of Labor; F. E. Harrison, Department of Labor, Calgary; A. H. Young, Manager of Industrial Relations, International Harvester Company, Chicago; Cyrus Ching, U.S. Rubber Company, New York; J. H. Coffey, Jr., and F. L. Riggs, Gutta-Percha & Rubber Company, Toronto; P. F. Sinclair and G. L. Thompson, Imperial Oil Company, Toronto; F. J. Gernandt and F. T. Day, International Harvester Co., Hamilton; H. H. Stedman, Swift Canadian Co., Toronto; R. M. Olzendam, Spanish River Pulp & Paper Company, Spanish River; George Valentine, Massey-Harris Company, Toronto; Wills MacLachlan, Consulting Industrial Engineer, Toronto; W. M. Gray, Gray-Dort Motors, Limited, Chatham, Ont.; John H. Frye, Canadian Consolidated Rubber Co., Montreal; J. D. Jones, General Manager, and Frank J. McGue, Algoma Steel Corporation, Sault Ste. Marie; W. H. Winter, Bell Telephone Company of Canada; T. A. Stevenson and Blake Robertson, Canadian Manufacturers Association.

Origin of Conference

Hon. Mr. Robertson, in welcoming the delegates to the conference, referred to the importance of promoting more harmonious relations between employers and their workmen, stating that early in 1918 the question first began to receive special consideration at the hands of the Canadian Government. He told of the appointment of the Royal Commission on Industrial Relations, of which Chief Justice Mathers was chairman, and of the holding of the Industrial Congress in Ottawa in September, 1919. He enumerated reasons why no conference was held in 1920, and explained that the present gathering was an effort to make some progress along the lines of promoting good will between workmen and their employers, as inaugurated in 1919. The Department were not entirely unselfish in calling the conference, as they wanted to obtain as much information as possible about industrial councils.

Senator Robertson, before concluding his remarks, made some observations about the spread of anarchistic doctrines and pointed out that in Canada missionaries of the movement to start a revolution were carrying on their propaganda and were attempting in every way possible to discredit existing institutions. He hoped that as a result of the conference, there would come a great growth of confidence between the interests of capital, so called, and those of labor.

Gerald Brown, Assistant Deputy Minister of Labor, who was named as alternate chairman of the conference, gave a brief summary of the activities of the Department in furthering the formation of industrial councils.

Wills MacLachlan, consulting industrial engineer, Toronto, spoke of the industrial council which had been formed in connection with the building trades in Toronto, and A. H. Young, manager of industrial relations, International Harvester Co., Chicago, gave a full account of the councils formed by his company, and spoke eulogistically of the success which had attended their formation. Other speakers at the first session included W. M. Gray, Gray-Dort Motors, Limited, Chatham; George Valentine, Massey-Harris Co., Limited, Toronto, and John H. Frye, Canadian Consolidated Rubber Co., Montreal.

At the afternoon session, Cyrus Ching, U. S. Rubber Co., New York, dwelt on the importance of an arbitration clause being included in every industrial council scheme, and that no discrimination should be made against any employee because he did or did not belong to a union, or against any employees' representative on a council because of any opinions he might have expressed. He pointed out that the success or failure of a scheme depended to a very great extent on the foremen, and, if their work was not performed with judgment, trouble would ensue.

Men are Very Fair.

Mr. Ching announced his belief that 99 per cent. of men are fair, if they know the facts, and, in support of this, he pointed out that, since the establishment of industrial councils by his company, the men at one factory demanded a 25 per cent. increase in wages, basing their demand on supposed increased cost of living. When, at a meeting of the industrial council, it was pointed out to them that the cost of living had increased only 95 per cent., whereas wages had been increased 118 per cent., they at once withdrew their demand.

The company have 18 councils, which the men have 314 representativ The average age of the latter is years and average length of service 12 years. In the first six months 2,3 cases came up for adjustment, and were settled satisfactorily. In o plant, 90 per cent. of 4,600 employees a non-English-speaking, but even here t council works successfully. In Queb Province they had on their councils n only officers of the International Uni but of the Catholic Union, and there d not seem to be any strife or ill-feelin Mr. Ching also expressed the opinio that councils would function just as we when wages were on the down scale a when they were on the up scale.

P. F. Sinclair, Imperial Oil Co., T ronto, said they had 14 councils. Th one at Quebec, among the French-Can dians, had been enthusiastically re ceived. He had been impressed by th fairness of both workingmen and com pany officials when seated togethe around a table. He read numerous vo untary statements of employees, all eulo gistic of the councils, and stated tha all cases had been satisfactorily settle On February 1st, one council at a meet ing had decided unanimously that th bonus the men had been receivin should be reduced 50 per cent.

Opposition from Foremen.

H. H. Stedman, Swift Canadian Co. Toronto, stated that their company hac commenced the establishment of indus trial councils eighteen months ago They had at first met with some oppo sition from the foremen, who had beer brought up under old-time conditions but they had carried on an educationa campaign, which had reconciled them to it.

J. H. Coffey, Jr., Gutta Percha and Rubber Co., Toronto, outlined the his tory of their works council, stating that it originated in a conference between the company and the men over the question of profit-sharing. A joint committee had discussed the matter and reported unanimously that the scheme was not feasible. This joint committee in one form or another, continued to hold conferences and meetings, and after about a year it was decided that some organized form of council should be established. The present constitution was adopted in April, 1920. Mr. Coffey expressed enthusiasm over the work accomplished, but said that the real test would come with the problem of wage reduction.

W. H. Winter, Bell Telephone Co., stated that the supervisors had opposed the introduction of the scheme, but they

now had 45 plant councils, the company bearing all expenses, meetings being held monthly and the scheme working generally satisfactorily.

F. J. Gernandt, International Harvester Co., Hamilton, voiced the same opinion as that expressed by previous speakers, that council schemes could only be successful if foremen were educated up to the necessity of such councils. He gave as an illustration of councils functioning in periods of depression the action of their council the previous week in deciding in favor of the lowering of the minimum wage of common labor from 45 to 40 cents an hour.

F. T. Day, of the same company, said that he had personally attended twenty-four monthly meetings; that their Hamilton council represented 2,000 men, and that on the council there are 8 employees' representatives, elected by secret ballot. In January, 1920, a much larger vote was polled than in March, 1919. The eight representatives consist of six union and two non-union men. He then explained the procedure and said that hundreds of suggestions made by the council had been accepted by the company. In his opinion employees were unanimous in their belief that the scheme was capable of great good.

Mr. Riley, secretary of the Building and Construction Association, pointed out that contractors were placed in a different position than the manufacturers by reason of the seasonable nature of their work and because their employees were already highly organized. At the same time beneficial results had followed the establishment of councils in Toronto, Ottawa, Hamilton and London.

J. D. Jones, Algoma Steel Corporation, said they had no industrial council, but some years ago they had an allied relief committee. In 1919 they appointed a welfare board. They have also a departmental committee to deal with grievances and a plant committee to deal with hours of work and working conditions. The latter held two meetings during the past year, the first in connection with an increase in wages and the second in January with a cut in wages. At this last meeting elaborate figures and data were presented by the company and the whole question was threshed out during two weeks. The committee then recommended a 17 3-5 per cent. reduction in wages, which was regarded as satisfactory by 93 per cent. of the employees. The company expected soon to be able to establish regular industrial councils.

On February 22, R. M. Olzendam, Spanish River Pulp and Paper Mills Co., dealt very fully with the welfare work of that company. He stated that their employees were all well organized and their unions were recognized. The company had agreements with them covering wages and grievances, so that any industrial council that might be formed would have to confine its attention to constructive work, such as the improvement and increase of production. He told about the *Spanish River News*, and how popular it had become among the men; of the practice of conferring service buttons; of their vacation arrangements; of group insurance; of the Christmas gift to all employees of a full day's pay and $2 for each year they have been in the service of the company.

During the afternoon of Feb. 22nd there was considerable discussion, and the motion, appearing on this page, was carried unanimously. Senator Robertson made some short remarks at the conclusion of the proceedings, and thanked the manufacturers individually, the C.M.A. and similar organizations for the courteous and generous treatment he had received since he had become Minister of Labor.

RESOLUTION OF ENDORSATION

RESOLVED: That the members of the group assembled in conference at the call of Hon. Gideon D. Robertson, Minister of Labor, do hereby express our sincere appreciation of the opportunity presented to get together for a frank discussion of human relationship in industry. The members of the conference believe that the broad-minded attitude of the Minister and members of the Department cannot fail to bring about a higher degree of confidence in the Department on the part of those who are engaged in industry, whether they be employer or employee, and will eventually bring about a better understanding of the problems of industry on the part of all. It is the consensus of opinion expressed by the members of the conference that the work thus far conducted in the field of industrial councils justifies a continuation of the confidence of both employee and employer. We would welcome further conferences along similar lines, to be called at the discretion of the Minister of Labor, and the publication by the Labor Department of bulletins of information on industrial topics.

The Present Economic and Industria Condition of Germany

By ALEX. MARSHALL
Manager, Commercial Intelligence Department

At the last meeting of the Executive Council the Commercial Intelligence Department was asked for a report on German Economic and Industrial Conditions. This report was prepared and presented at the February meeting of the Council and is now reproduced in "Industrial Canada" for the information of our readers. It summarizes conditions at the first of the present year.

—The Editor.

AFTER passing through the upheavals, distresses, reverses and the short period of unhealthy whirlwind activity of 1919 and of the beginning of 1920, German trade and industry were plunged into sudden stagnation in March, 1920, which, though its critical stage is probably past, is still continuing in a modified form. During 1919 traders and manufacturers not only survived violent fluctuations and disturbances, but they did good business in spite of them. The capital of enterprise was increased, and high dividends were paid. This was because not only the foreigner but also the German bought wildly and recklessly. Another factor which helped towards the satisfactory balance sheets of 1919 was the large sums paid by the State on the conclusion of the armistice to all branches of industry for the termination of war contracts. When the story of 1920 comes to be told a different picture may be presented. Possibly it may be regarded as significant that while, almost without exception, company reports at the end of 1919 concluded with the words "there are plenty of orders on hand," chairmen at shareholders' meetings in 1920, as a rule, did not refer to current business or future prospects. As far as foreign trade is concerned, the depreciation of the mark has been insufficient during most of the year to make Germany an attractive market for the foreign buyer, and its present decline has been too spasmodic for him to venture to commit himself to any extent. This does not mean, however, that Germany has not made considerable progress in the extension of her export trade.

Formation of Trusts.

Concentration of industry is the keynote of German industrial reorganization, and two tendencies are distinguished in the order of combining. They are described as the "horizontal" and "vertical" types of syndicates, the latter being a combination of the various stages of manufacture, from the first work upon the raw material until the final finished product, and the former a combination of several factories, all carrying out the same kind of manufacture. A typical instance is the merger of the Stinnes coal and iron trust with the Siemens-Halske Electrical Company, whereby 200,000 workers are controlled by one concern producing electrical power, and manufacturing the most complicated machinery. While the iron, coal and steel mergers are the most striking on account of their size and power, similar ones are in existence or in the process of formation throughout the country; the chemical combine has been strengthened, shipping is really controlled by two companies, the electric lamp industry, the motor car industry and the oil and fat industry have formed trusts of their own. In the field of banking, a similar tendency is noted in the fusion of six moderate-sized banks with an increase of capital of 125,000,000 marks.

There are many reasons for this tendency in German industry; the difficulties with which all firms found themselves faced at the time of the armistice drove those engaged in the same kind of manufacture together for mutual support and in order to minimize their risks; further, coalition was the one means of overcoming the lack of additional capital, it led to economy in running, it strengthened employers when meeting the demands of labor, it facilitated export by ensuring a uniform policy in foreign markets and it increased the power of obtaining credit abroad when purchasing raw materials.

During the spring and summer of 1920 the labor situation threatened to become critical, and though it has improved with the setting in of the purchases to cover the winter demand and with the decline of the mark, it is still unsatisfactory. The general condition is reflected in the unemployment figures which show a steady improvement between September 1st and October 15th. The decline in the number of unemployed receiving doles during this period amounted to 21,169. In the matter of wages it has just been estimated by a British authority that they have increased in Germany 8 to 10 times over pre-war rates. Following is an official notice as to the wages of municipal workmen in Berlin which was published in the press in the beginning of November: Unskilled laborers, 4.69 M. per h skilled laborers, 4.88 M. per hr. It evident, however, that a definite jud ment on wage conditions in Germa cannot be formed at a time when t German mark is fluctuating in value a prices are constantly changing.

In endeavoring to estimate the cost living and the rise in prices in Ge many, it may be best to give the figur published by the International Stati tical Bureau at the Hague comparin Germany with other countries. For comparison of the increase in the ge eral cost of living, the U.S. may be take as a standard; putting the rise in th country at three times since the ou break of war the following figures a arrived at:

U.S.A.	England.	France.	Italy.	German
3	3¾	6¾	8½	10-12

Export Trade.

It cannot be emphasized often enoug that successful export is one of the mo effective means for raising Germany u again and that, therefore, she will an must concentrate a large part of he energies on achieving this end. In e port trade, Germany has many things t her advantage. German currency is d preciated to approximately one-eighteent of its pre-war value, while wages hav only increased 8 to 10 times. The co of production in Germany has not rise by the same extent as the wark has d preciated. The former German Financ Minister, Gothern, shows in the *Berli Tageblatt* that the main causes of lo German production cost are the artif cially limited domestic and factory rent state subsidized food and very low rai way fares and freight rates. Herr Da berg, an official of the Import and E port Licensing Bureau, estimates th German production cost at about on third of the English.

However, it must be borne in mind tha the fall in the value of the mark place Germany under a handicap in importin raw materials from countries with a preciated currency. An examination c Germany's import list in 1913 shows tha 63 per cent. are raw materials and foo and the chief items of the former clas namely, cotton, wool, copper, hides, iro ore, rubber and tin were purchased fro the British Empire, United States, Franc and South America. If, however, Ge many is able to sell her products t nations whose currencies are at a pre mium compared with the mark, and ca obtain her imports of raw material from countries like those of Easter

Europe, including Russia, whose currencies have a low value, she is in an advantageous position. From this it may be seen that the low value of the mark gives the greatest value only to German producers of goods manufactured from raw materials of German origin, or originating in countries with greatly depreciated currency. It is with such commodities that Germany is now offering the strongest competition in foreign markets.

Articles Being Exported

During the last few months of 1920 warehouses in England were filled with German toys of all kinds, priced at about the same price as British toys of the same character. Similarly, a considerable quantity of toys were imported into Canada in November, 1919. Other articles which are being exported from Germany are: Clocks, magnetos, vacuum flasks, aluminum and enamelware, lead pencils, glassware, sewing machines, thermometers, scientific instruments, machinery, tools, silk hosiery, chemicals and dyes, cutlery, optical instruments, musical instruments, woollen yarns, paper and silk goods. Some of these goods are evidently from German pre-war stocks that could not be disposed of during hostilities.

Canadian Trade With Germany

Before the war, 14.2 per cent. of Germany's exports went to the United Kingdom, 7.1 per cent. to the United States, and 0.6 per cent. to Canada. A statement of the present relation of these countries cannot be obtained owing to the refusal of the German Government to publish official foreign trade figures. For the 12 months ending December, 1920, Canada imported from Germany merchandise valued at $840,203, and sold her goods valued at $7,033,550, an almost complete reversal of the pre-war position. During the nine months ended September, 1920, England sold Germany £16,800,000 worth of goods and bought £20,600,000 worth from Germany, with the third quarter showing the greater increase. In these days of unstable exchange conditions and more or less inflated currency values, possibly a better test of the extent of the trade is shown by the tonnage. From this it will be seen that the goods imported from Germany in the quarter ended 30th September, 1920, to the United Kingdom represent only about 25 per cent. of the quarterly average in 1913, while the export of British goods consigned to Germany for the same quarter represents about 40 per cent. of the quarterly average in 1913. Similarly, for the eleven months ending November, 1920, the United States imported from Germany goods to the value of 84 million dollars, and sold them goods valued at 253 million dollars.

In looking back over the past two years, and more particularly the year 1920, it is impossible not to be struck by the evidences of improvement in all departments of public and private life in Germany with one exception: State Finance.

Since no country can be economically healthy unless the public finances are sound, it is necessary to pay attention to the ever accumulating debt and the incessant flow of paper money. The revenue is far from meeting the expenditure. The net sum of Germany's requirements for 1920-21 was 114,200 million marks against on estimated revenue from taxation of 42,940 million marks. The floating and funded debt in October last was 288,000 million marks and was expected to reach 318,000 million marks by the end of the year. The budget deficit after meeting current obligations under the peace treaty, providing for postal and railway services, and meeting the expenditure of the Reich and the States exceeds 70,000 million marks for the last year. The powers of the Minister of Finance are to be increased so that he may enforce entrenchment in expenditure. The possibility of enforcing a year of compulsory work for all able-bodied persons, male and female, is being mentioned more and more by the ministers and is receiving attention. So long as there is an enormous deficiency between revenue and expenditure nothing can stop the flow of paper money, which is Germany's chief internal weakness at present. If it ever existed, the time when an international loan or other forms of credit would have been of assistance is long past. The healing process must come from within. The following figures showing the percentage of note circulation compared with gold reserve are significant:

Bank of England.

	Gold.	Notes in circulation.
Dec., 1913.	$170 million.	$144 million.
May, 1920.	547 million.	542 million.

Imperial Bank of Germany.

	Gold and Silver.	Notes in circulation.
Dec., 1913.	$351 million.	$630 million.
May, 1920.	266 million.	11,953 million.

The above report is compiled from information received from authoritative sources. These include: Board of Trade, London, England; Canadian Government Trade Commissioner, London, England; The Guaranty Trust Co., New York, and U.S. Bureau of Commerce Reports.

The Gold Coast Contract

Some details of the important development work in Africa to be undertaken by Canadians

CANADIANS and Canadian materials will play a prominent part in the big plan of development undertaken by the British Government on the Gold Coast of Africa, the contract for the first unit of which has been awarded to Major-General J. W. Stewart, C.E., C.M.G., of Vancouver, and will be part of the enormous harbor works to be constructed at Takoradi. Plans for this unit place the estimated cost at $17,000,000 and are now in the hands of General Stewart.

Preliminary surveys of the harbor sites and a probable line of railway have been made by a party of Canadian engineers and construction men, this work having occupied the past two years. It was after the surveys had shown the feasibility of the work planned that the Imperial Government decided to proceed with the undertaking.

One of the greatest tasks will be the construction of a big breakwater around the harbor of Takoradi, the rock fill-in for which will be secured from the interior lying east of the present village of Takoradi. Under the projected plans this village will be transformed into a model town within the next few years, with well paved streets, boulevards, electric lights, sewerage and water system.

In addition to this breakwater the plans provide for the construction of a large main pier, secondary breakwater, and several small piers, suitable warehouse sites close by, and terminal facilities adjacent to the main pier. Future work to be carried out makes provision for tramway lines through the main portions of the town. The entire scheme, General Stewart points out, has been planned with the expectation that Takoradi will eventually develop into a great commercial port.

Negotiations are now under way with firms in Eastern Canada for the placing of contracts for construction of engineering plants, machinery, locomotives and other equipment, stated General Stewart, and he also pointed out that contracts for steel railway sleepers would also be let, as the white ants speedily destroy any wooden material. Contracts for a large quantity of big timbers, mostly fir, will be let in British Columbia. This province is also in a position to furnish much of the foodstuff required in the way of canned goods, and it is probable that the two big British Columbia cement plants will be called on for much of the cement which will be required.

The labor for the building of the new works will be native, but the direction and administration of the huge undertaking will be entirely in the hands of Canadian engineers. From among the experienced men who served under him in France General Stewart is selecting the personnel to carry on the work.

The Gold Coast has enormous potential wealth in forests of mahogany, rice fields, rubber, sugar and cocoanut plantations, as well as gold and silver mines. Kumassi, the chief city of the Gold Coast, lies about 150 miles from the

(*Continued on page* 74.)

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Montreal Executive in Busy Session

A MEETING of the Montreal Executive was held on Wednesday, February 18. A definite step was taken in the Made-in-Canada campaign when a local committee composed of Messrs. W. R. Granger, W. B. Ramsay, P. E. Joubert, R. E. Jamieson and W. A. Desbarats was appointed to handle the details of the effort in the city of Montreal. Several suggestions, as to the general conduct of the campaign, were made and will be placed before the Dominion Executive Council at its next meeting.

The question of the provisions contained in the new bill recently introduced in the local Legislature providing for the registration of incorporated companies and partnerships was discussed and objections were raised to those features of the bill which were calculated to cause an overlapping in the registration provided for. This matter will be taken up with the Premier within the next few days.

An emergency committee was appointed composed of the chairman, F. W. Stewart, the vice-chairman, B. W. Coghlin, and the ex-chairman, Col. W. J. Sadler, to whom was delegated power sufficient to deal with matters demanding immediate attention and which cannot be held over until the next meeting of the executive committee.

Activities of Quebec Division

ANNOUNCEMENT that the annual convention of the C.M.A. this year will be held in the Province of Quebec has aroused a great degree of enthusiasm among members in the Quebec Division. They take this as a splendid opportunity of demonstrating the attractions of their province to manufacturers from other provinces and they have already decided to make a great effort on this occasion to provide for the convention in such a way that it will be a memorable event in the lives of the delegates in attendance.

A meeting of the Sherbrooke branch was held on February 1. A luncheon of the members was held in the Magog House preceding the business session and the manufacturers of the Eastern Townships turned out right heartily. Mr. Chet. Cleveland was in the chair and many matters of importance were discussed.

Bill No. 47, an Act Respecting Alcoholic Liquors, which provides for the handling of the sale of all intoxicating liquors b the Government of the province, has bee a matter of considerable interest to mer bers of the division. The original dra of the bill provided that all alcohol f industrial purposes be purchased throug a commission established by the Act. Th was objected to by manufacturers in th province manufacturing extracts, drug perfumes and other commodities requi ing a certain quantity of alcohol as a ingredient. The Prime Minister was i terviewed and agreed to allow those r quiring alcohol for industrial purposes t purchase it by permit direct from th distillers, such permits to be issued b the commission. This amendment i being made to the bill at the presen time.

Our Branch Chairmen for 1920-21

R. J. Hutchings
Chairman, Calgary Branch

LEEDS County, Ontario, was the birthplace of Mr. Hutchings, but at the age of eighteen he went to Western Canada, where he has since followed his business career. After four years in Winnipeg as an apprentice in the harness trade he went to Calgary in 1888 and soon after engaged in business, first as senior member of the firm of Hutchings & Riley, and later as vice-president and a director of the Great West Saddlery Company, Limited. This firm was formed in 1900 from the amalgamation of Hutchings & Riley, with other similar interests. Mr. Hutchings also acts as general manager for the company in Alberta, and is in charge of their British Columbia business.

Besides being a director of several other companies, Mr. Hutchings has been at various times a member of the Calgary City Council, chairman of the Calgary School Board, president of the Calgary Board of Trade, and president of the Associated Boards of Trade of Western Canada.

Kitchener and Waterloo Branch Annual

THE annual meeting of the Kitchene and Waterloo Manufacturers' Associa tion was held at Kitchener on Januar 25th. W. T. Sass, chairman, presided an among others present were: W. E Woelfle, vice-president; F. C. Hodgin and G. H. C. Lang. The Canadian Manu facturers Association was represented b President J. S. McKinnon, J. E. Walsh General Manager, and H. Macdonald Legal Secretary.

The chairman extended a welcome t the delegation from the Canadian Manu facturers Association, after which Pres dent J. S. McKinnon delivered an inter esting address on the industrial develop ment of the province, pointing to the un rivalled opportunities Canada presente for the development of home industrie and the cultivation of export trade on a comprehensive basis.

Mr. Walsh summarized the organizatio of the Canadian Manufacturers Associa tion, explaining the important function performed by the various departments.

Mr. Macdonald outlined the services o the Legal Department, giving an analysis of the legislation, federal and provincial dealt with during the last session, and explaining the operation of the new In come Tax Act. The large war debt o Canada called for heavy taxation, but the

esources of the country were ample to eet the requirements and, by taking adntage of the assistance offered by the egal Department, the performance of e technical duties imposed on the manucturers by taxing legislation could be duced to a minimum.

Interesting reports were submitted by e energetic secretary of the local Asciation, J. P. Scully, showing that the anch is performing highly important ities on behalf of the industries of Kitener and the neighborhood.

Farewell Banquet Given W. R. Ingram

ON January 27th the members of the Winnipeg branch gathered at the ort Garry Hotel and tendered W. R. gram a farewell banquet. Mr. Ingram as been appointed General Traffic Manger for Swift enterprises in Canada ith headquarters at Toronto.

The toastmaster was L. R. Barrett and ayor Parnell, W. J. Bulman, past presint of the C.M.A., M. F. Christie, past airman of the Winnipeg branch, and B. Hugg, K.C., solicitor for the Prairie vision, spoke in appreciative terms of e great service rendered the branch and innipeg employers generally by Mr. gram who was responsible for the reganization of the C.M.A. work in Westn Canada and the formation of the pres- t Prairie division. They commended m for the services rendered the various mmittees and the assiduous manner in ich he applied himself to the study of e subjects allotted to these committees d the constructive ideas suggested by n. All stated that Winnipeg had been better city in which to live as a result Mr. Ingram's activities and the busiss men of Winnipeg would miss him eatly.

J. B. Coyne, K.C., speaking on behalf Winnipeg business men outside the M.A., paid a tribute to Mr. Ingram for many services that he had rendered community.

Mr. Ingram was presented with a velling bag and was urged to pack it en and visit his many friends in nnipeg and, when this was not posle, to make good use of the fountain n, that went with it, to write them.

Branch Formed at Three Rivers, Que.

THE Quebec Division has added another member to its family of nches. On February 10 a new branch s formed at Three Rivers, with Vivian rill as chairman, and Anselme Dube vice-chairman. Three Rivers is one of e most rapidly growing towns in the ovince of Quebec and during the past r has added many industries to its eady thriving quota. With its growth e the desire that a branch of the .A. be organized in that city and to end the effort was made.

A luncheon meeting was held in the Chateau de Blois after which the organization work was undertaken. By a unanimous vote Mr. Vivian Burrill, the head of a large and long established lumber concern in Three Rivers, was appointed chairman. Mr. Anselme Dube, another prominent lumberman, was appointed vice-chairman.

An important agenda was then discussed, including the Equalization of Freight Rates, Business Profits Tax, Workmen's Compensation Act, Provincial Housing Scheme and the Made-in-Canada Campaign. On the general provincial committee for the study of the Workmen's Compensation Act, Mr. Robert Ryan, president of National Gloves, Limited, was appointed the representative of the Three Rivers branch.

A meeting of the Three Rivers branch will be held every other month during the year and it is hoped that a strong organization will grow out of the premier organization effort in that city.

The members of the executive committee for the Three Rivers branch will not be named until the next meeting, which will be held some time during the month of March.

The new branch embraces not only Three Rivers, but Victoriaville, Grand Mere, Shawinigan Falls and other important centres in this district, having at the present time a total membership of about fifty, which it is hoped will be doubled during the next twelve months.

R. W. GOULD.

Goes to Toronto

W. R. Ingram

Swift Canadian Company, Limited

MR. INGRAM, who has just been appointed general traffic manager in Canada for the Swift Canadian Company, will direct the traffic matters of the company from their head office in Toronto. For the past four years he has served as chairman of the Prairie Division's Transportation Committee. He was chairman of the Prairie Division in 1915-16 and has been a member of the Executive Committee for some years. In appreciation of the services rendered by Mr. Ingram to the C.M.A., members of the Winnipeg branch gave him a banquet on his departure for Toronto.

Executive of Quebec Division Meet

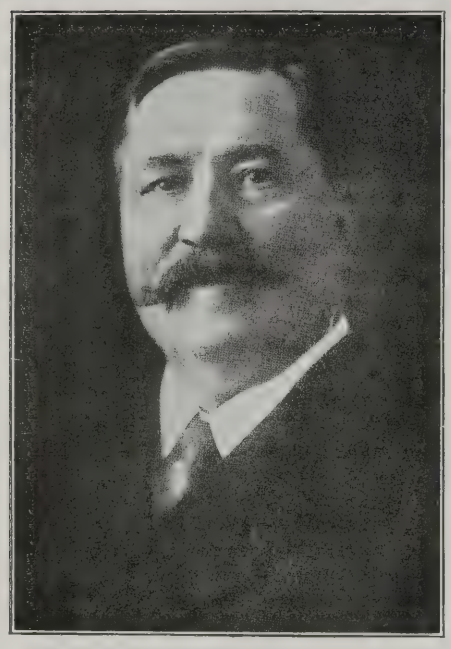
A MEETING of the executive of the Quebec Division was held on January 20th in the Old Colony Club, Montreal. C. Howard Smith, the chairman, was in the chair, following a lengthy absence in the Old Country, J. E. Walsh, general manager of the Association, was also present.

A report on the work that had already been done by the special committee appointed to study the Workmen's Compensation Act, and suggested amendments, reported the progress that had already been made. Two meetings with representatives of labor have been held and the outlook is that a common agreement will be arrived at in the matter of an amended or a new compensation law for the Province of Quebec.

It was decided to hold the February meeting of the Quebec Division in the City of Quebec, and since that decision was made it was found possible to hold the meeting of the Dominion Executive Council for the month of February in the same city. The date for the meeting was set for the 25th inst.

R. W. GOULD.

Lectures Endorsed on Social Hygiene



THE Toronto Branch has issued a circular to its members on the subject of social hygiene, which will probably be of interest to members in other parts of the country. It reads as follows:—

"The Dominion and Provincial Governments are co-operating in a programme for promoting Social Hygiene in Canada. As you know, both from the standpoint of disability and mortality, the situation as regards social disease is serious.

"The Toronto Branch Executive at a recent conference with Dr. Gordon Bates, representing the Canadian National Council on Social Hygiene, gave its general approval to lectures being delivered in the factories on the subject of Social Hygiene, on the understanding that satisfactory arrangements should first be made, in each case, with responsible officers of the corporations.

"It was also arranged that copies of any literature desired by the Canadian National Council to be distributed in the industries should first be submitted for

President of the Canadian Shoe Manufacturers Association

Joseph Daoust

President, Daoust, Lalonde & Company, Ltd.

THE new president of the Canadian Shoe Manufacturers' Association has a record of hard work behind him. He was born in 1865 at St. Eustache, Quebec, and educated at St. Mary's Academy and Ottawa University. In 1880 he took a position with the wholesale drygoods firm of P. P. Martin and Company, later becoming manager and buyer. While with them he established a shoe business, and from 1891 to 1897 he worked at the drygoods business during the day and carried on his own work at night. During the war he served as a private with the 65th Battalion. He is a member of the Montreal Board of Trade and Chambre de Commerce, and has held offices in several other organizations.

the approval of your Executive Committee.

"We trust that you will be interested and that you will afford the necessary facilities to the lecturers on whose behalf permission may be asked from time to time to address your employees at a convenient hour. The lectures to be given will be of real educational value."

Shoe Manufacturers Assemble in Toronto

SHOE manufacturers from all parts of the Dominion assembled in the King Edward Hotel, Toronto, on January 25th and 26th for the second annual meeting of the Canadian Shoe Manufacturers' Association. From both the business and social standpoint the convention was highly successful, and the use of French as well as English in the proceedings was found to be conducive towards the *entente cordiale*.

The welcome of the City of Toronto was extended to the delegates by Mayor T. L. Church, who spoke of the importance of the shoe and leather industries in Canadian industrial life and wished the Association every success. An address of welcome in French was then delivered by S. H. Parker, of Preston, vice-chairman of the Ontario Section, and F. H. Ahrens, chairman of the Ontario Section, followed in English.

The secretary-treasurer, Henry Viau, in presenting his annual report, gave a brief outline of the Association's history from its formation in December, 1918, During the second year of its life the membership has risen to ninety-nine, a growth of nearly 100 per cent. Standardization of cartons has been satisfactorily settled during the year, and export trade to France, England and Belgium has been stimulated. A statement was presented to the Tariff Commission during its Montreal session showing the necessity of protection for the shoe industry. Through the co-operation of customs authorities dumping has been kept at a minimum. Establishment of good-will among allied trades and associations, and the checking of fraudulent advertisements and injurious news items were other details of the year's work.

In the absence of J. D. Palmer, chairman of the National Advertising Committee, Alex. Marshall, the secretary, read his report. In the main objects of the campaign the committee believes that its efforts were successful. During the last two months of 1920 imports of shoes were 700,000 less than for the same period in the previous year. The report thanked the tanners and allied industries for their co-operation, and advocated an educational or publicity committee to succeed the National Advertising Committee. John A. Walker, of Toronto, then presented the Tariff Committee's report, which dealt chiefly with the statement presented to the Commission in Montreal.

Addresses were delivered by F. S. Scott, M.P., the retiring president; the Hon. E. J. Davis; L. J. Breithaupt, of Kitchener; Charles Holmes, of Montreal; Peter Doig; F. H. Knowlton, of the United Shoe Machinery Company of Canada, Limited, and James Acton, of the *Shoe and Leather Journal*.

A resolution against the Business Profits War Tax, one advocating stringent enforcement of anti-dumping legislation, and a third, recommending that the sales tax be collected exclusively at the source from wholesalers and manufacturers, and that it be paid to the Government every three months, were carried after some discussion.

F. S. Scott becomes honorary president for 1921. The newly-elected president is Joseph Daoust, of Daoust, Lalonde & Co., Montreal. John D. Palmer, of the Hartt Boot and Shoe Company, Limited, Fredericton, N.B., and J. E. Warrington, of the John Ritchie Company, Quebec, are respectively first and second vice-presidents. The following were elected to the executive: J. Leckie, J. Leckie & Co., Ltd., Vancouver; C. A. Sutherland, Amherst Boot and Shoe Co., Amherst, N.S.; Oscar Dufresne, Dufresne & Locke, Ltd., Montreal; D. F. Desmarais, La Duchesse Shoe Co., Montreal; T. H. Rieder, Ames, Holden, McCready, Montreal; H. E. Moles, J. & T. Bell Co., Ltd., Montreal; H. V. Gale, Gale Bros., Ltd., Quebec; J. E. Samson, J. E. Samson, Reg'd, Quebec; David Marsh, Wm. A. Marsh Co., Ltd., Quebec; F. H. Ahrens, Chas. A. Ahrens, Ltd., Kitchener, Ont.; S. H. Parker, Solid Leather Shoe Co., Ltd., Preston; G. W. McFarland, Williams Shoe, Ltd., Brampton; A. Brandon, Brandon Shoe Co., Ltd., Brantford; J. A. Walker, Walker, Parker Co., Ltd., Toronto; Paoul Lauthier, Kingsbury Footwear Co., Montreal.

President of the Canadian Lumbermen's Association

Dan McLachlin

McLachlin Brothers, Limited

DAN McLACHLIN, who was re-elected president of the Canadian Lumbermen's Association at their recent annual meeting in Ottawa, is the elder son of the late Hugh McLachlin, of Arnprior, Ontario. He was educated there and at McGill University. For eight years he was a member of the Arnprior town council, and for six years of that period he was mayor. Throughout his life he has been engaged in the lumber business. He is vice-president of the Canadian Forestry Association and a former president of the Quebec Limit Holders' Association. His re-election to the presidency of the C.L.A. indicates the esteem in which he is held by his colleagues in that organization.

Lumbermen Hold Annual Meeting in Ottawa

OVER two hundred delegates attended the annual meeting of the Canadian Lumbermen's Association held on January 12th and 13th at the Chateau Laurier, Ottawa, and many important matters were discussed. It was decided to establish a traffic department in the near future, and details for this will be worked out by the new executive.

The following resolution, moved by A. C. Manbert, and seconded by D. Champoux, was carried.

"That the Canadian Lumbermen's Association commends the action of the Government in holding hearings throughout the Dominion in an endeavor to obtain information regarding the fiscal Canadian customs tariff as will make it more scientific in construction and application, with the purpose of reducing to a minimum the hardships of its incidence and at the same time having due regard to the greater development of Canadian industry.

"We further recommend that the Government should issue a public statement at as early a date as possible, showing all classes of goods imported into Canada —quantity and value—with a view to promoting public sentiment that will discourage the importation of unnecessaries and luxuries.

"Be it further resolved that a copy of this resolution be forwarded to Sir Henry Drayton, Minister of Finance."

Other resolutions carried were a protest against the proposed prohibition of wooden shingles in Ontario, the expression of disapproval towards any increase in the rates of compensation provided by the Ontario Workmen's Compensation Act, and a resolution against the re-enactment of the Excess Profits Tax.

The following are the officers elected by the Canadian Lumbermen's Association for 1921:

President, Dan McLachlin, Arnprior, Ont; first vice-president, A. E. Clark, Toronto; second vice-president, Angus McLean, Bathurst, N.B.; Hon. treasurer, R. G. Cameron, Ottawa; secretary, Frank Hawkins, Ottawa. Toronto was selected as the convention city for 1922.

Pulp and Paper Association Annual Meeting

THE advantage of industrial associations which unite in their membership all those engaged in their particular line of activities, is illustrated by the decision of the pulp and paper manufacturers of Canada, arrived at, at the eighth annual meeting of the Canadian Pulp & Paper Association recently held in Montreal, to establish a department of scientific and technical research for the industry. The scheme contemplates the employment of a director of research and a staff, the establishment of a reference library and the initiating of practical experimental work in the mills best adapted for the purpose. The original outlay for the first year's work is estimated at $35,000, which will be collected *pro rata* from the mills based on their tonnage output. Later on, it is anticipated, that the department thus provided for will be operated in connection with the National bureau of scientific and technical research which it is proposed to establish in Ottawa under Governmental ownership and to be directed by the National Research Council.

In addition to this practical effort to further its own industry, the Association voted a grant of $5,000 towards the cost of publishing a series of vocational training text-books which are being issued under the direction of the Association, this being the third grant of a similar amount. These text-books are to provide a means whereby mill operatives and others who have been denied the opportunity of attending technical schools, may still obtain a technical knowledge of paper-making and all that goes to develop the highest skill in the industry.

There are some ten or twelve sections of the Association, each devoted to some particular branch or phase of the industry. These sections all held their annual meetings in connection with that of the parent organization, and in most of them discussions of a practical nature formed a large share of the programme.

The annual election resulted in the choice of Mr. P. B. Wilson, vice-president and general manager of the Spanish River Pulp & Paper Mills, Limited, Sault Ste. Marie, Ont., as president, and Mr. George M. McKee, general manager of the Donnecona Paper Company, Limited, Donnecona, Que., as vice-president. The Executive Council is composed of the chairman of the respective sections. Mr. A. L. Dawe is the permanent secretary-treasurer, with headquarters in Montreal.

During the meeting the Association heard addresses by Gen. Sir Arthur Currie, principal of McGill University, and by Prof. R. F. Ruttan of the Honorary Advisory Council for Scientific and Industrial Research in Canada.

The feature of the annual dinner was an address by Sir Henry Drayton, Minister of Finance, in which the minister gave an elaborate exposition of the duties as well as the benefits to the country of so-call "big business" organizations. The Hon. Walter Mitchell, provincial treasurer of Quebec, also made an able address.

The Association, it was stated at the meeting, now represents an industry whose capital exceeds $300,000,000, whose products exceed in value $200,000,000 yearly, and whose exports during 1920 reached a total value of $163,128,937, as compared with $96,168,188 the previous year.

President of Canadian Pulp and Paper Association

P. B. Wilson

Spanish River Pulp & Paper Mills, Limited

AT the annual meeting of the Canadian Pulp and Paper Association, Percy B. Wilson, Vice-President of the Spanish River Pulp & Paper Mills, Limited, was elected unanimously to fill the Presidential chair for the coming year. Born and educated in England, Mr. Wilson held positions with several firms there; from 1891 to 1895 he was in South Africa, first as financial manager of the St. Augustine Diamond Mine, and later as a diamond miner with Gould & Wilson. In 1913 he came to Canada and he has held his present position with the Spanish River Mills since 1915. In 1914 he was granted a commission in the 51st Soo Rifles. In January, 1917, he became acting O. C. with the rank of major.

Clay Products Association's Annual Convention

THE nineteenth annual convention of the Canadian National Clay Products Association was held in the Carls-Rite Hotel, Toronto, on January 25th and 26th. Among other matters discussed in his opening address, William Burgess, the president, spoke of the efforts made by the Association during the past year to prevent the sale of prison-made brick. In this regard Mr. Burgess said: "In view of the low profit margin on brick-making, advances in wages, transportation charges and overhead generally, all possible business is required to keep our plants, employing over 4,000 well-paid workers, running during the winter months." The convention decided to send a deputation to interview Premier Drury on this matter and to register opposition to labor's request for an increase in the amount of compensation that may be awarded under the Workmen's Compensation Act. The deputation is also to protest against a universal eight-hour day for labor. Natural conditions in the clay industries, it was pointed out, preclude the possibility of working in eight-hour time units.

According to the Association's established practice of promotion in office, Ryland H. New, of the Hamilton & Toronto Sewer Pipe Company of Hamilton, and last year's first vice-president, becomes president this year; Millard F. Gibson, second vice-president, succeeds to the position of first vice-president; T. H. Graham becomes second, and A. Dodds third vice-president, while Gordon C. Keith is retained as secretary-treasurer.

The Executive Council at Quebec

February meeting largely attended, with president and vice-presidents present — Luncheon of Quebec Division — Co-operation the keynote

SELDOM has a more representative group of Association officers assembled than was the case at the February meeting of the Executive Council held at the Chateau Frontenac, Quebec, on Friday, February 25. The president, J. S. McKinnon, and both vice-presidents, W. S. Fisher and J. R. Shaw, were present, as were also J. H. Fortier, vice-chairman, Quebec Division; F. W. Stewart, chairman Montreal Branch; A. Dubé, vice-chairman, Three Rivers Branch, and L. Letaurneau, chairman Quebec Branch. S. R. Parsons, ex-president, also attended.

Previous to holding the council meeting, a luncheon of the Quebec Division took place at which Sir Charles Fitzpatrick, Lieutenant-Governor of Quebec; Hon. A. David, Provincial Secretary; Hon. Frank Carvell and Mayor Samson, of Quebec, were guests of honor. The speeches on this occasion were of a most felicitous nature, the spirit of good fellowship and co-operation being strongly in evidence. The chair was occupied by Mr. Fortier and those who spoke were Sir Charles Fitzpatrick, Hon. Mr. David, J. S. McKinnon, W. S. Fisher and Mayor Samson.

At the conclusion of the luncheon, the Executive Council went into session when the usual monthly reports were considered as well as the report of the special committee on taxation, which was introduced by Mr. Parsons.

Proposal for a Conference on Labor Legislation

THERE is reason to believe that the Ontario Government instead of introducing Eight-Hour Day, Unemployment Insurance or Old-Age Pensions legislation will propose to the Dominion Government that there should be called a conference of Provincial Premiers and representatives of the various Legislatures, together with the nominees of employers and labor, as well as representatives of the Dominion Government and Parliament to discuss the whole question of labor legislation with a view to overcoming the constitutional and other difficulties by agreeing on joint action. To understand this proposal it is necessary to recall the fact that of the draft conventions passed at the Washington conference in November, 1919, practically all those relating to hours and conditions of work, as well as those relating to unemployment and old-age insurance, have been declared by the Dominion Government to fall within the legislative competence of the provinces. It is evidently felt by the provincial authorities, however, that no one province can well legislate on such a question as the eight-hour day, for instance, in advance of its sister provinces. Hence the proposal by the Ontario Government that all these matters should be dealt with by a Dominion-Provincial, Employer-Labor conference.

Joint Committee Reviews Legislation

A JOINT MEETING of the Legislation Committee of the Ontario Division and of the Industrial Relations Committee was held in the Association's board room, on Thursday, Feb. 17th, 1921, when several bills introduced in the Provincial House were under consideration.

The first was an eight-hour day bill which has been introduced as a private bill by an independent labor member. The Association's attitude to this legislation as formerly laid down at the September, 1919, conference at Ottawa, was one of strong opposition. This attitude was re-affirmed by the Association's representative at the Washington Conference in November, 1920, but nevertheless an eight-hour day resolution was passed and forwarded to the Canadian Government which has recently ruled that the question is one for the provinces. It is under these circumstances that the present bill has been introduced, not indeed by the Ontario Government, but by a private member.

While there is reason to believe that the bill will not be supported by the Government, it would be unwise to assume that the bill will be defeated. The Joint Committee, therefore, resolved to urge members to take the matter up with their local representatives in the Ontario Legislature so that they may appreciate the reasons manufacturers have for regarding the eight-hour day legislation as in every way detrimental to the best interests of the community. These reasons may be summarized as follows:

(*a*) The U.S. has not adopted and is not likely to adopt such legislation. Therefore, it would be all the more inimical to the industries of the Dominion.

(*b*) Canada is trying to attract foreign capital, and an eight-hour day law would tend to discourage foreign capital.

(*c*) As proved in France and Denmark, unnatural restrictions on labor would lessen production and therefore, would increase the cost of living.

(*d*) It would be impossible of universal application in a country so many seasonal industries, such as lumbering, etc.

(*e*) As it could not and would not apply to agriculture, it would increase the drift from country into town.

(*f*) It is in effect a movement for higher pay, not for shorter hours.

The present bill, known as the "Maximum Work Hour Day Act," contains the following provisions:

1. The normal work-day shall be eight hours.

2. The normal work-week shall be forty-four hours.

3. All industries, trades, etc., are included, except agriculture.

4. Exceptions are made in the case of firemen, watchmen, nurses, etc.; also in the case of machinery break-downs and emergencies generally.

5. Systematic overtime shall be legal except in emergencies when the limit is ten consecutive hours.

6. Penalty in case of infraction by employer or employee, $1,000 or six months imprisonment.

The Joint Committee had also under consideration an Act providing for one day of rest in seven, also introduced by a private independent member. As drafted, this Act demands twenty-four hours' rest in every week in any business establishment. The Committee understand, however, that the Act is really intended to apply only to the business of hotel-keeping, restaurants, etc.

The Gold Coast Contract

(*Continued from page* 69.)

coast, and has a climate stated to be about ten degrees colder than the average summer in Montreal.

In view of the extensive character of the development work planned for the Gold Coast, much interest attaches to the negotiations now under way between Canadian Government and the Gold Coast and Nigeria, with a view to reaching a preferential trade agreement similar to that now closed between Canada and the West Indies, but, in view of the existing Anglo-French convention, it is stated this agreement could not be effected within five years. Such an agreement would be of great benefit to Canada, for it is stated that Halifax is nearer to the Gold Coast than it is to Brazil, whence this country receives most of the tropical produce which Nigeria and the Gold Coast could supply.

An advance party of foremen were to leave Canada about the end of February for the Gold Coast, but the main body of workers will not be sent out until things are in readiness for their housing there.

First of the Little Tours of Ontario

Manufacturers' Party Visit Guelph, Kitchener, Preston, Galt and Brantford, meeting with very cordial receptions

THOUGH organized on short notice, the first of the four tours of Ontario industrial centres by members of the Association and head office officials proved to be a decided success. Planned for the purpose of informing members in the provincial cities of what was going on at headquarters, arousing their interest in Association work, bringing them together in their several communities for the discussion of problems of mutual interest, and otherwise promoting the welfare of the Association, the undertaking was helpful alike to the visitors and the visited. If the three succeeding trips work out as satisfactorily much good will be accomplished.

Guelph, the first city to be visited, was reached by the contingent from Toronto at 10.56 a.m. on Monday, February 21. The party were met at the Grand Trunk station by a number of the local manufacturers, headed by J. L. Taylor, president of Taylor, Forbes Co., Limited. They were driven immediately to the big Taylor, Forbes plant, where, under the guidance of Mr. Taylor and members of his staff, an inspection was made of the premises. To those who had never enjoyed the privilege of seeing this plant before, the visit was a revelation. Its immense extent, covering over eight acres of ground; the activity prevailing in all departments; the extent and variety of the products being manufactured, there being over 1,400 different lines of hardware alone, and the fine, clean and efficient condition in which plant and equipment were maintained, came in for much favorable comment.

Luncheon at Guelph.

At noon a luncheon was tendered to the visitors at the Kandy Kitchen by the Guelph Chamber of Commerce, and about fifty sat down at small tables tastefully arranged for the occasion. The chair was occupied by R. L. Torrance, chairman of the Chamber's reception committee, who expressed the pleasure of the Chamber at having as guests the officers and members of the Association from outside points. A welcome was also tendered by Mr. Taylor on behalf of the manufacturers of Guelph, while C. L. Dunbar spoke eloquently on behalf of the Chamber of Commerce.

The president of the C.M.A., J. S. McKinnon, who headed the party, spoke in reply. He congratulated Guelph on its many fine industries, and expressed the appreciation of the visitors for the kind reception and entertainment accorded. He then delivered a eulogy of the British Empire and the part that it had played down through the centuries in resisting tyranny and maintaining freedom. He urged his hearers to live up to their high heritage and build a greater and better Canada on the sure foundation of justice.

H. Macdonald, secretary of the Legal Department, C.M.A., followed, with a review of the various services rendered by the Association and a careful analysis of recent labor legislation and taxation measures and proposals. He was followed by R. L. McIntyre, McGregor, McIntyre & Co., Limited, member of the Executive Council, who told of the benefits of membership in the C.M.A., and explained what was proposed in connection with the reorganization of the safety associations under the Ontario Workmen's Compensation Act. J. M. McIntosh, secretary in charge of the party, concluded the speechmaking with a brief address.

Visits to Factories.

During the afternoon three of Guelph's industrial establishments were inspected. The visitors were motored first to the carpet factory of the Guelph Carpet and Spinning Mills, Limited, where, under the guidance of Mr. H. Quarmby, general manager, they were initiated into the mysteries of carpet weaving. The wonderful machinery employed in producing the many beautiful grades and designs of rugs and carpets, and the skill exhibited by the artisans, were much admired. The spinning mill near by, which has recently been considerably enlarged, was also visited and its numerous interesting processes examined.

There followed a visit to the fine new plant of the Northern Rubber Co., where about 250 hands were found busily engaged in making the various styles of footwear produced by this company, these including rubbers, rubber boots, overshoes, canvas boots, and several other lines. The factory is a model building from the standpoint of light, air and roominess. About 3,200 pairs of shoes per day are being produced at present.

A short visit was next paid to the plant of the Partridge Rubber Co., Limited, which was not far distant. This industry is now about four years old, and it has had a successful history. Its principal product is automobile tires. The plant is a modern one, thoroughly fireproof and well lighted and ventilated. Owing to limited time, only a cursory view of the interesting processes employed was possible.

The party left by train for Kitchener at 5.45 p.m., thoroughly pleased with their experiences in Guelph. On enquiry, it was found that practically all Guelph industries are operating and, while some are slack, there is an appreciable improvement in conditions. The spirit among the manufacturers of the city was hopeful, and the visitors were told that there was very little unemployment.

A delegation of Kitchener manufacturers, headed by J. H. Baetz, Baetz Bros. & Co., Limited, chairman of the Kitchener and Waterloo Branch, C.M.A., welcomed the visitors on arrival at Kitchener. Here, for the entertainment of the party, a dinner was served at the Masonic Hall at 7 p.m. A splendid attendance of local manufacturers and business men was present, upwards of one hundred persons sitting down at the tables. Mr. Baetz presided, and did the honors of the occasion most acceptably.

Dinner at Kitchener.

The visitors' headliner on this occasion was H. Macdonald, who elaborated on his luncheon address and gave his hearers a most instructive account of the work of the Legal Department in connection with legislative matters. Mr. Macdonald showed how important it was that every piece of legislation should be carefully studied by experts and gave several illustrations to demonstrate savings that had been made as a result of the efforts of the Legislative Committee and Legal Department. When he was through, members took advantage of the occasion to discuss the income tax act and the proposed turnover tax, a fruitful subject for consideration.

A. Neighorn, Nicholls Chemical Co., Montreal, member of the Executive Council, followed with a short speech, in which he pointed out the value of the Association's services to the membership and expressed his views on the subject of taxation. R. L. McIntyre then dealt in more detail with accident prevention work, outlining the history of workmen's compensation legislation in Ontario, pointing out its defects and impressing on his hearers the importance of getting practical men to take an interest in the reorganized safety associations. J. M. McIntosh thanked the local members for their entertainment and dealt with the advantages of organization, illustrating his points with several illustrations.

See Tire Industry.

After spending the night of February 21st at the Walker House, the visitors were taken on the following morning for a thorough inspection of the immense plant of the Dominion Tire Co., Limited. The party were divided up into groups of five, and each group was taken in charge by an officer of the company, who spared no effort in ex-

plaining the intricate details of tire manufacture. Here again the extent of the plant (the building is 960 feet long, four stories in height); the marvellous machinery and the skill of the workers, came in for admiring comment. The plant, when running to capacity, can produce 3,600 tires per day, but, of course, at present it is not doing this. There has been improvement since the recent slackness and the company looks for better business soon. The hospital, the lunch room, and other features of welfare work were examined during the visit.

As at Guelph so at Kitchener, a hopeful spirit prevails. Manufacturers report a steady improvement. Most plants are running and some are increasing their output.

Visit to Preston.

Leaving Kitchener at noon, the party journeyed by radial railway to Preston, where they were received by George D. Pattinson and a number of other local manufacturers, and proceeded to the Hotel Kress for luncheon. There was another gratifying turnout of members at this point, the attendance at the luncheon being well up to fifty, with representatives present from Kitchener and Hespeler. Mr. Pattinson occupied the chair, and, after the toast to the king had been honored, he extended a hearty welcome to the visitors.

The speakers on behalf of the C.M.A. were H. Macdonald; Major L. L. Anthes, Anthes Foundry Co., Toronto; A. Neighorn, Nicholls Chemical Co., Montreal; and R. L. McIntyre, McGregor, McIntyre Co., Limited, Toronto. All the speakers emphasized the value of the Association to the members, and urged a greater use of its services. The question of taxation was thoroughly discussed, and the opinion of members present taken on the desirability of a turnover tax in lieu of the business profits tax. At the conclusion of the speechmaking a vote of thanks to the speakers was moved by D. N. Panabaker, R. Forbes & Co., Ltd., Hespeler and seconded by C. Dolph, president of the Metal Shingle & Siding Co., Limited, Preston.

The party left by radial at 4 p.m. for Galt. On arrival they were taken to the Galt Club, which was headquarters during the rest of the day. Some members took advantage of the interval before dinner to visit local manufacturers, while others enjoyed a rest in the club premises. At seven a party of about forty sat down to dinner, under the chairmanship of R. O. McCulloch, Goldie & McCulloch, Limited. This proved one of the best gatherings of the trip as it developed into a sort of round-table meeting during which members individually expressed their opinions on the questions brought up for discussion.

The same speakers who had participated in the proceedings at Preston took part, but at somewhat greater length. Major Anthes, for example, spoke very forcibly on the absolute necessity for organization and action on the part of the manufacturers if they wanted to retain tariff and other advantages so necessary to their continued well-being. Mr. McIntyre and Mr. Neighorn were equally emphatic in their declarations regarding the work and worth of the Association. A vote of thanks was moved by S. L. Clark, Perfect Machine Co., Ltd., seconded by C. Turnbull, C. Turnbull Co., of Galt, Limited, and the meeting broke up about 10 o'clock.

After spending the night at the Iroquois Hotel as guests of the Galt manufacturers, the tourists proceeded to Brantford on Wednesday morning, February 23, arriving about 10 o'clock. They were received by C. A. Waterous, Waterous Engine Works Co., Limited, chairman of the Brantford Branch C.M.A.; R. Scarfe, Scarfe & Co., Limited; and S. B. Chadsey, Massey-Harris Co., Ltd. A tour of industries was at once commenced, the first plant to be visited being that of Scarfe & Co., paint and varnish manufacturers. So far as the production of varnish is concerned, this is an old-established industry, dating back to 1877. The manufacture of paint, however, was started only about a year ago in a compact new building erected for the purpose. The various processes in the manufacture of paint and varnish were inspected, and Mr. Scarfe showed with considerable pride the first shipment of paint in cans going to the hardware trade.

A rapid tour was next made of the immense Brantford plant of the Massey-Harris Co., which covers some eighteen acres. The extent of this industry was a surprise to many, building after building and floor after floor being traversed in apparently an endless succession. Here all the mowers and most of the binders manufactured by the company are produced, and in all departments there appeared to be much activity.

Next followed an inspection of the big foundry and shops of the Waterous Engine Works Co., close by, and here some immense pieces of machinery were shown in process of fabrication. A good deal of it was intended for pulp mills, while quite a number of big road rollers were being erected.

Envelope Manufacture.

Finally the party visited the Barber-Ellis Company's envelope and stationery manufacturing plant, to which a fine new addition has recently been made. This plant, if operated to full capacity, could produce 1,900,000 envelopes per day, but, of course, it is not doing that at present. The wonderful envelope-making machines with which the plant is equipped were objects of admiration as they turned out envelopes at a rate running up to 125 per minute. Many of these envelopes are printed in advance of manufacture, and a whole battery of fast presses are performing this operation at a rate of about 70,000 per day. The plant also makes its own supply of cardboard boxes, a there is a department devoted to t manufacture of fine stationery a papeteries.

At one o'clock the visitors were ent tained at luncheon at the Brantford Cl about thirty of the local members tur ing out for the occasion. The C.M. party had meantime been strengthen by the arrival of J. R. Shaw, Woodstoc chairman of the Ontario Division, a he took the place of honor beside t chairman, C. A. Waterous, and gave t leading speech for the visitors. M Waterous spoke briefly at the outs telling of the formation of the Brantfo branch, pointing out its needs and givi some statistics about the city of Bra ford and its industries. He was follow by Ald Stedman, chairman of the Indu trial Commission, who welcomed the vis tors on behalf of the city, and expresse regret for the absence through ill-healt of Mayor Wedlake, Mr. Stedma enumerated reasons for the industri progress of Brantford, and showed ho most of the industries were owned locall and how many of them had passed dow from father to son.

Mr. Shaw Speaks.

Mr. Shaw dealt at the outset with th work that was being done by the Associ tion, using workmen's compensation legi lation as an illustration. He told how men all over the country were gi ing their time and money to promote th interests of the Association, and thereb the interests of all manufacturers, an urged more devotion on the part of th rank and file. He then showed how Can dians had resolved to build up a natio under the British flag on the norther half of the continent, and how, in orde to achieve their object, tariff protectio was absolutely necessary. He appeale for the support of all manufacturers i the fight that was being waged for th maintenance of adequate protection.

Brief speeches were also made by H Macdonald and R. L. McIntyre along th lines of their previous addresses, and th meeting concluded about three o'clock Toronto members of the party returne home during the afternoon, bringing t a successful conclusion the first of th four projected Ontario tours.

Hormisdas Morais, Secretary-Treasurer St. Johns, P.Q., writes: "The factories in the city of St. Johns have been kept in operation since the war was over; new buildings (houses) are being erected and a new factory is being established. Those factories already established have increased their employment. I can assure you that industrial conditions in this community at the present time are very satisfactory."

Transportation Department

Express Rate Increase.

The Board of Railway Commissioners on February 2nd issued General Order No. 327, allowing an increase averaging approximately 30 per cent. in all express rates and charges. Details as regards this increase are set forth in the judgment which forms appendix "A" to the Order as follows:

First-class rates and charges, increase 35 per cent.

Second-class rates and charges, increase 25 per cent.

Commodity rates, increase 20 per cent.

In applying these increases, the following rule for disposition of fractions governs:

Any amount 2½c. and less—not counted.

Any amount over 2½c. up to, but not exceeding 5c.—considered as 5c.

In addition to the above, the Board also cancelled the cartage allowance of 15c. per hundred pounds, which was adopted in the last judgment covering increase in express rates. It will be recalled that this so-called 15c. cartage differential was deducted from the rate per hundred pounds at points where cartage service was not maintained by the express companies.

The judgment in considering the evidence submitted by counsel for the City of Toronto, provides that the revenue from the Money Order business, and returns from investments are to be considered part of the transportation portion of the express business.

In regard to the payment by the Dominion Express Company to the C.P.R., the judgment states that one and one-half times the first-class freight rate is the proper basis for payment to the railway company.

The view was also expressed that express rates should be made on the basis of a multiple of the standard first-class freight rate, except on goods moving under commodity rates, or such articles as fish, fruit, cream and various food products.

The increases took effect February 9th, and various tariffs have, or will be, reissued so as to avoid confusion in the application of the increases.

Special Committee Begins on Revision of Freight Classification.

The Special Classification Committee, which was recently appointed to deal with the revision of Classification No. 16, has had two very successful meetings in the offices of the Canadian Freight Association, Montreal. The first meeting was held February 8th, 9th and 10th, and the second meeting February 15th and 16th. Very promising progress was made in the disposition of the rules pertaining to the classification. An announcement will be made at an early date regarding these rules, when the matter will be placed before the public generally.

While shippers have generally expressed the opinion that ratings should not be dealt with by the Committee until after the Board of Railway Commissioners issues some decision in connection with class rates arising out of the general inquiry into freight rates, the Committee have felt that some progress can be made along the lines of disposing of some of the ratings. A suggestion has been made that at least those ratings which are not to be changed can be checked. It should also be possible to dispose of a number of the items, changes in which are of more or less minor importance. It is the Committee's purpose, of course, to call upon the different lines of trade for their views before disposing of these ratings. A very successful meeting has already been held in connection with a very important industry and satisfactory arrangements arrived at as to the proposed ratings and minimum weights to be applied.

Interested members should study carefully the present ratings contained in Canadian Freight Classification No. 16, and also, if possible, the ratings proposed in Freight Classification No. 17. A copy of Canadian Freight Classification No. 17 is being distributed so that it will be in the hands of each one of the divisional secretaries, each one of the branch secretaries, and each one of the chairmen of the trade sections. This should give ample opportunity to all members, at least for the purpose of studying the questions.

Tariff Department Bulletin

Department Rulings

Usual packages containing goods subject to *ad valorem* duty if included in the invoice value of the goods they contain, and not charged separately on the invoice, are subject to the same duty as the goods they contain.

Book entitled "Standard Estimating Course for Printers" and "Standard Cost Finding Course for Printers," rules to be dutiable under tariff item 171 at the rate of 10 per cent. under the general tariff.

Crushed or ground quartz ruled free under tariff item 297.

West Indian Trade Agreement

The following is a statement from the Commissioner of Commerce at Ottawa respecting the status of the new Canada-West Indies Trade Agreement. British Guiana and Trinidad have established new tariffs as have also British Honduras, Grenada, St. Vincent and St. Lucia.

The new tariff in British Guiana giving 50 per cent. preference to Canadian products went into effect on December 7th, 1920. The new tariff in Trinidad, giving the Canadian products 33 1-3 per cent. preference went into effect on November 6th, 1920. The preference, under the agreement, should have been 50 per cent. and it is understood that steps are being taken by the authorities in Trinidad to increase the preference accordingly. British Honduras has a new tariff effective from October 12th, 1920, which grants a preference of 33 1-3 per cent. to Canadian products. Grenada has introduced a new tariff, effective from the 23rd of November, 1920, granting Canadian products a preference of 33 1-3 per cent. The Island of St. Vincent has also introduced a new tariff effective from the 31st of December, 1920, which grants a preference of 25 per cent. to Canadian products. Under the agreement this preference should have been 33 1-3 per cent. and the Canadian Government has called the attention of the St. Vincent authorities to the discrepancy. The Bahamas, which under the agreement were to give Canadian products a preference of 10 per cent., have as a matter of fact granted a preference of 25 per cent. It is possible that this may be only temporary. Jamaica has ratified the agreement, but has not introduced, as yet, the new tariff schedules which are necessary in order to conform to the terms of the agreement. The Barbados, Bermudas, and the Leeward Islands have not as yet notified their ratification of the Agreement.

Regulations re Report of Matches as Ships' Stores

By an Order in Council dated January 24th last, authority has been granted for the delivery in bond by any Canadian match manufacturer, of matches for ships' stores to vessels bound on deep sea voyages without payment of the sales tax thereon.

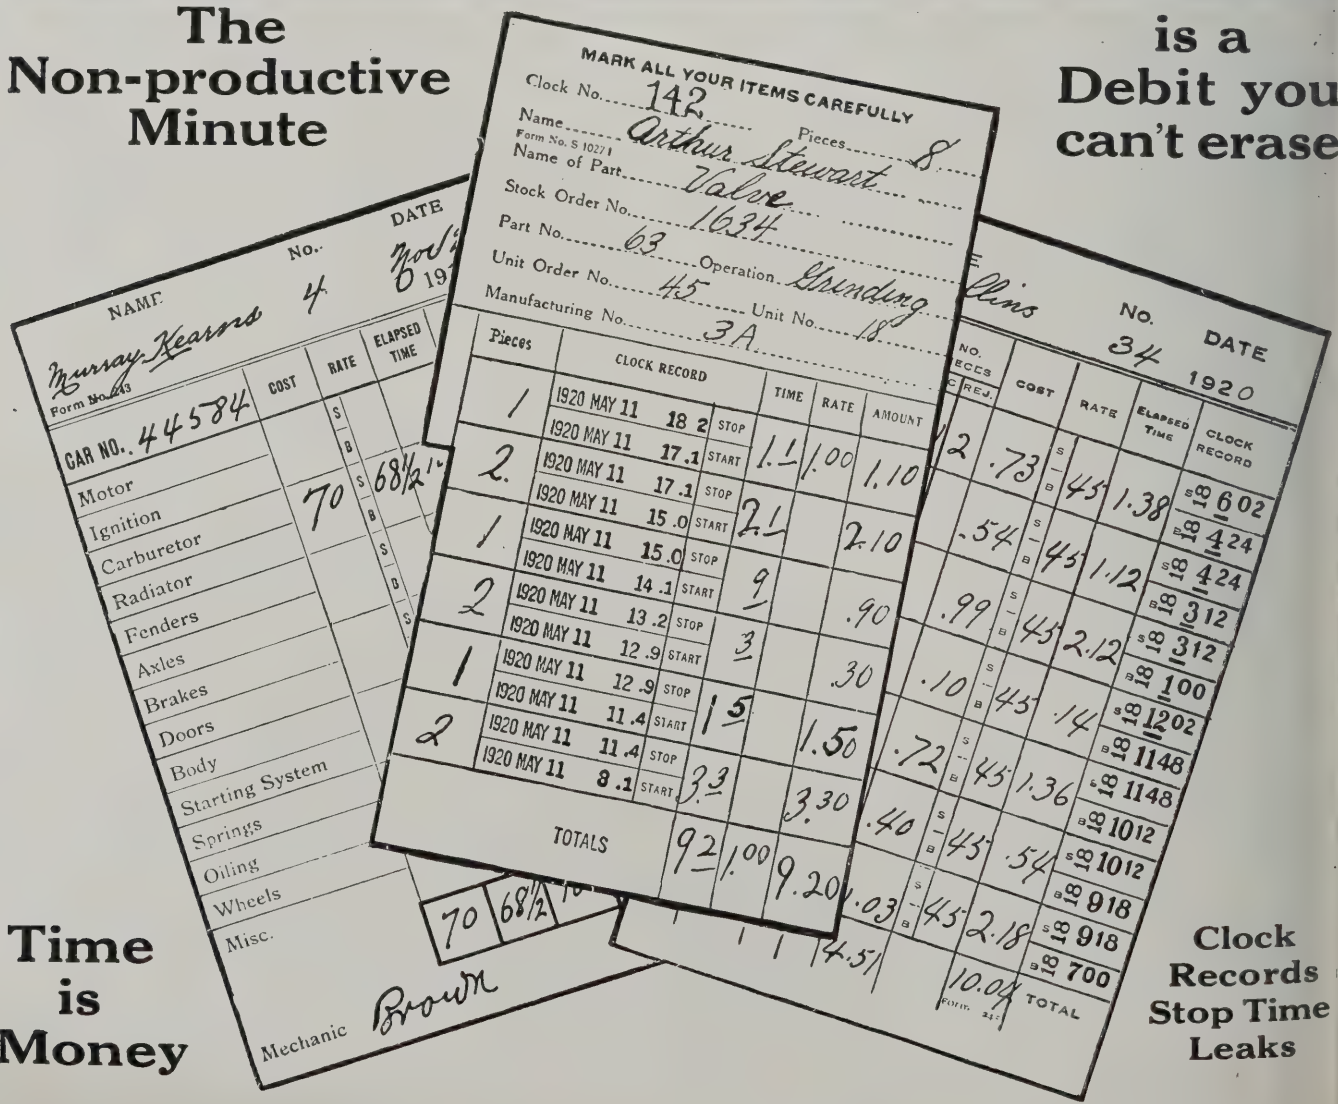
Full particulars of the regulations have been communicated by the Department of Customs and Inland Revenue to the manufacturers of matches in Canada.

Sales Tax

Purchases by Wholesalers from Manufacturers.—The Department of Customs and Inland Revenue has cancelled the ruling reported in the last part of our Circular No. 290, and it is not now necessary for a wholesaler to certify that the goods purchased by him are for resale.

All that is required under the new ruling of the Department of Customs and Inland Revenue is that the wholesaler should quote the character and number of sales tax license held by him.

Type Setting Exempt from Sales Tax

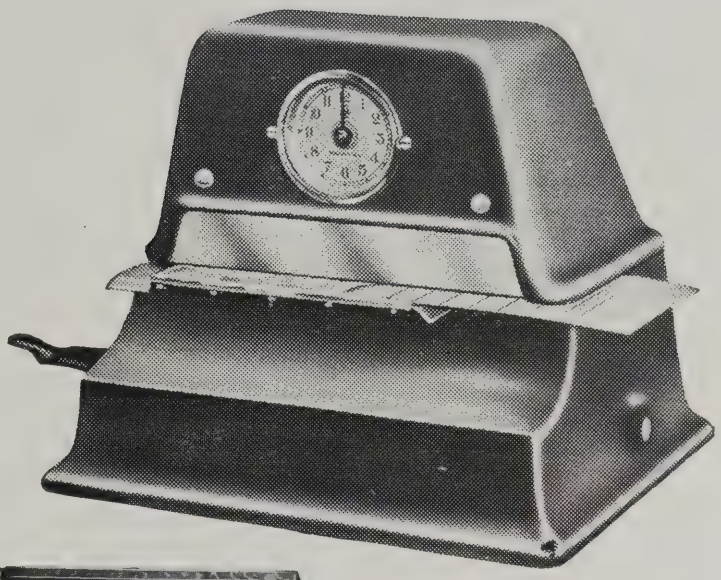


The Department of Customs and Inland Revenue has ruled that the sales tax does not apply in the case of composition set up by type-setters for printers, as it is understood that such transactions represent labor only.

International Job

The Non-productive Minute

is a Debit you can't erase

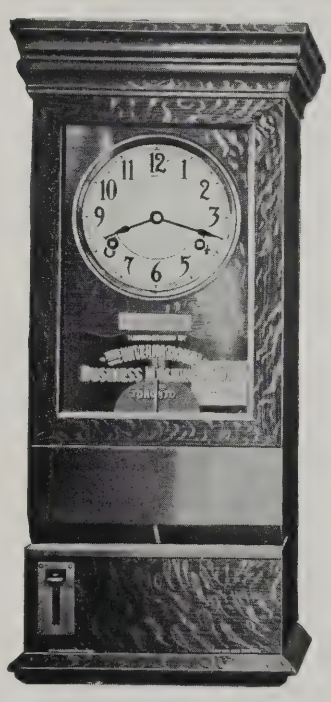


Time is Money

Clock Records Stop Time Leaks

Time Recorders

Wherever there is a Payroll there should be Internationals



What They Do

SHOW to the minute how much time each worker devotes to each job; tell you the total actual producing time of each worker each day; speed up production by calling attention to delays and all time losses, thus making it possible to remedy them; give you accurate and essential data for cost accounting.

How They Do It

AT start and finish of each job, worker inserts card in slot in the Recorder and presses down lever at left—it's done in a few seconds. The time record is clearly printed on the card, the indicator insuring that each record will be placed in right position.

Pertinent Questions

1. ***What is the total of your purchased hours for each department each month?***
2. ***Do you get all the hours purchased?***
3. ***What percentage of the purchased hours are productive hours?***
4. ***How does this fluctuate each month?***
5. ***Do you prove your purchased hours with job time card?***

If you cannot answer these questions immediately, we would welcome an opportunity to show you how you may.

Time is more precious now than ever before in the history of manufacturing. Systematize your use of it for greatest possible returns. Use International Job Time Recorders.

Montreal Cottons, Limited

Satisfactory Year's Results Disclosed in Annual Financial Report

A satisfactory year's results, despite the difficult conditions prevailing in the textile industries during most of the period, were disclosed in the annual statement of the Montreal Cottons, Limited, submitted at the annual general meeting of shareholders held in Montreal on February 22nd.

Cloth sales during the twelve months amounted to $8,804,459, an increase of over $1,000,000 in the year, the 1919 total being $7,678,506, and that of 1918, $5,917,520. Manufacturing profits, reflecting the disturbed conditions prevailing during the greater part of the last half of the year, amounted to $729,303, against $995,039 in 1919, and $703,095 in the previous twelve-months period.

After deducting fixed and other charges and with income from other sources swelling the year's total by $79,510, there remained a balance of $617,251 available for application to the $3,000,000 outstanding capital stock of the company, or equivalent to 20.57 per cent. This compared with $662,538, or 22.08 per cent. in 1919, and $681,220, or 22.7 per cent. in 1918.

Dividends totalling $390,000 were distributed among the shareholders during the year, against $345,000 in 1919, the rate on the common stock having been increased from 5 to 6 per cent. in the year.

The balance sheet portion of the statement shows that the comfortable financial position occupied at the end of the previous year underwent in 1920 further strengthening, current assets exceeding liabilities of a like character by $3,557,232, against $3,003,949 at the end of the 1918 period. Elsewhere the balance sheet disclosed few changes.

Officers and directors were re-elected for the ensuing year without change, as follows: S. H. Ewing, president; Sir Chas. Gordon, vice-president; Sir Herbert Holt, F. W. Molson, F. C. Inlay, Hon. D. Dandurand, A. Hamilton Gault, Sir Frederick Or Lewis, and John P. Black, with John Lowe, secretary-treasurer and general manager.

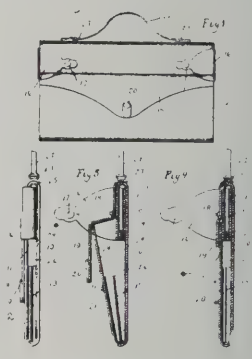
DEPENDABLE SERVICE

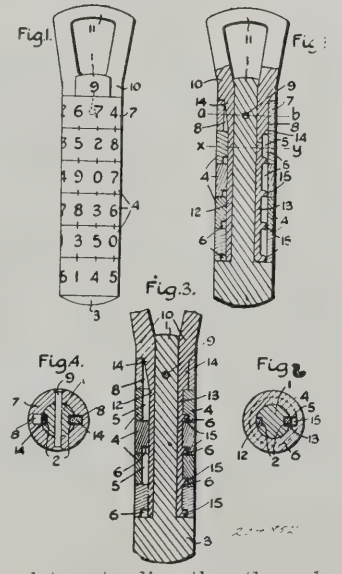
PATENTS FOR SALE



WINDOW OPENER

This invention relates to improvements in window openers, and particularly to devices for opening the upwardly swinging cellar windows. One object of the invention is to provide a novel and simple device of this character by means of which a cellar window can be quickly and easily raised into open position without the necessity of standing on a box or chair. Another object is to provide a device of this character which includes novel means for holding the window in elevated position, which can be readily engaged or released by a person standing on the cellar floor. Canadian and United States patents for sale by:

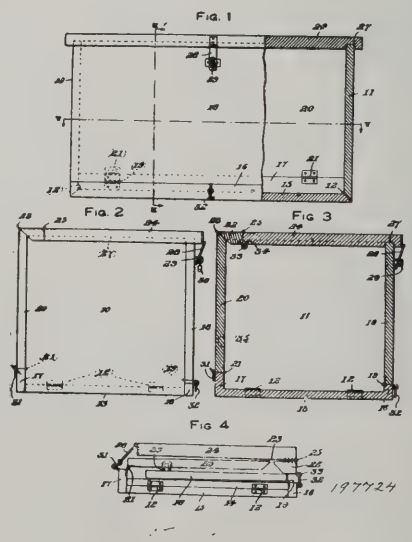
HERMAN J. LINDEMANN, P.O. Box 162, Ann Arbor, Mich., U.S.A.



MUSIC CASE

This invention relates to a music case comprising a body formed from a strip of pliable material folded to provide a rear wall, and a forward wall having an upper flap and a lower flap extending in overlapping relation to the upper flap when closed, spacing means secured between the rear wall and the free edge portion of the upper flap to provide a rack receiving pocket in the upper portion of said carrier, webs secured between the rear walls and the edge portions of the lower flap of the forward wall to provide a music receiving pocket in the lower portion of said carrier, a closure flap secured to the upper flap and extending in overlapping relation to the lower flap and releasably connected therewith, and side wings connected with the rear wall and having their free end portions releasably connected with the closure flap to provide closures for the ends of the rack receiving pocket. For information regarding Canadian patent, which is for sale, write:

GEORGE R. RIDGEWAY, Olympia, Washington, U.S.A.

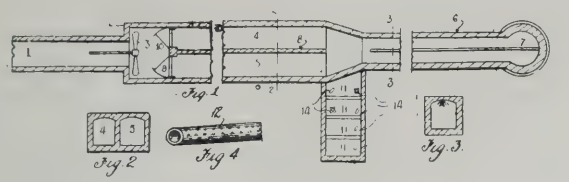


COMBINATION LOCK

This invention relates to combination locks, and consists in the combination with a shank having longitudinal slots therein and an enlarged lower portion, of a plurality of ring portions rotably mounted on said shank one above the other, each of said ring portions having a vertical slot extending therethrough, and having a circumferential groove in the lower surface thereof, a ring portion mounted on the shank above the aforesaid ring portions and secured to the said shank, said ring portion having a plurality of vertical slots extending therethrough, a forked member having an eye at the upper end thereof and depending tines, one of said tines provided with a plurality of downwardly extending suitable spaced lugs, and both of said tines provided with suitable shoulders. Canadian patent for sale. Write the inventor,

LLOYD GREEN, Newholm, Ontario, Canada

FOLDABLE BOX

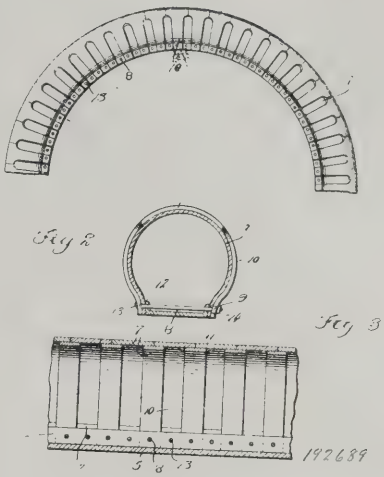


This invention relates to foldable boxes, and the primary object of the invention is the provision of a box formed of any suitable material and capable of folding in compact relation when not in use, readily set up in box formation when desired and forming a box of great strength. A further object of the invention is to provide a box possessing great strength and durability capable of being compactly folded and being formed of any desirable material, and in any suitable size. For information regarding Canadian patent, write

VINCENZO RUGGIERO, Box 117, Wendel, West Virginia, U.S.A.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

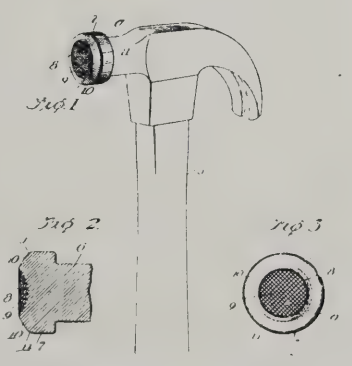
PATENTS FOR SALE—*Continued*



FUME ARRESTER FOR SMELTING PLANTS

This invention relates to fume arresters, for smelting plants, Heretofore much damage has been done to growing crops, fruits and vegetables, for miles around the smelting plants known to me, and a great loss of the metal being smelted, has been caused by the poisonous fumes discharged into the atmosphere from the stacks of smelting plants. The object of my invention is to arrest the said fumes before they are discharged into the atmosphere, and thereby prevent the great damage to growing crops in the vicinity of the smelting plant, as well as to condense and precipitate the fumes in a suitable fume-arresting tunnel, from which the precipitated metal is discharged into suitable receiving tanks, where it is treated with well-known chemicals, and thereby recover the condensed and precipitated metal, which is of great value. Canadian and United States patents for sale. Write

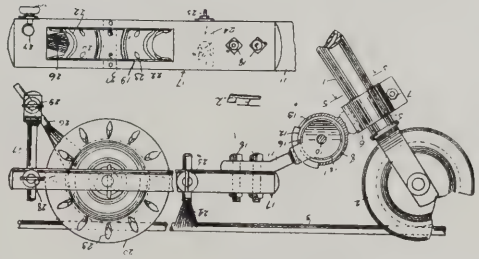
ANTONIO FERRARI, Collinsville, Ill., U.S.A.



TIRE

This invention relates to a spring tire and consists of a plurality of spaced bowed springs secured to the rim, tread plates overlying the spaces between these springs and having their extremities secured to the rim, and enlargements formed with the tread plates and arranged to abut each other at the crest of the tire. For information regarding Canadian patent, which is for sale, write:

SELMER O. HOFF, Trail, Minnesota, U.S.A.

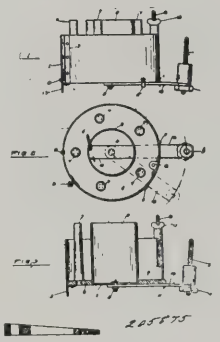


HAMMER

This invention relates to a hammer having an enlargement at one end of its head, having a concavity in its striking ends, said concavity having a serrated wall, an inclined striking face on the said end of the enlargement inclined upwardly and rearwardly from the peripheral edge of said concavity to the peripheral edge of said enlargement, said peripheral edge of the enlargement being rounded. For information regarding Canadian patent, which is for sale, write

WILLIAM K. KINGSLEY, Far Rockaway, N.Y., U.S.A.

AUXILIARY TROLLEY DEVICES

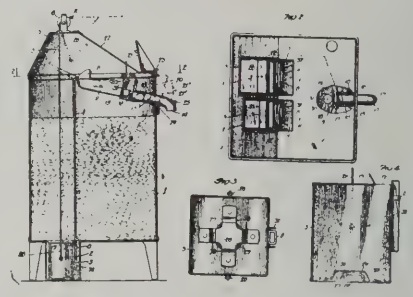


My invention relates to that particular class of electrical conductors for trolley cars in which the trolley poles are equipped not only with a principal trolley wheel for effecting a proper contact of the electrical wire, but an auxiliary wheel by which the wire may be cleared of incrustations of ice, sleet, etc., immediately prior to passage of said principal wheel thereover, the object of the invention being to effect a more thorough clearing of the wire from said incrustations of ice and sleet, to reduce the cost of construction, to render the device more efficient, while at the same time the construction remains simple, durable and strong, and to procure other advantages and results. Particulars of Canadian patent can be had from:

WILLIAM J. DAVIS, Windfall, Indiana, U.S.A.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

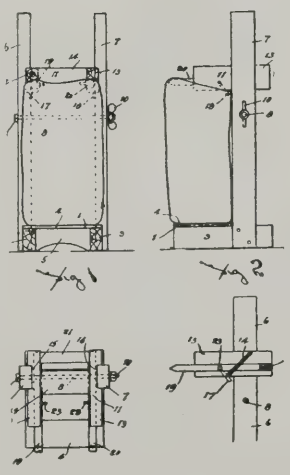
PATENTS FOR SALE—*Continued*



MOLDING APPARATUS

This invention relates to molds especially adapted for making cast metal bevelled flanges or filler rings. It often happens when installing flanged piping that it is desirable to run the pipe at odd angles which do not conform to any of the standard fittings, and therefore a special filler piece has to be made to fill up the gap or space between the abutting flanges, which are at a slight acute angle to each other, instead of having their faces in the same plane. This filler piece is commonly called a "dutchman." Ordinarily a special mold has to be made and a lead casting poured and machined before the work can proceed. My device provides a handy means of doing this quickly, without any appreciable loss of time, and consists in the novel and advantageous construction illustrated herewith. Canadian and United States patents are for sale by the inventor.

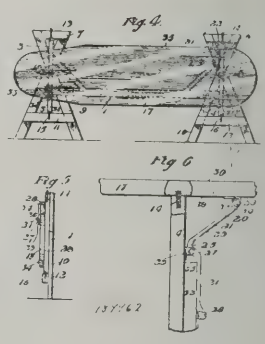
JAMES M. MARK, 706 J. Adams Street, Oregon City Oregon, U.S.A.



MEASURING TANK

This invention relates to measuring tanks, and it is intended mainly for the use of retailers in measuring such fluids as oil and for delivering the measured fluid to an oil can, which is preferably hung on a nozzle attached to the tank. The objects of the invention are to provide in a tank of the type described, a counterweighted nozzle which will automatically, after a measuring operation, oscillate back into position to permit any oil which remains in the nozzle to drip back into the tank, and to provide a hinged cover for closing the recess in which the nozzle is pivoted for the purpose of making the apparatus safer and preventing the escape of any oil vapor. A further object of the invention is to provide a design of nozzle which may be rocked into operative position by, and to support, the can which is to receive the oil. For full particulars of Canadian and United States patents write:

JOHN L GEIER, 2767 Lincoln Avenue, Chicago, Ill., U.S.A.

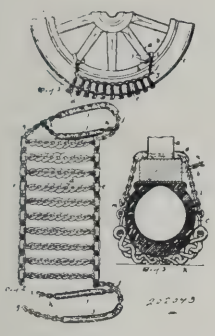


BAG HOLDERS

This invention relates to improvements in bag holders, and the object of the invention is to provide a simply constructed, easily operated and durable holder which can be readily adjusted to accommodate various sizes of bags, the adjustment provided allowing of the holding of the bags of various lengths and of various sized mouths. The invention consists essentially in a platform or stand, a pair of upright guides, a bag carrier adjustable up and down in respect to the guides and a pair of adjustable fingers formed as part of the carrier. For details of this Canadian patent correspond with

JAMES SINCLAIR, Bredenbury, Sask., Canada

IRONING TABLE

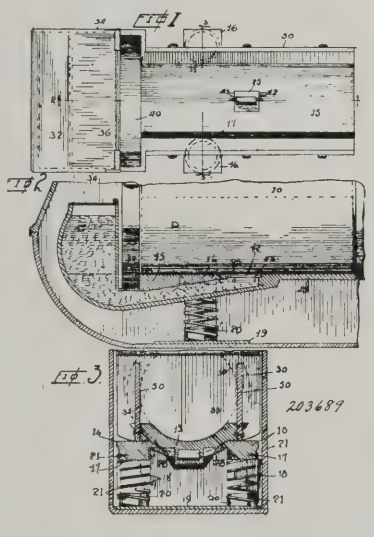


This invention relates to an ironing table including a frame, standards pivotally connected to said frame and adapted to be turned in a position substantially parallel with and at one side of the frame, an ironing board adapted to be operatively supported by said frame, and hinges including an arm and two pivoted brackets secured respectively to the frame and to the under surface of the ironing board to permit the latter to be turned down into a position at the side of said frame. Canadian patent for sale. Full data can be had from the inventor.

JOHN T. HILBERRY, R.D. No. 1, Lansdale, Pa., U.S.A.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

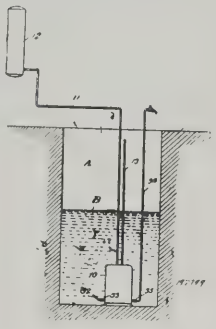
PATENTS FOR SALE—*Continued*



TRACTION ATTACHMENT FOR VEHICLE DRIVING WHEELS

This invention relates to traction attachments for vehicle wheels and it consists in a bovel traction attachment in which the portion thereof which actually has contact with the ground is graduated in thickness for certain purposes, to be pointed out, according to the service to which the attachment is to be put. The invention as claimed consists of a traction attachment for a vehicle driving wheel including a flexibly connected series of members having means to secure it to the wheel with said members in contact with the tread face of the wheel, said members increasing in thickness one after another. Canadian and United States patents for sale. Full particulars can be had from

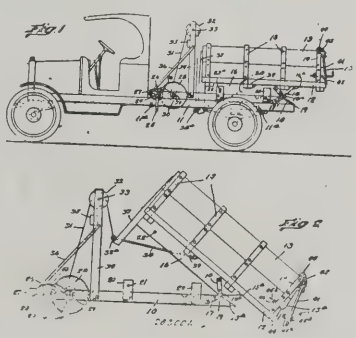
FRANKLIN RIGHTMIRE, Paterson, N.J., U.S.A.



CAR JOURNAL LUBRICATOR

Several patents have been granted me on constructions similar to the one illustrated herewith, all of which are directed to the utilization of rather heavy grease, as distinguished from the fluid oils, which have been chiefly, if not almost exclusively, used in car journal boxes. I have found the utilization of such heavy greases as the "candle" material or greases of somewhat lighter consistency than that, and yet being thick and "heavy," to be of great value in the lubrication of car journals. The invention illustrated has for its principal objects the provision of more simple and more easily operated means for applying to a car journal bearing continuously when in operation a desired amount of thick and heavy grease than suggested in my former patents, and in that respect is an improvement upon those inventions, and, with respect to the art generally, to provide for the utilization of thick and heavy grease by means of a device of few parts, of simple construction, one which is strong and durable, which contains no parts likely to get out of order, which is highly effective in suitably lubricating the journal with substantially the minimum of lubricant, which will so lubricate the journal for a very large mileage without re-charging or other attention, and, withal, to provide a device which may be installed in the present standard journal box casing, and which, when installed, is substantially secure against unauthorized removal. Details of United States and Canadian patents can be had by writing the inventor:

THOMAS J. HOLMES, 105 W. Monroe St., Chicago, Ill., U.S.A.

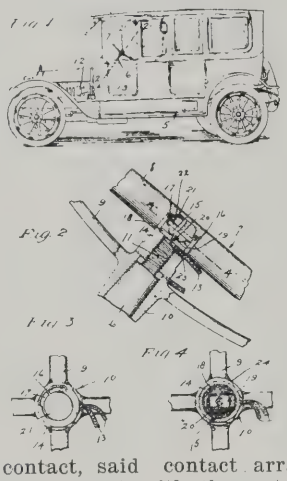


COMPRESSED AIR PUMP

This invention relates to pumps, particularly to that type operated by compressed air, and has for its object the provision of a pumping mechanism including a tank disposed within a body of water entirely below the surface thereof, and having connected and communicating therewith a pipe leading from a source of compressed air supply, the tank having disposed therein a float actuated trip for operating a valve controlling the flow of compressed air into the tank, the trip being automatically operated by the rise and fall of the float. An important object is the provision of a device of this character in which the tank is automatically refilled by gravity when the float reaches its lowest position and operates the trip, cutting off the supply of compressed air and opening an exhaust port. Another object is the provision of a device of this character in which the control valve is not operated directly by the float, but is operated by a trip which is in turn actuated by the float. A pumping mechanism of this character is simple and inexpensive in manufacture and installation, efficient in use, continuous in action, durable in service, and a general improvement in the art. Canadian patent for sale. Write:

CUYLER C. MILLER, Jr., R.R. No. 2, Carlinville, Ill., U.S.A.

RAISING, LOWERING AND SPREADING DEVICE FOR TRUCK BODIES

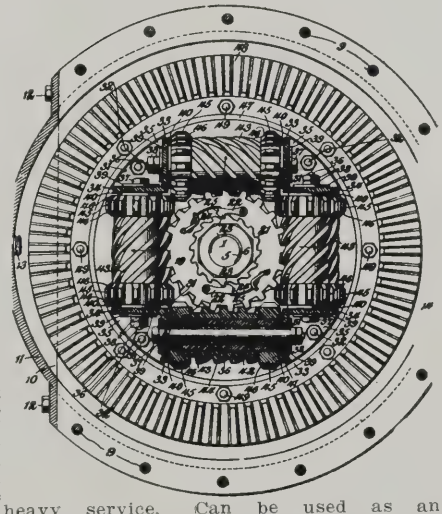


This invention relates to trucks, especially automobile trucks, having a body adapted to carry and spread uniformly over a road or the like while in motion a load of pulverulent material, as gravel and sand. An object of this invention is the provision of a body having reliable, efficient, and relatively inexpensive manually operable raising and lowering means for it by which the tilting of the body for the dumping or spreading of the load may be effected. A further object is the provision of means by which the uniform spreading of the load over the surface of the road, or it may be a field, may be regulated whereby to control the thickness of the coating applied to the surface. A yet further object of this invention is generally to improve the construction of truck bodies and raising and lowering and spreading devices associated therewith. For particulars of Canadian patent, write:

ROBERT T. MAWHINNEY, c/o Canadian Fairbanks Morse Co. St. John, N.B., Canada

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

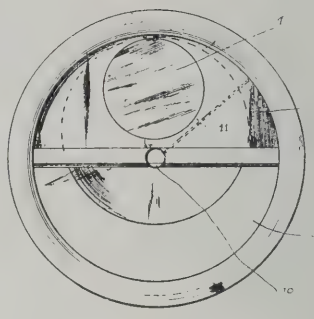
PATENTS FOR SALE—*Continued*



PUSH BUTTON FOR STEERING POSTS

This invention relates to push buttons for steering posts and consists of the combination with a steering post having a steering wheel, of a nut securing the steering wheel to said post, said nut having a socket, a push button mounted in said socket, an insulating disc seated in the socket below the push button, a spring contact secured to said disc; normally out of contact with the nut and yieldingly supporting the push button, and lead wires attached, the one to the nut and the other to the contact, said contact arranged to be moved into engagement with the nut by the depression of the push button to close the circuit through the lead wires. Write particulars of the sale of Canadian patent to

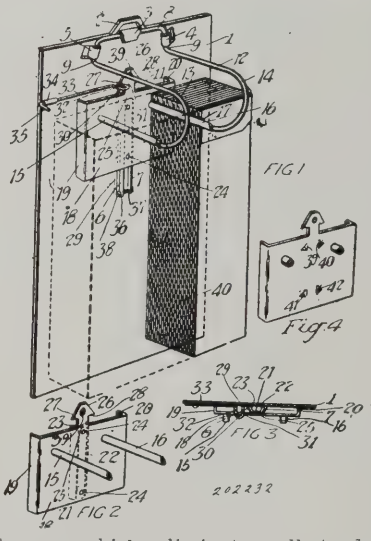
STEWART J. DANSKIN, c/o The Brown-Danskin Co. Grand Forks, North Dakota, U.S.A.



DIFFERENTIAL GEARING

This invention is designed for all services, the automobile, truck, tractor, traction engine, steam shovel, ditching machines. All parts can be forged. Can be built for worm drive equally as well as for bevel drive; can be built with two pairs of worm rollers for light service and with three pairs for heavy service. Can be used as an axle or counter shaft differential. Very simple in design, has few working parts and all working parts can be replaced by removing housing plate without taking the axle off the machine. The length of axles are the same. Worm rollers and worm wheels are the same, no right or left, they fit anywhere. The object of this differential is to see all the working parts and replace them in a few minutes, and also of pulling out of slippery ruts, where only one or both wheels are down. It does away with spinning the wheel that is on the slippery spot. Makes all turns equally as well as any other type of differential. The pitch of worm rollers and worm wheels has to be made to suit the length of wheel base; a light car needs more pitch in the teeth than a heavy, long car or truck. This differential increases the hauling power under all road conditions. If interested, please write for information and terms to:

JOHN A. FINEFROCK, R.D. No 2, Canal Fulton, Stark County, Ohio

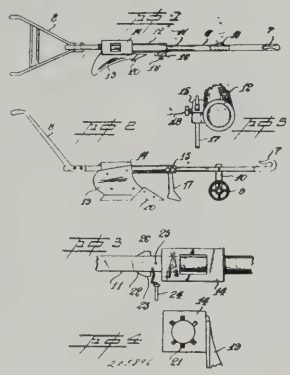


HEADLIGHTS FOR AUTOMOBILES

This invention relates to improvements in headlights for automobiles and consists in a casing, a reflector changeably positioned in said casing and a novel means of allowing the reflected rays to pass out from said casing. The object of my invention is to provide an attractive danger signal for approaching vehicles and to provide a headlight which will not reflect the light over a predetermined distance from the road level. The inventor of this headlight will be pleased to send data regarding same in answer to inquiries. Write

LEON L. DORAY, 120 Kent Street, Hamilton, Ont., Canada

LOOSE-LEAF HANGING FILE

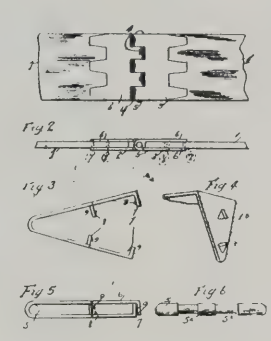


This invention relates to a hanging wall file in which the action differs from those now on the market, in that the curved fingers are rigid and the stick pins, which carry the papers, are mounted on a slidable base which slides away from the curved fingers to allow the filing of the papers, and, when returned, is held in position against the fingers by a spring catch. This style of file should become popular quickly with those who have use for a hanging wall file. The outstanding advantages are the rigid, instead of spring fingers, which eliminates all tendency of the stick pins becoming loose or bending in toward one another under the frequent blows on their outer ends delivered by the spring fingers being snapped shut against them; the ability to remove the stick pins with their contents in one piece, allowing another set of pins to be placed in position instantly, it being understood that extra pins or refills would be handled by retailers, which feature should be of great value to those who have monthly records to keep separate, the stick pins each having a hole at their outer ends, which enables a string to be threaded through and tied to hold the contents in place when pins and sliding base is removed. The sliding base is provided with a hanger which allows of this piece, with contents, being hung up. For those who wish to continue the use of the original pins, the holes at the outer ends of the pins afford a simple and speedy method of threading the contents on a string for bundling. Details of this Canadian patent can be obtained from:

WILLIAM H. MAWSON, Trenton, Ontario, Canada

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

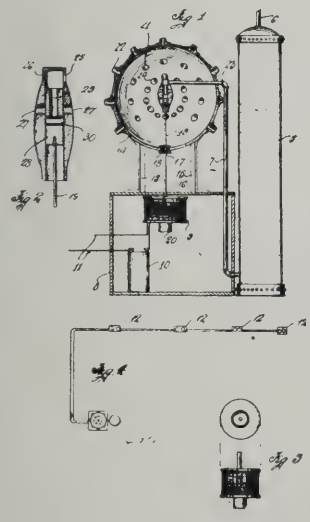
PATENTS FOR SALE—*Continued*



PLOUGH

This invention relates to ploughs, and more particularly to a plough for use wherein the mold-board and colter can be turned to different angular positions relative to the main beam of the plough, and by so doing the handles are always in an upright position for guiding the plough. The object of the invention is to provide a plough of novel construction wherein the mold-board and colter are so attached to the beam that the beam can be easily turned in relation to the mold-board and colter thereby adjusting the handles to the normal upright position while the ploughing is done at an angle thereto. Canadian patent for sale by

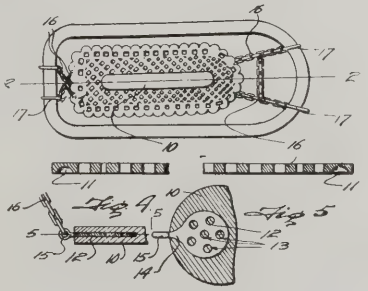
P. PETRUMICK, 901 Gore Street
West Fort William, Ont., Canada



BELT FASTENER

This invention relates to a belt fastener and has for its object to provide a device of this character which embodies novel features of construction whereby the two ends of a belt can be securely fastened together without the necessity of using the conventional lacing. Further objects of the invention are to provide a hinged belt fastener which can be readily applied to the belt, which will securely grip the ends thereof without the necessity of using bolts or similar fastening members, which will not injure the belt, and which possesses the necessary flexibility to admit of the belt fastening around a pulley in the usual manner. Canadian and United States patents for sale. Full particulars can be had from:

ROY McNICOL, R.R. No. 4, Lanark, Ontario, Canada

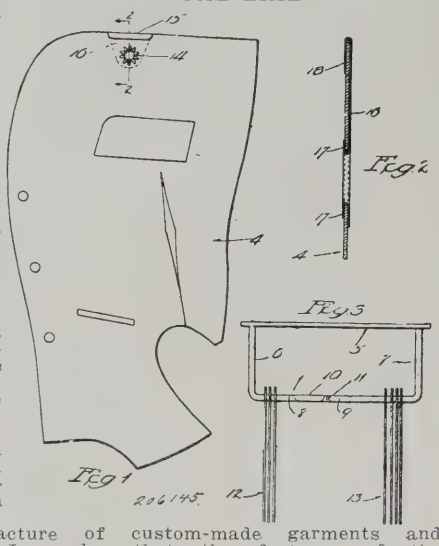


FIRE EXTINGUISHERS

This invention relates to improvements in fire extinguishers, and has for its principal object a globular-shaped container having particularly designed nozzles radiating in all directions so that when water is forced into said container it will be spread all over the room in which the extinguisher is located. Canadian patent for sale by

PAYTON JACOBS, 66 Versailles Street
Montreal, Quebec, Canada

SAFETY BATH TUB MAT



This invention relates to a safety bath tub mat, the principal object of the invention being to provide a comparatively simple and inexpensive device, preferably in the form of a mat of rubber or composition which can be readily applied to or removed from a bath tub, which will be effective in preventing slipping and consequent injury to persons using the bath tub. It will be understood that the interior surfaces of the modern types of bath tubs are enamelled and that these surfaces, when wet, are exceedingly slippery, and I propose to provide a flexible mat adapted to fit in the bottom of the tub and to provide means for anchoring said mat in position so that it will not shift or slip under a person's weight. Canadian and United States patents for sale by

MRS. LAVINIA D. TOLLEY, 130 Lavergne Street
Algiers, La., U.S.A.

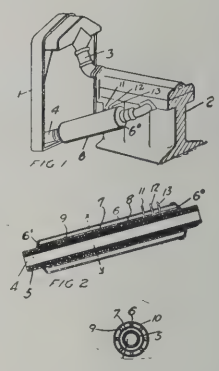
HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE—*Continued*

REINFORCEMENTS FOR THE EDGES OF CARDS AND THE LIKE

The invention has to do with an arrangement for reinforcing or strengthening the edge portions of cards and the like which are provided with perforations adjacent to said edge portions. More particularly it has reference to the reinforcement of the edge portions of paste board or card board patterns which are used in the manufacture of custom-made garments and the like. In order that the features of the invention may be better understood and their significance appreciated, I will first explain that in many tailoring establishments it is the common practice to make up paste-board or card-board patterns showing the forms to which the cloth should be cut for the different parts of the garment. These patterns are used time after time and day after day during the season, and, consequently, it is necessary to devise or provide some means for filing them or preserving them, so that they will be accessible when needed. The common practice has developed of filing or preserving these patterns on racks on which they are hung. This makes it necessary to provide a perforation near the edge portion of each pattern which will receive the wire or rod of the rack on which it is suspended. It has also become the custom to provide these racks or supports with hinged gates or passages, which can be swung open by the pressure of the edge of the pattern itself, to the perforation in the pattern to be passed over the wire or rod. In the ordinary course of operations in such an establishment, the edges of the patterns will be driven rather violently against the gates of the racks in the hurry and bustle of things, so that the edge portions of the patterns soon become mutilated and broken through at the perforations. To overcome this I provide a reinforcement for the edge portions of the patterns in conjunction with the perforations thereof, so that not only will the perforations be protected, but also the entire edge portion of the pattern, including the periphery of the perforation. This reinforcement is provided from the use of a single piece of sheet metal or the like, which can be very cheaply and economically cut out and formed by very simple operations. The inventor will furnish information regarding Canadian and United States patents on request.

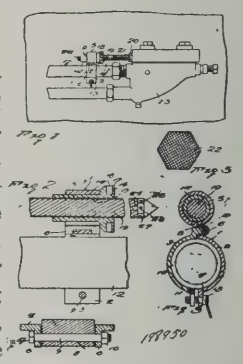
MESSRS. HECKLINGER & CURTIS, 1302 Washington Blvd. Chicago, Ill., U. S. A.



CHAIN FASTENER

This invention relates to a chain fastener and consists of a link, open at one end, a rivet extending across said link at the open end thereof, a pair of levers pivoted at their rear ends upon said rivet, spring washers interposed between said levers and the adjacent link ends, each of said levers being provided with a plurality of angularly inclined slots communicating with one edge thereof, and the slots on one of said levers overlapping the slots on the other lever when the said levers are closed. Write for particulars of Canadian patent, which is for sale, to:

MESSRS. STREVY & MILLER, Penawawa, Wash., U. S. A.

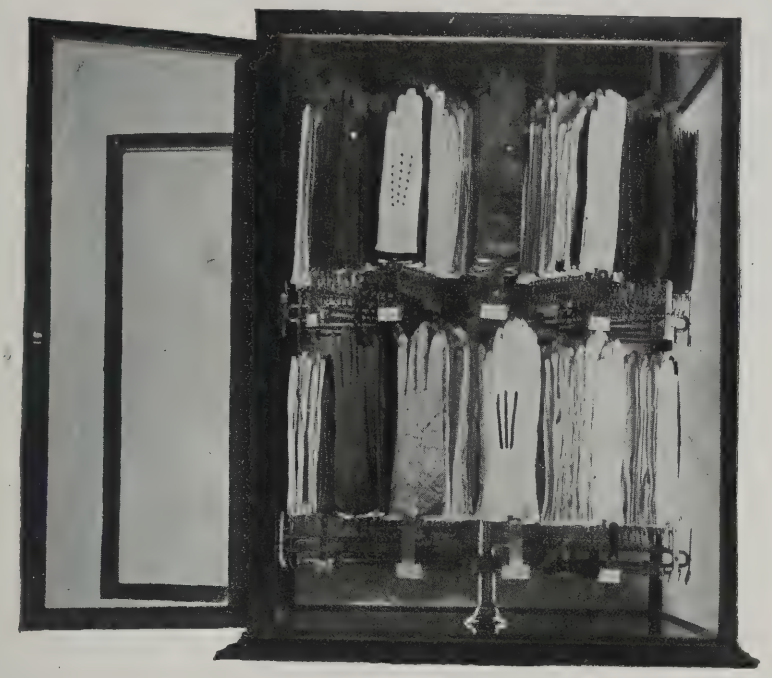


TEMPERATURE REGULATOR

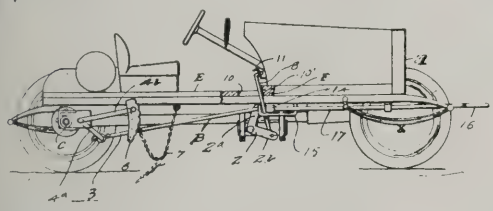
This invention relates to a temperature regulator, particularly designed for use in a Ford car, the combination with the return pipe of the water circulating system, an insulating cover for the pipe, a cylinder having closed ends carried by the pipe so as to be spaced apart therefrom, an electric winding surrounding the insulating cover of the pipe within the cylinder and having its terminals extending through the wall of the cylinder, an outer cover of insulating material covering the winding, and longitudinal spacing strips fitting between the outer insulating cover and the cylinder to form intervening dead air spaces. Write the inventor for further information regarding the sale of his Canadian patent:

RICHARD H. CRONYN, London, Ontario, Canada

PIPE JACK



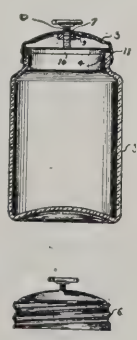
This invention relates to a pipe jack and includes an attaching and supporting bracket composed of a pair of metallic sections, other sections being bent to form an arcuate jaw, a straight portion continuing from one end of the jaw, and having an opening therein, a tubular receiving body continuing from the straight portion, ears projecting from the straight portion at the ends of the opening, another straight portion continuing from the opposite end of the jaw, the other section being bent to form an arcuate jaw, an offset hinged ear formed at one end of the last mentioned jaw, pivotal means engaging the ears for pivoting the sections together, a straight portion formed at the outer terminal of the last mentioned jaw, means detachably engaging the straight portions with the outer terminals of the jaws for releasably holding the jaws in clamping relation, and co-acting adjusting members, one of which is operably mounted in the tubular body. For information regarding Canadian patent, which is for sale, write



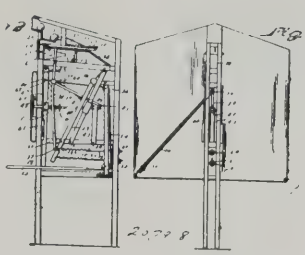
J. H. JONES, 309 Wash. Avenue., Etowah, Tenn., U. S. A.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

PATENTS FOR SALE—*Continued*

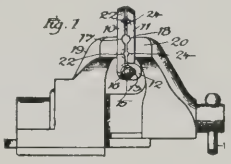


DISPLAY RACK FOR GLOVES. The present invention appertains generally to display racks, and aims to provide a device of that character constructed especially for displaying gloves in an effective manner, and enabling a selection to be conveniently made without the unnecessary handling of the gloves. This invention affords practical and efficacious means for holding and displaying various sizes, styles and prices of gloves or equivalent articles, to enhance the selection of the gloves, both by the salesman and customer. Canadian and United States patents for sale. Write Walter M. White, Rockymount, Virginia, U.S.A.

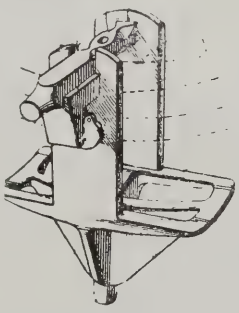


SAFETY STOP. This invention relates to a safety stop and consists of the combination with an automobile of a rockably mounted crank shaft extending transversely thereof in advance of and adjacent the rear wheels of the automobile, brake blocks mounted on said shaft and positioned to be lowered beneath and in front of said rear wheels, a bell crank lever, connections between one arm of said lever and the crank shaft for rocking said shaft, a vertically movable setting rod connected to the other arm of said bell crank lever, said rod being provided with a transverse groove intermediate its ends, a setting pin positioned for engagement into said groove for normally holding the rod in lowered position, a bumping bar projecting forwardly of the automobile and a tripping bar connected to said bumping bar so as to be forced rearwardly thereby, said tripping bar being positioned in front of and closely adjacent the setting rod so as to force the same rearwardly out of engagement with said setting pin upon rearward movement of the bumping bar so as to release the crank shaft and permit downward movement of said braking blocks into operative position, and spring means for retaining the setting rod in engagement with the pin. Canadian patent for sale. Write Harry C. Taylor, West Frankfort, Illinois, U.S.A.

SEALER TOP. This invention relates to tops for sealers, jars or the like, and consists in a novel means whereby the top for the jar or sealer is tightly compressed against the top of the sealer so as to make a perfectly air-tight connection. The object of this invention is to provide a sealer construction with a suitable top whereby, after screwing the top on, pressure can be exerted to the subsidiary top for still further tightening the connection between this subsidiary top and the sealer. Write Josiah Cowan, 571 Bethune St., Peterboro, Ontario, for full particulars regarding Canadian patent.

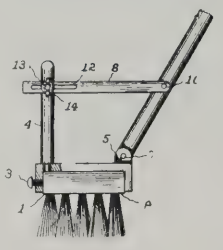


BICYCLE PUMP LOCK. This invention consists of a pump lock to hold a bicycle pump, comprising a clamp capable of being fixed to a bicycle frame, a lock fixed to the clamp, a cylindrical casing fixed to the clamp, a bushing in the cylindrical casing, a clamp yoke swingingly confined in the bushing, a catch pin made on the lock yoke, a spring confined on the lock yoke to constrain it normally downward, said bushing and cylindrical guide having a bayonet slot in which the catch pin is confined to hold the lock yoke in disengaged position from the lock. For full particulars regarding U.S. patent write Adolph P. Lundin, 149A Kithner Ave., Johannesburg, Transvaal, S. Africa.

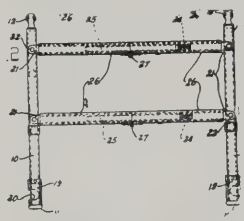


GAME APPARATUS. This invention relates to a game apparatus consisting of the combination of a pivotal spring actuated batting lever and locking and trip mechanisms for controlling the same, a ball chute traversed by the free end of the batting lever for discharging a ball therefrom, a closure for said chute yieldingly held in its chute closing position, a follower carrying a tilting closure actuating finger, and connections between the batting lever and the follower. Canadian and U.S. patents for sale. For full particulars write Norman Shupe, Box 405, Long Beach, Cal., U.S.A.

VISE CLAMP. This invention relates to vise clamps comprising co-acting head members having their confronting faces in constant parallel relation and including portions in spaced relation, one of said spaced portions having a slotted projection and the other spaced portion having an aperture, and a clamping means operating through the slot and the aperture, whereby the head members may be adjusted bodily toward and away from each other. Full particulars regarding Canadian patent can be had from William T. Plowhead, Middleton, Idaho, U.S.A.

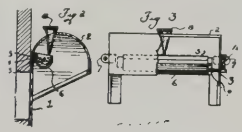


SAFETY AUTOMOBILE CHOCK. The invention consists of a metal ground engaging and pointed body having an upstanding pair of arms, which are arranged to straddle the rim and tire of the automobile wheel, one of arms having an opening for the reception of the hooked end of the locking bar, while the other has an open-ended slot for the reception of the other end of the bar. The last-named end of the bar has a depending loop for engagement of the shackle of a padlock. The said end of the locking bar has an opening through which the said loop passes and a depending protecting flange, which prevents tampering with the padlock. The centre of the bar carries a screw, which is arranged to be adjusted to bear on the rim, and thus permit the device to be adjusted to rims and tires of different diameters. A single demonstration should bring large and quick sales, with great profits to the maker. For further particulars regarding the invention and the terms on which rights under the patent may be obtained, address Fred Retterer, Harpster, Ohio, U.S.A.

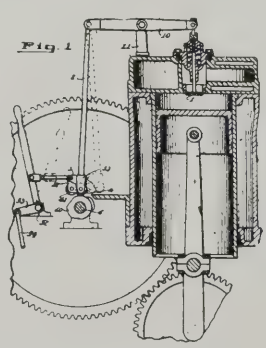


HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

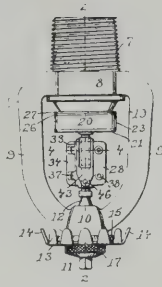
PATENTS FOR SALE—*Continued*



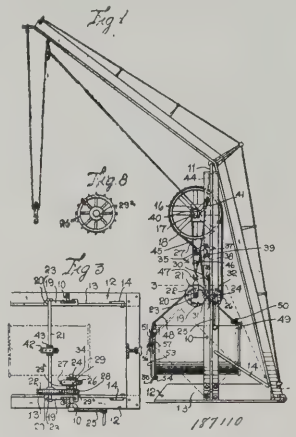
SCRUBBING BRUSH. The present invention relates to a handle for scrubbing brushes, and has for its object to provide a device of this character which embodies novel features of construction whereby the scrubbing brush can be manipulated by a person in a standing position, thereby avoiding the back-breaking labor which is incident to stooping over or getting down upon the knees. Full particulars, write Joseph M. Check, Box 152, Wilkes-Barre, Pa., U.S.A.



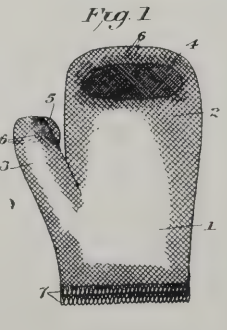
TELESCOPIC BED. This invention has for its object the provision of a bed which may be extended both laterally and longitudinally so as to be used by one or more adults or children as desired. A further object is to provide a bed which may be telescopically folded or collapsed when not in use, so as to occupy a minimum of space. Full particulars can be had from Franciszek Dudek, 309 Power St., Johnstown, Pa., U.S.A., who has Canadian and U.S. patents for sale.



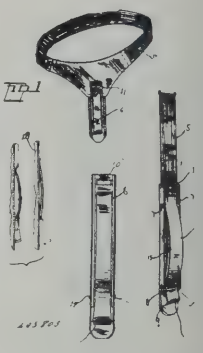
REGISTER. This invention relates to improvements in registers of hot air heating systems, and one of the objects of the invention is to provide means for making a more even distribution of the hot air coming from the register in the room. Another object of the invention is to provide means for moistening this air as it passes from the register. Canadian and U.S. patents are for sale. Write John Desjardins, Marinette, Wisconsin. U.S.A.

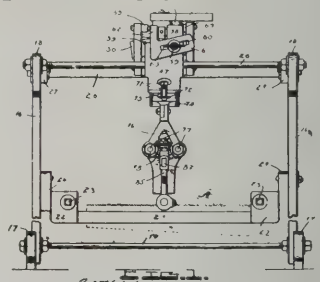


VALVE OPERATING GEAR FOR INTERNAL COMBUSTION ENGINES. This invention relates to a valve operating gear for internal combustion engines and consists of a valve operating gear comprising fuel injection, air supply, exhaust and starting air valves, a separate actuating head for each of said valves, said heads being connected, to be shifted together between neutral and operative positions, a rotative exhaust, air suction and fuel supply heads having cam rollers which are aligned in the direction of the length of the shaft, and the air starting and exhaust heads having cam rollers offset to one side in the same direction from the other cam rollers. Canadian patent for sale by Ernest V. Parker, 5115 Desmond Street, Oakland, Cal., U.S.A.



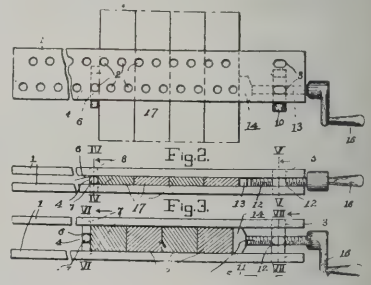
AUTOMATIC SPRINKLER. This invention relates to an automatic sprinkler, a valve supporting and releasing device consisting of two thrust rods and an intermediate roll, a shoe shaped to hold the thrust rods and roll, side extensions on the shoe, a plate over the thrust rods, roll and shoe, means for detachably hinging the plate to a side extension, and means for fusibly securing the plate to the opposite side extension. Canadian and United States patents for sale by Robert W. Newton, 189 Cass St., Providence, R.I., U.S.A.



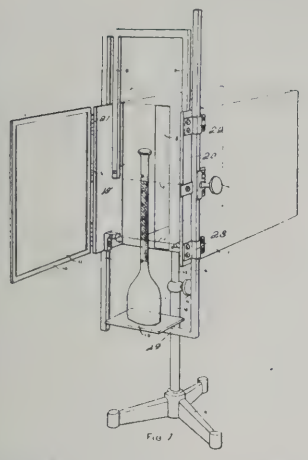


HOISTING MACHINE. This invention relates to a hoisting mechanism comprising a supporting frame including uprights and a crossbar, a winding shaft mounted on the frame, a tilting shaft, a cable on the winding shaft operatively engaging the tilting shaft to raise or lower it, means on the tilting shaft for engaging the article to be handled, seats carried by the supporting frame for the tilting shaft, means for rotating the driven shaft to raise or lower the tilting shaft, and means for rotating the tilting shaft to tilt an article supported thereby. Write Alonzo Ghent, Box 62, Helix, Ore., U.S.A., for full particulars regarding Canadian patent.

WOVEN WIRE MITTENS. This invention relates to hand-coverings or mittens, and has for its object, to provide an improved hand-covering to serve as a protection against heat and especially designed for use by bakers and domestics for removing hot vessels from ovens, without burning the hands. A further object is to provide improved means of additional protection near the ends of the fingers and thumb which come in direct contact with the heated vessel in grasping the same. Write Mrs. Clara P. Dubois, c/o Frederick V. Winters, 1133 Broadway, New York City, New York, U.S.A., for particulars regarding Canadian patent.

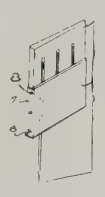


GARTER. This invention relates to a garter consisting of an attaching member, a fastening member connected thereto, said fastening member formed of a flat sheet of metal having its sides bent upwardly to within a short distance of the lower ends, said sides formed with annular openings adjacent their lower ends, a transverse opening disposed on the upper end of said fastening member between said sides, through which the fabric of the attaching member is passed for holding said fastening member thereto, a flat spring, lugs on said spring, said lugs being positioned in the said annular openings, said spring having a convex portion between its upper end and said lugs, and having a transverse bend coinciding with said lugs, the lower end of said spring being bent inwardly at right angles and having teeth at its end and a transverse concave portion in the lower end of said fastening member adapted to receive said teeth. Full particulars can be had from John Chrisholm, 30 Clairmont Ave., Montreal, Que., regarding Canadian patent.

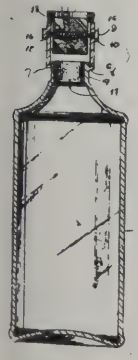


SAW FILING MACHINE. This invention relates to certain new and useful improvements in saw filing machines. The primary object is to provide a saw filing machine in which there is provided clamping means for holding a saw in position to have the teeth thereof filed and mechanism for supporting a file being shiftable relative to the saw to move the file into position for filing successive teeth. Canadian patent for sale by Frank Pysz, c-o Messrs. Jablonski & Siarkiewicz, 829 State Mutual Bldg., Worcester, Mass.

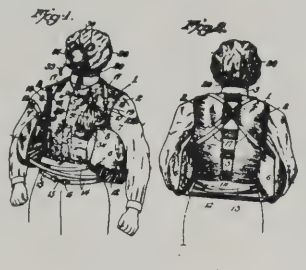
CLAMP. This invention relates to clamps for holding glued boards together until they become joined, and has for its object to provide a clamp of very simple and inexpensive construction which is easily adjustable to fit different thicknesses of boards as well as various numbers and widths of boards. For particulars regarding Canadian patent write Sebastian Gaul, care Frederick V. Winters, 1133 Broadway, New York City, New York.



HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

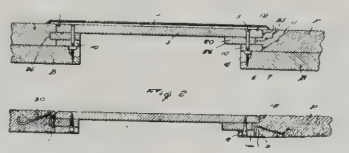


PATENTS FOR SALE—*Continued*

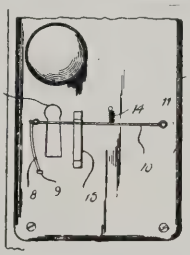


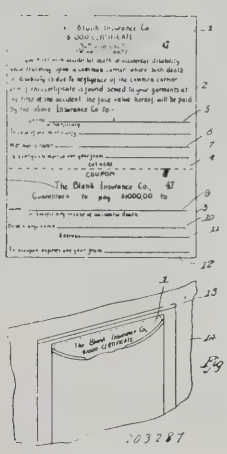
APPARATUS FOR ACCURATELY READING A MILK TEST BOTTLE. This invention relates to an apparatus for accurately reading a milk test bottle, and comprises a support, a housing carried thereby and having a lens and a ground glass, a shelf supported thereby adjacent the lens and adapted to support a test bottle between the lens and ground glass, means for vertically adjusting said shelf, a horizontal wire permanently attached to the support, a second horizontal wire, and means for vertically adjusting said second wire. For full particulars regarding Canadian and U.S. patents, write George E. Willmarth, 19 Garden St., Potsdam, N.Y., U.S.A.

NEEDLE THREADING DEVICE. This invention relates to improvements in needle threaders and consists in a means for holding the needle and a means for guiding the thread into the eye of the needle. The object of my invention is to provide a simple and inexpensive construction whereby needles of different sizes may be conveniently threaded in different compartments. For full particulars regarding Canadian patent write James Thom, 1861 William Ave., Winnipeg, Man.



NON - REFILLABLE BOTTLE. This invention relates to a bottle which when filled and corked cannot be tampered with without breaking the neck thereof. A further object is to provide a bottle by which customers will at once know as to whether it has been refilled or whether it is the original filling from the user of the bottle. For full particulars regarding Canadian patent write Charles W. Sharp, 81 Chestnut Ave., Hamilton, Ont., Canada.

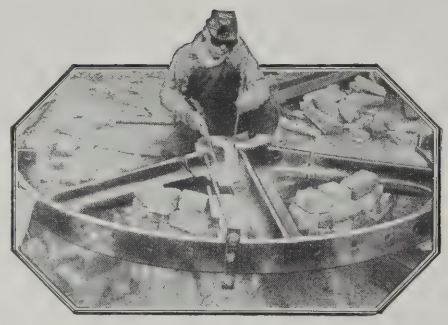




LIFE PRESERVER. This invention relates to a life preserver comprising a garment for the body of the wearer, flotation members fast near one edge to the opposite sides of the garment to be located under the arms of the wearer, and bands fast to the flotation members at points distant from the fastening of said flotation members to the garment and of a length to encircle the waist of the wearer. Write John P. Curley, Iron River, Mich., U.S.A., for full particulars regarding Canadian patent.

THRESHOLD. This invention relates to a threshold and consists in the combination with the threshold, of a plate below the same, and fastening means for connecting said plate and threshold in different selective positions of the plate with respect to the margin of the threshold. Write Adelard J. Dubee, 79 West Street, Glen Falls, N.Y., U.S.A., for information regarding his Canadian patent, which is for sale.

KEY HOLDER. This invention relates to improvements in key holders for doors and the object is to provide a novel means whereby the key when placed in the door will be held against dropping out or being pushed out from the opposite side of the door. A further object is to provide an inexpensive construction of this nature which can be put on door plates already in use. For particulars regarding Canadian Patent write R. J. Eckstein, 1! Strange St., Kitchener, Ont.



ACCIDENT AND IDENTIFICATION CERTIFICATE. This invention relates to a combined accident and identification certificate or policy, the object of the invention being to provide a policy which may be issued by a merchant to a customer purchasing a suit of clothing or other similar article, and which may be attached to one of the garments worn by the insured, whereby the policy may be readily and conveniently carried for inspection or display and protected against loss or displacement, and whereby in the event of the accidental death of or injury to the insured the policy may be found attached to his person for ready liquidation, and also to serve as a means of identification of the person insured thereby. Full particulars can be had from F. J. Rogers, 1307, 14th St., Parkersburg, W. Va., U.S.A. Canadian and U.S. patents for sale.

TOP SPINNER. The object of the invention is to provide a simple and efficient means for communicating spinning movement to a top without the inconvenience and effort incident to winding a spinning cord upon the spindle thereof and serving as a means whereby the top may be spun successively without intermediate preparation of the spinning device. Full particulars can be had from James D. Lytle, 2622 Baltimore, Md., U.S.A.

FIRE EXTINGUISHER. The present invention has for its object to prevent the discharge of liquid from within the casing of such extinguishers through the discharge pipe, when the casing is subjected to movement as for example when mounted on vessels, motor vehicles or trains. Canadian and United States patents are for sale, and full particulars can be had from The Minimax Limited, Feltham, Middlesex, England.

Like Mahomet and the Mountain

It was lots easier to bring Prest-O-Lite and the oxy-acetylene flame to this mammoth wheel than to haul the wheel five miles from a mountain mine to a repair shop.

That's one of the advantages of Prest-O-Lite. Its ready portability makes oxy-acetylene welding possible and remarkably economical anywhere and everywhere.

And a chain of plants and warehouses assure a constant supply of Prest-O-Lite, the Universal Gas with the Universal Service.

All of which means a Nation-Wide Service which you will be interested in knowing all about.

PWC-527

Annual Meeting Held

Financial Report of Canada Foundries & Forgings, Limited, is Presented

A decrease in net income in 1920, as shown in the annual statement submitted to the shareholders, and numerous changes in the personnel of the directorate, were the chief features of interest at the annual meeting of Canada Foundries & Forgings, Limited, held in Brockville on February 22nd. Among the latter are revealed several new names, while other former officials now resume their old positions.

According to the statement for the year ended December 31, 1920, net profits for the twelve months amounted to $39,979 which, augmented by $77,496 interest from investments, brought total income for the year up to $117,475, compared with $242,062 in 1919, and $612,117 in the 1918 period.

After allowing for the usual deductions, including bond interest and other miscellaneous expenses, but before the payment of 7 per cent. dividends on the preferred stock, there remained a balance of $90,861 as at the end of December last, against $169,915 in 1919 and $351,825 in 1918, the latter figure being arrived at after the deduction of $100,000 transferred to contingent reserve. The 1920 balance referred to includes a readjustment of the value of machinery, which was increased by $54,585.

The balance available for application to preferred dividend requirement was equivalent to approximately 8.6 per cent. on the $960,000 of senior securities of the company outstanding. After disbursing the full year's dividends on the preferred there remained the amount of $15,053 to apply on the common, or equal to about 1½ per cent., against 10.7 per cent. in 1919, some 40 per cent. in 1918, and 54 per cent. in 1917. In the three last-mentioned periods dividends at the rate of 12 per cent. per year were paid on the common; in 1920 three payments of 3 per cent. each and one of 1 per cent. were made. Since the last disbursements payments have been discontinued.

Surplus carried forward into the 1921 accounts, according to the preliminary figures at hand, amounted to $1,204,275 against $1,285,221 at the end of the previous period and $1,297,706 in 1918.

Among the changes in the Executive of the enterprise is to be noted the return of W. M. Weir as president in succession to T. J. Dillon, whose resignation was announced a few days ago. The board now stands as follows: Wm. M. Weir, president; Hon. George P. Graham, vice-president; Hon. W. J. Shaughnessy, Montreal; Lt.-Col. C. M. Monserrat, Ottawa; W. T. Sampson, Gananoque; Lt.-Col. C. W. McLean, W. D. Robb and B. F. Conway, Montreal; James Arnold, general manager Brockville, and J. M. Briggs, Brockville, the latter being also secretary-treasurer.

The retiring members of the board are: T. J. Dillon, Welland; Henry Bertram, Dundas; Lawrence Chamberlain, New York; John T. Dillon, Buffalo; S. J. Lehuray, Montreal; J. A. Mackay and Colin O. Cameron.

OFFICE AND FINANCE

What the Office Manual Will Do*

Assists Both the Management and the Employee—Points Regarding Its Use, Contents and Enforcement—The Question of Vacations

By ALAN M. IRWIN

IN the days when Bob Cratchit "scratched away with his pen" in the little "tank" which formed his section of Mr. Scrooge's office, an office manual was unnecessary. Scrooge knew when Bob was there! He most certainly knew when he was late—as lovers of the "Christmas Carol" will remember. And Bob, on the other hand, being the whole office force, required no book of directions.

The change from those times, with its increase in the number of articles manufactured and merchandised, its increased production and consumption, is naturally reflected in the size of the office. It is more often the case that the owner of the business, to maintain the parallel with Dickens' character, knows only one or two members of the staff.

It is in the large office that the printed book of regulations is effective. In the small concern, where all are in close touch with the management, personal instructions with regard to procedure may be easily given.

Larger businesses, where staffs of from fifty to one hundred or more are maintained, find it expedient to formulate a standard of practice. To place this intelligently before the employees and to standardize the routine in branch offices, a handbook is compiled containing complete WRITTEN instructions, rules and so forth. This handbook is known as the Office Manual

Function of the Manual.

It's function is to take the place of verbal, easily forgotten instructions and to provide a handy ready reference of office procedure, routine and the rules which are in force.

In the army ignorance of regulations is not considered an excuse, yet the majority of the rank and file never see K. R. & O. (King's Regulations and Orders). In the office the same rule cannot be permitted to apply unless the rules and regulations are in possession of each member of the staff.

The first essential then is the drafting of a set of regulations, the co-ordination of the details of routine, in their proper incidence, and the explanation of the duties and authority of the various members of the organization.

*Reprinted from "Business Methods" for December, 1920.

"The Office Manual is a valuable assistant to the manager. It saves his or his assistant's time when a green hand is to be broken in. It points out to the employee the road to travel. Publication of such a booklet gives the manager a firm stand when dealing with infractions of rules, and makes the employee realise that 'this is an up-to-date firm,' where the experimental phase has been passed, and where there is established a standard to which he must live up."

Compiling a manual is not a task to be attacked single-handed by the Office Manager. It is one that should be the work of a committee of the various executives.

Each phase of the booklet should be prepared by, say, the manager of each department and his assistants. The whole thing should then be edited and whipped finally into shape by the committee.

An opportunity is given for the education of the new employee in the ideals and ultimate object of the firm's activities in the introductory paragraphs. Here the firm is introduced to the employee and may build for itself lasting good-will. It can make the newcomer feel welcome. It can show him that there is a place in the organization for him.

The concluding paragraph of the introduction to the Office Manual of Marshall Field & Co., of Chicago, reads as follows:

"We wish you to see, back of these rules, our earnest desire to conduct this great institution in the most harmonious manner; we give you the benefit of long experience; to save you the retracing of unguided steps, to enable you to grow in the knowledge of sound business principles and thus to become a credit to yourself and the house."

Following the introduction may come a brief history of the firm or corporation, as the case may be.

The third section will give a general outline of the work of the house, the different phases of its affairs.

A list of the officers and executives should follow and where practicable, that is in an office where the personnel remains comparatively stationary, there should also be included a list of all employees and their duties. It takes away from the impersonality of the office when the Traffic Manager is known to all as Mr. Dickens rather than by his title.

Brief descriptions of the functions of each department form a section of great educative value. After reading this through and thoroughly familiarizing himself with the information contained therein, the new employee can better understand how his work fits in with the scheme of things.

Important from a disciplinary standpoint is the section dealing with office instructions and information. This chapter contains the rules with regard to attendance, punctuality, conduct, etc., and after a careful study of this the newcomer is conversant with the hours of arrival and departure and may be held to account for tardiness, non-attendance, etc.

The following examples are culled from "Office Management," published by the Alexander Hamilton Institute. These rules, representing the collective opinions and study of recognized experts may be accepted as a standard.

The office hours are: weekdays from 8.45 a.m., to 12.30 p.m.; in the afternoon from 1.20 to 3.20 and from 3.30 to 5; Saturdays from 8.45 a.m. to 12.45 p.m. In July and August, the hours on Saturday are from 8.45 a.m. to 12 noon. . . . The offices are open from 7.30 a.m. to 6 p.m., after which hour no employee may remain in the office without permission from a Senior or Junior Officer."

The Vacation Question.

A list of holidays which are generally observed follows and then the question of vacations is treated in a concise manner. To quote the same authority again:

"Vacations may be taken from July 1st to September 15th, and each employee who has been with the company six months receives two weeks off with pay. Those who have been employed three months receive one week.

"Chief Clerks and their assistants have first choice as to when they will take their vacations. Assistant staff secretaries and junior officers may take their vacations between June 1 and October 1; Junior Officers have three weeks' vacation. Employees who have been engaged less than three months may take a weeks'

vacation at their own expense, unless the pressure of wor is so severe that they cannot be spared."

More particular instructions may be given under separat sections relating to specific departments; they should, hov ever, be included in the make-up of the general manual. B this means, practice in every branch of the organization i known generally, and transfers from one section to anothe are simplified.

The Vocational Branch of the Department of Soldiers Civil Re-establishment in Toronto instructs its stenographer as follows:

"*Paragraphing.*—Every paragraph should be started a figure 25 on the standard scale or fifteen spaces from the lef margin of the letter.

"*Identifying Letters.*—Stenographers and typists will a ways put in the lower left hand corner of the letter the in tials of the person dictating the letter, followed by thei own: ABC/XY.

"*Erasures.*—Nothing detracts so much from the genera appearance of a letter as erasures. Anything that detract from neatness leaves a bad impression.

"When, for the sake of economy or time, erasures ar necessary, these should be made with all neatness possible Corrections, should invariably be made on carbon copies a well. In order that time may be saved in searching for rubber, it is advisable to attach this to the machine b means of a string."

The manual offers a splendid opportunity for the passin on of good advice in connection with deportment in th office, tidiness in desk habits and personal neatness.

Suggestion systems, the workings of the merit and de merit plans, the use of rest rooms, explanation of lunc room facilities, use of the telephone for personal calls; al these subjects may be included in the manual.

One essential is the inclusion of fire instruction. Thes should be set forth clearly and concisely, giving complet directions for the turning in of an alarm, notification of fir marshals (members of the office force in charge of fir organization), procedure in the case of fire, fire warnings exits, use of the stairways, elevators and fire escapes.

Office managers at times find that enforcement of rule is hard to accomplish on account of ignorance. This excus goes into the discard when each employee is in possessio of a rule-book. All members of the staff are, or should be fully conversant with the regulations and when necessar disciplinary action is taken, no feeling of injustice is en gendered in the mind of the culprit.

Clerical work presents an almost unique problem to th cost accountant. With the exceptions of typists and dicta phone operators it is almost impossible to instal a systen of payment by results. Even in these cases the volume o work depends upon the correspondents of executives an cannot always permit of absolute fairness of operation.

Therefore some other arrangement has to be made t assure the management of a sufficient return for the weekl or monthly salary paid. The time-clock, of course, is of value but this accounts only for the attendance record. Quality o work, attention to business, resourcefulness and extra effor or their opposites, however, may be taken into account b the merit and demerit plan, and in this way, payment ma be made to coincide to a great extent with the value of th individual. By the application of this system the rules se forth in the manual may be enforced and an efficient staf ensured.

To quote again from "Office Management":

"The merit system has been established to encourage and reward good work, and to discourage and penalize any thing that intreferes with good work."

Merits are generally awarded for punctuality, error-free work, quantity of work and desk tidiness. Demerits natur ally are earned by lateness, carelessness, low quality or quantity of work, untidiness or insubordination.

The qualifications given above may represent whole merits or fractional parts thereof—it does not matter.

Various systems have various local arrangements, but the principle is the same.

Suggestions which are of value, whether recognized or not in other ways, count in the merit system. At the end of the year, when salary revisions are due and promotions are being considered, the office manager's personnel file, containing the merit and demerit totals of each individual, gives a record in black and white that guides him in recommending increases, and reference to it when higher positions become vacant, show those who are deserving of advancement.

To make it apparent to the employee that his record is being watched, it is customary to have a scale by which a certain percentage of merits over demerits is rewarded. The higher this percentage is, the higher the amount will be.

This not only brings home to the employee the fact that he is paid what he earns, but also forcibly points out, when the balance is unfavorable, that rules are made for observance.

The Office Manual is a valuable assistant to the manager. It saves his or his assistant's time when a "green hand" is to be broken in. It points out to the employee the road to travel.

Publication of such a booklet gives the manager a firm stand when dealing with infractions of rules, and makes the employee realize that "this is an up-to-date firm," where the experimental phase has been passed and where there is established a standard to which he must measure up.

A Record Year

Net Earnings of Howard Smith Paper Mills, Limited, Show a Large Increase

The annual statement of the Howard Smith Paper Mills, Limited, for the twelve months ended December 31st last, discloses earnings of the enterprise at a record level, net profits for the year being $1,089,898. This compares with $704,261 in the 1919 period, the latter figure representing the earnings of the Howard Smith Paper Company and those of the Toronto Paper Manufacturing Company for the full twelve months, so that the 1920 increase amounts to $385,657.

After deducting bond interest and preferred stock dividends, which totalled considerably higher than in 1919, owing to the capital reorganization of the company, and the acquisition of the Toronto Paper enterprise, there remained a balance of $891,898, applicable to the increased common stock outstanding, or equivalent to 30 per cent. on the average of year.

Concurrently with the mailing of annual financial statement and the directors' report of the year a circular announcing new financing on the part of the company is going forward to shareholders. For the approval of the latter there will be submitted at a special meeting to be held next month a by-law to permit of the directors creating an issue of $7,000,000 7 per cent. 25-year, first refunding mortgage sinking fund bonds. Of this amount it is proposed to issue $1,000,000 at once, the proceeds of which will be utilized to provide additional working capital and means for further extensions.

A Successful Year

Turnover of St. Thomas Packing Company, Limited, Shows Increase of Fifty Per Cent.

The annual financial statement, presented at the twelfth annual meeting of the St. Thomas Packing Company, Limited, on January 5th, showed the company to have enjoyed during 1920 the most successful year in their history, with a total turnover of $1,005,000, which is an increase of 50 per cent. over 1919. A dividend of 7 per cent. was declared for the year.

Owing to the increase in business, the company have found it necessary to increase their capitalization from $250,000 to $1,000,000, and $300,000 worth of 7 per cent. guaranteed preferred stock is being issued.

Profits Have Increased

F. N. Burt Company, Limited, Have Most Prosperous Year in their History

An industry which has entered a most prosperous period nce the close of the war is the F. N. Burt Company, Limited, Toronto, whose annual report for the year ended December last has been mailed to shareholders. This shows profits $842,712, compared with $795,714 in the previous year, the ofits having been arrived at, as President S. J. Moore points t, "after writing down inventories to present replacement lues." "The shrinkage has been charged off in the year's erations," Mr. Moore adds. "In view of this, it is gratifyg to be able to report that the profits are the largest in the mpany's history."

Taking advantage of the conversion privilege, a large block preference stock has been converted into common, the mmon stock now amounting to $1,278,700, compared with 58,500 a year ago, while the preferred has been reduced to 476,500 from $1,866,700. The inducement was the increase the dividend on common from 8 to 10 per cent. on October last. Dividend payments on both classes of stock amounted $214,132, or about one-third of the year's profits. All vidends were paid in New York funds.

Even after writing down, the company's inventory is still gher, merchandise amounting to $1,186,587, compared with 91,609 a year ago. The profit and loss balance carried forard is $984,857, as against $713,044, an increase of $271,000. uick assets have increased from $1,671,710 to $1,938,003, hile current liabilities were reduced from $676,021 to 59,948.

"Incoming business fell off during the last quarter, but we ve entered the year 1921 with a substantial amount of ders on hand and look for a satisfactory volume of profitle business," the report concludes.

Earnings Greatly Increased

Annual Statement of Brompton Pulp & Paper Company, Limited, Shows Record Year

The annual statement of the Brompton Pulp & Paper Comny, Limited, for the year ended October 31st, 1920, shows record year of business and a material increase in earnings.

Profits for the year amounted to $1,853,588, a gain of nearly per cent. over those for 1919, when the figure reached 098,337, and compares with $1,051,274 in the 1918 statent. After deducting $235,122 for depreciation, against 88,499 in 1919, together with bond interest and preferred ck dividends, there remained a balance available for aplication to the common shares of $1,340,886, compared with 87,383 in 1919, and $637,274 at the close of the preceding elve months' period.

The results of the year in this respect were equivalent to 57 per share on the outstanding 140,000 shares of no par lue for which the old securities were exchanged earlier in e year. In 1919 the company earned 9.8 per cent. on its nmon capitalization, and 9.1 per cent. in 1918.

After disbursing among shareholders the sum of $665,000 ring the year, against $350,000 in the two previous years, ere remained a surplus of $675,886 to carry into the current ar's accounts, compared with $337,383 in 1919, and some ,000 less in 1918.

The balance sheet portion of the statement reveals a hly comfortable financial position, current assets exceedi liabilities of a similar character by well over $2,000,000 spite the extensive additions to the East Angus plant of t company in process during a period. A bank loan of 5,000 which appeared in the exhibit of a year ago was ped out altogether, and in addition, the company was able tadd the substantial sum of $372,326 to its investments duri the year, bringing those up to $1,721,418. Cash holdings, ao, are shown at $244,111 in this year's statement, against ,831 as at October 31, 1919.

Profits Are Reduced

Belding, Paul, Corticelli, Limited, of Montreal, Issue Annual Statement

For the year ended November 30th last the profits of Belding, Paul, Corticelli, Limited, of Montreal, have suffered decline of 39 per cent. from the figures shown by the 1919 tatement. Profits for the year amount to $262,152, compared with $429,260 in 1919, a decline of $167,108. After the sual deduction for sinking fund, interest on debentures, depreciation, and writing off $50,000 for additional provision or inventory depreciation, as well as the payment of eighteen months' dividends on the preferred stock—the arrears n which were cleared off in the period—there remained for pplication to the common stock the sum of $30,428, as gainst $210,325 in 1919, and $68,336 in the previous twelve months. The year's result in this respect was equivalent to lightly over 4 per cent. on the junior securities, compared ith approximately 28 per cent. in 1919.

After all deductions there remained a surplus of $25,428 p be carried into the current year's accounts, against $50,325 t the close of the 1919 period, and $38,336 in 1918. The mount standing to the credit of profit and loss account, as t November 30th last, was $363,565.

The balance sheet discloses an excess of current assets ver current liabilities of $736,578, compared with $850,340. mong the liabilities, accounts and bills payable were almost ouble those of the previous year-end, the figures being 1,023,138 in 1920, and $558,226 in 1919. A new item of 510,000 appears in the 1920 statement covering advances om the company's bankers

In his report to the shareholders President Dawson states at the outlook for the year 1921 is somewhat obscure, "but our directors are hopeful that trade conditions will improve s the year advances."

Net Earnings Decline

Annual Financial Statement of the Dominion Bridge Company, Limited

A falling off in net earnings is shown in the financial tatement of the Dominion Bridge Company, Limited. The eport shows that net earnings available on the capital stock mounted to $964,530, as compared with $1,343,305 in the ear ended in 1919. The 1920 net earnings are equivalent o 14.84 per cent. earned on the $6,500,000 stock outstanding, s compared with 20.66 per cent. earned in the previous ear.

While the past year has been a lean one as compared with ie war years, when the earning power was very large, the ight per cent. dividend was earned a little less than twice ver.

The total profits for the year before deductions amounted o $1,125,892, as compared with $1,640,531 in the previous ear. The liquid position of the company has been improved, urrent assets exceeding current liabilities by $5,137,965.

A Satisfactory Showing

Provincial Paper Mills, Limited, Close Year with a Substantial Surplus

A satisfactory showing is made by the Provincial Paper ills, Limited, for the year 1920, although direct comarisons are not possible owing to the fact that the figures the last year for the first time include those for the Port rthur Pulp and Paper Mills, taken over some time ago it for a while operated as a separate unit. The company osed the year with large liquid assets and a substantial rplus for the year.

The profit and loss statement shows profits for the year ter allowing for 1921 war tax, of $1,225,775.

During the year some $200,000 was set aside for depreciation on buildings and plant, against $75,000 in the previous year, and after paying preferred dividends and all other charges, there was available for common dividends some $890,903, against $223,408. Some $257,500 was paid in common dividends, against $90,000 in the previous year, and there was a surplus for the year of $633,403, against $133,408 in 1919.

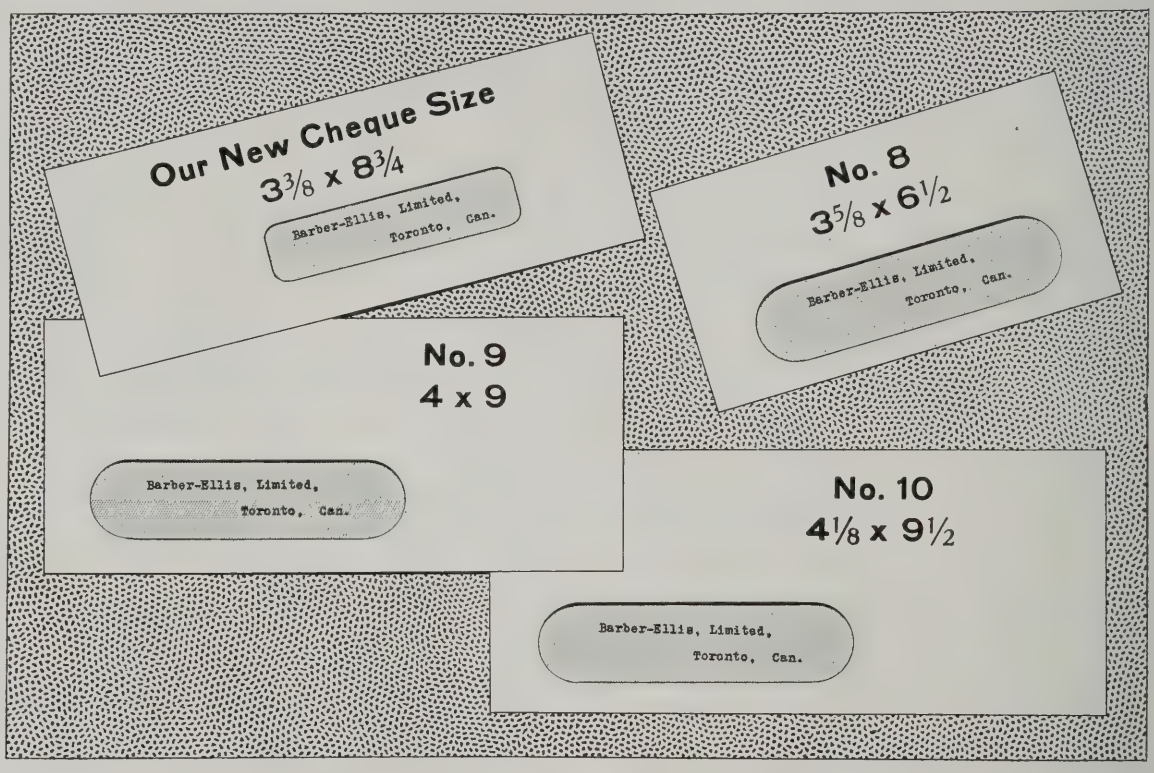
The balance sheet of the company shows a good cash condition. Cash on hand totals $315,166, against $110,902, and accounts receivable are set down at $811,600, against $435,612. Victory bonds at market are placed at $396,800, against $15,000. Current assets aggregate $1,791,052, against $1,260,585, and surplus of current assets over current liabilities exceeds one million dollars.

Of course, as all the above comparisons are the figures of the consolidated operations in 1920, against the operations of the paper company alone in 1919, they cannot be taken as actually comparing the same scope of operations, but can only be taken relatively.

Canada Cement Company

Shortage and Increased Cost of Coal Reduce Profits for 1920

Earnings applicable on the common stock at the rate of 3.1 per cent. are shown in the financial statement of the Canada Cement Company, Limited, for the year ended December 31, 1920. During the year the company paid the full six per cent. dividend, which necessitated a drawing from surplus of $525,887 in order to permit the writing off of a proper amount for depreciation, which last year amounted to $810,491, against $1,149,584 in 1919. During that year, the write off for depreciation was permitted after the common dividend had been paid by the withdrawal from surplus of $241,666, so that in the past two years the company, in order to pay the common dividend, and at the same time allow for a proper depreciation reserve have drawn from surplus the sum of $767,553. This has resulted in helping to reduce the surplus account from $2,677,643 at the end of 1918 to $898,972 at the end of last year.



Net earnings last year before depreciation, etc., were down 22 per cent. from the preceding year at $2,362,742; depreciation allowance was $330,000 smaller, bond interest $18,000 smaller, and the balance left for common dividends amounted to $424,630, or, as stated, 3.1 per cent.

In his address to shareholders the president says that the inability to obtain coal was greatly responsible for the smaller business. Also among the expenses an increase of 54 per cent. in coal cost and 145 per cent. increase in labor are mentioned. All items that go into operating expenses increased on an average 196⅔ per cent., while the selling price of cement increased 90 per cent.

The company's balance sheet contains among other changes a reduction of $900,000 in investment account, and an increase of nearly $2,000,000 in inventories, with a new item in the liability side of the account of $275,000 bank loans. Accounts receivable are up $250,000, and call loans are down $40,000. Accounts payable have been increased $1,500,000 to $1,949,475. Total assets show slightly more than $1,000,000 increase over the preceding year.

Minard's Liniment Co., Ltd., held their annual meeting at their offices in Yarmouth, Nova Scotia, on January 28th, with John D. Kirk, president of the company, in the chair. The financial statement showed a successful year's business and prospects at the beginning of 1921 indicate another good year. John D. Kirk was re-elected president of the company; S. P. Goudey is vice-president, and W. L. Rogers, L. C. Gardner and B. G. Burrill were elected directors.

Canada's Industrial Expansion

A Record of Progress

Lever Brothers, Limited

Two Large Buildings Added to the Sunlight Factory in Toronto

The additions to the Sunlight factory of Lever Brothers, mited, at Toronto, consist of two large buildings—com- only called the "North" and the "South." The former opens rectly on to Eastern Avenue, while the latter is consider- ly nearer the lake. It has been decided that, for the time ing, the buildings will be only three storeys in height— e North 140 feet long by 80 feet wide, the South 120 feet ng by 80 feet wide. Plenty of room has been left for ex- nsion, however, for it is intended that each building shall entually be six storeys in height and 320 feet long by 80 et wide.

The additions are built of reinforced concrete throughout, ith special granuloid floors, and every room practically en- osed in glass. Downstairs in each building the space from or to floor is 18 feet, while on the other storeys the space 14 feet. Thus, on account of their great height, the rooms e exceedingly bright, airy and pleasant for work. The heat- g system is excellent, for not only are there floor radiators each room, but on the top storey there are roof radiators as well. All of these can be controlled individually or by sections. There is an elevator of the most modern make in each building and also spiral conveyors running from floor to floor for the purpose of "feeding" each storey. Every precaution has been taken against fire—metal doors, fire extinguishing apparatus and emergency exits.

The main floor of the North building will be used as a shipping department. Two car sidings run into the building on the east side, and in this way it will be possible to load the goods directly on to the cars. On the north side there are two entrances for trucks and waggons. Metal roller doors, operated by electricity, close all four openings. On the south and west this building connects with the shipping department and the toilet department in the old factory, while a gravity conveyor runs directly across to the South building.

The second floor of the North building is to be entirely given over to the production of toilet goods, while the third storey will contain separate dining rooms for the staffs working in the factory, a rest room for the women, a kitchen, and a department for fancy card box-making. Cafeteria counters are to be run along the north end of the room, with the cashier's desk where both counters terminate and separate entrances for the men and women. The women's wash-

The New South Building at the Toronto Plant of Lever Brothers, Limited. The New North Building is Similar in Design

room is on the second floor, close to the stairs, so thus the women employees are enabled to go directly from there to the dining room or rest room, which are both on the stair side of the third storey.

There are prospects of the top of the North building being made into a roof garden, with easy chairs, palms and all manner of conveniences, for the benefit of the Sunlight employees. A splendid view can be obtained from this vantage point—not only of the entire Sunlight works, but also of Lake Ontario and the city of Toronto itself.

The South building is much after the plan of the North, but will, however, be used entirely for manufacturing purposes. It contains a basement 14 feet deep, which will, when finished, be completely filled with storage tanks for oils, etc. On the first floor there will be wash rooms and locker rooms for the men and women and also the offices of the works manager and others. The other two storeys will be used for manufacturing only.

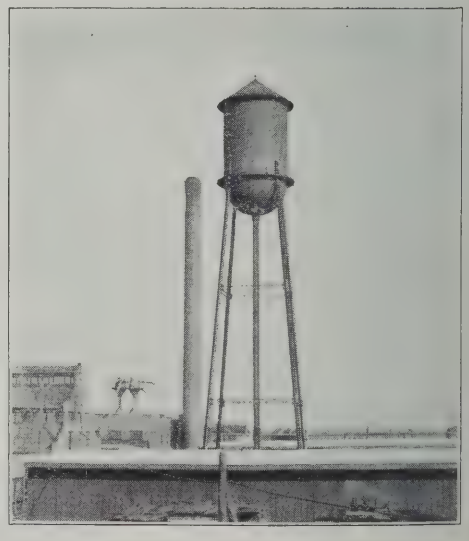
As a final summing up it might be said that the new additions, both inside and out, are being done in true Lever style. Efficient modernity has been the watchword of those who planned the buildings, and this has been carried out in every part down to the minutest details. Nothing has been omitted, but neither is there anything superfluous. When finished, every room will be fitted out in the most up-to-date manner and will contain every possible convenience for the benefit of the Lever Brothers' employees. Plans are also under way to add recreation rooms, a surgical room and a library in the near future. The staff have already shown that they are more than willing to take full advantage of the quarters provided for social and other functions and thus "do their bit" towards spreading the spirit of co-partnership throughout the firm.

Gatineau Company, Limited

Final Details of Large Pulpwood and Timber Merger are Completed

The Gatineau Company, Limited, owned and operated by the Riordon Company, Limited, have formally taken over the business carried on by W. C. Edwards & Company, Limited at their New Edinburgh mills, Ottawa, states the *Canada Lumberman*. Carl Riordon, president of the company, F. B. Whittet, accountant, and V. Drury, of the Royal Securities Company, Montreal, were in Ottawa lately attending to the final details of the transfer, which aroused no small interest when the gigantic $60,000,000 merger of the vast pulpwood and timber holding and other properties of the W. C. Edwards & Company, Limited, and Gilmour & Hughson, Limited, with the Riordon Pulp and Paper Company, Limited was consummated last May. The value of the Gilmour & Hughson, Limited, property, approximates $3,500,000, and that of W. C. Edwards & Company, Limited, more than $8,000,000.

Most of the office staff and other employees of W. C. Edwards & Company at New Edinburgh will continue in the employ of the Gatineau Company, Limited, of which Sam Thompson, former sales manager of W. C. Edwards & Company, Limited, will be manager.



W. C. Edwards & Company, Limited, who also own Watson & Todd, will continue in the wholesale lumber business and will still be identified with several large manufacturing lumber concerns. Their new office, however, will be in the Rideau Club Building, Ottawa, and their capitalization is $4,000,000. The following are owners and directors: W. W. Humphries, E. R. Bremner, N. F. Wilson, Col. C. M. Edwards, John A. Cameron, and Gordon C. Edwards.

Steel for Permanence

The All Steel Elevated Water Tank is the most economical installation for Automatic Sprinkler systems for fire protection, general mill supply, or Municipal Water Works systems.

Its first cost is not excessive, the maintenance expense is very low, and there is no danger of leakage, falling ice, or possibility of the tank bursting or catching fire.

Hundreds of our All Steel Elevated Water Tanks now in service throughout Canada bear witness to these facts.

New Branch Factory

McIlroy Belting Works of Canada, Limited, Are Located in Kingsville, Ontario

At Kingsville, Ontario, a new branch company, the McIlroy Belting Works of Canada, Limited, expect to be in full operation by March 1st, employing at the start from twenty to thirty hands. The Canadian company are a branch of the McIlroy Belting & Hose Company of Hammond, Indiana, who for the past eighteen years have been manufacturing solid woven and stitched canvas belting, exporting their products throughout the world. They also manufacture fire hose.

The McIlroy Belting Works of Canada will manufacture the same products as their parent company. Their main product will be the "Rubber-ite" stitched canvas belting. This is folded and sewed in the same manner as all classes of stitched canvas belting, but the finishing process is the exclusive property of its makers. It consists of impregnating the belting with a preservative compound made from mineral rubber and known as "Elaterite." The process, the manufacturers claim, makes the belting absolutely waterproof and also proof against heat, oils or acids.

"It is the intention of the McIlroy Belting Works of Canada, Limited," writes F. B. McIlroy, the president, to INDUSTRIAL CANADA, "to cater to the Australian and South African business. This is a business the United States factory had for a great number of years, but the recent war brought around changes, and those British provinces for the past two years have preferred buying British-made goods. One object in establishing the Canadian factory is to regain that business."

The firm will also cater to the large jobbing business in Canada and will go direct to the cement plants in the Dominion to secure their business in belting for transmission and conveyors. The company have made a study of thi industry's requirements and turn out a double-stitched belt ing especially designed to meet them.

The company have filed articles for incorporation with provincial charter under the Ontario Companies Act. The are capitalized at $50,000 of which amount $35,000 has al ready been paid in and expended on machinery and equip ment. The balance will be paid whenever the business re quires it. At present the president, treasurer, and genera manager of the company is F. B. McIlroy, who holds all th stock except the four shares subscribed in conformity wit the provisions of the Ontario Companies Act. A meeting o the five shareholders will be held in Canada during Marc to elect the vice-president and the secretary of the company

Will Rebuild Plant

W. R. Cuthbert & Company, Montreal, Will Erect Two New Buildings

A plant owned by W. R. Cuthbert & Company of Mont real and recently damaged by fire, will be rebuilt. The com pany are now in the course of preparing plans for the re construction of their present premises at 37-41 Duke Street One building will be a solid brick three-storey structure 83 x 66 feet, in which will be located their machine shop and the polishing and nickel-plating departments. The one-storey brick building adjoining this will measure 60 x 83 feet and will house the foundry.

The company propose to make an entirely new instal lation in their foundry and core room department. The plant generally will be made in conformity with the latest ideas in equipment and practice for the manufacture of a complete line of brass plumbing and steam supplies, including com pression work, ground work, valves, lavatory fittings, etc.

Weighs 40 Pounds
Lifts 4 Tons

This cut illustrates a No. 2 Little David Drill reboring a 40-inch air compressor cylinder at a large Ontario mine.

Speaking of the power of this drill, the master mechanic said: "The cylinder weighed in the neighborhood of four tons, and at times, if the boring tool stuck, the Little David Drill would lift the entire casting enough to be noticeable."

You do not buy pneumatic drills on the basis of their hoisting ability, but when the question of adding to your tool equipment comes up and you choose a Little David, it's interesting to know that the tool of your choice has the power and the stamina to stand up under such an overload as this.

Shops all over the country find Little Davids rugged, highly efficient, easy to operate, and readily portable. Ask for a set of Little David bulletins. You'll find them of interest.

To Make Tin Cans

Laing Produce & Storage Company, Limited, Install Machinery in Present Building

The Laing Produce & Storage Company, Limited, manufacturers of condensed and evaporated milk at Brockville, Ontario, have for some time been planning to manufacture tin cans to contain their own products. While building costs have made the present time inopportune for the erection of a building to house the new department, the company have temporarily installed machinery and equipment for the manufacture of tins in their present building.

If the prices for commodities required in connection with their proposed new building are sufficiently reduced the company state that they may proceed with its erection during the summer or early fall. If the anticipated reduction does not take place the matter will probably be held over until the spring of 1922.

Chains and Bracelets

Canadian Sturdy Chain Company, Limited, Are a New Sherbrooke Industry

The Canadian Sturdy Chain Company, Limited, are one of the newer industries at Sherbrooke, Quebec. In the latter part of April, 1920, they commenced the erection of a two-storey building of solid brick and cement mill construction, measuring 158 x 40 feet. This building was completed at an approximate cost of $50,000, and in July of last year they were able to put out their first products. The principal goods manufactured are the Sturdy chains and bracelets and other products of rolled plate and ten and fourteen-carat gold.

The Canadian company are affiliated with an old United States firm, the J. F. Sturdy's Sons Company, of Attleboro' Falls, Massachusetts, and their president is F. E. Sturdy of that company. They are capitalized at $300,000.

New Lines Contemplated

H. Mueller Manufacturing Company, Limited, Will Make Die Castings at Sarnia

Plans for this year of the H. Mueller Manufacturing Company, Limited, who manufacture brass goods and castings and forgings in brass, bronze, aluminum and nickel silver at Sarnia, Ontario, include several new lines preferably in brass and other non-ferrous metals. In their plant at Port Huron, Michigan, they now manufacture brass rod, brass and copper tubing, and die castings, and it is their intention to manufacture die castings in Canada also, provided that prospects for business into which they are now inquiring will warrant this.

They also plan to manufacture brass rod and brass and copper tubing in Canada, but this will be proceeded with gradually at first, as they naturally do not wish to install too much expensive equipment unnecessarily. They, therefore, plan to cast the billets for rod and tubing in their Sarnia factory and take them from there to the Port Huron plant where the rod billets will be extended and the tube billets pierced. The billets will then be brought back to Sarnia in an unfinished state and all drawing, annealing, pointing, redrawing, etc., will be done there. In this way about 96 per cent. of the work would be done in Canada, while the expense of an extruding press and a piercing machine would be saved. These would be added later if found advisable.

The matter will be taken up with the Government shortly so that the company can make definite arrangements for handling their material in the manner described. President O. B. Mueller states that other plans for extending their business are also under consideration.

Plant in Operation

Canadian Manhasset Cotton Company, Limited, at St. Hyacinthe, Quebec

During the past year the Manhasset Manufacturing Company, of Providence, R.I., manufacturers of tire fabrics, decided to enter the Canadian field, and formed a Canadian company under the name of the Canadian Manhasset Cotton Company, Limited. At St. Hyacinthe, Que, about thirty miles from Montreal, the Canadian company have completed the erection of a new spinning mill from which their Canadian customers are now being supplied. The following description of the new plant is taken from a recent issue of the *Contract Record*:—

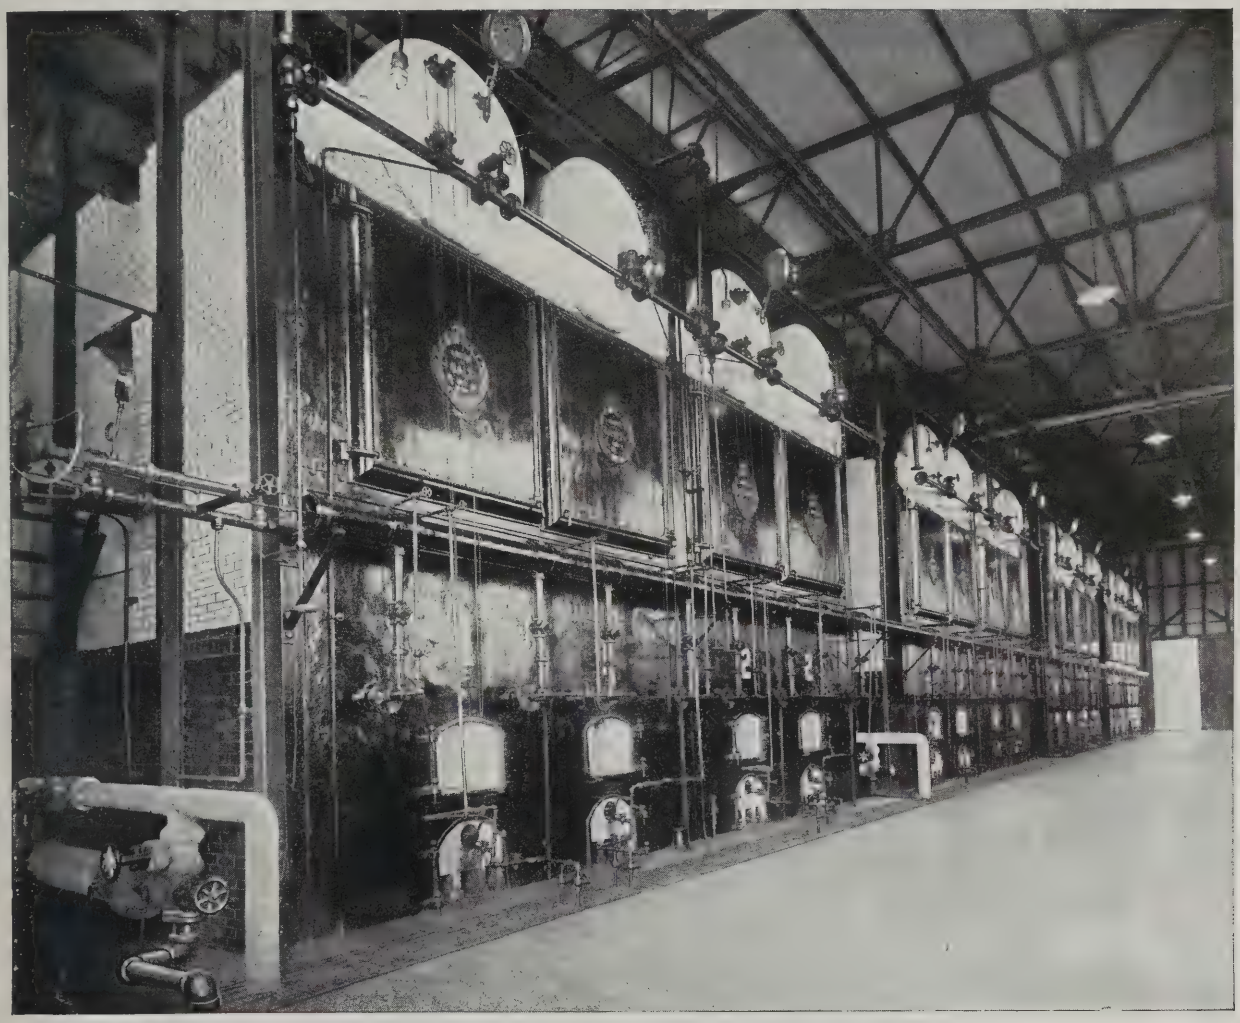
"The plant is situated in an area which is becoming very popular on account of the abundance and stability of labor and the satisfactory and reasonable supply of power available. These, with the general transportation facilities, offer a very great inducement to industrial enterprises generally, and particularly to companies whose headquarters are in the New England States—of whom no less than twelve have located here within the last year. The plant is situated close to the St. Hyacinthe railway station—and has a railroad siding running the entire length of the property.

The plant comprises a mill building, weave shed, boiler house and fire-proof stair tower. The mill building, which is 110 ft. x 200 ft., three storeys and basement, was designed with a view to extension to a total length of 500 ft. This building has a concrete foundation and the upper walls are of solid brick. The construction is of first-class mill type, the floors being 6 inches in thickness and finished in hardwood. A stair tower, connecting all floors, projected out from the main building, and separated by a fire wall, ensures safety in an emergency, does not break up any floor space and is a feature in the building architecturally. The lavatories are attached to the stair tower, making their position central; in this way they do not interfere with the floor space, and by being grouped closely to the stair tower, allow the maximum glass area to be secured.

The weave shed, which is 120 ft. x 310 ft., one storey and basement, has a roof of saw-tooth construction in order to supply sufficient light for weaving operations. This roof is made up of 5 in. x 2 in. spruce on edge. The roof trusses and columns are of steel. This building has a concrete foundation, the upper walls are of solid brick and the floor is finished in hardwood. The columns and floor beams in the basement are of reinforced concrete with no exposed steel in order that the basement may be used for cotton storage. The windows in the saw-tooth are double glazed and every alternate section is hung to swing outwards and is controlled by a sash operator running the entire width of the building. By this method good ventilation is secured.

The boiler house is of brick and concrete, with steel sash and wired glass, and is equipped with two Goldie & McCulloch 72 in. x 16 ft. horizontal return tubular boilers. This building was designed with a view to extension, and, therefore, the building which now measures 25 ft. x 50 ft., will later measure 50 ft. x 50 ft. The chimney was built by the Canadian Custodis Co.

Steel outer sash and a removable wooden sash on the inside for winter use are provided throughout the plant, both being equipped with good-sized vents in order that good ventilation may be secured in the winter as well as in the summer.



To insure even distribution of light in the interior of the buildings, all inside walls, ceilings, columns and beams are finished in mill white paint.

The buildings are equipped throughout including canopies, overloading platforms with automatic sprinklers. The system is connected to two separate city mains with valve controls. In case of emergency a reserve supply is provided for by a 50,000 gallon steel water tank erected on the side at the rear of the mill building with valve control house and

GOLDIE & McCULLOCH
SECTIONAL WATER TUBE BOILERS

Illustration shows an installation of eight Double Drum Sectional Water Tube Boilers at the Dartmouth, N.S., plant of the Imperial Oil Company, Limited.

Similar Boilers have also recently been installed by us in the Sarnia and Regina Plants of the above Company.

Thoroughly satisfactory performance is the explanation of these repeat orders.

G. & McC. Water Tube Boilers are designed to give more than ordinarily rapid circulation, increased steaming capacity and maximum overload allowance. All parts subjected to pressure are made of the highest grade forged steel. Write for catalogue, plans, etc.

THE GOLDIE & McCULLOCH CO., LIMITED

Head Office and Works: GALT, ONTARIO, CANADA

TORONTO OFFICE: Suite 1101-2 Bank of Hamilton Bldg.

WESTERN BRANCH: 248 McDermott Ave. Winnipeg, Man.

QUEBEC AGENTS: Ross & Greig 400 St. James St., Montreal, Que.

BRITISH COLUMBIA AGENTS: Robt. Hamilton & Co. Vancouver, B.C.

heater directly underneath water tank. The prevention of freezing in zero weather of the water in this tank is ensured by a direct supply of steam to the heater from the boiler house.

This mill is entirely electrically driven. Leather belt drives, Canadian S.K.F. hangers and ball bearings, Canadian Crocker-Wheeler motors, Dodge Mfg. Co. pulleys and shafting were used throughout this plant for transmission purposes, giving as a result, a well-driven and easily operated spinning mill, which may be classed with some of the most elaborately equipped mills in this country.

The siding at the rear of the buildings reduces the problem of handling both the raw material and the finished product to a minimum. The raw material is unloaded at the receiving platform and conveyed down the chute to the basement of the weave shed, which has been equipped as a store until the increase in output warrants the erection of a separate storage building. The bales are then conveyed to the picker room in the mill building basement where the bale opener and pickers are located in a fire-proof compartment. A feature in the picker room is the dust ducts from the pickers which are of concrete and are laid under the floor with manholes at suitable intervals for cleaning purposes. These connect to the duct chamber and dust tower. The remaining area of the basement of the mill building and the first floor accommodate the carding machines, drawing frames and slubbers. On the second and third floors the spinning frames and warpers are situated. A two-ton freight elevator encased in a fire-proof shaft situated between the weave shed and mill building enables material to be moved from floor to floor expeditiously. Two-thirds of the floor area of the weave shed is taken up by the twisters and looms. The remaining area is partitioned off as a cloth room and inspection room from which the finished article can be shipped by way of the covered loading platform—either by freight car or road transport.

The general contractors for the buildings were W. I. Bishop, Limited, construction engineers, Montreal. The plumbing and heating were executed by the Garth Company Limited, Montreal. The sprinkler system was installed by the Grinnell Company of Canada. The Whitall Electric Company were the electrical contractors. The entire plant was designed and erected under the supervision of J. M. Robertson, Limited, consulting and designing engineers, Montreal.

Commenced Operations

K. D. Manufacturing Company Making Picture Frames and Moulding at Kingston

On January 31st the K. D. Manufacturing Company, 670 680 Montreal St., Kingston, Ontario, commenced manufacturing operations with a force of about fifteen hands. The new company intend to manufacture oval picture frames and moulding and have a capacity for five hundred frames a day. They are located in a one-storey building, 42 x 12 feet. The organization is a partnership composed of H Kelly and J. S. Driver, from whose initials the firm name has been derived.

Make Insulating Felt

Canadian Insulation Company, Limited, Complete Factory at Selkirk, Manitoba

The Canadian Insulation Company, Limited, manufacturers of insulating felts, have completed their factory at Selkirk, Manitoba, and have opened sales offices in Winnipeg The product, which is intended for use as insulating materia against heat or cold in dwellings, apartment houses, refrigerators, etc., is made from flax straw and other cereal straws This is supplied in flat and flanged sheets of standard size or in any special sizes required, all ½-inch thick.

PERMANENT SATISFACTION

The settled policy throughout our whole organization is to make each job a matter of entire satisfaction to the owner. Numerous repeat orders would indicate the confidence the owner has in our ability to give real service.

The interest of the owner is ever our interest. Our object is to serve you repeatedly, and whether the job is large or small the same careful attention is given in either case.

It is by adherence to these principles that the construction work carried out by us has been a matter of permanent satisfaction to the owners.

Cheese Companies Amalgamate

Kraft-MacLaren Cheese Company, Limited, is Organized at Montreal

An account of the Kraft-MacLaren Cheese Company, Limited, recently organized at Montreal with a capital of $1,000,000, is published in the *Canadian Grocer* for February 11th. The new company is the result of an amalgamation of the cheese interests of the MacLaren Imperial Cheese Company, Limited, and the J. L. Kraft & Bros. Company of Chicago. The MacLaren Company are manufacturers of cheese in jars, as well as dealers in cheddar cheese, Canadian stilton, brick, limburger and MacLaren cheese in packages. The J. L. Kraft & Bros. Company of Chicago are manufacturers of cheese in what are termed sanitary packages. They also own and control a number of patents pertaining to the manufacture of cheese, the principal one of which is the patent process for sterilizing cheese in tins. The amalgamation embraces the cheese products manufacutred by the MacLaren Imperial Cheese Company, Limited, in Canada and throughout the world and the business of the J. L. Kraft & Bros. Company in Canada and a large part of the export business of the J. L. Kraft & Bros. Company, which has formerly been conducted through their New York house.

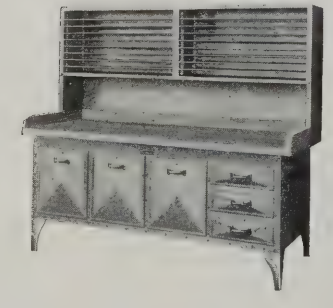
The MacLaren Imperial Cheese Company, Limited, will continue to be conducted as before under the name of the MacLaren-Wright Company, Limited, with Henry Wright and his former associates conducting the business, which will include their business as manufacturers' agents to the grocery trade in various lines of food products and grocers' sundries.

Henry Wright, president of the MacLaren Imperial Cheese Company, will also become a director in the new Kraft-MacLaren Company. The other directors of the Kraft-MacLaren Company will be as follows: Wm. H. Dunn, president of the Wm. H. Dunn Company, Limited, of Montreal, also of the Dunn-Hortop Company, Limited, of Toronto. Mr. Dunn is also manager of the Borden Company, Limited, and has recently been elected president of the food products section of the Canadian Manufacturers Association; J. L. Kraft, president of the J. L. Kraft & Bros. Company of Chicago and Kraft Bros. Cheese Company of Wisconsin; C. H. Kraft and Ernest Ridgway, of Chicago; Fred Kraft, of New York, and Albert Irving, of Philadelphia.

The purpose of the amalgamation of these two interests, as stated to *Canadian Grocer*, is to consolidate in one corporation the various interests so that all varieties of cheese may be sold from one source; also to organize an export department within the company to go after export trade.

None of the changes above referred to will take place until after April 1. Until that time the MacLaren Imperial Cheese Company will be handled by Mr. Wright, as it has been heretofore.

An advertising campaign is being planned for June or July or as soon as possible after the Kraft-MacLaren Company occupy their new fire-proof building in Montreal, which is being constructed on the historical site of the old home of Maisonneuve, the first Governor of Canada, adjoining the Place Royal.



Make Aluminum Utensils

W. D. Shambrook & Company Operate a Plant in Hamilton, Ontario

One of the recent additions to Hamilton's list of industries is the firm of W. D. Shambrook & Company, who have been operating there since June, 1920. The plant is owned and operated by W. D. Shambrook; the products consist of a full line of aluminum kitchen utensils under the trade-name of "Duro."

The normal staff of the company is forty, but it is expected that within the next four months this number will be greatly increased. Mr. Shambrook reports that though trade has been slack within the past few weeks the plant will be running to full capacity very shortly.

To the Buyer of Equipment for Industrial, Hotel, or Institutional Kitchens

As a buyer of the above equipment, you are held responsible for its efficiency and stability. This is a large responsibility. Moreover, there are very few organizations who are in a position to advise and help you. Equipment of this nature is highly technical. It requires experienced mechanical judgment and skill to execute it. You may devote your best brain in the formation of the plan. Its acceptance, however, is only the first step.

Catalogues of various equipment are on your desk. They receive your consideration. You may do one of two things.

Order each individual item from different firms or place your confidence in one firm to furnish you with the entire equipment. The latter is not only the most satisfactory from practically every point of view but it also relieves you of a mass of detail. In either capacity, that is, in supplying one piece of equipment, or, in the furnishing of the entire equipment, we offer you our services. Our experience is manifold. Write us so that we may send you our literature. Our experts are at your command in submitting layouts and prices. Write us when you need us.

Ornamental Iron Work

W. S. Mahaffy Company, Toronto, Are Operating a New Department

The W. S. Mahaffy Company, Gladstone and Trafalgar avenues, Toronto, announce that they are operating a new department known as the Ornamental Iron Products Company. This department is under the management of J. Harlander, former superintendent of the Canada Foundry Company, and for twelve years with the firm of Jno. Williams, Inc., New York, in charge of the production of some of their finest examples of iron and bronze art work. The new department is now prepared to submit tenders on and execute all kinds of ornamental iron and bronze work.

Rebuild on New Site

Alex. Young, Limited, Regina, Saskatchewan, Replace Plant Destroyed by Fire

The plant belonging to the firm of Alex. Young, Limited, manufacturers of cut stone and monuments at Regina, Saskatchewan, was recently destroyed by fire, but plans have been prepared for immediate rebuilding. The company are purchasing a new site and will erect on this a suitable building to contain two diamond teeth saws, two planers, three overhead derricks and a lathe for stone work. Complete equipment for a monumental business will be installed, and an office building and showroom are included in the plans. When again in full production the company will employ thirty men. The estimated cost of the new plant and equipment is $30,000.

Adding One Storey

Standard Meter Company, Limited, Are Extending Their Toronto Plant

The Standard Meter Company, Limited, 10 Morrow Ave., Toronto, have for some time felt the necessity for more room to carry on the manufacture of gas meters, and are therefore adding another storey to their present building. The addition will enable them to increase their present output by about 50 per cent. Its estimated cost is about $12,000, and it will be completed towards the end of March.

London Motors, Limited

New London Industry to be Ready for Production Early in April

A site on the old George White properties at the corner of King and Ridout Streets in London, Ontario, has been purchased by London Motors, Limited, the makers of the "London Six" car. They will have ample room there to start assembling and expect to be ready for production very early in April. They also have let contracts calling for the erection of a new factory on Hale Street by the Grand Trunk Railway not later than July of this year.

William R. Stornsell is president and general manager of London Motors, Limited, and Howard W. Soper is first vice-president and secretary. G. D. Pinner and Samuel Willis are second and third vice-presidents respectively. The other directors are Thomas H. Griffith and Harry Bartliff.

The Woods Manufacturing Company, Limited, manufacturers of jute and cotton bags, twine, tarpaulins, etc., with factories at Montreal, Ottawa, Toronto, Winnipeg and Welland, Ontario, have installed a plant for the manufacture of paper bags in their Winnipeg factory. The plant is now practically ready for operation and orders for the new product will shortly be taken.

Discusses Fire Prevention

Expert says Sufficient care not given to Structural Designs and Arrangement

A PAPER on "Fire Prevention: the Engineer's Part," was read before the Engineering Institute, Montreal, on January 13, by George H. Greenfield, member National Fire Protection Association and the British Fire Prevention Committee, who specializes in fire prevention for the Canada Car and Foundry Co. Mr. Greenfield drew attention to the fact that in the majority of cases, neglecting the actual origin of the fire, there will be found some structural defect or series of defects that tend to either accelerate or else fail to retard the spread of the fire. The defects are often unprotected openings, elevator shafts, dumb waiters, etc. It is quite reasonable to suggest that in many cases sufficient consideration is not given to fire prevention in the design and arrangement of a building or group of buildings.

It was pointed out that there are many manufacturing processes carried on, and also buildings used for such purposes as garages, where the structure is entirely unsuited to the class of work or occupancy. Further, this procedure constitutes a continuous menace, both to the individual and community, especially when these fire traps are allowed to exist adjacent to, or even directly under, dwelling houses.

The process of evolving the fire insurance rate on a building was then explained briefly. It was pointed out that a city making a bad start was continually saddled with high insurance rates. As regards individual buildings the burden for poor construction involving fire hazards was apparently purely private as regards penalization by a high insurance rate. Actually, however, the "Fire Tax" is distributed over the entire population of the country and exists as a small partially removable charge in the cost of every commodity.

Reference was made to the amendment of the criminal code respecting fire prevention and how a person is now criminally liable if loss of property or life occurs through a fire originating on his premises, and it can be proved that the owner or person responsible has failed to obey the requirements of any law intended to prevent fires, and which fire would not have occurred if such law had been observed.

Mr. Greenfield concluded with an outline of the work of the National Fire Protection Association.

The oatmeal mill of the Canadian Cereal & Flour Mills Company, Limited, at Tillsonburg, Ontario, which was burned last October will probably be rebuilt. The actual decision has been left in abeyance until the spring, but the company have found that the walls of the plant destroyed are in such condition as to enable them by reinforcement to install their new plant in the same building.

A building 65 x 40 feet at the corner of Des Prairies and Vallier Streets, Quebec, will be the plant of the Quebec Brass Foundry. The plant will cast bronze, babbitt, brass, aluminum and solders, and operations will commence in January. The capital of the enterprise is $20,000, and C. A. Beaulien is sole proprietor.

The Dominion Bridge Company of Montreal held their second annual reception and dance at the Windsor Hotel recently, when about 600 were present, including the president, G. H. Duggan, and a number of directors and representatives from the branch office and plants.

The Smardon Shoe Company, Limited, 533 Visitation Street, Montreal, have laid the foundation and completed the basement of a new wing for their factory. Their sole leather department is now installed in this addition. The company do not intend to complete this building at present.

Winnipeg Warehouse Property

The Cant About Cancellations*

By ELWOOD SAMPSON

National Chairman, Public Relations Committee, National Association of Purchasing Agents

CANCELLATIONS, like "too high prices" or "too low prices," are not the cause but are the effect of certain basic economic conditions. Therefore, cancellations as an evil can never be eradicated unless the effort is directed to correct those economic conditions which produce this evil.

The fundamental basis of a contract is mutual obligations in which each party assumes equal burdens and receives equal benefits. When either side so manipulates the conditions as to receive an unfair advantage, then the basic conditions of a contract as a contract have been destroyed.

First, let us consider the present situation and what has brought this about. In this article we are summing up the general situation and not considering any specific or outstanding exceptions, of which there are many. We also shall make no reference to the many incidental conditions affecting contracts. These have been thoroughly covered in various articles already published, and the only real objection to them is that they have been considered as major factors instead of being given their proper relation to the general subject.

Adding to the List of Excuses.

We shall leave out of consideration the abnormal conditions existing when the country was at war. In a general way since peace was declared, contractual obligations have undergone some marvellous changes. Taking advantage of the "seller's market," the seller has so manipulated things as to shift the contractual burdens almost entirely to the shoulders of the buyers and thereby frees himself from most of the hazards of carrying on business. The old standardized reasons for exempting the seller from fulfilling a contract were: "Strikes, fires, the act of God, or similar causes beyond the control of the seller." These standardized causes were used so many times, whether they were true or not, that sellers really got ashamed of the same old excuses and decided it was time to add some new ones to the list and take some additional advantages from the economic situation. We attempt to mention here only the most glaring general examples of the breaking down of the fundamental principles of equal burdens and equal benefits upon which a true contract must rest.

First was a widespread refusal in many industries of the seller to accept business upon a fixed price basis. If an order or a contract was accepted at all it was done upon the basis of the "price prevailing at the time of shipment." The result of this was that the seller was freed from nearly all the hazards of doing business which affect selling profit and loss, and the buyer assumed these hazards in the seller's plant as well as in his own. Moreover, by this provision the seller had removed the necessity of maintaining an efficiently operating organization in order that the cost of operating be less than the selling price so as to produce the desired profit.

Second, the contractual obligations with reference to schedule deliveries were an even greater shifting of the burden from seller to buyer. So complete was the failure of the seller to live up

Waterous

BRANTFORD, ONTARIO, CANADA

to shipping schedules that a shipment made on time was a wonderful thing and the subject of doubting comment among the buying fraternity. The result of this situation was that the buyer was placed in a very precarious position. He did not know what he could rely upon, for depending upon the seller's contract obligation was a most uncertain thing. He might possibly get one-half or one-third of the material somewhere nearly on time. The remainder was pretty sure to be delayed for months—often for eternity, so it seemed. In order to protect his own concern, the buyer was then forced to place these one-sided obligations with more than one firm. It was necessary for him to buy twice or three times what he actually required, so that when each of his orders was reduced down to one-half or one-third, the total actually shipped would still be enough approximately to take care of his production requirements.

This condition was the result of certain reasons considerably different from the standardized excuses given out for the failure to ship according to contract schedule. The true reasons are principally two:

First, almost no mill attempted to restrict sales to the quantity which it was reasonably sure of producing. Business was accepted far in excess of the total possible output. This resulted inevitably in a large proportion of any one month's business being held over. These hold-overs increasing in quantity each month kept putting back the shipping schedule farther and farther as the successive months went by.

Second, was the practice of a great many raw material producers of selling secretly through some brokers in order to obtain the advantage of even higher prices than they felt they dared to charge openly. Often a buyer would be expecting a certain quantity of material to be shipped to him from a mill with which he had been doing business for some time. At the last minute he would be advised by the seller that shipment would be delayed for months because of some one of the standardized excuses. This material was vital to the buyer. If he did not get it his plant would be forced to close down. In order to avoid such a calamity he would have to go into the open market and procure this material from some hat-desk broker, who charged a much higher price than he had contracted to pay his regular mill source.

Faith in Contracts Shaken.

When buyers order material from any except a mill source they like to know whom it is coming from, because they have found out through experience that the material received from different mills has to be handled in a slightly different way in their own shop in order to get the best results. So the buyer would ask the broker what mill's material would he receive. The broker would reply, "I am not allowed to tell you, as this has been bought on a pledge of secrecy." The buyer would take this material anyway to prevent the plant from shutting down. Often, however, through some quiet investigation in checking back the travels which the car containing this material had taken, the buyer would find from the car markings or in some other way, that this particular car had come from the same mills which advised him shipment could not be made until months after the time promised.

Some Exceptions

There were some exceptions to these general examples of the contractual breakdown. These exceptions, however, were not numerous enough to influence the situation, as they often had other conditions affecting them which nullified to a great extent their general benefit.

For example, there were some mills which carefully figured out their production schedules and accepted contracts from their old customers for a certain amount of material at a certain price. However, in nearly every one of these cases the amount of material which the buyer was allowed to contract for was greatly reduced from what he had actually been getting in the past. When the buyer would receive notification that "because of present conditions we can allow you to contract for only 52 per

cent. (or 40 per cent.) of what was *actually shipped* to you last year," then he could not help having his faith in that mill shaken somewhat. He could not help wondering why the amount of material he was allowed to get directly from them was cut in half, when he was morally certain that the production had not been reduced to only half of what it was the previous year.

Confidence Destroyed

As a result of all these conditions the faith of a buyer in a contract as something dependable has been almost entirely destroyed. The transformation of the last two years has warped the so-called contract into a purely one-sided obligation in which the buyer has assumed the risks, the worries and all the other burdens which the seller could by any means whatever shift to the buyer. Therefore, when business conditions have changed so that the seller no longer has the immense advantage which he has had during the last year or two, the buyer has left on his hands not a true contract but a one-sided obligation which if completely carried out under present business conditions would force his own company to the wall. Therefore, to the buyer the great number of articles and talk at present about "the inviolability of the contract" is a very strange thing. This is particularly true when it comes from the seller, who, during the last two years, again and again has issued the ultimatum of "while we would like to live up to the contract, conditions are such that we cannot." Now the situation is reversed and the seller suddenly finds that the very life of business rests upon the contract being considered unbreakable, and because of the metamorphosis that the seller has gone through during the last six years, he does not mean a contract resting upon the basic principle of equal burdens and equal benefit, but the present distorted, one-sided obligation into which the seller's market of the last two years has transformed the former business contract.

One-Sided Obligations

Apparently the sellers do not seem to be able to understand that what most buyers want to do is not to cancel true contracts but to cancel the one-sided obligations, which are destructive of the general business welfare of their own companies. This can readily be proved by a detailed examination being made of cancellations requested. Not one time in a hundred will it be found that a buyer is requesting a cancellation of a contract which he has with a source of supply which has maintained with him true contractual relations during the last two years. For the firm which during this time has lived up to the principle that a contract is a contract and actually carried it out at all times is not suffering from the so-called cancellation evil of the present moment.

Looking forward to the fresh start to be made, it is up to both buyers and sellers to profit by the present and past situation. Both sides must proceed on the basis that the contracts of the future shall be contracts which are true in principle. When this is done, most of the causes producing cancellations will have been eliminated.

Basis for Fresh Start

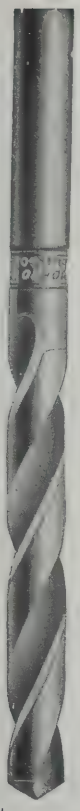
Acting on this basis, when a contract is drawn up giving the seller freedom from penalty or freedom from fulfilling the contract, should there be strikes, fire or other causes beyond the seller's control, then exactly the same clauses must be inserted giving the buyer freedom from fulfilling his part of the contract when there are strikes, fire or other causes beyond his control.

Another way in which this could be handled would be to have a certain specified penalty to be paid by either the buyer or the seller when either did not fulfill the terms of the contract, regardless of whether or not the causes for failure were beyond the control of the offending party. Whatever course of action is pursued, the one thing to bear in mind is that the burden must be equal and the exceptions for failure to fulfill the contract must be equal. Otherwise we shall not have a contract which is true in principle and therefore unbreakable.

A DISCOVERY!

Progressive manufacturers are making discoveries every day, and doing those things that result in a saving of time and money.

They are adopting progressive methods.



This is what you will be doing the minute you place your storage and distribution in our hands.

The details of these you leave to us—so that to manufacturing and selling you may devote your whole time.

You will discover something worth while the minute you let us explain why and how we can save YOU money on the distribution, handling and storing of your shipments.

Suppose You Retired From Business Now

By O. F. LEWIS

EDWARD BOK, for thirty years editor of the *Ladies' Home Journal*, has retired from business, while still in full working vigor.

Why?

Just because he wanted to "play," and because he refused (as he said) to "drop in the harness."

"Play" may mean frittering away precious hours in profitless and even unhealthy pastimes, dangerous to self, family and to society.

But to Mr. Bok, "Play" means cultural diversions, more time for good friends, fine sportsmanship, good health, and for the satisfaction of his stored-up longings and dreams of many years, years when Business would not give him the leisure time to play.

We fool ourselves, often, and are content with talking about Business as the Game of Life—a desperately grim game, and so we go on with it, and "drop in the harness."

Mr. Bok is very wise—but he can afford to be. He retires. What of hundreds of thousands of us who cannot yet afford to retire?

We can also be wise, within the limitations of Business. We can Play, in our leisure time, sensibly, profitably. Play is to-day being preached as never before. It is hailed as a great national tonic, a medicine. Walter Camp urges one kind of Play—regular health exercises. To Sir Edward Grey, fishing and hunting are indispensable.

Field Marshal Haig withdrew in the midst of intolerable pressure on the western front, from time to time, and played golf on the quiet links of France. Theodore Roosevelt was loved for his sportsman's adventures.

But all these men did something themselves when they played.

They weren't contented simply to sit down and watch a Ruth or a Dempsey, or to follow a Chick Evans about the links, or gaze upon a Tilden. They played actively themselves.

Labor-saving devices, shorter hours, and the closed saloon are producing more leisure time in all of our lives. In a city of 125,000, there are in each day a half million leisure hours.

How will they be spent? In what kinds of Play—or Diversions—or Satisfactions of Hobbies—or what?

In the United States a number of leading citizens, who have recognized the great importance of directing the recreation of the people along right lines, have actually formed an organization for the purpose. This is known as Community Service, which is really an outgrowth of War Camp Community Service. It has its headquarters at One Madison Avenue, New York, and its object is to assist communities to put into the leisure hours of life abundant chances for all the people to enjoy life with play and profit.

Countless communities now almost starve for decent, varied, helpful amusement and the inspiration that comes from the fellowship of play. Strange that Play, the most natural thing in the world, should have had to wait so long to begin to come into its own in the life of the sensible, normal man!

Dividends in Factory Waste

The war has taught the world to abhor waste. It has brought home to manufacturers the dividend possibilities of the refuse heap. To-day the by-products of manufacturing contribute very largely to the profits of our largest industries.

What about ***your*** factory wastes?

Our trained investigators may be able to show you an extra 2% or 3% profit that is being lost to you to-day. Have them study and experiment with your waste. They will find a commercial use for your scrap and salvage present refuse.

Book Reviews

The British West Indies

The British West Indies and British Guiana. Issued by the Bank of Montreal.

In view of the new trade agreements between Canada and the British West Indies, which open up interesting possibilities of trade development, this little booklet of information about the Islands and British Guiana will be found most serviceable. It gives a very good idea of the extent and production of the Islands, their trade and the shipping arrangements that exist, together with more detailed particulars about each separate country.

The booklet, of course, refers to the services of the Bank of Montreal. Through its close alliance with the Colonial Bank, which has for many years been identified with the trade of the British West Indies, it has now direct representation in the Islands and is in a position to give every possible assistance to Canadians doing business there.

Mineral Resources of Canada

Alkali Deposits of Western Canada. By L. H. Cole, B.Sc., Mines Branch, Department of Mines, Ottawa, Jan., 1921.

This pamphlet is the first of a new series of publications dealing with the mineral resources of Canada and contains some valuable information about the deposits of soluble mineral salts in the Prairie Provinces and British Columbia, and their uses. The most important products obtained from these deposits are salt cake and Glauber's salts. The first is used extensively in the manufacture of sulphate pulp and also in refining nickel and making various kinds of glass. The latter is needed for dyeing, tanning and textile industries and for medicinal purposes. Magnesium sulphate or Epsom salts is also found in the West, as well as sodium chloride, the common salt of commerce.

To obtain marketable products from these deposits the raw material must be purified in most cases. This is being done by the Salts and Potash Company, Limited, of Kitchener, Ontario; the Grasselli Chemical Company, Limited, of Hamilton; the Nichols Chemical Company, Limited, of Montreal, and the Victoria Chemical Company, Limited, of Victoria, B.C.

The Canadian production of salt cake for 1918 was 6,001 tons, valued at $123,544. In 1919, 3,197 tons, valued at $57,045, were produced. The imports of the product for the same years were 34,386 tons and 23,952 tons respectively. In the case of Glauber's salts production declined from 2,358 tons in 1918 to 1,423 tons in 1919. Imports increased from 343 tons in 1918 to 369 tons in 1919.

The figures go to show that there is a great possibility for profitable expansion in this branch of the Canadian chemical industry. The alkali deposits of Western Canada are of considerable extent, and it is to be hoped that they will soon be recognized as being among the most valuable of our natural resources.

The Steel Industry

The Production of Iron and Steel in Canada, 1919. By John McLeish, Chief of Division of Mineral Resources and Statistics. Ottawa: Thomas Mulvey, King's Printer.

Within the 45 pages of this pamphlet has been condensed an immense amount of valuable information about the iron and steel industry of Canada. It is divided into three sections dealing respectively with iron ore, pig-iron and steel, and very complete statistics covering all three are presented. In conclusion figures showing the exports and imports of

GASOLINE TANKS

COPPER-STEEL
WELDED
TESTED
HIGH-CLASS
TANKS

For Underground Storage of Gasoline
Any Fittings to Suit Supplied

A high quality tank steel welded throughout, making it practically a one-piece tank. Treated with an odorless, anti-rust oil, and then painted on the outside with anti-rust acid-proof black paint. They are practically rust and corrosion proof. We are tank builders. We make a specialty of tanks. Anything we turn out in this line you can depend on. They are made by expert workmen. We put our best efforts into tank building; it is our specialty. Our tanks are built to conform to the requirements of the National Board of Fire Underwriters. They are all tested before leaving our works under air pressure by a competent superintendent and then crated and shipped so they will reach you in good condition. We believe our prices will appeal to you as being very reasonable. Nothing but the best will do for handling gasoline. If not as represented when it reaches your station, fire it back at our expense. Can we do fairer? Any size made to your order.

New Westminster Booklet

Board of Trade Publishes Description of Fraser Valley Industrial Centre

Evidence of industrial development in Western Canada is contained in a booklet recently issued by the New Westminster Board of Trade. It describes the advantages possessed by the city in the way of location, railway connection, harbor facilities and manufacturing establishments. From 1911, when the Dominion census placed the population of New Westminster at 13,199, a considerable growth has taken place and the city authorities now estimate the number of inhabitants as 15,000.

The chief source of wealth in New Westminster lies in the lumber business and allied trades. Plants of the Brunette Saw Mill Company, the Canadian Western Lumber Company, the Dominion Shingle and Cedar Company, and many other similar concerns are located in the city or its environs. Among the fifty-three industries listed in the book are also the Western Canada Cordage Company, a firm run entirely by war veterans; the St. Mungo Canning Company, the Brackman-Ker Milling Company, Galbraith and Sons, and the British Columbia Manufacturing Company, both of the latter being engaged in the manufacture of lumber products.

The secretary of the New Westminster Board of Trade announces his readiness to give reliable information about manufacturing opportunities, labor conditions, industrial sites, and other matters of interest to prospective settlers in this growing centre of the Fraser Valley district.

Vincent Massey, secretary of the Massey-Harris Company, Limited, has been elected a director of the Mutual Life Assurance Company of Canada, succeeding F. C. Bruce, the former first vice-president on the board. R. O. McCulloch, of Galt, has been elected first vice-president.

At the annual meeting of the Woods Manufacturing Company, Limited, held in Montreal on February 15th, the retiring board of directors was re-elected without change. The annual financial report presented to the shareholders showed a deficit on the year's operations amounting to $412,324, which with depreciation allowance of $123,157 and other items reduced the company's surplus to $838,929.

The Ross Can Company, Limited, of Bowmanville, Ontario, are installing new equipment calculated to increase their output from 50 to 100 per cent. during the year. The new equipment consists principally of additional machinery to complete some of their automatic lines and for some new lines which they have under consideration. It will be installed within the next two months.

Trade with Cuba

Havana, Cuba, Jan. 19, 1921.

EDITOR INDUSTRIAL CANADA:

You are aware that the Canadian Government Mercantile Marine is operating a certain number of ships to Havana, and doubtless also know that Canadian trade with Cuba for the year 1919 passed the $6,000,000 mark. The establishment of a direct line of ships between Canada and Cuba is, from our viewpoint, a wise move with a view to developing trade with this country.

The facilities of the port of Havana, however, are quite inadequate for the large volume of business offered, with the result that the port was badly congested during all of 1920. Some relief from this situation is now being met with. If the Government of Canada, however, wish to place Canadian exporters in the most favorable position to extend their trade with Cuba, in our opinion the wisest step that could be taken would be for the Government to obtain adequate dockage and warehouse facilities.

We know of one company that would be willing to receive and discharge all Canadian mercantile ships coming to this port, if the Government were prepared to advance them, say $1,500,000 against first-class mortgage security with which to further develop their undertaking, and which they would be willing to repay on terms to be agreed upon.

If your Association wished to do a real service to Canadian trade with Cuba, in our opinion, you should urge the Government to obtain the facilities here that we have suggested. The preferential duty which the United States enjoys, is largely offset by the present exchange situation, in so far as Canada is concerned, and if Cuban merchants could be assured of receiving prompt shipment and prompt delivery of Canadian goods, Canadian exporters would have an advantage in this market that you cannot appreciate without a personal knowledge of the existing situation.

CANADIAN BANKER.

The Artificial Limb Industry

Hantsport, Jan. 24, 1921.

EDITOR INDUSTRIAL CANADA:

It was with pleasurable interest that I read the January number of INDUSTRIAL CANADA. The healthy, optimistic tone of contributors shows that the growth of Canadian industries is bound to be sure and is in no wise problematical; also that our manufacturing industries are in safe, sane hands.

The writer was mildly surprised and much disappointed that amongst our dozen or more artificial limb manufacturing industries there was nothing from their managers. Perhaps, like the writer, they were too busy.

Some thirty or more years ago one lone man in the city of Toronto began the making of artificial limbs. Owing to the prevailing idea that one had to go or send to the U.S. for such appliances, coupled with the aggressiveness of American firms who systematically flooded this country with attractive literature, following up with salesmen, and a large commission allowed to doctors and surgeons, the going was most difficult. It is still quite "up-hill."

That the old ideas, the attractive literature, the persistent salesmen, and the commission to doctors and surgeons are still with us, we are frequently and painfully reminded.

The one, and the only feature that has enabled this industry to get on its feet, has been the excellence of its product. To-day, the writer knows that so long as the superior quality

of production is kept up we have little to fear from American competition.

That the Federal Government did not take alvantage of the facilities afforded by our own artificial limb factories, which are conveniently situated over Canada, appears to be a great mystery. It is also very mysterious why an Order-in-Council was passed by the Federal Government on the 25th of September last, authorizing the workmen's compensation boards of the provinces to have all cases of amputation coming under their jurisdiction fitted with artificial limbs at the Civil Re-establishment factories.

If the Act remains in force and the boards take advantage of it, the "sledding" for the artificial limb factories will be still more difficult. This will be owing to the fact that a great deal of the work now being done by those factories is derived from the industrial plants which are under the workmen's compensation boards. It remains to be seen if that Order-in-Council remains in force for any length of time, and if the success in fitting men who are maimed in industrial plants will be as variable as that of the returned soldiers. Perhaps the excellence of the making and fitting of artificial limbs and kindred appliances by Canadian companies will again have the opportunity of killing competition, not of American makers, but of the product of the civil re-establishment.

C. S CHESLEY,
General Manager, Chesley Artificial Limb Company, Limited.

T. J. McFadden has joined the Western Ontario sales staff of the Diamond State Fibre Company of Canada, Limited, with headquarters in Toronto. Mr. McFadden has had both executive and factory experience with the company before joining the sales force.

New Society Formed

Northern Electric Company, Limited, Promote Study of Engineering Problems

To promote the interchange of knowledge on engineering subjects and to encourage good fellowship and congeniality the Northern Electric Engineering Society was recently formed in Montreal. Membership in this organization is confined to members of the engineering staff and employees of the Northern Electric Company, Limited, while honorary membership may be extended to others distinguished in engineering and kindred sciences. The programmes for the meetings held on the first Monday of each month include addresses on subjects connected with the work of the members.

P. E. Sise, president of the Northern Electric Company, Limited, is honorary president of the society. Other officials are W. S. Vipond, president; D. W. Whitney, vice-president; L. E. Hamilton, secretary; G. S. Patterson, treasurer; W. E. C. Irwin, T. J. C. Heeney, H. R. Ashley, W. L. Brebner, and W. D. Bishop members of the council.

Change of Name

N. Slater Company, Limited, is New Name of Slater & Barnard, Limited, Hamilton

The firm of Slater & Barnard, Limited, Hamilton, Ont., manufacturers of hangers, hinges and builders' hardware, will hereafter be known as the N. Slater Company, Limited, supplementary letters patent authorizing this change having recently been granted by the Secretary of State, Ottawa.

The company have recently issued a revised catalogue illustrating and listing their complete line of hinges, fire-door fixtures and hardware specialties, which will be mailed to interested parties upon request.

G. F. Morris

Appointed Sales Manager of International Business Machines Time Recording Division

Announcement has been made of the appointment of G. F. Morris to the position of sales manager of the Time Recording Division of the International Business Machines Company, Limited, Toronto. Mr. Morris' connection with the company has extended over a period of ten years, and he has been an active member of the organization in almost every capacity, beginning as an apprentice machinist with the International Time Recording Company, Limited, in 1909, when International Time Recorders were first manufactured in Canada. When F. E. Mutton became general manager of the International Time Recording Company in 1915 Mr. Morris was placed in charge of the Time Recorder Service Department at Montreal. It was here that he graduated as a salesman, and after a short time spent in Montreal and Toronto in this capacity was appointed Sales Agent for Time Recorders in Manitoba and Saskatchewan. At the time the International Business Machines Company, Limited, was organized in 1917, comprising the International Time Recording Company, Dayton Computing Scale Company, and Tabulating Machine Company, Mr. Morris made a study of the Tabulating Machine business and was appointed subsequently representative of this branch of the company's interests in Western Canada. In August of last year he was called to the head office in Toronto to assume the duties of assistant to Mr. Mutton, vice-president and general manager. His appointment as sales manager of the Time Recorder Division was announced at the convention which the company held January 3-8.

J. A. Macdonald

President of Amherst Pianos Limited becomes member of Dominion Senate

Succeeding the late Senator Peter McSweeney, of Moncton, N.B., in the Upper Chamber at Ottawa, J. A. Macdonald of Shediac, N.B., brings to the position a life-long experience in manufacturing industry. As president of Amherst Pianos Limited, he is head of one of the best managed industries in the Maritime Provinces and one that has won wide recognition for the merit of its product. On various occasions Senator Macdonald has served on conciliation boards under the Industrial Disputes Act and his relations with labor have always been of a most friendly kind.

J. R. Marlow

Montreal Manager of Willys-Overland, Limited, Promoted to Secretary-Treasurer

Several changes have taken place in the personnel of Willys-Overland, Limited. J. R. Marlow has been promoted from the position of Montreal branch manager to be secretary and treasurer of the company. As he will also have supervision of sales generally, Mr. Marlow will take over many of the duties formerly performed by Mr. McKay and Mr. Dover. His appointment follows Mr. Burt's transfer to one of Overland's allied industries, the New Process Gear Company of Syracuse, N.Y. When T. A. Russell, president of Willys-Overland, Limited, announced the appointment of C. R. Burt as general manager, it was part of the arrangement with Mr. Willys and Mr. Chrysler that Mr. Burt would return to the United States later in the present year. Owing to develop-

ments earlier than expected, it was found advisable for Mr. Burt to assume the management of the gear company in January. Formerly sales manager of the Russell Motor Car Company in Toronto, Mr. Marlow went to Montreal in 1915 to take charge of the then Russell Motor Car Company branch. This branch was taken over as a branch of Willys-Overland, Limited, in 1917, and Mr. Marlow continued as manager.

John Stanfield

Head of Stanfields Limited, Truro, Appointed to the Dominion Senate

Announcement was made on February 17th that Lt.-Col. John Stanfield, president of Stanfields, Limited, Truro, N.S., had been appointed a member of the Dominion Senate. The new Senator was born in Charlottetown, P.E.I., in 1868, and has been engaged in the woollen business since he was sixteen. At an early age, in partnership with his brother, he bought out a small woollen mill in Truro and from this small beginning he succeeded in building up the present large and successful industry, of which he has been president for 25 years. He entered politics in 1907, being returned to the House of Commons in a by-election that year. He was re-elected in 1908 and 1911 and was for some years Chief Government Whip. During the war he raised the 193rd Highlanders and engaged in military work both in Nova Scotia and in England.

Deaths Among Prominent Manufacturers

Andrew J. Dawes

President of National Breweries, Limited, Dies at his Home in Montreal

The death of Andrew J. Dawes, president of the National Breweries, Limited, occurred at his Montreal home on the morning of February 11th. Mr. Dawes was a son of the late James P. Dawes of Dawes Brewery, Limited, and became president of that company before their amalgamation with the National Breweries. He was also vice-president of the Merchants Bank and a director of the Bell Telephone Company, Limited, and several other corporations.

The late Mr. Dawes was seventy-three years old at the time of his death. He is survived by his wife and two daughters, Mrs. F. L. C. Bond and Mrs. B. H. Porteous, of Montreal.

John J. Main

President of the Canadian Incinerator Company, Limited, Dies at his Toronto Home

John J. Main, president of the Canadian Incinerator Company, Limited, Toronto, and formerly manager of the Polson Iron Works, died at his home in Toronto after a protracted illness following several strokes of paralysis. Mr. Main was born 70 years ago on the Island of Jersey. He came to Canada as a young man, working at his trade as a boilermaker. His invention of the Heine boiler was the beginning of his rapid rise in the boiler industry. At various times he was superintendent for the Doty Engine Company, Limited; the John Inglis Company, Limited, and the Bertram Engineering Works, Limited. During the war he worked for the Imperial Munitions Board without pay and turned over to the military authorities all his patents on oil-fired boilers.

J. Harry Paterson

Death of Founder and President of the Toronto Hardware Manufacturing Company

J Harry Paterson, president of the Toronto Hardware Manufacturing Company, Limited, died at his home in Toronto on February 4th. Mr. Paterson, who was sixty-eight years old, was taken ill on the previous day and his death was quite unexpected.

The late Mr. Paterson was educated at Trinity College School in the early days of that institution. In later life he became prominent in manufacturing circles, founded the Toronto Hardware Manufacturing Company and built it up to its present position. He was an active member of the Y.M.C.A.

Many charitable enterprises benefited through Mr. Paterson's interest, in particular the Toronto House of Industry of which he was for many years the treasurer. He was an Anglican and a member of Ionic Lodge, A.F. & A.M.

Surviving are his widow who, before her marriage, was Miss Florrie Ince, daughter of the late William Ince, of Toronto, one brother, Rev. Thomas Paterson, of Toronto, and two sisters, Mrs. Emily Winstanley and Miss L. Paterson, both of Los Angeles, Cal.

James McLauchlan

President of McLauchlan & Sons Company, Limited and Ex-Mayor of Owen Sound

James McLauchlan, for fifty years a citizen of Owen Sound, died there on February 12th in his 87th year. He was born in Kirkcudbright, Scotland, and came to Canada in 1852, settling at Hamilton, Ontario. In 1871 he went to Owen Sound where in partnership with the late William Anderson he opened a small bake shop. When Mr. Anderson retired from the business five years later, Mr. McLauchlan became head of the firm and under his leadership it has grown to the large manufacturing house now known as McLauchlan & Sons Company, Limited.

The late Mr. McLauchlan was for forty years a member of the Board of Education and for one term its chairman. He was mayor of the town for two years and was one of the founders of the public library. In politics he was a Conservative and contested the riding of North Grey in 1896 against the late John Clark and Hon. William Paterson. He was a Past Master of St. George's Masonic Lodge, Past Principal of Georgian Chapter; a charter member and Past Preceptor of Offanto Preceptory and a Noble of Rameses Temple, Mystic Shrine. For several years he was Chairman of the Biscuit and Confectionery branch of the Canadian Manufacturers Association. He leaves one daughter, Mrs. W. J. Stewart, Owen Sound, and five sons: James M., William G., George D., all in Owen Sound; Joseph K., Toronto, and John H., in West Virginia.

Jenkins Brothers, Limited, of Montreal, have sent out their 1921 calendar. It is a heavy card with a metallic finish and bears an illustration of the company's plant as well as pictures of several valves, products of the firm.

A rich deposit of nickel copper ore, 800 feet long and from 100 to 400 feet wide, has recently been discovered at Bear River by Dr. J. E. Wilkinson. The ore occurs in norite, which the discoverer claims is exactly similar to the Sudbury norite.

Steel shipbuilding in British Columbia for 1920 shows a deadweight tonnage of 83,300 steel tons, as compared with 70,200 tons in 1919. Included in this year's construction are five freighters for the Canadian merchant marine.

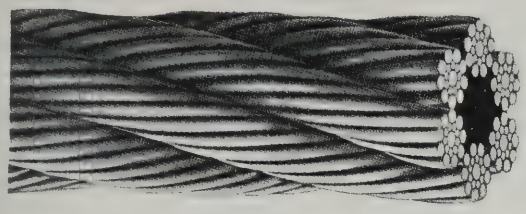
Building Conditions

Increase of $201,000 in Value of Construction Contrac Awarded in January

Construction contracts were awarded in Canada dur January to a value of $8,947,500, according to figures c piled by MacLean Building Reports, Limited. This re sents an increase of $201,000 over December, 1920. Of total, Ontario's share was $2,643,600; Quebec's, $1,261,2 the Western Provinces' $4,945,800, and the Maritime Pr inces' $77,900. The figures in detail are:—

Class	Number	Value
Residences—		
Frame	121	$426,900
Brick	119	799,600
Eusiness Buildings—		
Frame	61	240,900
Brick	104	1,479,900
Concrete	1	800,000
Industrial Buildings—		
Frame	4	8,000
Brick	9	248,000
Concrete	1	15,000
Engineering Construction—		
Steel Bridges	5	284,300
Concrete Bridges	3	9,000
Miscellaneous	15	4,635,900
Total for all Canada		$8,947,500

Trade Returns



Both Imports and Exports for January are Lower tha Last Year

Trade returns issued by the Department of Custo show a considerable decrease in both free and dutiable ports during January. The reduction is most noticeable the imports of fibres, textiles and textile products. Expo also declined, particularly those of animals and animal p ducts though decreases are shown in all other classes well. Following are the statistics of January trade:—

Imports Entered for Home Consumption.

Month of January.

	1920. Free.	1920. Dutiable.	1921. Free.	1921. Dutial
Agricultural and vegetable products, mainly foods	$3,835,217	$9,618,580	$2,278,702	$6,553
Agricultural and vegetable products, other than foods	5,292,763	3,783,081	2,212,649	4,773
Animals and animal products	5,404,492	4,178,029	924,664	2,730
Fibres, textiles and textile products	10,480,846	20,383,521	2,967,821	6,980
Chemicals and chemical products	1,229,456	1,852,018	696,777	996
Iron and steel and manufactures thereof	1,820,168	13,990,565	2,015,129	10,858
Ores, metals and metal manufactures, other than iron and steel	1,360,751	2,878,608	722,785	3,390
Non-metallic minerals and products	4,852,100	4,478,396	5,783,917	10,488

Central British Columbia

New Descriptive Booklet Issued by the Department f the Interior

The Department of the Interior has issued a descri booklet on Central British Columbia prepared by F. H. K under the direction of the Superintendent, Natural Resou Intelligence Branch. Several sections are devoted to ge information about the history, resources, etc., of the prov and the six districts are then considered separately. A cussion of agricultural and industrial opportunities is cluded in the work, and the prospective settler is fu assisted by appendices containing summaries of the important regulations about land-holding, mining and rights. The book is illustrated by views of industrial farming centres, and a good map completes it.

Recent Trade Inquiries

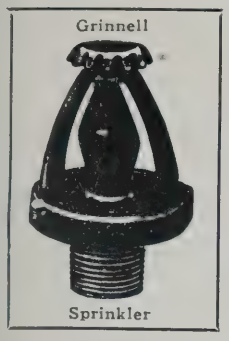
A List of Inquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC.

657. Saskatchewan—A firm of manufacturers' agents in Saskatoon are anxious to represent some Eastern manufacturers throughout the Western Provinces.
658. British Columbia—A firm in Vancouver, who are at present representing some Old Country manufacturers, are anxious to get in touch with Eastern manufacturers with a view to representing them in British Columbia.
659. Apple Wood Scrap Lumber—A firm inquires as to possible buyers of large quantities of apple wood scrap lumber, which they have available at Annapolis, Nova Scotia.

FOREIGN.

660. Brazil—A gentleman in Rio de Janeiro, who has spent twelve years in South America, and has for the last three years been representing an English firm in Brazil, desires to obtain a position as export manager or travelling representative of some Canadian firm. He speaks and writes Spanish and Portuguese, and would require a salary of $10,000 per year, expenses and a commission on sales. He supplies the best bankers' references.
661. China—A firm in China wishes to get in touch with Canadian manufacturers of the following lines: Enamel ware, linoleum, oilcloth, wallpaper, engineering supplies and tools, construction and building equipment and belting.
662. Argentina—A well-known and old-established firm in Argentina is in a position to represent Canadian manufacturers of various lines.
663. Scotland—A gentleman who is leaving Canada for Scotland in about three weeks wishes to represent any Canadian manufacturer who may be interested in shipping to the British Isles. He has excellent engineering experience, having been with a large firm in Scotland for a number of years and also employed by a Canadian engineering house.
664. Packing House Products—A firm of commission agents desire to obtain representation in Barbados for Canadian packing house products.
665. Butter (cooking and table)—A firm of manufacturers' representatives in Barbados would like to have a Canadian connection for cooking and table butter.
666. Flour—A newly established firm of commission agents in Barbados, having Canadian connections, would like to secure the representation for a flour house.
667. Canned Goods—A firm of manufacturers' representatives in Barbados wish to obtain a Canadian agency for canned goods, including fish and fruit.
668. Foodstuffs for Spain—A firm of importers in Barcelona, Spain, desire to receive quotations for grain, flour, and other produce. Terms of payment offered are cash against shipping documents. First-class references given.
669. Office Furniture—An important London company, with branches at Paris, Brussels, Buenos Aires, Valparaiso, and Santiago, are open to purchase Canadian office furniture, more particularly roll-top desks, revolving and tilting chairs, filing cabinets, and invite catalogues and prices, c.i.f. London from Canadian manufacturers able to fill orders.



Hamilton Manufacturers Entertain

Retail Grocers are the Guests at a Banquet Given by Foodstuff Manufacturers

A dinner at the Royal Connaught Hotel in Hamilton was the means adopted early in February for bringing together a number of Hamilton manufacturers of foodstuffs and the retail grocers who sell their products. The dinner was arranged by the Hamilton Advertisers' Agency, of which firm Russell T. Kelley is president. The menu consisted of goods manufactured by Hamilton firms who are clients of the agency, and included soup, ham, marmalade, tarts, ice cream, bread, coffee and cigars, all made in Hamilton.

After the dinner the retailers, who were the guests of the evening, were addressed by a number of representatives of manufacturers, and also by Russell T. Kelley, the toastmaster. Mr. Kelley asked the retailers to buy goods made in Canada. "My two thoughts for you to-night," he said, "are 'Buy goods made in Hamilton,' preferably those manufactured by your hosts this evening, and secondly, 'Buy goods made in Canada.'"

Some of the manufacturers represented were: Dominion Canners, Limited; Brant Ice Cream Company; Harper Pres nail Cigar Company, Limited; R. B. Hill, bread manufacturer John Duff & Son; the T. Upton Company, and the F. F. Dalley Corporation.

Adding New Freighters

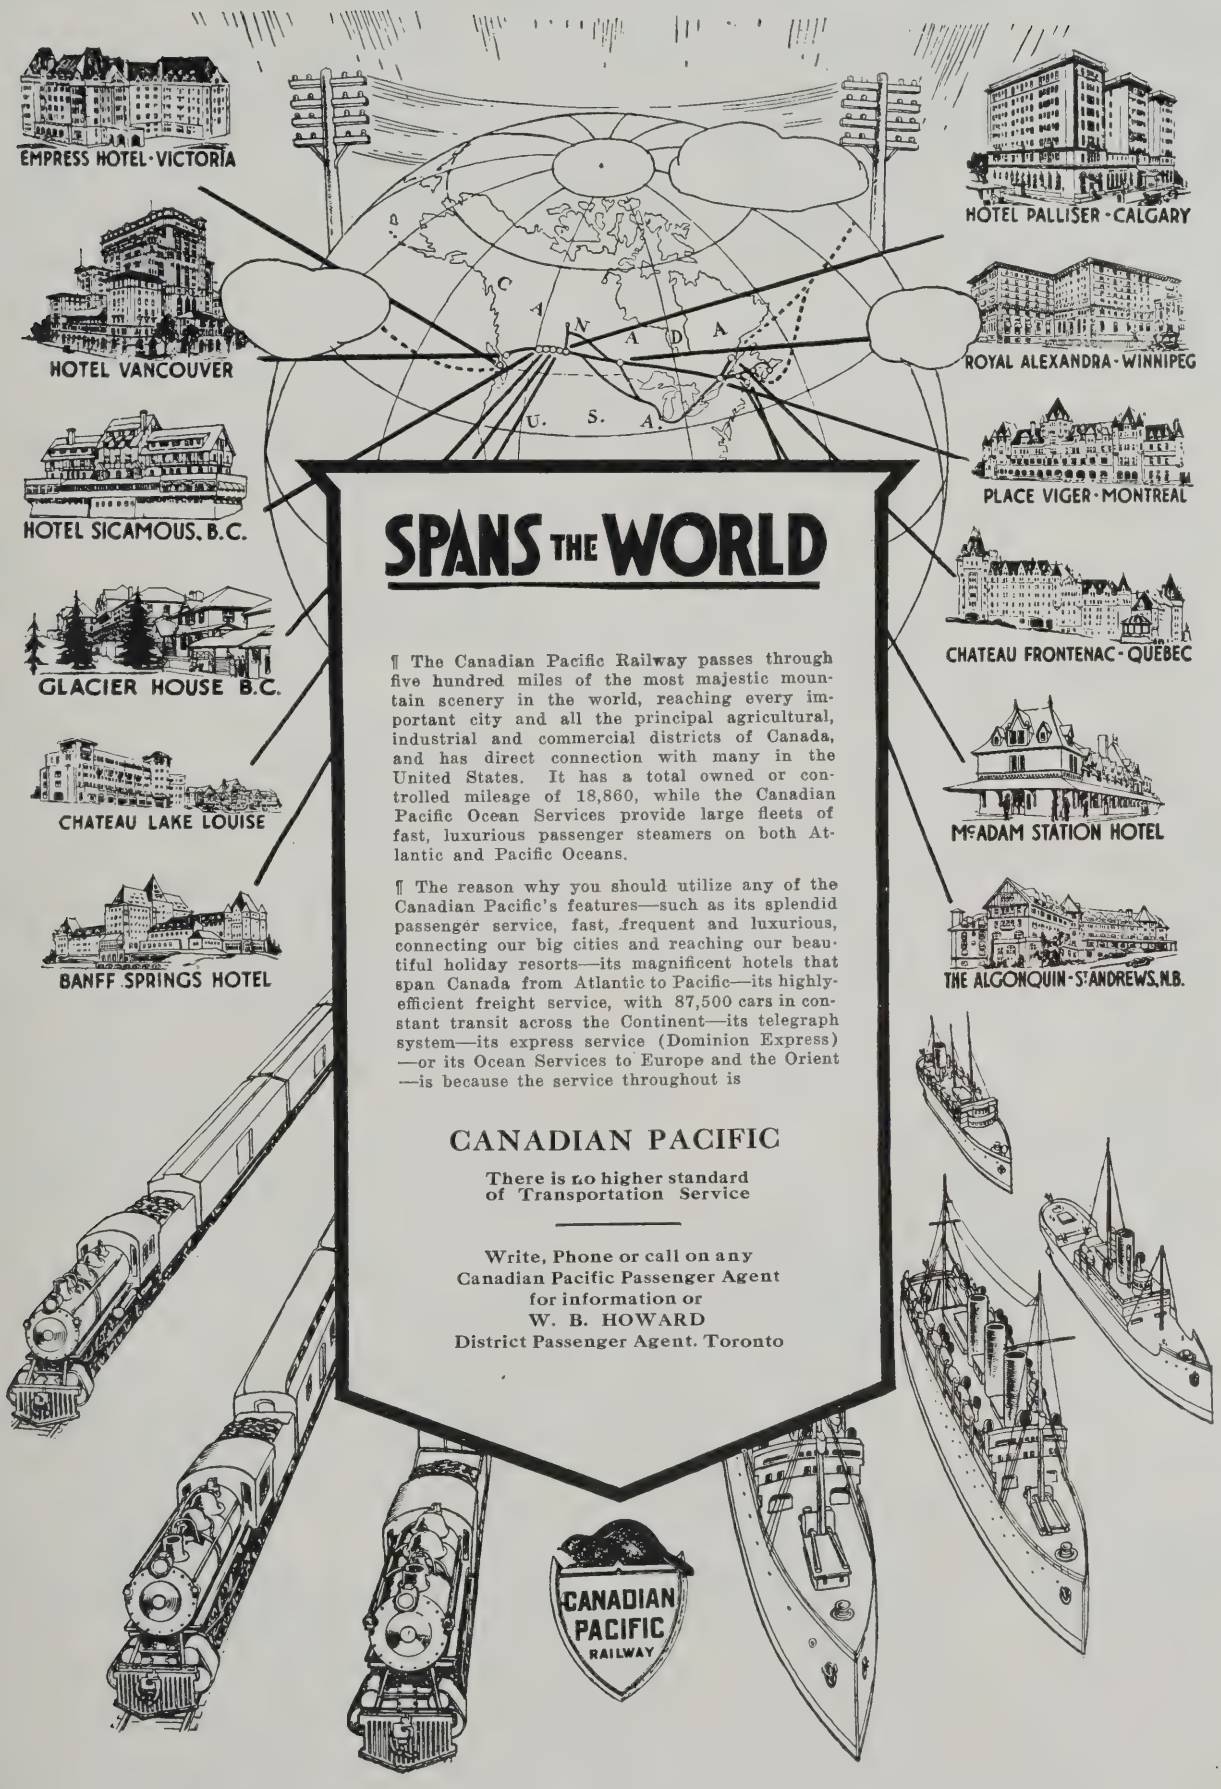
Ten Freight Ships being Added this Year to the Fleet of the Leyland Line

Ten new freighters now under construction will be added to the fleets of the International Mercantile Marine Company in the next sixteen months. The ships are for the Leyland Line, one of the important freight carrying subsidiaries of the company. All ten doubtless will be employed in North Atlantic service.

Some of these vessels were ordered directly after the armistice, and two, the *Norwegian* and the *Dakarian*, have recently been launched in Scotch yards. The *Dakarian* was delivered in February to her owners, and the *Norwegian* will be delivered in March.

Five others of the ten are also due for delivery in 1921, and the three remaining in 1922. All but the *Norwegian* are being built by the Hendersons, at Glasgow. Besides the two mentioned, five others have received names, as follows: *Dakotian*, *Darian*, *Daytonian*, *Davisian* and *Delilian*.

The scale plan of the *Dakarian*, just received at New York, shows a handsome vessel 400 feet long, of the continuous bridge deck type, affording greatest protection amidships, and a design with special features in the way of loading and discharging facilities, with five cargo hatch openings, one being between the bridge and the funnel. The ships bear a close family resemblance to the *Winifredian* of the Leyland Line's Boston-Liverpool service. Unlike the *Winifredian*, they will not carry passengers.



New Ships Still Uncompleted

Labor Troubles hold up work on four vessels of Canadian Pacific Ocean Services

The contemplated developments on the Atlantic and Pacific by the Canadian Pacific Ocean Services, Limited, are being held up temporarily by the labor troubles in the ship-building industry. Four ships are awaiting completion, viz.: the *Empress of Canada*, 22,000 tons, launched in August last, which it was hoped would be in the Pacific service early in June, after a cruise around the world; the *Montcalm*, launched in July last; the *Montrose*, launched in December last; both ships are of 16,200 tons for the Montreal-Liverpool service; and the *Montreal*, formerly the German S.S. *Konig Friedrich August*, bought by the C.P.O.S. for the direct Mediterranean service between Montreal, Genoa and Naples. The troubles at present are with the carpenters and cabinet makers in the ship-building yards and the difficulties do not seem to be easy of adjustment.

From a passenger business outlook the extra ships would be a very welcome addition to the Atlantic fleet, to take care of business offering during the coming summer. There is a very good demand for accommodation; the tourist traffic, which has not been up to pre-war standard since the armistice was signed, has now begun to revive, and numbers of bookings have already been made on ships of both the British and Continental services. Reports from Europe, especially from the countries most visited by tourists, indicate improved conditions in the way of train service, hotel accommodation, food, means of sight-seeing, etc., and publications from the Government tourist bureau in some of the countries are being circulated soliciting tourist business. Several large conventions will be held on the other side, including the Rotary Club convention, June next, in Edinburgh, and everything points to a season of "booked up capacity" ships.

Trade in the Orient seems to be improving and there is a very optimistic feeling in regard to the future. Opinions

Bureau of Canadian Information

THE CANADIAN PACIFIC RAILWAY, through its Bureau of Canadian Information, will furnish you with the latest reliable information on every phase of industrial and agricultural development in Canada. In the Reference Libraries maintained at Chicago, New York and Montreal are complete data on natural resources, climate, labor, transportation, business openings, etc., in Canada. Additional data is constantly being added.

No charge or obligation attaches to this service. Business organizations are invited to make use of it.

CANADIAN PACIFIC RAILWAY
Department of Colonization and Development

165 E. Ontario St. Chicago | 335 Windsor Station Montreal | 1270 Broadway New York

expressed by business and financial men from Japan indicate that industrial and financial affairs have taken a turn for the better, and normal conditions are in sight. Space on the Empress of Asia and Empress of Russia, making the quickest time across the Pacific, is in good demand in both directions, and inquiries for space on the other steamers show an improved tone.

There is a decidedly better feeling on the Atlantic. Inquiries for space would seem to indicate an improvement of trade conditions, which always precedes a shipping revival. The improvement in sterling exchange should bring Great Britain more into the market for Canadian products, and this will no doubt be felt in the near future.

A Word Contest

International Business Machines Company, Limited, Offer $2,500 in Prizes

A "word" contest, with $2,500 in cash prizes for the successful competitors, who must be merchants or clerks in Canada or Newfoundland, is being staged by the International Business Machines Company, Limited, of Toronto. There are 372 prizes, ranging in value from $2.50 to $300, and they will be given to those who can compile the largest list of words made up from the letters used in the words Dayton Scales. The words listed must be English, and such as can be found in any standard dictionary. The contest closes on March 15th, and the winners' names will be published in various trade papers around the first of June.

Acquire Larger Premises

Diamond State Fibre Company of Canada, Limited, Are Moving

The Diamond State Fibre Company of Canada, Limited, are moving into new premises in the Wrigley Building, Carlaw Avenue, Toronto, on or about March 1st. This building is twice as large as their present premises, and will enable them more easily to handle the volume of business which the increasing demand for Diamond Fibre products has brought about. They are equipping a thoroughly up-to-date show-room for visiting customers where they can inspect Diamond Fibre products at their leisure from every angle. A private railway siding will facilitate greatly the prompt delivery of shipments.

SOLE AGENCIES WANTED

Sole Agencies Wanted by well-known, reputable and established English Engineering firm, represented all over the world, for Contractors' or Municipalities' small Engineering Equipment, which must be first-class, competitive in price, and in constant large demand. British made and patented preferred; if Colonial or Foreign, privilege of manufacturing in England required. Big sales assured for the right equipment. Write giving details to "Enginering," P.O. Box 1934, Montreal.

We are builders of railway vehicles to suit every requirement of passenger, freight and general service on steam and electric lines either to the purchaser's or, if required, to our own designs and specifications for home or export orders.

Among our many other products are the following:---

STEEL
CASTINGS
ROLLED BARS
PRESSED WORK
COUPLERS
SPRINGS
BOLSTERS
BRAKE-BEAMS
DRAFT-ARMS
RAILWAY TRACKWORK
ROLLING MILL ROLLS
ETC.

IRON
MALLEABLE CASTINGS
ROLLED BARS
CHILLED WHEELS
DROP FORGINGS
ROLLER SIDE BEARINGS
ETC.

If not mentioned here, it is probably an "Etc."

FERRO-ALLOYS
CASTINGS
CRUSHER JAWS
DIPPER TEETH
BUCKET LIPS
PINS AND BUSHES
CRANK SHAFTS
CRANK PINS
ROLL SHELLS
SPECIAL TRACKWORK
ROLLING MILL ROLLS
ETC.

Our plants are thoroughly equipped for large and efficient production, and we invite correspondence from those interested.

Is your community handicapped by roads like the one shown above? Or is it helped by mudless, dustless roads like the one at the right—Halifax-Bedford Road. Constructed with "Tarvia-X," 1920.

How Did Your Roads Come Through the Winter?

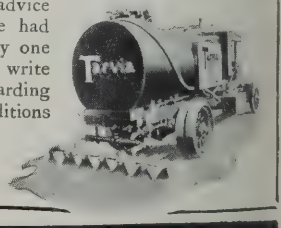
THE annual Spring thaw is the "Waterloo" of thousands of miles of road throughout the country. For weeks in the Spring, when the frost is coming out of the ground, they are swamps of sodden mud—often impassable—always hard going.

To spend money year after year on unimproved roads, is to send good money after bad. For, at best, such roads are hopelessly inadequate for present-day traffic.

Look at the Tarvia road at the right. Isn't that the sort of road you need? A road that is dustless, mudless, frost-proof and traffic-proof 365 days in the year? Good roads like that are not expensive. They are within the reach of every community.

Let us send you facts, figures and pictures of some Tarvia roads that have come through the freezes and thaws, the rains and the snows of winter, smooth and firm—all ready for the heavy summer traffic.

Tarvia is a coal-tar preparation for use in building new roads and repairing old ones. It reinforces the road surface and makes it not only dustless and mudless, but water-proof, frost-proof and automobile-proof. Where the existing macadam or gravel road can be used as a base, the cost of the traffic-proof Tarvia top is extremely low.



Illustrated booklets descriptive of the various Tarvia treatments free on request.

Tarvia

Preserves Roads—Prevents Dust

Special Service Department

This company has a corps of trained engineers and chemists who have given years of study to modern road problems. The advice of these men may be had for the asking by any one interested. If you will write to the nearest office regarding road problems and conditions in your vicinity, the matter will be given prompt attention.

Editorial Comment

The Value of Industrial Tours

TOURS of Ontario industrial centres during the past month by officers and members of the Association proved to be a capital way of working up interest in the organization. As a rule, members who live in the smaller cities and towns, while they may make some use of the services rendered by the Association, are of necessity to a considerable extent out of touch with the many activities at headquarters. To take to them the news of what is going on and to seek their counsel and advice on questions of policy is of benefit to both the visitor and the visited. This was one of the main purposes of the tours, and it was, we feel, satisfactorily achieved as the various parties proceeded from point to point.

Another objective was to enlist the support of manufacturers who have not yet become members. This is also good missionary work, for the Association gains in strength and influence by the addition of each new member. While it cannot yet be stated what results were attained in this direction, there is no doubt that a considerable number of new members will be added to the membership list when the necessary follow-up work is completed.

Speeches of several members of the touring parties were directed towards getting local members to make a greater use of Association services. The value of these services was illustrated with concrete cases. Meetings were told of how, oftentimes, many dollars had been saved by placing problems in the hands of officials at headquarters. This first-hand evidence was most convincing and should go a long way towards developing a more active interest on the part of outside members in the work of the organization.

The kindly receptions that were tendered the touring parties were features of the trips. Nothing was left undone to make the brief visits of the tourists pleasant and profitable. Industries were thrown open for inspection, lunches and dinners were tendered and all possible arrangements made for the comfort and convenience of the visitors. Indeed, so advantageous were the trips from the standpoint of both the visitors and the visited that it would seem advisable to make them regular features of the Association's programme in future.

Quebec, a Great Industrial Province

THIS number of INDUSTRIAL CANADA is devoted very largely to an account of the industrial development of the Province of Quebec. The theme is an interesting one. Quebec lays many claims,—historical, racial and otherwise,—to the attention of the people of Canada, but in no respect is it more deserving of appreciation than in the way its people have built up, with the resources at their command, a great and prosperous industrial fabric.

The French-Canadian artisan, as is pointed out by more than one contributor to this number, possesses special merits not only in his skill as a craftsman, but in his industry and reliability. We are told by those who have been intimately associated with him that he has great respect for authority and is strongly opposed to that spirit of radicalism which seeks to subvert the present economic system. These characteristics all conduce to the stability of industry in the Province of Quebec and are an undoubted source of strength to its manufacturers.

Our immediate reason for issuing this Quebec Feature Number is to work up early interest in the annual general meeting of the Association which, as has already been announced, is to be held in Quebec City on the 7th, 8th, and 9th of June. It is our hope that the many attractions of the ancient capital, coupled with the value of the meeting itself, will draw a large attendance of members. Apart from these considerations, we feel that Quebec's industrial position in itself merits special treatment, and it is a pleasure to devote our pages to a series of articles descriptive of its various features.

The Quebec feature articles are not completed in this number. Others now in course of preparation will be published in the May issue, which will also be devoted very largely to the same general subject. The two numbers taken together will comprise a fairly complete review of the industrial progress of the province.

Quebec's Water Power Potentialities

NORWAY is the foremost country of the world in the per capita development of water power. Two of the determining factors in this pre-eminence have been the quantity of power available and its convenient location to tide-water. Quebec has approximately the same amount of available water power and equal population to Norway. Its development of power is but little less and it has ready access to tide-water. Quebec, under an enlightened policy, is making wonderful progress and expects to assume a foremost place in the "White Coal" sphere within a very short time.

The Attitude of the Press

RECENT references to the Association and its work in the columns of the press seem to indicate a desire on the part of editors to give the organization a fairer interpretation than has oftentimes been the case in the past. The tours through Ontario industrial centres, with their open meetings at which the real work of the Association was explained, undoubtedly served to improve the attitude of both press and public towards the organization. This effort to be fair in judgment is appreciated by members of the Association and those entrusted with the administration of its affairs, and it is hoped that, with increased knowledge, there will be less ground for misunderstanding.

Referring to the visit to Quebec in February of members of the Executive Council and the holding of the monthly meeting of council there, *L'Evenement* declared that, "The Canadian Manufacturers Association well deserves to be favorably appreciated by all the people. In the last years its members gave great examples of initiative, patriotism, vision and energy." It then proceeded to dilate on the war service of manufacturers and their efforts in the direction of reconstruction. "With firmness and intelligence they are working again, and harder than ever, for a complete restoration of business. They are not selfish in their aims because they understand that co-operation and solidarity are needed to attain sound prosperity."

The *British Whig,* of Kingston, on the occasion of the manufacturers' visit to the Limestone City, expressed itself as follows: "Just now, when the 'C.M.A.' is being attacked by the 'U.F.O.' leaders, it is only fitting that the people should understand what the C.M.A. stands for in Canada It is an association of manufacturers whose business it is to promote the best interests of Canadian industry by overcoming obstacles and solving problems that individual concerns would be unable to do. In this way vast progress would be made in the facilities for increasing the volume of Canadian trade, in transportation, shipping and in the development of a general public policy favorable to industrial growth, the profitable employment of capital and labor and the upbuilding of population, thus creating an ever-increasing market for Canadian agriculture right at home."

Extra Provincial Licensing Acts

FOR a number of years past, joint stock companies carrying on business in Canada have been compelled to give increasing attention to a class of legislation adopted by a majority of the provinces, under the name of "Extra Provincial Licensing Acts."

The British North America Act gives to the provincial legislatures jurisdiction over the incorporation of companies with provincial objects. The jurisdiction with respect to incorporating companies with objects other than provincial rests, of course, with the Dominion Parliament.

While the boundaries of the respective jurisdictions of the Dominion and the provinces over other subjects have been fairly well ascertained by judicial decisions the doubts which, ever since Confederation, surrounded the whole subject of the relative powers of the provinces and the Dominion over the incorporation and control of companies have only at a comparatively recent date been brought specifically before the courts

Because Dominion-chartered companies claimed that they were exempt from provincial legislation and could, therefore, carry on business anywhere in Canada without taking out a license in each province in which they did business, several test cases of interest to Canadian manufacturers were brought about. The Privy Council, in the John Deere Plow case, established the principle that Dominion-chartered companies are not amenable to discriminatory enactment of the provincial legislature. Many provinces endeavored to square their statutes with this decision but others contended that their Acts were valid and could be distinguished from the Act which was in question in the John Deere Plow case.

Still further test cases, through the activity of the C.M.A., were taken to try out the validity of these attempts. The Supreme Court of Canada being divided the Legislation Committee of the C.M.A. thought that a solution should be found in a conference of Dominion and provincial representatives.

A group of Dominion companies, however, though that having proceeded so far, it was eminently desirable that a final decision of His Majesty's Privy Council should be obtained.

That decision has now been issued, under which i

is found: 1. That in the case of all four appellant companies the provisions of the parts of the provincial companies Acts which were the subject of the proceedings in the courts of the provinces of Ontario, Manitoba and Saskatchewan, in so far as they purport to apply to the appellant companies respectively, are *ultra vires* of the provincial legislatures in each case, and that these companies are not precluded by reason of not having been licensed, or registered under those Acts from carrying on business and exercising their powers in the three provinces, and are not liable to the penalties prescribed for having so carried on business and exercised their powers. 2. That in the case of the Province of Ontario none of the appellant companies can acquire and hold lands in the province without a license under the provincial Mortmain Act, and that it is within the power of the other provincial legislatures to impose the requirements of a license directed to this purpose. No costs are awarded.

The Legislation Committee is considering the most convenient way of convening a conference of Federal and Provincial representatives with a view to an equitable arrangement for the future on behalf of all interests.

Rash and Injurious Statements Should be Nailed

UNDOUBTEDLY a great deal of harm is done by the publication of statements such as that credited to Mrs. A. H. Beaton, president of the Women's Liberal Association, Toronto. Mrs. Beaton, in attempting to answer Sir Henry Drayton's assertion that Canadian housewives were largely to blame for the adverse condition of exchange between the United States and Canada, declared boldly and emphatically that aluminum utensils manufactured in the United States lasted six times as long as Canadian-made utensils. This obviously ill-considered statement was given considerable prominence in the news columns of the Toronto *Globe* of March 23rd, and among ill-informed people would probably be accepted as correct and a great injustice be thereby done to Canadian manufacturers.

Credit is due to those manufacturers of aluminum ware who took prompt action to controvert Mrs. Beaton's injurious remarks. Unfortunately, the same prominence rarely attaches to the answers to such sensational statements as to the original publication, but those who read the *Globe* thoroughly would no doubt see one or other of the letters of protest that were published in its columns following the appearance of the Beaton interview.

The Northern Aluminum Co., Limited, wrote: "'Wear-Ever' aluminum utensils in Canada are made according to the same specifications and of the same quality and thickness of aluminum as 'Wear-Ever' aluminum utensils that are made in the States. 'Wear-Ever' utensils are selling in Canada at the same prices that 'Wear-Ever' utensils are selling at in the States. Aluminum cooking utensils made in Canada are just as good as similar grades of aluminum cooking utensils made in the States."

L. McLain, president of The Louis McLain Co., Limited, wrote: "Mrs. Beaton referred to aluminum cooking utensils manufactured by manufacturers in the United States lasting six times longer than Canadian-made. This statement from Mrs. Beaton we take very strong exception to, because it is not true to fact, and is very misleading. We, as manufacturers of the 'Ideal' 'Louis McLain Line,' use an exceptionally heavy gauge of 99 per cent. pure metal in all of our utensils, and being conversant with every known line manufactured in the United States, we know that, taking any line in the United States piece for piece, that we use as heavy, if not heavier, gauge of metal all the way through our large line of aluminum cooking utensils, and as for design, finish and workmanship of utensils, our line cannot be surpassed by any manufacturer of aluminum cooking utensils."

H. G. Wright, president E. T. Wright Co., Limited, wrote: "Mrs. Beaton apparently does not know anything about the production of aluminum ware made in Canada. There are in the city of Hamilton at least three aluminum ware manufacturers, and two or three in Toronto, and I venture to say that aluminum ware made by our Canadian manufacturers is equal in every respect, and in many cases superior to the cheap German-American made aluminum ware which comes into Canada, and which helps to depreciate our good Canadian dollar.

"I am sending you a copy of our aluminum catalogue, and am prepared to put up $1,000.00 of a donation to any charity institution in the Dominion of Canada, that our 'Wellworth' aluminum manufacture is equal to anything imported."

Attacks on the quality of Canadian goods such as that delivered by Mrs. Beaton may be expected from time to time, and it behooves manufacturers to be on the alert and nail the lie the moment it is uttered. Certainly no good will be done by the publication of such wild statements, and it is a question in the field of newspaper ethics whether a paper has any justification for publishing, even in the form of an interview, a statement calculated to do such serious injury to a third party. It is useless to cast responsibility on the person interviewed. The paper alone is responsible for giving publicity to the injurious statement and its action should be judged on that basis.

Parliamentary Proceedings of the Month at Ottawa Reviewed

By INDUSTRIAL CANADA'S SPECIAL CORRESPONDENT

PARLIAMENT, after being in session for six weeks, adjourned for the Easter recess, having accomplished little of moment. Dr. Clark, in one of his usual free trade orations, speaking on the Speech from the Throne, outlined the present political situation and the differences between the policies of the three political parties in the following words:

"It is unfortunate that the official Opposition in this House are apparently not in a position to take direct issue with my Right Hon. friend, the Prime Minister upon the tariff question. . . . . The Prime Minister says it is the greatest issue; we agree with him and join issue on the question; we are opposed to the principle of protection; he is in favor of it. I submit to my hon. friend (Mr. Mackenzie King) that he should tell his friends that it is really impossible in this serious condition in the minds of our people, to speak with two voices upon what is the great issue of the day."

In the accompanying article our readers are furnished with a most comprehensive review of the proceedings in Parliament up to the beginning of the Easter recess, interpreted from the manufacturers' standpoint. The article is prepared by a writer who is intimately in touch with what is going on at the capital, and we feel that it will well repay readers of INDUSTRIAL CANADA *to devote careful attention to what he has to say.—The Editor.*

The Exchange Situation

Hon. Hugh Guthrie, who followed, dealing with the exchange situation said:

"We are buying nearly a billion dollars worth of goods from the United States, and we are selling to them about half that amount. The day of settlement is at hand now, unfortunately, and we are settling by going out in the market and buying American currency, and by doing that we are depreciating our own dollar, or appreciating the American dollar—and you have the exchange situation. . . . . There are two ways that I know of, and only two, of correcting that—you can correct it by selling the U.S. more goods, or you can correct it by ceasing to buy so much goods from the U.S."

And in addition to this line of thought, he enumerated article after article advertised in the catalogue of the United Grain Growers, stating the United States point of manufacture, and at the same time mentioning the number of companies within the Dominion making the same class of articles, from whom the Grain Growers, were they so minded, could purchase.

The agreement between the party managers was that the debate should end on Thursday, March 3rd, but the carrying out of the agreement was rendered possible only by remaining in session until 4.35 Friday morning, when the vote was taken, and the address disposed of, the Government being sustained by a majority of twenty-five.

Canada's railway situation has already been up twice for general discussion, first on motion of Mr. Campbell, of The Pas, that work should be resumed as early this year as possible on the Hudson Bay Railway, and the project completed without any further delay, which claim brought the ministerial announcement from Dr. Reid that further work is abandoned until the financial conditions of Canada will permit of its resumption, and second when Dr. Reid made his annual statement in connection with the Canadian National Railways, announcing a fixed charges and operating deficit, for the calendar year 1920 of $70,331,734.88, without taking into consideration any interest or fixed charges on the Transcontinental or National Railways.

Standardization of Parts

The discussion introduced by A. B. McCoig, M.P., regarding the standardization of certain parts of agricultural machinery, resulted in this subject being referred to the Committee on Agriculture and Colonization; those who believe that the acme of perfection has already been reached and that neither industrial research nor corporate or private initiative are capable of bringing about any improvements, are comparatively limited in number, and it is likely that those who look with disfavor upon any hampering restrictions likely to retard invention and improvement, will win when the issue is fought out either before the Committee or in the House, although the technical nature of the subject may necessitate the presence before the Committee of the implement manufacturers desirous of continuing to live up to their watchwords of "Progress" and "Improvement."

From a trade standpoint the announcements of Sir George Foster are of interest that Great Britain's treaty with the Soviet authorities was concluded entirely irrespective of the self-governing Dominions, but that Russian subjects have a perfect right to make purchases and pay for purchases in Canada, and that Canadians have a full right to trade with Russian subjects, as was the announcement that Roumania has used $22,571,073 of the established credit of $25,000,000, and that Greece has used $7,475,073 of her credit for like amount.

Answers to Questions

In answers to questions by members the Ministry announced many interesting facts of which the following are samples:

Roumania on April 1, 1921, will owe Canada in interest $1,475,234.96. Negotiations regarding payment of this amount are in progress.

No Imperial Conference is to be held in 1921, but at a meeting of Prime Ministers in June there will likely be a review of the foreign policy of the Empire, discussion of the renewal of the 1911 treaty with Japan, and consideration of a naval policy based upon co-operation.

During a period of four years the Dominion Government floated the following domestic loans:

YEAR ENDING MARCH 31.

	Amount.
1916	$97,003,600 22
1917	115,889,812 65
1918	517,430,056 35
1919	584,281,459 07

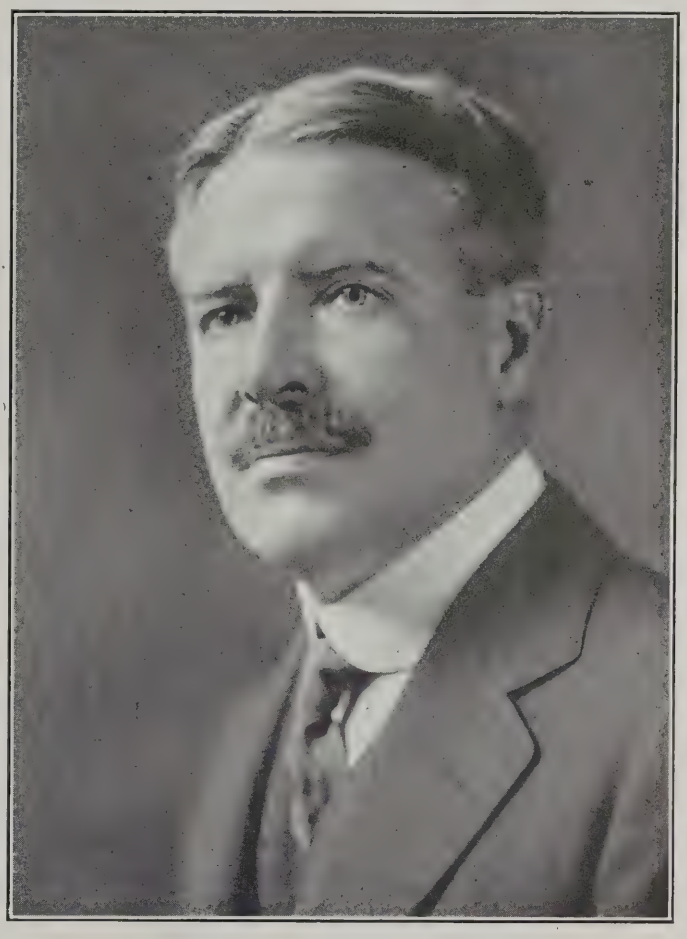
Farmers have paid by provinces as income taxes for the years 1917 and 1918, the following amounts:

Province.	No. of farmers paying in 1917.	No. of farmers paying in 1918.	Amount paid for both yrs.
Nova Scotia and Prince Edward Island	17	37	$2,721 72
New Brunswick	5	29	2,393 30
Quebec	94	163	9,500 78
Ontario	488	2,042	69,794 75
Manitoba	1,853	4,352	151,036 17
Saskatchewan	3,387	4,377	340,900 98
Alberta	3,011	1,356	361,218 39
British Columbia	104	417	22,203 63
Yukon	3	1	30 55
Totals	8,962	12,774	$957,980 27

For the fiscal year ending March 31st, 1920, eleven individuals paid tax on incomes of $200,000 or over.

The Lignite Utilization Board expect to complete by next June the coal briquetting plant at Bienfait, Sask., at a cost of $675,000. The plant will have a minimum capacity of 100 tons of briquettes per day and the output will be marketed through the ordinary channels of trade.

The Dominion note circulation on March 31st, 1914, was $117,795,718.53, and on February 28, 1921, it was $290,194,519.92.



There are estimated to be now only 900 antelope in Western Canada and of these 100 are on a Dominion Government antelope reserve of 5,000 acres recently established near Nemiskam, Alberta..

Canada bears 25/478 of the total expenses of the League of Nations.

By way of resolution the Government has given notice of its intention of coining five-cent pieces out of pure nickel of standard fineness weighing seventy grains.

Time-consuming discussions of an academic rather than of a practical nature, and which, generally speaking, are not expected in Parliamentary circles to result in Governmental action, have taken place regarding the Cattle Embargo, the Great Lakes-St. Lawrence Deep Waterway, the Housing Problem, Political Patronage, the advisability of a Minister of the Crown having the right to occupy a seat in either Chamber when matters affecting his department are under discussion, and the propriety of Ministers of the Crown acting as directors in Canadian corporations, all of which debates occupied much of the time of Parliament and many pages of the official reports. Belonging to this class, but of a more practical nature than most, was a resolution regarding development of Canada's national resources, introduced this session by Dr. Manion, which furnished an excellent opportunity to sixteen speakers to dilate upon the Dominion's wealth in lands, mines, forests and fisheries. Of a similar class, but still to come, are the discussions on Proportional Representation, and the making of Vancouver a Free Port.

Now that the War Measures Act is no more, and with the return of peace-time conditions, orders in council directly affecting manufacturers or the public generally are less numerous than during the war period, but under certain Acts of Parliament the Governor-in-Council still has power to take action which it is deemed inadvisable to limit to Parliamentary regulation. Under such powers an order in council has recently been passed of direct benefit to numerous manufacturers of food products. During the session of 1920 the Food and Drugs Act was passed providing that on goods sold in sealed packages the weight, measure or number must be clearly indicated. When this provision became law many manufacturers found themselves with bottles, boxes, cartons and labels in stock which did not comply with the new law, and such manufacturers were pleased to learn that the Governor-in-Council had postponed until January 1st, 1922, the weight, measure or number marking provisions, thus giving them an opportunity to use up their stock on hand.

Hon. Sir Henry Drayton

As Minister of Finance, one of Sir Henry's Most Important duties is to prepare and present to Parliament the National Budget. He is now engaged night and day in working out its detail

The Government has announced its policy on butter substitutes by giving notice of a resolution permitting under proper supervision and indefinitely, the importation or manufacture within Canada of olemargarine. If legislation in the terms of the resolution is enacted, this industry, the existence of which has been attacked in Parliament on dozens of occasions since 1886, may finally rest on a foundation which will permit of its legitimate expansion.

The only bill enacted into law is an amendment to the Election Act necessary in connection with the Ontario Referendum. Bills relating to patents and copyrights have been given their first readings and are available in printed form.

The Government has given notice of its intention to amend the Insurance Act, the most contentious amendment being the one providing that in the case of any insurance against fire on property situated in Canada, effected in any unlicensed company, the person effecting such insurance shall pay to the Minister of Finance for Consolidated Revenue Fund, a sum equal to fifteen per cent. of the total net cost of such insurance so effected, but not to exceed in any case fifteen cents for each one hundred dollars of insurance for one year, or a proportionate sum for any longer or shorter period.

The moment when a Cabinet Minister comes most directly under fire is when he faces Parliament asking for the money necessary to carry on the next year's operations of his department. Dr. Tolmie was this session the first to make his bow as an applicant for funds, and at the end of three sittings of the House had been granted for agricultural purposes $5,602,139.50, an increase over last year of $139,139.50. The Minister of Justice came next and was granted his supply, and the Minister of Trade and Commerce had a portion of his estimates voted when the House adjourned for the Easter recess.

In view of the public utterances of President E. W. Beatty and the Hon. Mr. Crerar regarding the necessity on economic grounds of a progressive immigration policy in order that by increase of population the taxation burden may be lightened by being borne by a greater population, importance is being attached to the discussion which will take place when S. W. Jacobs, M.P., commences from his seat in the House, as he has announced his intention of doing, a full discussion of the Government's immigration policy.

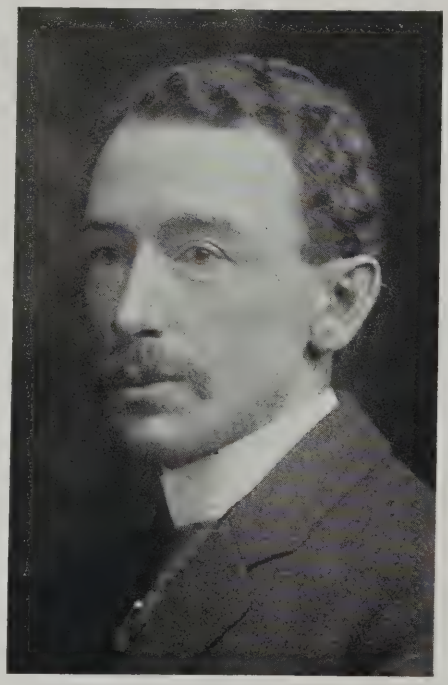
The most frequent subject of discussion in the corridors and lobbies of Parliament is "Will or will not the tariff revision be brought down this session." Those who are prophesying that the revision will not take place, are basing their opinion largely upon the desirability of Canada, before announcing her policy in this regard, knowing just how high the Harding administration contemplates

(*Continued on page* 102.)

Un Message Bilingue du Premier Ministre de Quebec

(A Bilingual Message from the Premier of Quebec)

CEUX dont la mission consiste à diriger l'industrie, et souvent à la créer, ont à l'heure présente une tâche aussi lourde qu'importante. Aucun peuple n'a échappé aux répercussions économiques de la grande guerre. Plusieurs de nos industries ne pourront subsister qu'en se réadaptant à des conditions nouvelles. Il en est où le coût de la production semble prohibitif. D'autres voient leur existence compromise par les taux élevés de transport. Les usines et les ateliers n'ont plus la main-d'oeuvre laborieuse et experte qui faisait leur valeur. En face de l'instabilité des marchés de consommation et en butte aux exigences croissantes du travail, le capital hésite à s'engager. Il est devenu d'une prudence qui confine à la pusillanimité et qui peut dégénérer en une funeste abstention.



* * * *

La puissance économique et financière du Canada dépend cependant et de son activité industrielle et de son activité agricole. Nous n'allégerons nos charges budgétaires et n'acquitterons nos dettes à l'étranger que dans la mesure où, à une production agricole intensive, s'ajoutera un développement industriel qui puisse mettre en valeur les énormes ressources de notre pays .

* * * *

Aussi convient-il de féliciter nos manufacturiers canadiens d'avoir pris conscience de leur responsabilité, et d'apporter à la solution des problèmes de l'industrie la totalité de leur pensée et de leurs efforts.

Il me plaît surtout de les voir tenir leur prochaine convention au sein de la province de Québec, qui leur a indiqué la voie à suivre dans l'étonnante façon dont elle a su allier à une production agricole sans cesse croissante un prodigieux développement industriel.

Hon. L. A. Taschereau

Premier Ministre de Quebec

Car, c'est bien là l'angoissant dilemme que de multiplier et de grossir les centres du commerce et de l'industrie et de ne pas encourager un exode funeste vers les villes.

Pour que le développement industriel d'un pays s'opère en toute sécurité et durablement, il faut qu'il repose sur une production agricole suffisant aux besoins de la population et qu'il ne détourne pas l'élément rural de son emploi.

La province de Québec a su réaliser ces conditions. En ces derniers vingt ans, alors que se triplait le nombre de ses manufactures, l'étendue de ses terres en culture se triplait également. Les capitaux engagés dans nos industries se sont sextuplés depuis 1900; et, durant la même période, la valeur de nos récoltes s'est accrue exactement de six cents pour cent.

En s'exerçant ainsi, concurremment, notre activité industrielle et notre activité agricole s'alimentent mutuellement et peuvent s'intensifier sans se nuire. Il arrive même que l'abondance et la qualité des produits agricoles créent des industries de transformation très profitables. * * * *

Les industriels, les négociants et les hommes d'affaires qui se réuniront à Québec ont une notion trop juste des vérités économiques pour perdre de vue la relation qui doit exister entre la prospérité agricole et le développement industriel.

Entreprise dans cet esprit, puisse leur convention

ON the captains of Industry a heavy and important task is imposed at the present time. No nation has escaped the economic shock of the great war. Many of our industries can only carry on by adapting themselves to new conditions. In some the cost of production seems well nigh prohibitive. The very existence of others is threatened by the expensive cost of transport. Factories and workshops have lost the assiduous and skilled workmen who formerly gave them their principal value. Confronted with unstable markets and the ever-growing demands of labor, capital has become shy. It has developed caution bordering on faint-heartedness, or even fatal inaction.

* * * *

The economic and financial power of Canada depends however upon its industrial and agricultural activities. We can only lighten the burden of our budgets and discharge our foreign debts according as an increased agricultural production, added to a large industrial development, enables us to reduce to value the vast latent resources of our country.

* * * *

Our Canadian manufacturers are to be congratulated on having appreciated their responsibilities and on seeking by every means in their power a solution of our industrial problems.

I am particularly gratified that they should hold their next convention in the heart of the Province of Quebec, which has pointed the way in the surprising manner in which she has combined an ever-growing agricultural production with a prodigious industrial development.

For the crying difficulty is, how to swell the centres of commerce and industry without a fatal depletion of the rural population.

In order that a country's industry may develop securely and permanently, it should be based upon an agricultural produce sufficient for all the needs of the people and should not drain the rural population from the fields.

These ideal conditions the Province of Quebec has achieved. In the course of the last twenty years, whilst the number of its manufactures has trebled, the acreage under cultivation has also increased threefold. The capital invested in our industries is six times what it was in 1900, and the value of our harvests has increased exactly six hundred per centum in the same period.

By thus keeping pace together, our industrial and agricultural interests can mutually support one another and flourish without injury to either. It is a fact indeed that the abundance and excellence of agricultural produce often gives rise to most profitable industrial operations.

* * * *

The manufacturers, merchants and business-men who will meet in Quebec have too clear a view of economic truths to lose sight of the relation which must exist between agricultural prosperity and industrial development.

I trust that the Convention entered on in this light

leur inspirer d'heureuses initiatives, susciter en chacun l'énergie créatrice, et provoquer un redoublement d'activité industrielle qui contribuera à libérer notre pays de ses obligations financières et nous permettra de reprendre notre marche vers les hautes destinées réservées au Canada. —*L. A. Taschereau.*

may conceive many fruitful enterprises, arouse in all the energy for creation, and bring about such redoubled industrial activity as will aid in releasing our country from its financial obligations and allow us to resume our progress towards the high destiny reserved for Canada. —*L. A. Taschereau.*

A Bilingual Reply from the President, C.M.A.

(Une Reponse Bilingue du President, A.M.C.)

APPRECIATING to the full the significance of the statesmanlike words of the Prime Minister of Quebec, I feel that it will prove an inspiration to the members of the Canadian Manufacturers Association to hold their annual convention in a province and in a city where the position of manufacturing industry is so thoroughly understood and where such splendid co-operation exists between agriculture and manufacturing industry and between employer and employee.

We look forward with the keenest interest to the approaching meeting in the historic city of Quebec where our English-speaking members will have an opportunity of fraternizing with our French-speaking members and imbibing from them some of that spirit of progress, toleration and broad sympathy which is bringing such wonderful success to the industrial life of the province.

The Canadian Manufacturers Association knows no distinction of race or creed in its membership nor does it recognize any such differences in its work. It aims at the building up, on a broad basis, of a strong, loyal and prosperous industrial nation on the northern half of this continent,—a nation in which the great industries of agriculture and of manufacturing will go forward hand in hand in the most effective co-operation. Because in Quebec we have such convincing proof that it is possible that these combinations can exist and prosper, those of our numbers whose homes are in the other provinces will welcome the opportunity to study at first hand the principles and methods which are making such results possible.

This is indeed a period of difficulty and uncertainty, and it will be rendered more so by the dissemination of doctrines calculated to unsettle the minds of the people and induce them to advocate policies which, instead of building up, will cast down and thereby ruin the work that has been so painstakingly performed during the formative years of Canada's history. It is indeed a matter of great satisfaction to learn that in the Province of Quebec those influences which tend to stability are so strong and so effective. Quebec may well prove an object-lesson to the rest of Canada in the industrious and thrifty habits of its people, in the sane policies of its government, and in the masterly administration of its great and growing industries.

On behalf of the Canadian Manufacturers Association, with its 4,200 members scattered from coast to coast, may I thank the Prime Minister of Quebec for his words of counsel and of welcome and express the hope that the coming Quebec Convention will prove to be the fruitful gathering which he has the kindness to hope that it will be.

—*John S. McKinnon.*

Mr. J. S. McKinnon

President Canadian Manufacturers Association

TOUT en appréciant toute la portée des paroles d'un homme d'Etat comme le premier ministre de Québec, j'ai l'impression que les membres de l'Association des Manufacturiers Canadiens devrait tenir leur convention annuelle dans une province et dans une ville, où la situation d'une industrie manufacturière est si bien comprise, et où la coopération entre les industries agricole et manufacturière est si bien appréciée ainsi qu'entre employeurs et employés.

C'est avec l'intérêt le plus intense que nous prévoyons que la prochaine réunion des membres de langue anglaise, dans la vieille cité historique de Québec, leur donnera l'occasion de fraterniser avec nos membres de langue française, et qu'ils recevront d'eux l'inspiration de leur esprit de progrès, de tolérance et de grande sympathie qui est l'essence du succès merveilleux de la vie industrielle de la province.

L'Association des Manufacturiers Canadiens ne fait aucune distinction de race ou de croyance de ses membres, et ne fait aucune différence de ce genre dans son travail. Son but est de construire, sur de grandes bases, une nation industrielle, forte, loyale et prospère sur la moitié nord de ce continent, une nation qui unira les grandes industries.

Agricole et Manufacturière qui iront de l'avant, la main dans la main, vers une coopération effective. Parce que nous sommes convaincus que dans Québec, il est possible que ces combinaisons peuvent se réaliser et prospérer, ce qui donnera à nos membres qui demeurent dans une autre province une bonne occasion d'étudier sur les lieux les principes et les méthodes qui rendent de tels résultats réalisables.

Nous traversons une période difficile et incertaine, qui sera aggravée par l'énonciation de doctrines qui seront de nature à troubler l'esprit du public, et l'induire a préconiser des principes qui, au lieu de construire, causeront la ruine du travail qui a été accompli au prix de grands sacrifices durant les années d'activité de l'histoire du Canada. Nous éprouvons une grande satisfaction en apprenant que de telles influences n'ébranleront pas la stabilité de la province qui est forte et effective. Québec sera une preuve exemplaire, pour le reste du Canada, des habitudes industrieuses et économes de sa population, à cause de la politique saine de son gouvernement et de l'admirable contrôle de ses industries croissantes.

Au nom des 4,200 membres de l'Association des Manufacturiers Canadiens, qui sont dispersés d'un océan à l'autre, permettez moi de remercier le premier ministre de Québec pour ses bienveillants conseils et ses paroles de bienvenue, lui exprimant l'espoir que la prochaine convention de Québec sera une réunion qui portera les fruits qu'il a eu la bonté de prédire.

—*John S. McKinnon.*

The Romantic History of Industrial Development in Quebec

Province was the Cradle of Canadian Industry, Manufacturing Having Originated in the French Regime and Attained Goodly Proportions by the Time of the Conquest — Extent of Manufacturing To-day

By E. T. D. CHAMBERS

Department of Colonization, Mines and Fisheries, Quebec

CANADIAN INDUSTRY, like Canadian agriculture, had its birth in what is now the Province of Quebec. Necessity was its mother. To provide clothing for their families the thrifty mothers of Canada laid the foundation of the textile industry with the spinning wheel and the hand loom. Without the skill, patience and deftness of French-Canadian operatives, our cotton, woollen, silk and other textile industries would not be what they are to-day; nor could our boot and shoe and other branches of the leather trade have attained their present enviable position. Indeed, it has been well said that "the United States itself could never have gained its prominence in cotton manufacturing and in boot and shoe making had it not been able to draw upon the Province of Quebec for its factory hands."

Intendant Talon wrote in 1671 that druggets, cloth serge, woollen cloth and leather were being made in New France, and he said: "I have of Canadian make wherewith to clothe myself from head to foot." The Ursuline nuns willingly assisted him in this policy and taught the girls of the colony to spin and weave while at their schools, and these girls going out into the world as wives of farmers and hunters carried the knowledge of their art all over the country.

Made Every Fabric Needed.

"The flax spinning wheel, the wool spinning wheel and the clumsy wooden loom were a part of the furniture of almost every house, and in course of time these industrious women provided every fabric needed for the household," says Mr. Biggar, "from the clothes they wore even to the towels used in the kitchen, the carpeting on the floor and the bed clothing under which they slept." The preparatory processes, including carding, were of course done by hand. They obtained their dyes from butternut wood and the berries and roots of wild plants, which were supplied, together with necessary instructions, by the Indians. In time their primitive looms not only turned out colored as well as plain linen and woollen fabrics, but also the *catalonnes* (so called from Catalonia in Spain) for rugs and carpets.

The Jesuit relations of 1668 speak of hat and shoe factories at Quebec and of proposed linen cloth and leather manufactures. The census of 1681 shows the existence of four weavers of cloth, one of carpets, one ribbon weaver, four rope-makers, six hatters and one carder.

There is a wealth of interesting material in the story of early industrial development in Quebec, and Mr. Chambers has given a fascinating glimpse of the beginnings of industry in the province. Of particular value is the reference to the establishment of the iron industry on the banks of the St. Maurice River, an undertaking which had a long and eventful history. Other early industries are also mentioned.

—The Editor.

Some First Things.

The first timber manufactured in Canada for export was shipped by Talon in 1667, and in 1735 Lieut. Hocquart exported timber and boards to Rochefort.

The first brewery in Canada was established by the Intendant Talon in 1672 upon the site of a portion of the present Boswell brewery between St. Valier and St. Paul streets in Quebec City.

A joint stock company for the manufacture of iron upon the banks of the St. Maurice was formed in 1733 by Messrs. Francheville, Peter Poulin, Gamelin and Cugnet. Its raw material was drawn from deposits of ore a few miles north of Three Rivers, which had been discovered in 1667, and described by Frontenac in 1672, and by the Marquis de Denonville in 1681. The early death of Francheville led to a reorganization of the company under the title of Cugnet & Co., with François Etienne Cugnet, Pierre François Taschereau, Jacques Simonet and Ignace Gamelin as partners. Smelting operations were successfully entered upon in 1737 on a large scale, but resources failed, and in 1743 the property which had been conceded by the King of France was reunited with the Crown domain. Thereafter the forges were operated in the name of the French king under the management of Mr. de Rouville, who with other trained workers had learned their art from men whom Colbert had sent to Sweden fifty years before to be trained in it.

One Franquet, who was sent from France to inspect the fortifications of Canada in 1748, visited the St. Maurice forges in 1752 and left an interesting description of them. A tributary of the St. Maurice was dammed in three places to provide power for the iron works. One fall was used for a wheel which furnished power for the furnace work, and two others operated forges and hammers. In Mr. Franquet's presence, a pig of iron 15 feet long by six inches and four inches thick was cast, and he also witnessed the making of pots, kettles and other hollow ware and also the casting of stoves, which were each made of six different pieces fastened together. Up to that time, the early settlers had for the most part to heat their houses by open wood fires on the hearth. The fuel used in the forges was charcoal made from wood near the iron works, and the services of a chaplain were provided at the expense of the Crown. Although 180 hands were employed, and a large village was supported by them, furnished with all necessary comforts, there was as little economy displayed in the management as is customary under Government ownership, and consequently the Crown drew no profits from the flourishing industry.

Under British Regime.

After the capitulation which followed the two battles of the Plains of Abraham, the St. Maurice forges were operated under the British military regime, just as they were under the French, and under the same practical heads, for four years, and in 1762 showed a net profit of $3,314. From 1764 to 1767 they remained idle, but in the last-mentioned year they were re-opened by a company composed of Christopher Pelissier, a Quebec merchant; Alexandre Dumas, Thomas Dunn, Benjamin Price, Colin Drummond, Dumas St. Martin, George Allsop, James Johnston, and Brooke Watson, which leased the works from the Government for a period of sixteen years for £25 a year. New buildings were erected and fitted up at a cost of £4,500, and success once more smiled on the company, its products being sold in Quebec by an agent, Dr. Pierre de Sales Laterriere, who had his place of business facing the little market square in front of the Church of Notre Dame des Victoires.

Pelissier, the manager of the company, made additional profits for the company

in 1775 by treacherously making at the works belonging to the Crown, munitions of war for General Montgomery and the American revolutionary army, which had then taken possession of Three Rivers. He even visited Montgomery at Holland House, near Quebec. When the tide of war turned at Three Rivers, Pelissier fled to Sorel by canoe, and Dr. Laterrière, who had taken charge of the forges, was instructed by General Carleton, who paid them a visit, to continue operations. Under his management as many as 800 people were employed at a time making charcoal and iron, and the gross profits, of which one-third went to Laterrière, were sometimes from £10,000 to £15,000 a year.

Alexandre Dumas succeeded Laterrière in the management of the forges, up to 1783, when they were leased to Mr. Conrad Gugy, who met with considerable success up to 1787, when reverses overtook him, and his property and lease were sold by the sheriff to Messrs. Alexandre Davison and John Lees. In 1801 they passed into the hands of Messrs. Munro and Bell. In 1810 their lease was renewed for a term of twenty-one years for £500 a year. Mr. Bell kept great state at the Forges, where the Governor-General and other distinguished people of the country were his frequent guests, and where he kept a pack of foxhounds and a stable of fine horses for hunting purposes. In 1846 the Government sold the Forges by auction. They were bought for £5,575 by Mr. Henry Stuart. In 1847 he leased the property to Mr. James Ferrier, who operated the works profitably for four years. They changed hands several times within the next few years, being transferred in 1876 to Mr. George McDougall, by whom they were operated till 1883, when they were definitely closed, the choicest deposits of the ore having apparently been exhausted.

In 1826 the textile industry took a new departure in this province, when Mr. M. Willett, father of the late S. T. Willett, Chambly, set up a 24-inch carding machine, a spring jenny of 75 spindles and two hand looms at L'Acadie, removing in 1830 to Chambly, where he found good water power, and later set up a spinning jack and four power looms, and in time turned out the famous Chambly flannels. Meanwhile the 91 carding mills and 79 fulling mills of 1827 in Quebec had grown to 169 carding mills and 153 fulling mills in 1844. In the last-mentioned year Adam Lomas established a cotton mill of 1,200 spindles at Sherbrooke, and in 1853 F. W. Harris opened in Montreal a cotton factory of 1,500 spindles and 46 looms. The Lomas mill was noteworthy as having been promoted by a limited liability company, a feature of the enterprise which aroused the opposition of Sir John A. Macdonald. The bill was allowed to pass because of the large amount of capital required, £12,000. It was promoted by Sir A. T. Galt. The principal product of the mill was grey sheeting.

Enormous progress had been made in other industries in the early part of the nineteenth century. The closing of European continental ports against Britain by Napoleon opened up to Quebec a vast export trade in timber and ships. As many as 1,350 square-rigged ships visited Quebec annually for timber, the zenith of the trade being reached in 1864, when over twenty million feet of white pine was shipped from that port, the timber coves extending for ten miles on each side of the St. Lawrence. Up to the early seventies of last century from forty to fifty wooden sailing ships were annually built in Quebec shipyards, employing several thousand artizans.

The first sugar refinery was established in Montreal in 1854 by John Redpath, and the Glencra flour mills on the Lachine Canal were originated by the Ogilvie Brothers in 1860 and were the original unit of the Ogilvie Milling Company.

In 1851 the province boasted of 541 grist mills, 1,065 sawmills, 193 carding mills, 18 woollen mills, 13 breweries, 7 distilleries, 12 shipyards, 38 foundries, 204 tanneries and 123 industrial establishments.

The pulp and paper industry is one of the most remarkable industrial developments of Quebec, in which province Canada's first paper mill was established at St. Andrew's in 1803. Later on in the same century came other mills at Portneuf, Lorette, Valleyfield, Sherbrooke and Windsor Mills. It was not until about a century from the time of the first paper mill, that is to say, until the early part of the present century, that Quebec forged ahead as the largest pulp and paper producing province of the Dominion. This progress is not only due to the proximity to the raw product of water powers of considerable capacity, but also to legislation compelling the manufacture in Canada of all pulpwood cut on lands in Quebec leased from the Crown. Many million dollars of American capital have been invested in this industry in Quebec within the last quarter of a century, much of it in the various manufacturing centres located along the banks of the St. Maurice. The industry has had for effect, among other things, the building up of large towns at Shawinigan Falls, at Bromptonville, La Tuque, Grand' Mère, Windsor Mills, Kenogami and Chicoutimi.

A Quaint Old View of Quebec

This picture dates back to the year 1700

Not only does the Province of Quebec lead Canada in the pulp and paper industry, but as the Hon. Mr. Mitchell stated in his last Budget speech, it is the greatest producer of all the Canadian provinces in respect to boots and shoes, clothing, cotton fabrics, lumber, steel bridges, railway rolling stock, tobacco, cigars and refined sugar, in this connection it is worthy of remark that the new Quebec bridge, the largest of its kind in the world, is entirely the product of the Dominion Bridge Company of Lachine.

The boot and shoe industry, which is one of the most important in the province, entered into its greatest period of development in Quebec about the middle of the last century with the establishment in Quebec city of the Woodley, Breese and Migner factories, and in Montreal of that of Brown and Childs, who in 1847 established a three-storey factory on Notre Dame Street and were the first to use machinery in the industry, in the shape of Singer sewing machines for making the uppers of boots and shoes. Its introduction was so much resented by the workers of the time that upon one occasion a mob threatened the destruction

of the building. Half a dozen small factories had been in existence in Montreal soon after 1840. The first McKay machine for the sewing of soles, replacing the old pegging system, was imported by Scholes and Ames of Montreal about 1860. The Goodyear and other machines followed, and it is worthy of note that Canadian inventors have taken a large share in bringing out new machines and making improvements on others during the last sixty years.

How Industry Grew.

In 1871, the number of industrial establishments of all kinds in the province was 14,079 with an invested capital of twenty-eight millions of dollars, employing 66,714 hands and producing an annual output valued at $77,205,182. The figures for 1881 were 15,673 industries, with an invested capital of fifty-nine millions, 85,673 employees and products valued at $104,662,258. In 1891, the number of industries was 23,037, the invested capital $118,000,000, employing 117,389 hands, and with products valued at $153,255,583. In 1900 there were 4,845 manufactures of various kinds in the province, which increased to 4,965 in 1905, to 6,584 in 1910, and to 7,158 in 1915. The number of employees in each of the above-mentioned years was as follows: 5,684; 108,918; 158,207 and 148,329 respectively. Wages paid in 1900, 1905, 1910 and 1915 respectively were $32,428,384; $38,703,763; $69,432,967, and $70,217,258. The capital invested in these industries, including the value of land, buildings and machinery increased from $142,403,407 in 1900, to $548,972,575 in 1915, and the total value of the manufactured products increased from $158,287,994 in 1900 to $387,900,585 in 1915, of which $41,528,772 represented war trade.

Of these industries, the 82 establishments engaged in the manufacture of boots and shoes employ 10,325 hands and turned out in 1915 products valued at $22,918,292.

Butter and cheese ranked next, employing 2,950 hands in 2,058 establishments and making $18,471,501 worth of products.

The industries which in 1915 ranked next in order with the value of their respective products were as follows: Log products, $16,988,888; tobacco, cigars and cigarettes, $15,330,837; slaughtering and meat packing, $14,952,108; paper, $14,787,703; sugar refining, $14,038,752; house building, $13,410,760; men's clothing, $13,295,143; flour milling, $13,159,054; cotton, $12,539,037, railway-car building, $11,617,714; electric light and power, $9,606,659; bread, biscuits and confectionery, $9,060,954; tobacco and snuff, $7,385,329; bridges, iron and steel, $6,868,938; foundry products, $6,842,624; explosives, $6,372,180; paints and varnishes, $6,247,598; electrical apparatus and supplies, $5,680,060; malt liquors, $5,290,208.

From total manufactured products of $158,287,994 in 1900, Quebec's industries progressed in the next twenty years so far as to reach a total output in 1919-20 of $890,420,023. The chief manufacturing centres of the province are Montreal, with products valued in 1919-20 at $551,814,605, Quebec $32,742,192 and Lachine $27,156,203.

Some Comparative Figures.

The following comparative figures will show the rapid strides made in most of Quebec's industries during the present century:

Forest products, which now employ 20,000 men were valued in 1900 at $18,069,716, and last year reached a value of $40,761,730.

Pulp products increased in value during the same period from $2,421,068 to $33,637,775, and paper from $2,021,592 to $41,601,790.

Of butter 24,625,000 lbs. were manufactured in 1910, valued at $4,917,000, while in 1920 the production was $40,037,692, valued at $22,352,146. The value of the cheese made in 1910 was $7,958,000, and in 1920 amounted to $13,356,475.

In the value of manufactured cottons Quebec leads with twelve textile plants having a capital of $37,962,311 out of a total for the Dominion invested in this industry of $58,732,941. These plants produced in 1919 goods valued at $57,530,438 out of a total for Canada of $82,642,949.

Twenty Implement Plants

Quebec has $3,892,851 invested in her twenty plants for the manufacture of agricultural implements.

She operates 83 of the 147 factories in Canada employed in the manufacture of men's clothing, and they represent a capital of $14,180,989 out of a total investment in the industry in the Dominion of $25,703,795.

Two of the eight Canadian sugar refineries are in Quebec and they represent an investment of $5,869,592 out of a Canadian total of $37,256,851.

Of the 1919 hat, cap and fur manufacturing establishments of the Dominion, 71 are in Quebec and they have a capital of $7,585,382 out of the total of $14,431,530.

Twelve of Canada's woollen textile mills are in this province, with a capital of $3,126,141 out of a total of $21,311,633.

Eighteen of the fifty-seven glove and mitt factories of Canada are in Quebec and have invested in them $3,315,328 out of a total of $6,291,269.

In the leather, boot and shoe industries, of the 161 establishments in the Dominion, 91 are in Quebec, and they represent a

The Abounding Natural Resources of the Province of Quebec

What the Largest Province of Confederation Has to Show in its Inventory of Agricultural, Mineral and Forest Wealth

By HON. ATHANASE DAVID
Provincial Secretary of Quebec

UNFOLD a map of Canada—let us say that published in 1920 by the Chief Geographer of Canada, Mr. J. E. Chalifour—and consider for a moment the space that the Province of Quebec occupies on it, and it will be easily seen that it is the largest of the nine provinces of the Dominion.

In fact, Quebec has an area of 703,653 square miles out of a total superficial area of 3,726,484 square miles for the whole of Canada, or about one-fifth of the entire area of the country.

Quebec is 1.7 times larger than Ontario, 1.9 larger than British Columbia, 2.7 larger than either Manitoba or Alberta, 2.8 larger than Saskatchewan, 25.5 larger than New Brunswick, 22.8 the area of Nova Scotia, and 322.1 times that of Prince Edward Island.

France, with Alsace-Lorraine added, could be placed within its borders 3.3 times over, Germany 3.9 times, Spain 3.6 times, the Kingdom of Great Britain and Ireland 5.7 times. It is 4.4 times larger than Poland, and 10.5 times larger than Austria.

Before 1912 the total area of the Province of Quebec was 341,756 miles; the annexation of Ungava, now called New Quebec, doubled that area. This northern portion of the province was ceded to Quebec by the Federal Government. It is an uninhabited territory as yet, but it is rich in products of the forest, in water powers and in mineral products.

Northern Settlement.

The atlas of Canada shows that there is little settlement in some parts of the Province of Quebec. Along the banks of the navigable streams the agricultural population usually settles; later the railways give access to the interior, great expansion for instance being manifested in Abitibi district, where, thanks to the construction of the Transcontinental Railway, a new agricultural province is developing. Here, in the past eight years, fifteen parishes have been established, a population of 15,000 people has settled, and every day settlement grows larger.

The Province of Quebec is above all an agricultural province. For a long time, the tilling of the ground was the sole occupation of its inhabitants. Left with their spiritual advisers, after the conquest, they grouped themselves around parish churches, and sought out an existence from the land. For nearly a century this sufficed, but lately the inhabitants of Quebec have enlarged their horizon and they have set about vigorously to exploit all the natural riches of the soil, the forest and the tumbling, swift waters.

Quebec's forests hold great wealth and can last forever if they are conserved and exploited in a rational manner. These forests cover nearly 125 millions of acres and contain wood of all kinds. Newspaper expansion has brought about of late years an enormous consumption of paper, and, as the greater part of this paper to-day has for its base wood fibre, the industry of the forest has gone through many considerable changes.

Production of Mica.

The small production of Quebec's mines of 20 years ago is far outstripped by the figures to-day. Its territory, while not as rich as that of certain other provinces to the west, possesses enormous values hidden from view, the most important of which is asbestos. Construction material ranks second, such as brick, cement, limestone and lime.

Quebec's rivers and lakes are filled with fish; as well as its mightier stretches of water such as the Gulf of St. Lawrence and Chaleurs Bay, where fishing is an industry. Nevertheless this industry has not received all the attention it should have. The tilling of the soil and the exploitation of the forest wealth has always exercised a greater influence on the population of Quebec, which has always regarded them, and not without reason, as more stable sources of livelihood.

And let us add, among the other natural riches of the province, that which brings profit to the trapper. No province has a greater number of fur-bearing animals, the skins of which are becoming more and more valuable throughout the world.

Agricultural and Industrial Development.

Whatever loss the Province of Quebec has sustained during the past seventy-five years through emigration to the United States, it remains nevertheless a fact that the native of Quebec has not lost his qualities of agriculturalist, nor those of settler and hewer-out of new ways. Year after year the forest recedes under his efforts and new land is sown.

In a period of 20 years, the land under cultivation has tripled, as follows:

AREA UNDER CULTIVATION.

	Acres.
1901	4,704,396
1911	8,147,633
1920	12,145,103

Let us see now whether the value of the products of the farm has increased in the same ratio. There is no doubt that it has increased rapidly, above all since 1914, because of the exportation of food products to the countries at war. But let the figures speak for themselves.

CROP VALUE.

1901	$44,851,108
1911	64,478,984
1920	330,251,000

The animal stocks on Quebec's farms are one of the greatest riches of its farmer population, and a great deal of effort has been put forth lately to improve strains, taking into consideration the adaptability of the various kinds and their chances of developing and becoming profitable assets in our climate.

For the past twenty years, the progression in number and value of farm animals is clearly demonstrated.

NUMBER OF DOMESTIC ANIMALS.

	1901.	1911.	1920.
Horses	320,673	369,237	433,199
Milch cows	767,825	753,134	1,030,809
Other bovines	598,004	697,860	1,101,403
Sheep	654,503	637,062	1,031,982
Pigs	404,163	793,348	836,431

VALUE OF DOMESTIC ANIMALS.

1901	$57,070,940
1911	93,978,445
1920	

The dairy industry has also made rapid progress in the Province of Quebec during the past twenty years. Not that the number of establishments has increased, because several of the smaller factories, more or less equipped, have been done away with in order to centralize matters. But the industry has increased in value as may be judged by the following figures:

BUTTER.

1901	24,625,000 lbs.	$4,917,000
1911	41,783,000 lbs.	9,962,000
1920	40,037,692 lbs.	22,352,146

CHEESE.

1901	80,630,000 lbs.	$7,958,000
1911	58,171,000 lbs.	6,195,000
1920	52,441,504 lbs.	13,356,475

The forests of the province are also a source of great revenue and it is estimated that not less than 20,000 men are

View on St. Valier Street, Quebec

employed as woodmen and at other allied occupations. Here are some figures on forest production during the past fifteen years:

VALUE OF FOREST PRODUCTS.

1900	$18,969,716
1910	13,122,287
1919	40,761,730

VALUE OF PULP PRODUCTS.

1900	$2,421,068
1910	3,169,025
1919	33,637,775

VALUE OF MANUFACTURED PAPER.

1900	$2,021,592
1910	4,722,477
1919	41,601,790

These figures need no commentary, their increase is so obvious, above all, during the past ten years. Grouping the three values together, the enormous progress is readily seen:

PULP AND PAPER.

1900	$23,412,376
1910	21,013,789
1919	116,001,295

The fisheries of the province can be divided into two groups—inland fisheries and ocean fisheries. The value of fish caught and sold during late years has increased in a remarkable manner, as the following figures show:

VALUE OF CAUGHT FISH.

1900	$1,989,279
1910	1,692,476
1919	4,568,773

Mineral Production.

"The total value of the products of mines and quarries in the province in 1920," says Mr. T. C. Denis, Superintendent of Mines, "is $28,223,141, or an increase proportionately of 35.5 per cent. having regard to the total of the preceding year, $20,813,670. 1920 was then a banner year for the mining industry.

"The increase is entirely attributable to the production of non-metallic substances, which form the greatest proportion of the mineral production of the province. The exploitation of the metallic minerals has felt the industrial reaction which followed the feverish activity of the war, when it was necessary to produce at whatever cost, and without taking revenue into consideration. During 1918 and 1919 immense stocks of metals accumulated, and 1920 was marked by a remarkable drop in the price of these metals. As metallic minerals represented but 16 per cent. of our total mineral production in 1918, which year was a record one for metallic mineral production, a reduction of 20 per cent. for 1920, has but little effect on the entire amount.

"It is to be remarked that the increase in the total value figures arises from an increase in price rather than a larger quantity."

Here is the way the mining production has increased in value during the past 20 years:

VALUE OF MINING PRODUCTS, ETC.

1900	$2,586,076
1910	7,323,281
1920	28,223,141

In order to judge of the industrial expansion there is no more certain guide than the compilations of the Ottawa Government. Up to 1915, this information came to us every ten years. Since that date it has been tried every year to obtain this information by means of a questionnaire addressed directly, through the mails, to the various manufacturers. It can be seen by the following figures how the Province of Quebec, hitherto exclusively an agricultural province, is today taking a foremost place in industrial production. It has not as yet reached the heights of its neighbor to the west, but, on the other hand the value of its industrial productions exceeded that of the seven other provinces combined:

VALUE OF MANUFACTURED PRODUCTS.

1900	$158,287,994
1910	350,901,656
1919	890,420,023

The urban centres, where are produced the most valuable of these articles, are the cities of Montreal Quebec and Lachine, as can be seen by the following figures:

	Montreal.	Quebec.	Lachine.
1900	$71,099,750	$12,779,546	$2,909,84
1910	166,296,972	17,149,385	6,295,71
1919	571,814,605	32,742,192	27,156,20

Hydro-Electric Power.

One of the things which contribute most to this development is the abundance of electric energy available at reasonable prices. Many waterfalls have been harnessed and the hydro-electric installation is capable of producing 900,000 horse power, but even this is only one eighth of the available power within easy reaching distance of the habited parts of the country. And furthermore, the Government has inaugurated a policy of regularizing the water-courses upon which there are hydraulic powers.

In this manner, the Gouin barrage at the head of the St. Maurice River was created so as to give a flow of 2,00 cubic feet of water a second, or a force capable of producing 1,000,000 h.p. Lake St. Francis has also been dammed near its mouth, and works of like nature are proceeding on the Ste. Anne de Beaupre River.

In Quebec the workingman has nothing to do with socialism. He respects authority and is not afraid to turn up his sleeves and work. His endurance is proverbial and his handicraft is well recognized.

Let us also add that a very wise system of law protects capital, and at the same time assures the workingman of guarantees based on principles of charity and equity of the widest extent. In a word employers and employees are mutually sympathetic, help one another, and cooperate in bringing about success in various enterprises, the numbers of which increase every day.

Population, Colonization and Roads.

It has almost become commonplace to speak about the prolific French-Canadian since this has been the cause of their remarkable propagation during the past 150 years.

Although emigration has caused the Province of Quebec to lose not less than a half million people, and though this half million people now represent in the neighboring republic nearly two million population, this has not prevented the French element in Quebec from growing large, and even spreading into the neighboring provinces.

The birth rate has varied from 35 to 40 per 1,000 of population since 1900, while the death rate has varied, good year with bad, between 17 and 20 per 1,000 of population. The net surplus would be then about 20 per thousand. This annual increase which began with 21,037 at the beginning of the century has reached the number of 47,341 in one

year. About four-fifths of the population of the province is of French origin.

These figures show this increase in population during the past ten years:

POPULATION OF THE PROVINCE.

1901	1,648,398
1911	2,003,232
1920	2,500,000

The farmer follows in the wake of the pioneer's axe trail, and the number of homesteads increases rapidly from year to year. The colonization regions are always under the care of the Government. Many are the farmers each year who go into these new regions, stay there and help their sons establish themselves there also. The following figures are eloquent:

NUMBER OF FARMERS.

1901	150,599
1911	159,554
1920 (estimated)	175,000

To the end that colonization might be furthered and give rise to other advantages, which the colonists would be free to avail themselves of, the Government voted last year the sum of $5,000,000 to open up new roads, build bridges and even to erect schools in the new colonies. There is a wide difference between the sum spent for the purposes of colonization in 1900 and that which was paid last year, as the figures below show:

COLONIZATION GRANTS.

1900	$124,000
1910	216,857
1920	700,000

The Government has not only thought of the needs of the colonist. Since 1912, more particularly, a good roads policy was inaugurated and local municipalities received then as now subsidies to further the building and the bettering of their neighborhood roads. The Government at its own expense undertook the building of the national roads. There is, in the province, 35,651 miles of public road, including the streets of cities and towns, which alone amount to 2,150 miles.

It is only during the past four years that the road statistics, so far as the kind of improvement is concerned, found a place in municipal statistics. These figures show the progress obtained during the past four years:

	1916.	1919.	
Improved roads	7,678	11,585	miles
Macadamized roads	2,232	2,268	miles
Gravel roads	1,436	2,246	miles

There is actually then, more than 45 per cent. of the public roads of the province which can be said to be subjected to a systematic scheme of upkeep and are thoroughly in good condition.

The Government has spent more than $30,000,000 on this item alone since 1912. Six hundred and eighteen municipalities keep up their own roads. The provincial roads, exclusively under the control and at the expense of the Government, measure 362 miles, while it controls the upkeep of 3,460 miles of roads in the province, through its engineers.

There are many aspects of the life of the French-Canadian which are worthy of mention. However, we hope that these points will serve to throw some light on the Province of Quebec, on the people who inhabit it, and on the industries which exist there. The population is satisfied with its destiny, happy over its lot, and desirous of increasing its field of activities in all directions, but feeling not at all envious over the heritage of their neighbors. These people intend to live their own lives, following their own conception of it, and without having any ambitions towards imposing that view on anybody in Canada. And no one wishes more ardently than the Province of Quebec, elder sister in the family of provinces, that the country may prosper and its inhabitants may be happy. Her patriotism, deep-rooted as it is, has shone throughout three centuries.

MORE QUEBEC FEATURES

In addition to the articles appearing in this issue and dealing with various aspects of the industrial development of the Province of Quebec, there are in preparation additional articles outlining the progress of leading industries and describing the growth of some of the industrial centres. These articles will be published in the May and June issues, the whole collection forming an appropriate introduction to the Province on the occasion of the holding of the annual meeting of the C.M.A. in Quebec City.

The City Hall, Quebec

Water Powers and Electrical Development in Quebec Province

It is Estimated that from Five to Six Million Horse Power are available of which only 900,000 have been developed

By O. LEFEBVRE

Chief Engineer, Quebec Streams Commission

THE increased cost of coal has brought to the fore the value of power generated by water. Whilst the capital outlay required for hydro-power development is much larger than is required for steam power, the operating cost is very much more. On the other hand, in a country where coal deposits do not exist and where fuel has to be imported, hydro-power, when available, should be made the basis of most industries.

The Province of Quebec has no coal deposits known, but its water-powers are plentiful. They have been estimated by various authorities from five to six million horse-power. This figure does not include the powers which may be supplied by the rivers north of the 50th degree of latitude.

In a short article, it is not intended nor possible to give a complete list of the power sites making the above total, and the principal power rivers only will be mentioned. Then the amount of power developed and its distribution amongst the principal industries in the province will be considered.

The principal power rivers in the province are the Quinze, the Ottawa and its tributaries, the St. Lawrence between Lake St. Francis and Montreal, the St. Francis, the St. Maurice, the Lake St. John tributaries, the Saguenay and the main rivers on the north shore of the St. Lawrence.

Many streams less important than the above afford good power sites for small industries. For example: the North River, the Ouareau River, the Batiscan, the Jacques-Cartier, the Montmorency, the St. Anne (Beaupré), etc. Most of the rivers on the south shore of the St. Lawrence, except the St. Francis and the Chaudiere, abound in waterfalls and rapids, but none can form the nucleus of a large development.

Beginning at the west boundary of the province is the Ottawa district where a fall of 300 feet between Quinze Lake and Temiscaming gives a possible development of 175,000 horse-power. The Ottawa River, from Temiscaming to Ottawa, can supply about 600,000 horse-power. However, this part of the Ottawa forms the boundary between the provinces of Ontario and Quebec and the power must be divided in equal shares between the two provinces.

The Carillon Rapids afford a possible development of 135,000 horse-power.

Good power sites may be developed on the River Gatineau—a very large stream with a drainage area of 9,130 square miles and discharging into the Ottawa River a few miles below Ottawa. The principal powers may supply at least 135,000 horse-power. The River du Lièvre which flows about twenty miles east of the Gatineau has also some good power sites but they are in the hands of private interests.

A World-Renowned Dam

This is a View of the Famous Gouin Dam near the head waters of the St. Maurice River. It is by no means the highest Dam in the world but it stores up more water than any other dam. Its construction has enabled the Quebec Streams Commission to increase the minimum flow in the St. Maurice River from 6,000 to 12,000 cubic feet per second, with a possible increase to 15,000 cubic feet per second.

The second group of powers to be taken into account are those of the St. Lawrence, between Lake St. Francis and Montreal. The difference in level between Lake St. Francis and Lake St. Louis is 82 feet, divided in three principal chutes, namely: The Coteaux, Cedars, and Cascades, in a distance of about fourteen miles. The minimum flow of the St. Lawrence at that point is approximately 180,000 second-feet. Figured at 80 per cent. efficiency, this amount of water can generate 1,300,000 horse-power. At the foot of Lake St. Louis the Lachine Rapids afford a possible head of 27 feet and a possible development of 450,000 horse-power.

The third group is found in the territory drained by the St. Francis River, which comprises most of the Eastern Townships. The water-powers on the river itself have a capacity of about 70,000 h.p. River Magog, which is its main tributary, supplies about 10,000 h.p. to industries located in Sherbrooke and vicinity.

The next group is that of the St. Maurice River. It is the most important, both on account of the size of the river which drains 17,000 square miles and the high falls which break its course. The head waters of the St. Maurice are about 1,260 feet above the level of the St. Lawrence at Three Rivers. This river has been regulated so that a minimum flow of 12,000 c.f.s. at Shawinigan is assured at any period of the year. The possible amount of power that can be derived from its falls is nearly 1,000,000 h.p. The Crown still has for lease the water-power sites known as Rapid "des Coeurs," from which a minimum of 60,000 h.p. can be derived, and Rapid Blanc from which 125,000 h.p. can be generated. Other falls of less importance can also be leased. The falls at Shawinigan, with a capacity of 200,000 h.p., and those at Grand Mère with a capacity of 100,000 h.p., are fully developed. The Grès Falls, where a combined development of 70,000 h.p. is possible, and La Tuque Falls, where a development of 125,000 h.p. can be made, will be developed as soon as the market for power demands it.

The next important group is to be found in the Lake St. John district where the river tributaries to the lake, namely: Chamauchouanne, Mistassini, Peribonka and Ouiatchouan, offer within easy reach from the lake an aggregate possible development of 150,000 h.p. This figure may be increased to 200,000 h.p. by the regulation of the flow of River Peribonka. The water of Lake St. John flows into the sea via the Saguenay River. Its two outlets are called " the Great Discharge" and "the Little Discharge." The total head between the lake and the sea level at Kenogami is about 300 feet. It is possible to develop

600,000 h.p. in two developments of 100 and 200 feet respectively.

In the Lake St. John district also are located the water-powers of the Chicoutimi River, the River "aux Sables" and the River Shipshaw. The former two are fully used by pulp and paper mills; the powers of the Shipshaw are being developed to supply power to the pulp mill at Kenogami.

North Shore Powers

Next in importance are the powers of the north shore of the St. Lawrence. The north shore of the St. Lawrence, from the Saguenay down to the Gulf, is 600 miles long and is near the Laurentian chain of mountains. The fifty or so rivers which flow into the St. Lawrence in that distance offer important power sites. Information is lacking as to the value of these powers. In late years, an examination has been made of Rivers Manitouagan, aux Outardes, Betsiamites Bersimis), Escoumains and Natashquan. The water-power sites on the latter do not offer any facilities for development as the river is large and the falls are low; the powers examined on the Manitouagan River, in the lower part, offer two possible developments with an aggregate capacity of 81,000 h.p.; on the River aux Outardes, the first two falls may be developed to their full extent for an aggregate capacity of 50,000 h.p.; on the Bersimis River the first fall is located forty-two miles from the mouth of the river and the second fall about twenty miles further upstream and they could be developed for an aggregate capacity of 51,000 h.p.

Important power developments have been made on River Marguerite, opposite Seven Islands, where a pulp mill with a capacity of two hundred tons per day has been operated. There is now at that point a considerable village called Clark City.

On the south shore of the St. Lawrence, from Quebec down, most of the rivers have a small drainage area and, while having falls and rapids, the amount of power which can be derived therefrom is small and can be used only for local needs and small industries.

In the Abitibi district, the Rivers Bell and Megiskan offer good opportunities for power developments. Two sites of the former within easy reach from the Transcontinental may be developed for a total capacity of 10,000 h.p. The powers on the Megiskan River are less important. These two blocks are now being advertised for lease by the Department of Lands and Forests of Quebec.

In the Abitibi district, within easy reach of the Transcontinental, the water powers can be developed for small blocks of power and none of them are very large. To get large developments, one has to go far north from the railway and, of these, only guesses can be made.

The provincial authorities are giving particular attention to the study of the rivers of the province and, in a few years, it is expected that enough data will have been collected to allow a much better estimate being made of the value of the powers and the facility for their development.

Power Developed in the Province

A census carried out by the Dominion Water Power Branch and the Federal Bureau of Statistics shows that on the 31st of December, 1919, there was developed in the province a total of 902,000 h.p. Of this amount 638,000 h.p. were being generated in central electric stations, 175,000 h.p. were generated by pulp and paper companies, and the balance by other manufacturing industries.

At that time the amount of power used by pulp and paper companies in the province was 267,000 h.p.; the amount of electric power used by other manufacturing industries was 289,000 h.p. The amount of hydro-power used for street railway service was 54,000 h.p., and the amount used for lighting purposes was 90,000 h.p.

Progress of Montreal

To the development of hydro-power must be ascribed the progress made by the city of Montreal which has trebled its population in the last twenty years. Also, the development of industrial centres like Shawinigan, where there is a population of 12,000; that at Grand-Mère with a population of 8,000, La Tuque with a population of 5,000, and Three Rivers which is growing by leaps and bounds. The city of Sherbrooke, well provided with hydro-power, has progressed very materially. The town of Drummondville was greatly increased in population as a result of hydro-development. The working of the asbestos mines at Thetford Mines and vicinity was greatly facilitated by the supply of hydro-electric power both from Shawinigan and the St. Francis valley.

In late years, the Government of the province has adopted the policy of water conservation, and has built storage dams in the upper St. Maurice River, at the head of the St. Francis River and at the head of the St. Anne (Beaupré) River. The amount invested in those reservoirs is about $3,300,000. The water stored during spring freshets and wet periods is distributed during the low water months, so as to greatly increase the minimum flow of the river. In the case of the St. Maurice the minimum flow was 6,000 c.f.s. under natural conditions; it is now 12,000 c.f.s. and may be increased to 15,000 c.f.s. On the St. Francis River, the minimum flow has been increased by

A Magnificent Panorama Near Quebec City

This is one of many fine views which the motorist enjoys on the Montreal-Quebec Highway, the 180-mile road joining the two cities

Quebec's Scenic Attractions and Fine Highways are a Great Asset

By GEO. A. McNAMEE

Secretary-Treasurer, Automobile Club of Canada

THERE is really little need in these days to set forth in much detail the attractions which the Province of Quebec offers to visitors from other parts of Canada and from the United States, for year by year its attractions, from every point of view, are becoming known to hundreds and thousands of tourists who, winter and summer, by automobile, train and other means, find their way to the ancient capital and to the commercial metropolis of the Dominion.

In Biblical times the wise men came from the east. To-day the wise men are coming from all directions to the East, and the wiser ones, if it is at all possible for them to do so, will make their journey to the scene of the annual convention of the Canadian Manufacturers Association by automobile. By journeying in this manner to the famous old city of Quebec they will be able to see for themselves some of the things that have made Quebec so widely and favorably known.

More Miles of Highway.

The oldest province in Confederation, it stands out to-day as the most historic, the most hospitable, and the most scenic portion of the Dominion. No other province can boast of so many hundreds of miles of first-class permanent highways, ideal means of communication that wind in and out through busy cities and prosperous villages, now running alongside the mighty St. Lawrence River, now delving into the mountains and around the lakes and through the forests, and at all times opening up to view the most varied and delightful scenery.

Hospitality a Tradition.

And equally delightful is the sincere welcome which every visitor receives in this province of all the liberties. In the chateaus of the wealthy, as in the humble homes of the habitants, the glad hand of fellowship is always extended. Hospitality is a tradition of the French-Canadians which has been cherished and lived up to for centuries, and this is one of the reasons why the province holds the enviable position it does to-day.

One has only to drive along its beautiful highways, to look at its monuments raised in honor of the country's pioneers and men of note—Champlain, Cartier, Maisonneuve, de Salaberry, Wolfe and so on—to see the hundreds of wayside shrines that dot the highways and byways throughout the countryside, and the fine churches that rear their stately spires in every parish, to realize that the French-Canadians, who form the major portion of the population, draw their inspiration to progress from higher things than the events of the moment, and that, while they have an unbounded belief in their future, they still have an unshaken faith in that which has made them what they are.

No delegate should miss the opportunity which the convention offers of seeing the Province of Quebec by automobile, for, thanks to the splendid educative work carried out for years past by the Canadian Good Roads Association, backed up by the various automobile organizations in the province, the Government and the municipalities have provided means of communication with the convention city from almost all parts of the provincial boundaries.

Some Famous Roads.

The famous King Edward highway, which has its northern terminus in Montreal, links up with the Adirondacks, the White and Green Mountains, and the well-known routes in New York and the New England States, while the new Montreal-Quebec highway, which runs for much of its distance along the north shore of the St. Lawrence, forms an ideal means of travel between the metropolis and the capital. It passes through the thriving city of Three Rivers, with its shipbuilding, its pulp and paper mills, and from here an enjoyable side trip can be made to Shawinigan Falls and Grand' Mere, two of the model cities that have grown up around giant industries. All along the main highway the visitor is in touch with civilization, for the villages, with their quaint thatched houses

and barns, seem to stretch for miles, and every farmhouse is in itself a "welcome" sign to the tourist to bid him pause and refresh himself in body and mind.

Then in the other direction runs the Levis-Jackman highway, connecting Quebec with the State of Maine, while off from it is the highway to Sherbrooke, connecting with the fine highway through part of the Eastern Townships, with its beautiful lakes and rivers, to Newport, in the State of Vermont.

An Ideal Centre.

Montreal itself is an ideal centre for tourists, for not only is it well supplied with high-class hotels, but from it there are a score of enjoyable short trips that can be made—to the famous Lachine rapids, the shooting of which in the steamer provides a unique sensation; to the delightful Laurentian Mountains which rival in their varied lake and river scenery the best that can be found on the continent; to the world-famed Monastery at Oka, where the industrious Trappists have their habitat; to the historic forts at Chambly, even around the Island of Montreal itself or across to the mainland through prosperous agricultural districts intersected by well-paved roads each one of which nature has made a wonderfully-shaded boulevard—in fact in all directions there is something well worth seeing, and spending an additional few days in the district for.

Within the limits of the city itself there is much to attract the tourists of either sex. Situated at the head of ocean navigation, although nearly a thousand miles from the open sea, Montreal is the centre of railway, shipping, financial and commercial industry. Its manufacturing plants are the equal of any on the continent, while the fine stores make it a Mecca for those who desire high quality articles at reasonable prices. The beautiful Mount Royal park, with its wonderful look-out, the playing fields at its base, the magnificent cathedrals and churches, its parks and public gardens, each and all are worthy of a visit.

Trips from Quebec City.

And from Quebec, too, the visitor can easily make many enjoyable trips in between the sessions of the convention or in the cool of the evening, when the golden sun sinks below the line of the Laurentide hills back of the St. Charles River in a glorious scarlet halo. He can run down to Montmorency Falls, which are higher than Niagara, and alongside of which is Kent House, once the residence of royalty, and now a museum and rest house for travellers, or go on to Ste. Anne de Beaupre, famous for its churches and shrines, its Scala Sancta and its monasteries, a quiet little town to which thousands of tourists wend their way every year. He may drive out to the famous Lake St. Joseph district, and enjoy fishing to his heart's content, for indeed the whole province abounds with lakes and rivers in which bass and trout, salmon and maskinonge, dore and pickerel, and other kinds of fish are to be found by the followers of Izaak Walton. He may make a trip to Valcartier camp, from whence started out the heroic first contingent of Canada's great army to the war, men from all parts of the Dominion, who carried with them overseas pleasant memories of their sojourn in the Quebec district, as those who come down for the convention will carry back assuredly with them to their own districts. Or he may drive to ancient Lorette, the Indian village where once the Hurons lived and had their being, or out through the beautifully laid out Battlefields National Park, known to history as the Plains of Abraham, on which Wolfe and Montcalm fought to the death, to the great Quebec bridge, admittedly the most wonderful engineering feat in the world, for constructed on the cantilever principle, its central span is the longest in existence.

Scenes Within the City.

Within the city limits there is much to be seen. The quaint, narrow streets of Lower Town, where Montgomery met his fate at the time of the American invasion; the grim citadel and ramparts, the ancient gateways of the old fortifications, the Parliament buildings, and last but not least the Dufferin Terrace, with its board-walk overlooking the St. Lawrence, from which beautiful views can be obtained of the Island of Orleans, the St. Charles River and the way to the open sea, forming a promenade that is without a peer on this side of the Atlantic—these are only just a few of the attractions that the convention city offers to the delegates.

Space does not permit one to go into any detailed description of the different routes that may be used to reach Quebec, of the enjoyable river trips that can be made from Montreal to Quebec and down the Saguenay River, but full information on all these points may be obtained from the Tourists' Bureau of Montreal or the Automobile Club of Canada, 909 New Birks Building, Montreal, or the Quebec Automobile Club, Power Building, Quebec.

It is recognized that the Made-in-Canada movement needs the support of Canadian women if it is to be successful, and the following message signed by Mrs. H. S. Griffin and Mrs. Victor Ross, regent and secretary of the Hamilton I.O.D.E., which was read at the luncheon meeting in Hamilton on March 16th, is evidence that this support may be relied upon. It reads:—

"The Municipal Chapter, Imperial Order Daughters of the Empire of Hamilton, in session this morning, desire to assure the Canadian Manufacturers Association, in conference to-day, of the sympathy, interest and support of Hamilton I.O.D.E. towards their Association and their efforts for greater production and a greater market for Canadian-made goods."

A Renowned Quebec Waterfall

These are the famous Montmorency Falls, about nine miles from Quebec. They have a drop of 250 feet, or 100 feet more than the great cataract of Niagara. The body of water, which leaps from this lofty precipice, pours, it is said, through a subterranean passage and rises in a tumultuous manner near the end of the Island of Orleans, gaining the name of Le Taureau. On both sides of the river, above the falls, are the remains of two towers, between which was once suspended a bridge that fell some fifty years ago, carrying with it two lives.

Round About The Chateau Frontenac

Fascinating Historical Associations Clustering round the Scene of this Year's Annual Meeting of the Canadian Manufacturers Association—The Wonderful Part Played by the City of Quebec in the History of Canada

By WILLIAM WOOD

HALF the dramatic turning points in the history of Canada are connected with Quebec, which has thus been repeatedy brought into vivifying touch with some of the greatest events that have profoundly affected America, Europe, and even the world itself, during the last five centuries, from the time when Jacques Cartier discovered here an immemorial "Kingdom of Canada," inhabited by Indians, down to our own day, when the Dominion of Canada sent forth her sons to meet the crisis of the Great World War.

Most of the famous sites are either within full view of the Château Frontenac Hotel or else within quite easy reach of it. The hotel itself has been vigorously growing for the last thirty years on the site of the old Château St. Louis, or Castle of St. Lewis, which was burnt down in 1834 after having served as the official residence of many a French and British Governor. The original Château was begun in 1647. Only the dated corner stone remains, built into the present entrance to the hotel. Before the first Château the site was occupied by Fort St. Louis, which Champlain built in 1620.

A glance through the centuries will enable any intelligent visitor to see how often the fate of Canada was settled at Quebec, and on how many another great occasion Quebec became the chosen scene of action. (Quebec is the Indian name for the Narrows of the St. Lawrence, and should be spelt Kebec in English.)

1535. Jacques Cartier discovered Quebec and wintered near the Indian village of Stadacona, a little way up the St. Charles.

1608. Champlain founded Quebec by building his "Abitation" beside the St. Lawrence, between the present Terrace and the river.

1629. A tiny flotilla, commanded by the brothers Kirke, took the starving French colony without a blow, and Quebec remained in English hands till 1632. Champlain returned in 1633, and died on Christmas Day, 1635. The whole French population was less than a hundred souls.

Quebec Made the Capital

1663. The original Hundred Associates, who had been formed into a chartered company for the exploitation of Canada, were now brought under the local authority of the Crown, and Quebec was made the capital of the Royal Province of New France.

1665. The Marquis de Tracy comes out as Viceroy, Courcelles as Governor, and Talon as Intendant; also over two hundred men of means or position, and a regiment of regulars. Carefully selected girls, known as "les filles du roi," were sent out in batches and married off almost at once. Only six were left over at the close of the first season.

1690. Frontenac, the "Fighting Governor," defeated Phipps, whose American Colonists attacked Quebec.

1659-1706. Episcopate of Monseigneur de Montmorency-Laval, first Bishop of Quebec.

The First Battle of the Plains

1759. The great British fleet under Admiral Saunders holds Quebec in its irresistible grip and enables Wolfe's small army to outmanœuvre the French (who had no fleet at all) and win the first Battle of the Plains.

1760. The remnant of Wolfe's army now commanded by Murray, is defeated in the second Battle of the Plains by the remnant of Montcalm's army, now commanded by Lévis. But a British fleet comes up, and New France surrenders at Montreal.

1774. The Quebec Act.

1775-6. Carleton defends Quebec (with a garrison of whom one-third were French-Canadians) against the American Revolutionists under Montgomery and Arnold.

1791-4. The Duke of Kent, Queen Victoria's father, was stationed at Quebec in command of the 7th Royal Fusiliers.

First Parliament Opened

1792. The first Parliament opened in the Bishop's Palace at the top of Mountain Hill, on the site now converted into a small park. Here (in the House of Parliament that was built on the same site and burnt down in 1883) King Edward VII stayed in 1860, the Fathers of Confederation met in 1864, and the Dominion was proclaimed in 1867.

1812-14. Quebec was the general headquarters in Canada during the War of 1812. The Army Bill Office was at 17 St. Louis Street, next door to the new wing of the hotel. The Army Bill Act, passed by the Parliament of Lower Canada (Quebec) in August 1812, was in some ways the most important financial measure in Canadian history. The Army Bills never lost face value for a day and were not only the

The Chateau Frontenac from Dufferin Terrace

first paper money ever redeemed at par in Canada but the first that also paid interest on redemption (6 1-12 for those of $25 and over). They are now so excessively rare that neither the Dominion nor Provincial Archives possess a single specimen; and, when the documents of "1812" were being edited, only two bills (both in private hands) could be discovered. The importance of the Army Bills to Canadian business can hardly be exaggerated. Native Canadians for the first time in their lives saw native paper money they could trust. This trust begot confidence in Canadian finance (backed by Bills of Exchange on London and, in the last resort, guaranteed by the Imperial Forces). In its turn this confidence begot confidence in the great Canadian banks that began to be established soon after "1812"; while the new Canadian banking system, in its own turn, both steadied and stimulated the general business of the whole country.

Present Citadel Built

1823-32. The present walls and Citadel built by the Royal Engineers after plans approved by Wellington. (The cost, over thirty-five million dollars, is less than 7 per cent. of what the Imperial Government paid out of purely Imperial funds on permanent naval and military works alone, from the time when British garrisons first landed on Canadian soil to the time when, in the present century, the last Imperial garrison withdrew.

The vouchers for the above expenditures on works are now in the Dominion Archives.

The Tercentenary

1858. The 100th "Royal Canadians" raised.

1884. The Canadian Voyageurs leave Quebec for the Nile.

1899. The First Canadian Contingent leaves Quebec for South Africa.

1908. Quebec celebrates her own and Canada's Tercentenary. The pageant displays historic scenes in every generation from the sixteenth to the nineteenth centuries. The Indian, French, and British régimes are successively brought on to the natural stage by thousands of performers, while on the St. Lawrence such different kinds of craft can be seen as birch-barks and battle-cruisers. The Frontenac and Carleton scenes showed how first the French and then the British kept Canada Canadian at Quebec; while the British, French, and American warships that formed a fleet of honor showed the inspiring modern friendship between the three great powers that have such great historic interest in Quebec. By far the greatest number of Canadian militia ever seen together till that time marched past at a review on the Plains of Abraham, where Lord Roberts represented the British Army, Lord Jellicoe commanded the Naval Brigade, and King George V, then Prince of Wales, represented King Edward VII, who shares with M. Théophile Delcassé the everlasting honor of having originated the glorious *Entente* between our Mother Countries. A piquant contrast was afforded by the juxtaposition of the French and British transatlantic record-breakers: Champlain's *Don de Dieu*, which, in the seventeenth century, sailed from Normandy to Tadousac in 18 days, and King George's flagship, the *Indomitable*, which speeded home from land to land in 67 hours, stoked by the King among the other eager members of her crew. Lord Grey should never be forgotten in connection with the Tercentenary. Quebec herself did not forget him, nor his invaluable help in commemorating the city and the country Champlain had founded, and Frontenac and Carleton had preserved. This was the inscription on the silver model of the Wolfe-and-Montcalm monument which the city gave him as a souvenir:

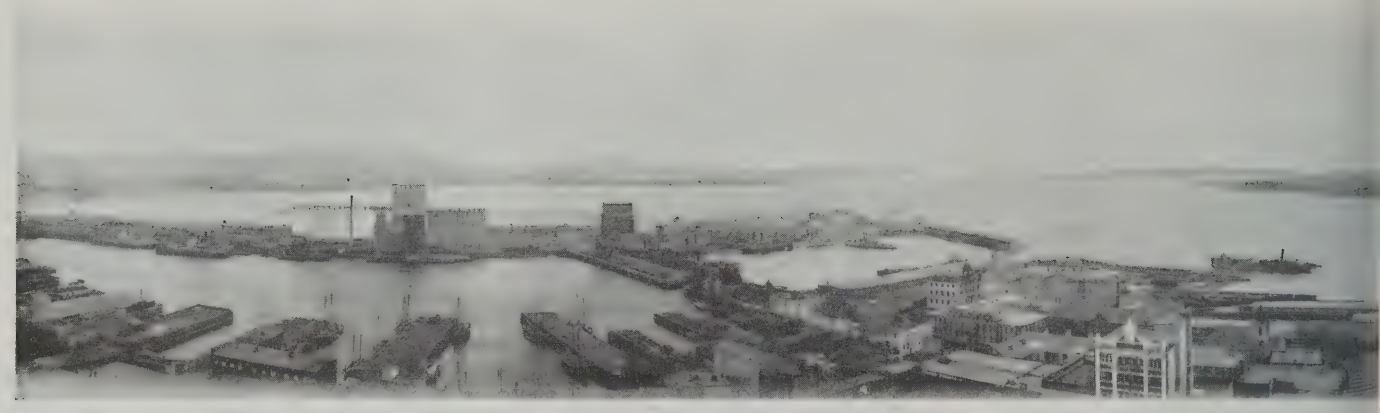
QUEBEC
CONDITOR—CHAMPLAIN
CONSERVATORES—FRONTENAC, CARLETON
COMMEMORATOR—GREY

1914. When the First Division of the C.E.F. embarked at Quebec for the Front the escort and convoy together formed the greatest assemblage of tonnage that had ever crossed the Atlantic up to that time. In many ways Quebec resumed her old position as the Canadian headquarters during the Great War. A good many industrial war activities were carried on here. Many thousands of Jugo-Slavs, from all parts of America, mobilized in Quebec. And during the last year of the war the port activities of Halifax were mostly transferred to Quebec, through which many thousands of our American allies proceeded to the front.

1920. A Quebecker may perhaps be excused for mentioning that of the six senior Generals in the C.E.F. at the conclusion of the war no less than three were Quebeckers born and bred: Lieut.-General Sir Richard Turner and Major-Generals Sir David Watson and Sir Henry Burstall. Each received a sword of honor or other object of his choice as a souvenir of this unique distinction for Quebec.

St Louis Gate, Quebec

Points of Interest



NOTE.—Guide books will probably suffice for nearly all the points of interest that any member of the Manufacturers Association may wish to see. But particular attention might perhaps be drawn to a few. There is a deliciously comic touch about the first.

(1). When Charles I held Quebec in pledge till the King of France should pay the balance due on his sister's dowry as Charles's Queen, King Charles was pleased to add "Ye Kingdome and Lordship of Canada" to the "other estates" of his good friend Sir William Alexander, Earl of Stirling.

(2). Wolfe's final plan was no sudden idea suggested by a happy chance but, like all great plans in war, the result of a life-time of preparation brought to the test of action. What we should now call his Intelligence Department was extremely well informed; and, in Saunders's overwhelming fleet, he had the means of carrying out schemes of combined strategy that were wholly denied to Montcalm. He never repeated Gray's *Elegy* when in the leading boat on its way to the battle, when absolute silence had been enjoined on all ranks under pain of death, but on the afternoon of the day before, when making his final reconnaissance in a boat half-channel over from Silley Point. The common version of this famous story is merely theatrical and false, which is probably one reason why it passes current instead of the version which is only dramatic and true.

(3). The first battle of the Plains

(*Continued on page* 102)

Panorama of Important Section of Quebec's Waterfront

Quebec boasts possession of the largest inland harbor on the continent. It extends a distance of 15 miles from the mouth of the Chaudie on the west to St. Patrick's Hole on the east. It is reputedly large enough and deep enough to accommodate the whole of the British Navy and has fine dockage equipment

Quebec City as an Industrial Centre

By O. H. COTE

Industrial Commissioner, Quebec City

Members of the C.M.A., who will be attending the coming annual meeting in Quebec City, will naturally be interested in examining the industrial development of the city. The accompanying article, prepared specially by Mr. Cote, will serve as an excellent introduction. Mr. Cote gives a thorough review of the extent of Quebec's industries and the part they play in the life of the city.

—THE EDITOR.

AS a manufacturing centre, the industries of Quebec City are exceptionally well diversified. This is a fact which outsiders do not always adequately appreciate. One sometimes hears Quebec's industrial activities spoken of as though they were practically confined to boot and shoe and leather manufacturing. This is far from being the case. As a matter of fact, the largest single factory in the city is that of the Dominion Corset Company, of which Hon. Geo. E. Amyot is president, employing some 1,300 persons, and said to be the largest corset factory under the British flag. The output of the factory, when working to capacity, is said to be not less than 1,000 dozen pairs per day. Another important corset factory is the Parisian Corset Manufacturing Company, Limited; it also is splendidly equipped with the latest and best machinery.

Boot and Shoe Industry

The boot and shoe industry is represented by thirty-two factories, and among them they produce one-fifth of all the boots and shoes made in Canada. In normal times, the capacity of the factories is more than three and one-half million pairs per year, and that capacity is being increased in readiness for the time, which experts tell us is not far distant, when the depression in this industry shall have given place to bigger and brisker business. This industry gives employment to some 4,000 persons.

In addition to the boot and shoe factories, large and small, there are fifteen tanneries, employing some 900 persons. The leather industry is one of the oldest-established in the city, for, in looking over the records, we find that some tanneries were in operation as far back as the year 1670.

Another important industry in the city is tobacco, represented by four establishments, the largest being the Rock City Tobacco Co., Ltd. Its president is Mr. Napoleon Drouin, who was Mayor of Quebec from 1910 to 1916. The managing director, Mr. Joseph Picard, is one of the best known business men of Quebec. The company employs some 400 persons and has a plant of enormous size devoted to the manufacture of cigarettes and cut plug tobaccos for smoking and chewing. The yearly output, which is very large, is sold throughout the Dominion. The company also maintains a box factory, the output of which is partly utilized by itself and partly for the trade.

The Lumber Industry

The lumber industry is represented by a number of firms, and is also one of the earliest to be developed in the city, the principal establishment being that of J. H. Gignac, Limited. It has a planing mill, box factory and dry kiln, and pr duces mouldings, sash, doors, blinds, etc bank, office and church furniture; t boggans and trunks. The company em ploys about 300 persons.

The fur industry is represented b some firms which are known throughou the American continent and Europe. I will suffice to name:—Holt, Renfrew Co., Ltd., and J. B. Laliberte, who deal i raw furs, in addition to doing a wholesal and retail business of almost uniqu magnitude.

Iron and Steel

The iron and steel industry is repr sented by some important firms. Th plants of the Eastern Canada Steel & Iro Works, Ltd., La Cie F. X. Drolet, Diamon Engine Co., Terreau & Racine, Miche Latulippe, Alex. McKay Co., to name onl these out of some twenty establishment is sufficient to show the importance c that industry in the city.

Special mention might be made of th two Canadian National Railway shop one at St. Malo, employing 800 men, an the other at Limoilou, employing 300 mer The St. Malo plant is capable of emplo ing over 2,000 men, and the numbe actually employed will be increased a soon as conditions warrant a greate number. There is also the Dominio Arsenal a unique establishment, makin ammunitions, where some 300 men ar employed.

The city has also some large paper an wooden boxes and paper bag factories eight establishments represent these in dustries.

The provision of drinks, soft and other wise, is an industry that flourishes in th city. Mineral water, ginger ale and soda are manufactured in four establishments

There are also two breweries, one of them, Boswell's, is the oldest in the Dominion. It was founded by the famous intendent, Jean Talon, of the French egime in 1668.

The preserve and canned goods industry is well represented. The Quebec Preserving Co., Ltd., of which Mr. Louis etourneau, M.P.P., is president, is a splendid factory, doing a large business jams, jellies, etc. The old City Manufacturing Co., Ltd., owned and operated by J. B. Renaud & Co., Inc., also does a ne business all over the Dominion. heir products are favorites, due to their nexcelled qualities.

Industrial Statistics

In the clothing industry there are even establishments, manufacturing all asses of wearing apparels, some of them ite large. The city has also some glove ctories, spice mills, candies, drugs, dairy oduce, cooperage, awnings and tents, scuits, etc.

Mr. F. Canac Marquis has a very large nd prosperous glue factory, which gives mployment to over 100 persons. It is most unique in its kind. Here are anufactured all grades of glue, size and at's foot and fish oil; fertilizers, bones, llows, etc., as well as sulphuric and uriatic acids.

Of course the industries briefly referred t above do not by any means exhaust te list of those which are carried in the ty, but the scope of this article does not rmit covering the whole field.

Below are given some statistics of the nsus of 1900, 1910 and 1918, which ustrate the development for the last enty years better than words:—

Census of 1900.

Nuber of establishments	255
Ctal invested	$9,588,739.00
Eployees on salary and wages	9,384
Saries and wages paid	$3,103,578.00
Ct of raw material	$7,127,994.00
Vue of products	$12,779,546.00

Census of 1910.

Nuber of establishments	175
Ctal invested	$16,488,303.00
Eployees on salary and wages	8,067
Saries and wages paid	$3,632,199.00
Ct of raw material	$8,212,505.00
Vue of products	$18,933,227.00

Census of 1918.

Nuber of establishments	424
Ctal invested	$36,927,434.00
Eployees on salary and wages	11,500
Saries and wages paid	$6,979,516.00
Ct of raw material	$16,067,679.00
Vue of finished products	$38,265,277.00

he capital invested, which was nie and one-half millions in 1900, ar sixteen and one-half millions in 19), jumped to thirty-seven millions in1918, four times the amount of 19). The value of production incrsed about in the same proportio. The salaries, which remained th same during the first ten years, nerly doubled during the next eigt years, with the number of employees increasing only 25 per cent.

Now let us consider what the industries established within the city limits mean to the population. In normal times we can say that some 18,000 persons find employment in the different factories. If we consider that at least three persons are dependent upon one employee, we find that over 70,000 persons of our population are dependent upon the industries for a living.

Progress of the City

It might be interesting now to note the progress of the city during the same period, as regards population and assessment. The population, which was 68,840 in 1901, was 78,710 in 1911, an increase of 10,000 in ten years. During the next nine years the increase was much more rapid, as the last private census taken early in 1920 showed a population of 116,850, an increase of 38,000 in nine years.

If we now look at the assessment value of taxable properties we find there also a remarkable development:—

Taxable properties in 1901	$19,100,349.00
Taxable properties in 1911	51,187,450.00
Taxable properties in 1920	73,039,135.00

Value of properties exempted from taxation are as follows:—

Land and building, 1901	$7,296,960.00
Land and building, 1911	11,916,060.00
Land and building, 1920	31,395,760.00

For the year 1921 the increase in the value of the taxable properties, as prepared by the tax assessors, will be nearly ten millions. Even with that increase, the properties in the City of Quebec are not considered to be assessed at their full commercial value.

The building permits issued during the last ten years have shown a continual increase for the year 1918. Records show the following figures:—

Year 1910	$526,498.00
Year 1915	2,576,342.00
Year 1920	2,301,480.00

Unfortunately the figures for 1920 do not represent the actual value of the construction work carried on during that year, as we can find over three and one-half millions and even be on the conservative side. The prospects are that the year 1921 will be a record-breaking one for the construction industry in the City of Quebec.

If we take into consideration the large amount of inquiries received from different sources for information as to the natural and other advantages offered to new industries desirous of locating within the city limits or the district, the citizens of Quebec have reason to be optimistic and look to the future with confidence.

Transportation Facilities

Quebec's position as a railway centre is well recognized. When the harbor, which is specially equipped with its fine elevator, gets its share of the grain trade of the western provinces, this trade, which is now diverted to United States ports for exportation, the same coming over the National Transcontinental Railway, which was built for that purpose, we shall see some new developments and industries will benefit accordingly. This we hope to see in the near future.

The Made-in-Canada Idea

How the Made-in-Canada idea is catching hold of the people may be illustrated by the action of the Ladies' Auxiliary, G.W.V.A., District Command of Toronto and York county. Every member present at the February meeting of the Auxiliary, after hearing an address on buying Made-in-Canada goods, pledged herself to buy only such goods in future.

This is the Court House, which Stands to one Side of the Place d'Armes near the Chateau Frontenac

Premier Position held by Quebec in the Manufacture of Pulp and Paper

Province was the First to Engage in the Industry and it Still Holds Its Supremacy as a Producer

By EDWARD BECK

Canadian Pulp and Paper Association

THE Province of Quebec was the birthplace of the pulp and paper industry of Canada and still retains the supremacy which it achieved in the early days, although to-day it is being somewhat hard pressed by Ontario for first honors. The first Canadian paper mill was erected at St. Andrews, Que., in 1803, and was followed by a second one established at Bedford Basin, N.B. in 1818. The first mill built in Ontario, or Upper Canada as it was then known, was erected in the village of Crook's Hollow, in 1825, twenty-three years after the first mill was put into operation in Quebec.

The First Wood Pulp

The first woodpulp that was ever manufactured in commercial quantities for use in paper-making was made in what is now the Canada Paper Company's mill at Windsor Mills, Quebec, and was converted into paper in mills located at Sherbrooke, Que., in the year 1864, by John Thomson, the inventor of the process, a Canadian of Scotch descent. Almost simultaneously similar experiments in the United States were brought to fruition so that the claim to priority in the use of woodpulp in paper-making is sometimes the subject of dispute.

Quebec also boasts the first mill built in Canada to produce finished high-grade book and writing papers. It was erected in 1882 at St. Jerome, Que., by the Rolland Paper Company, Limited. In 1885 the output of this mill had the distinction of being awarded the gold medal at the world's fair in Antwerp, repeating the achievement in 1893 at Chicago and taking the Grand Prix at Paris in 1900.

The development of the industry in the province has been specially marked during the present decade. Its growth in the immediate future will, in the opinion of those conversant with its progress, be not less assured.

A Most Important Industry

It is probably the province's most important manufacturing business regarded either from the standpoint of the amount of invested capital, the value of its output, the extent to which it provides employment and in the amount of revenue it brings into the province from abroad.

The industry owes much of its success to sympathetic treatment by the provincial authorities, who have never failed to realize its value to the province and who are always ready to co-operate in its development. This has found expression in the joint undertaking by the Government and the companies of large hydro-power development as well as in the adoption of progressive forestry methods.

There are now 46 establishments in Quebec engaged in the industry, comprising 17 pulp mills, 12 pulp and paper mills, and 17 paper mills. They represent a capital investment of $124,101,164, which is being constantly augmented by expansions of existing mills and the building of new ones.

The industry gives employment to 14,000 employees, exclusive of woodsmen, and distributes in wages and salaries over $15,000,000 a year.

Quebec, in 1919, the latest year for which official returns are available, produced pulp and paper of a total value of $75,239,565, as shown in the subjoined statement:

THE INDUSTRY IN A NUTSHELL

No. of Establishments	**46**
Capital	**$124,101,164**
Employees	**14,000**
Salaries and Wages	**$15,000,000**
Production (1919)	**$75,239,565**

Woodpulp Production

In Pulp Mills.

Kind of Pulp.	Tons.	Value.
Groundwood	204,556	$6,167,057
Soda fibre	.....	.....
Sulphite (bleached)	28,793	2,245,854
Sulphite (unbleached)	31,846	2,229,265
Sulphate fibre	47,391	3,574,012
Other Products	.....	20,417
Totals	312,586	$14,236,605

In Pulp and Paper Mills.

Kind of Pulp.	Tons.	Value.
Groundwood	310,901	$6,840,042
Soda fibre	3,395	272,413
Sulphite (bleached)	11,422	668,703
Sulphite (unbleached)	113,433	5,783,861
Sulphate fibre	79,554	5,803,346
Other products	.....	32,805
Totals	518,705	$19,401,170

Of the above production, 391,272 tons of pulp of all kinds, at a total cost value of $11,240,481, were made by the mills for their own use, and 440,020 tons, of a selling value of $22,397,294, were made for sale or export.

Paper Production

In Paper Mills.

Kind of Paper.	Tons.	Value.
Newsprint (in rolls)	348	$33,060
Newsprint (in sheets)	778	67,395
Hanging papers	2,299	217,277
Book and writing:—		
Book, wood fibre	1,432	219,507
Book, rags	....	.....
Cover	....	.....
Coated paper	1,577	369,738
Writing paper	4,539	1,620,325
Other fine paper	5,677	2,010,138
Wrapping Paper:—		
Manila (rope, jute)	....	.....
Heavy wrapping	404	21,828
Straw wrapping	....	.....
Bogus or wood manila	4,803	477,923
Kraft paper	397	63,520
Other wrappings	1,193	125,670
Boards:—		
Woodpulp board	....	.....
News board	802	82,156
Trunk leather and press boards	440	74,800
All other boards	5,563	470,778

In Pulp and Paper Mills.

Kind of Paper.	Tons.	Value.
Newsprint (in rolls)	238,692	$16,486,229
Newsprint (in sheets)	74,292	5,303,849
Hanging papers	....	.....
Book and Writing:—		
Book, wood fibre	2,760	416,400
Book, rags	769	110,736
Cover	520	75,800
Coated paper	....	.....
Writing paper	1,038	149,959
Other fine paper	893	160,740
Wrapping Paper:—		
Manila (rope, jute)	329	41,125
Heavy wrapping	714	79,624
Straw wrapping	449	40,410
Bogus or wood manila	3,721	384,797
Kraft paper	24,055	3,762,675
Other wrappings	4,033	453,543
Boards:—		
Woodpulp board	30,754	2,473,709
News board	....	.....
Trunk leather and press boards	....	.....
All other boards	7,764	502,900

Other Paper Products

	Tons.	Value.
Tissue paper	....	.....
Building and roofing	19,410	$1,800,057
Toilet papers	615	73,800
Miscellaneous	1,008	132,740
All other products	....	593,145
		$8,453,857

	Tons.	Value.
Tissue paper	19	$5,000
Building and roofing	21	1,680
Toilet papers	646	157,677
Miscellaneous	13,379	910,165
All other products	....	1,630,915
		$33,147,933

The materials used in the production

of pulp included 1,176,134 cords of wood, valued at $13,830,734, divided as follows:

Wood.	Cords.	Value.
Spruce	760,586	$8,662,489
Balsam fir	410,389	5,096,332
Hemlock	2,146	25,364
Poplar	2,894	45,166
Other kinds	119	1,383
	1,176,134	$13,830,734

Other materials used in manufacturing pulp, including sulphur, limestone and lime, soda ash, sulphite of soda, bleach, etc., were valued at $2,638,882.

The materials used in the manufacture of paper were:—

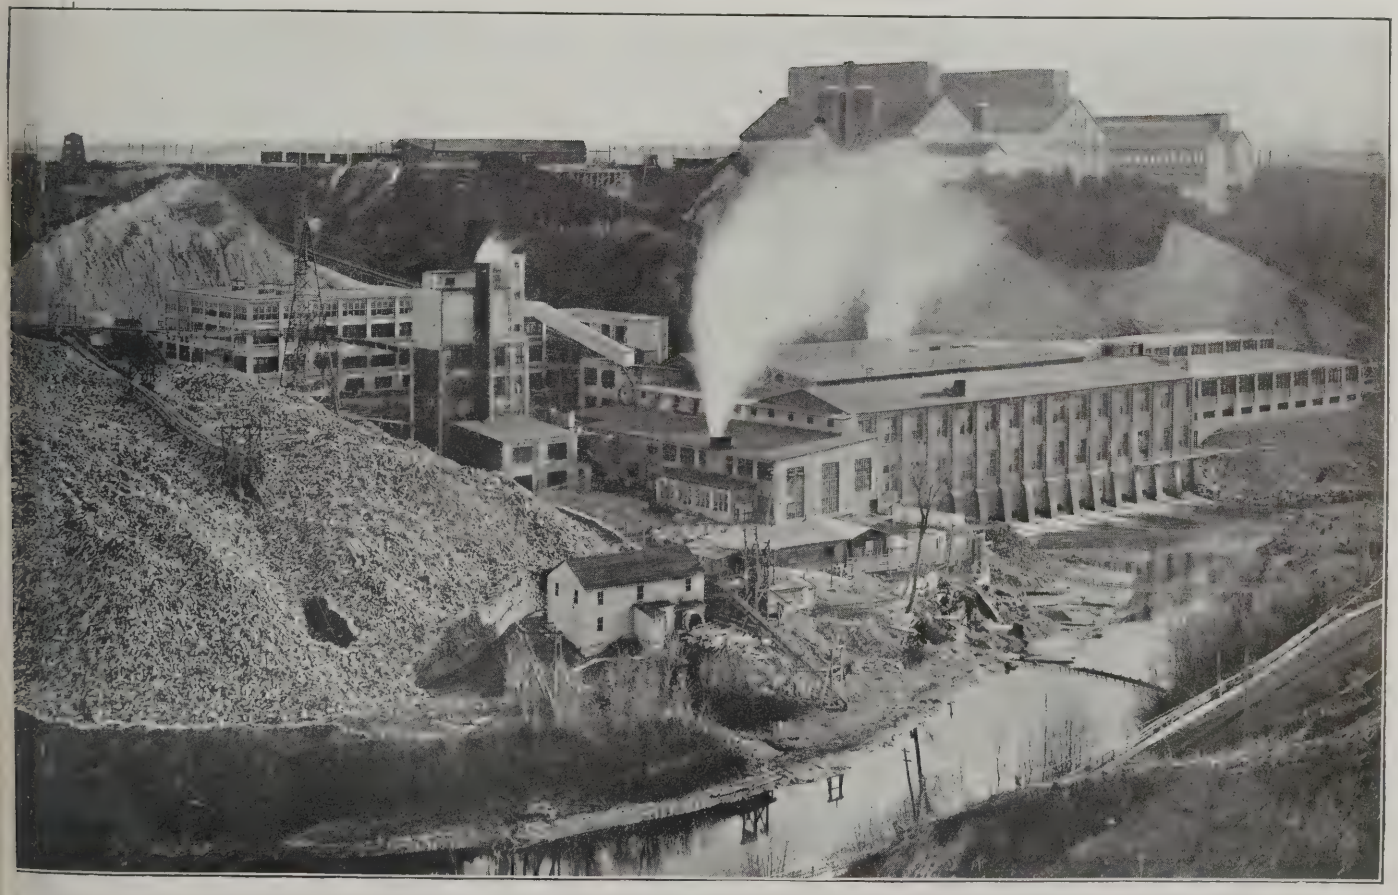
	Tons.	Value.
Groundwood pulp	306,486	$6,858,791
Soda fibre	1,854	144,177
Sulphite fibre (bleached)	14,014	1,218,451
Sulphite fibre (unbleached)	88,916	4,291,627
Sulphate fibre	32,342	2,054,166
Rags, etc.	15,769	1,286,498
Waste paper	13,068	381,095
Straw	244	4,680
Manila stock	1,627	93,255
All other stock	3,652	281,048
Soda ash	....	13,759
Alum	....	212,385
Clay	....	65,101
Dyes and colors	....	171,317
Miscellaneous	....	1,099,557
		$18,175,907

The industry contributes largely to the provincial revenues. In 1920 the Quebec Government derived $2,600,000 from its forest resources, principally from its pulpwood limits, which represents about 15 per cent. of the total revenues. Recent increases in license fees and stumpage dues will increase this percentage.

Commenting upon the value of the industry to the province, the Provincial Minister of Lands and Forests in 1918, said:

"The development of the pulp and paper industry is most important in an economic sense. The manufacturers are earnest and enterprising. They strive not only to get value from their raw material, but also to utilize the waste and the by-products and to turn them to profitable account. Every large mill employs a considerable number of experts, such as chemists, mechanical and civil engineers, etc., all working to discover new ways of improving the manufacturing processes.

Intensive Use of Forests



"The industry insures a more intensive utilization of our forests—since even small timber is used—and allows us to hope that the immense territories of Labrador, Ungava, and the North Shore, so rich in pulpwood and so poor in large timber, will thus acquire value.

"As all the world's forests are becoming more and more exhausted, it follows that other countries will have to rely more on our province for the pulp and paper they need. It will be easy for us to supply them if we take the necessary precautions, because we have the raw material and also the necessary water-powers."

Quebec has probably the most advanced forestry laws and the most progressive forest administration of any of the provinces and is constantly striving to improve them. The province was one of the first to place restrictions upon the pulpwood cut from Crown Lands by requiring it to be manufactured into pulp or paper in Canada, and has undoubtedly profited greatly thereby. The restrictions do not apply to private lands, and last year 827,982 cords of pulpwood were exported from the province. With the growing scarcity of wood and the absolute necessity of husbanding the supply, pending the enforcement of measures to provide for its replenishment, there is a strong sentiment growing up in favor of restricting the export of wood from patented lands, or at least of requiring such wood as is exported therefrom to bear a fair share of the cost of forest upkeep and renewal which is now practically all borne by the Crown Lands.

Reforestation is making progress in the province. The Government maintains an excellent nursery from which three to four million trees are distributed every year. It also maintains a forest

(*Continued on page* 94.)

Turning Quebec's Forest Wealth into Paper

This is a view of one of Quebec's largest pulp and paper industries, that of the Belgo-Canadian Pulp and Paper Co., Limited, located at Shawinigan Falls. To the left will be noted the immense heap of pulpwood which comprises the industry's principal raw material. 345 cords of wood are consumed daily in producing 195 tons of newsprint paper. This industry, controlled by Belgian capital, was started in 1901.

Some Sidelights on the Shoe Manufacturing Industry in the Province of Quebec

The Growth of One of the Province's Foremost Industries With Glimpses of Some of Its Leading Personalities

By ALEX. MARSHALL

SHOE MANUFACTURING had an early beginning in what is now the Province of Quebec. As far back as 1667 there were already twenty shoemakers in New France. They were turning out very simple and rough kinds of footwear by old-fashioned hand methods. By 1671 the local shoemakers were making shoes for nearly all the local population, then, of course, only a few thousand people. About one-third of the leather even in those early days was tanned in Canada.

Contrast this small business with the 1919 figures which show the value of production of leather boots and shoes in Canada of $63,320,000 worth, 65.8 per cent. of which was produced in the Province of Quebec. In fact, the shoe industry in point of value of products is second only to the pulp and paper industry in Quebec and ranks above it in total annual wages paid.

Through a rather odd set of circumstances, Ontario produces by far the greater quantity of upper and sole leather, but Quebec, through its immensely predominating position in the production of boots and shoes, is gathering to herself the subsidiary developments, the manufacture of shoe machinery, lasts, box toes, counters, and findings of all kinds, gradually tending towards a self-contained industry within its own borders.

A Large Production.

Figures usually are dreary, but the few given below represent roughly the production of the different big classes of shoes in the Province of Quebec in 1919:

	Pairs.
Welts	3,372,950
Turns	2,070,000
McKay sewn	4,650,000
Wire, screw or metal fastened	1,153,000
All other	1,000,000
	12,245,950

A slight analysis of other figures shows that while Quebec is producing 65 per cent. of the shoes, her wage bill is about 2½ per cent. (no reference to the strength of the liquid refreshments) less than 65 per cent. of the total, but this saving is balanced by the fact that her materials cost about 2½ per cent. more than her proportion of the total. This does not mean that employees in Quebec individually get less pay, but that they produce more pairs of shoes for the pay they receive.

The Quebec manufacturers also appear to be able to conduct their business with slightly less than their normal proportion of capital. This is chiefly shown in the capital tied up in machinery and tools, the manufacturers in the other provinces apparently getting less production as compared to the investment in plant than the Quebec manufacturer. This, coupled with the better results from labor, gives rise to what may be considered a fair deduction that Quebec shoe manufacturers are conducting their business more economically.

Secret of Success.

Larger unit production appears to be the secret of the success of the Quebec manufacturers, and this is, partially at least, due to the industrious and economical habits of the French-Canadian people who so largely compose the working staffs of the shoe manufacturers in Quebec whether the factories are managed by French or English-speaking people.

The shoe business is certainly one for which the French-Canadians show a natural inclination and many instances could be quoted of shoe workers becoming owners and managers of extensive shoe plants and having a further realization of their early dreams by bringing their sons up in the business, later to occupy similar positions. The Government of the province continually recognizes the importance of this great and growing industry, the latest example of their interest being the establishment of a school in which much of the technical and practical work of shoe-making is taught. In this way, they are providing for the continuance of the industry in the hands of men thoroughly skilled and schooled in their industry.

Another example of their ability to do a big thing in a big way was the great Shoe and Leather Fair and Style Show held in Montreal last year under the auspices of the Shoe Manufacturers' Association of Canada. This fair was held in happy conjunction with the annual convention of the National Shoe Retailers' Association of Canada and witnessed many of the greatest gatherings of shoe and leather men ever held in Canada. As was natural, the men who shouldered the bulk of the work were Montreal men, the largest French-Canadian shoe manufacturers, the Tetrault Shoe Manufacturing Co., Limited, loaning the services of P. A. Doig for two or three months to enable him to throw his whole energy into the big task.

In an industry that has seen as much change and development as the shoe industry, it would be amazing if it were not filled with rather unique personalities. To do proper justice to Quebec Province as a shoe centre, an interesting story could be given about practically every business. That, of course, is impossible of achievement, but it is not becoming to close this article without brief reference to a few:

The president of the Shoe Manufacturers' Association of Canada is Joseph Daoust, of Daoust, Lalonde & Company, Ltd., Montreal. Mr. Daoust has the rather unique distinction of being at once a tanner, a shoe manufacturer and a shoe jobber. He may have other serious business interests of which I am unaware, but his versatility is sufficient for all his needs. He adds to this quality a geniality and bi-lingualism that increase greatly his scope and influence.

Versatility seems to be the "middle name" of many shoe manufacturers, for T. H. Rieder, of Ames, Holden, McCreedy, Ltd., has graduated from the rubber business into the shoe business, working in both leather and canvas lines, and now some of his surplus energy is overflowing back to his first love. Mr. Rieder approaches most of his problems from a scientific viewpoint and is very keen on mechanical and business efficiency.

An Outstanding Firm.

One of the outstanding examples of the working of French-Canadian characteristics in the shoe business is the Tetrault Company. Easily in the front rank in extent of production, the company is fortunate in having the father to son continuity established and the best traits of French character exemplified. Without Napoleon, Albert and Oliver Tetrault, the shoe business would be a less efficient and less harmonious industry.

Then we have Mr. Lanthier and Mr. Martin of the Kingsbury Footwear Company, a nice blending of two distinct French and English types working successfully together. Alfred Lambert, whose manufacturing operations may be small compared with his jobbing business, shows us a type of public-spirited French-Canadian interested keenly not only in his business but in municipal and trading organization affairs, reserving some of his time to a movement for the maintenance of the purity of the French language

as spoken and written in Quebec and taking his place in English speech on even terms with the best business orators in the Empire at the sessions of the Chambers of Commerce of the British Empire.

Montreal cannot be left behind without reference to the "men behind" in Aird & fully rendering "La Marseillaise," "O Canada," or "Madelon," either solo or duet.

The firm of J. A. & M. Cote, of St. Hyacinthe, has long been well known and respected throughout the trade and it has not been an infrequent occurrence for in the shoe trade. Like all really happy families, however, they have occasional "scraps" to blow off excess steam. The John Ritchie Co., Limited, is one of the oldest institutions in the trade, John Ritchie and, I believe, his father before him being pioneers in the trade when it

In the Heart of Quebec's Shoe and Leather District

Here are located several of the industries which make Quebec famous as a producer of Boots and Shoes. In the centre foreground stands the plant of the Wm. A. Marsh Co. Limited. Near by are the plants of the John Ritchie Co. Limited, Gale Bros. Limited, A. E. Marois Limited, O. Goulet and others. Together they form an interesting groups.

on, Narcisse Gagnon and his son, who ve the reputation of producing more cKay shoes than any other firm in Canda. Father and son can enliven any cial gathering of shoe men by delight-

J. A. Cote to be called into consultation on questions affecting shoes where experience and integrity were the necessary qualifications.

In Quebec City, there is a happy family

began to change over from hand methods to machine production. The company dates back to 1859, and is now under the active direction of J. E. Warrington, the

Co-ordinating Record Systems

A New Association Provides for the Interchange of Ideas Among Filing Departments, Making Record Work a Business Science

By ALAN MAURICE

THE Canadian Association of Record Officers should prove a very useful assistant to office managers who have filing troubles. A thoroughly Canadian organization, officered by Toronto filing experts and librarians, this Association aims to make indexing filing and record preservation a business science. It is a peculiar thing that business colleges and the like do not give instruction in filing in conjunction with their regular courses. The proper classification of records must be thoroughly understood in any office before such records can be properly preserved, and the study of various problems which are constantly arising in this connection is an important duty which is being undertaken by the Records Association.

The Association's Objects.

To quote from the Constitution and By-laws, the organization has been formed: "to promote the study of the science of indexing and filing, the development of efficient methods and the solution of the problems which may arise in this connection," and it may "engage in whatsoever activities a majority of its members, regularly convened, may desire, provided such activities are in furtherance of the objects" as outlined above.

Membership is divided into two classes, active and associate—active members being those who have executive authority and charge of record departments and associate those who are employed in the routine work of indexing, filing and preserving records. If the Association does nothing more than turn out a finished product, capable of planning and running a records department from the raw material it possesses in the associate members it will have earned its place in the business world. It is governed by an executive committee which instructs the officers, receives reports of standing and special committees and reports to the Association. In drafting the Constitution and By-laws, the Association was guided by the example of the Canadian Traffic League and the Canadian Manufacturers Association. It has provided for standing committees on Membership, Education, Research and Employment.

The Membership Committee.

The duties of a Membership Committee must naturally be more or less universal and no departure from precedent is found in this case where the committee obtains new members and passes upon the eligibility of applicants.

Dalton J. Little

The William Davies Company, Limited

President, Canadian Association of Record Officers

These duties are performed by a chairman and four members.

Committee on Education.

A big field is provided for the activities of the Committee on Education and an ambitious programme is being undertaken. Formation of study groups under competent instructors is under way and all members may take advantage of the instruction which is provided free. Special systems will be studied at the request of members interested and reports on the instruction given in business colleges will be prepared. This committee, which will be ready to co-operate with the principals of such schools in the suggestion of studies which may be included in their curricula, consists of a chairman and four colleagues.

The Research Bureau, as the committee on research is named, has an interesting task before it, in investigating and reporting upon the filing systems and equipment which are now manufactured and offered for sale. It will be ready on request to supply members with information as to the suitability of——'s system to their needs, will study the requirements of members and, when required, devise systems which are suitable to these requirements.

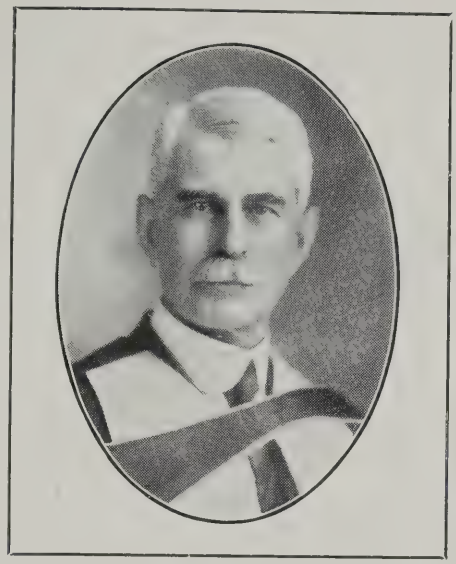
When the Constitution and By-laws were adopted, in view of the importance of the work of the Research Bureau, a clause was inserted in the by-laws making those engaged in the manufacture or sale of filing systems or equipment ineligible for membership in the Association. Thus, all those engaged in this business are ensured an unbiased consideration when systems and equipment are discussed.

The Employment Committee.

The Employment Committee, which has been authorized but has not yet been appointed, is designed to keep a record of members of the Association only who may be temporarily out of employment. It will not list the names of those who are engaged without the sanction of such members' employers.

The Association had its beginning in the minds of two or three Record officers who met last spring and discussed the formation of an association for the mutual benefit of filing clerks and librarians in Toronto. Their discussions eventuated in the formation of an organization committee of twelve which decided to take the necessary steps to launch an association. Care was taken that as many types of organization as possible should be represented and a circular was drawn up and forwarded to over one hundred office managers in Toronto. In this they were apprised of the proposed association and its objects and were invited to send representatives to the organization meeting. At this meeting, held by permission of the Canadian Manufacturers Association in their committee rooms on January 20th last, officers were elected and the constitution and by-laws as drafted by the Organization Committee were adopted.

Colonel Fraser's Address.



Col. Alexander Fraser, LL.D., Litt.D., A.D.C., the honorary president of the Association, addressed a later meeting and gave a talk on "The Value of Records in Business." Col. Fraser, who is Provincial Archivist, drew on his large experience and told the members some interesting things on this subject.

Dalton J. Little, president, who has charge of the Records Department of Wm. Davies Co., Ltd., was some years ago employed as a filing clerk in the Post Office Department at Ottawa. He was engaged for seven or eight years in journalism and served on papers in Ottawa, Montreal and Toronto. After over-

seas service he returned to newspaper work in Toronto.

The chief of the Cataloguing Dept., Toronto Reference Library, Miss W. G. Barnstead, B.A., author of a "Handbook on Filing," published by the Department of Education, and a lecturer of some note on "Cataloguing," is 1st vice-president, and W. L. Flemming, chief of the Central Registry of the Dept. of Soldiers' Civil Re-Establishment, was before going to France, some years in the Civil Service at Ottawa, and is a recognized expert in Governmental filing. A. M. Irwin, of the Canadian Manufacturers Association, formerly assistant office manager, Vocational Branch D.S.C.R., fills the office of secretary-treasurer.

Wilson Fenton, treasurer Murray-Kay Co., Ltd., is auditor of the new association. Of the Executive Committee, Miss C. A. Rowe, International Nickel Co., Ltd., a Record Officer of some years standing, and A. J. Milner, of the Robert Simpson Co., Ltd., are representative of the corporations. H. A. Asman, archivist Canadian Bank of Commerce, brings to the councils a knowledge of banking record systems, and W. H. Hughes of the Central Registry Vocational Branch D.S.C.R., the Civil Service. A. W. Brookes, Hydro-Electric Power Commission of Ontario, holds the reins of the Membership Committee, and C. U. Stapleton, Office Methods Expert to the Canadian National Railways, occupies the chair of the Education Committee.

Colonel Alexander Fraser,
LL.D., Litt.D., A.D.C.

Provincial Archivist and Honorary President, Canadian Association of Record Officers

While the organization is local in scope at present, it is intended that it shall be Dominion-wide and for that reason its present name has been adopted. Plans include qualifying examinations for active membership with a standard rating of competency for chartered record officers. Already interest in the Association is being evidenced in Ottawa and Hamilton, and it is likely that in these two cities the first branches will be formed. Prominent business men of Toronto have expressed themselves as being strongly in favor of a movement to raise the standard of record keeping, and it is believed that the C.A.R.O. will be of material use to the business community.

Filing, whether it be correspondence, invoices, cheques, deeds or books, has too long been considered of minor importance and consequently it has been neglected. In a great many offices it is entrusted to the "care" of a stenographer or switchboard operator to be done in her spare time with the result that letters needed in a hurry cannot be found. The advent of the filing department is correcting that condition, and the scientific record officer is but the next step.

While it is well known that a standard filing system is not possible (every firm must really work out its own), with an organization which includes specialists from the Dewey Decimal Classification to the straight alphabetic to consult, the designing of a system to meet every individual need should be easy of accomplishment.

A Typical Filing System

The record department of the Sheet Metal Products Company of Canada, Limited, in Toronto

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Annual Meetings Scheduled for April

ONTARIO DIVISION'S annual meeting will take place in the Royal Connaught Hotel, Hamilton, on Tuesday, April 26th. There will be the usual programme of reports and other routine business, after which the meeting will be thrown open for the discussion of such questions as may come up for consideration. No outside speakers will take part but members and officials will supply the oratory.

Toronto Branch annual meeting is scheduled for Thursday, April 21st, and will be held in the Board of Trade Rooms, Royal Bank Building.

Vice-President Shaw Speaks at Stratford

VICE-PRESIDENT JOHN R. SHAW, Woodstock, was the speaker at a luncheon of the Stratford Chamber of Commerce on March 28th. He told his hearers about the Association, tracing its growth and outlining its various services. He further explained that the Association favored a permanent tariff commission, which would study conditions and recommend to Parliament necessary legislation. Mr. Shaw gave it as his opinion that without protection the business of the country would not be as good as it is to-day.

Immigration Requirement is Extended

BY an order in council dated March 19th, 1921, the order of November 29th, 1920 (P.C. 2930) requiring that immigrants of the mechanic, artisan and laborer classes, whether skilled or unskilled, shall be in possession of $250 as a condition of landing in Canada, has been extended indefinitely. This action has been taken, it is stated, "in view of the existing employment conditions."

The original order was based on the information received "showing that in various parts of Canada a considerable amount of unemployment now exists and that certain classes of workers, particularly mechanics, artisans and laborers find difficulty in obtaining steady employment," and also because "the prospects for employment are not likely to improve during the next few months." The order was to remain in effect until March 31st, 1921.

Secretary-Treasurer of Safety Association

AT the last meeting of the Executive Committee of Ontario Division it was announced that R. B. Morley, secretary of Ontario Safety League, had been appointed secretary-treasurer of the Industrial Accident Prevention Association of Ontario. The Association is to be thoroughly reorganized and the interest and co-operation of all employers in the province was invited.

Death of Ex-Chairman Winnipeg Branch

THE death occurred on March 27th at Hot Springs, Va., of A. B. Stovel, vice-president The Stovel Co., Winnipeg, a prominent member of the C.M.A., who in 1916 and 1917 served as chairman of the Winnipeg Branch. Mr. Stovel had not enjoyed good health for some years. He went to Virginia about the middle of March in the hope of recovering his health, but when he reached there had to take to his bed. He was born in Mount Forest, Ont. in 1865, was a practical printer and worked at his trade in Chicago and Winnipeg previous to the formation of the Stovel Co. In religion he was a prominent Baptist, being president of the Baptist Union of Western Canada. He also took an active interest in the Independent Order of Oddfellows and was a member of numerous clubs.

Winnipeg Branch Visited by the Treasurer

ON the evening of February 22nd, the Winnipeg Branch, C.M.A. entertained Thomas Roden, Honorary Treasurer, Toronto; and Messrs. Caron, Montreal; Lees, Hamilton; McKnight and Dobbs, Toronto, who were delegates attending the Jewellers' convention in Winnipeg, at a dinner at the Hotel St. Charles. Mr. Roden was the guest of honor and principal speaker, while D. J. Dyson, chairman Prairie Division, occupied the chair.

Mr. Roden appealed for closer co-operation between East and West and dealt at some length with the object of the C.M.A. and its various service In order that the Association might take intelligent action on public questions, he urged that the membership throughout the whole country should consider the problems that arose and give the Association the benefit of their advice. Mr. Roden spoke at considerable length on the turnover tax, which he contended would provide an equitable and easy method of raising a large sum of money.

Other speakers were Mayor Parnell who appealed to the members of the Branch to think of Canada's requirements first, last and all the time, and Charles Pratt, chairman Medicine Hat Branch, who spoke in hearty appreciation of the services rendered by the Association to manufacturers in the Province of Alberta.

Fake Advertising Schemes Are Exposed

ATTENTION of the members of the Toronto branch is again being directed to the Bureau of Advice and Information which was established three years ago to assist manufacturers in handling questions relating to applications for subscriptions for alleged philanthropies, charities and advertising, about the merits of which they may be in doubt.

"Fake advertising devices are among the chronic nuisances of modern business," states a circular issued by the Branch. "Are you ever favored with a call from the glib-tongued stranger who tells you that he has one of the best propositions in the advertising line that has ever been before the public? Do you ever receive circular letters from an organization with a high-sounding name you never heard of before, inviting subscriptions to some worthy object?

"If so, do you not think it would be to your advantage to co-operate with your fellow-manufacturers in reporting all such schemes to one central bureau

where they can be thoroughly investigated, and if necessary exposed? Worthy schemes will at the same time receive the commendation they deserve.

"The Canadian Manufacturers Association, through its chain of branches and wide membership, has exceptional facilities for undertaking this class of work, and through the Bureau of Advice and Information is prepared to report fairly and fearlessly upon anything you may bring to its attention. In the aggregate the Bureau has saved and may save the manufacturers thousands of dollars.

"We enclose a card to be hung in your office, notifying solicitors that all requests for advertising, etc., are referred for investigation to the Bureau of Advice and Information, which will save the annoyance of many personal calls by solicitors whose appeals will not bear scrutiny. This service has been of great assistance to many of our members since it was inaugurated in 1918. We trust that our members will continue to make use of it."

Members of Toronto Branch Visit Brampton

THE industrial progress being made in Brampton was seen by seventeen members of the Toronto Branch who motored there on Wednesday, March 23rd, in response to an invitation from manufacturers and the Board of Trade of the town. The plants of the Williams Shoe, Limited, and the Copeland, Chatterson Company were first visited and then the delegation were taken through the beautiful greenhouses of the Dale estate. They then returned to a luncheon provided by the Board of Trade at the Victoria Hotel.

After the luncheon G. W. McFarland, president of the Board of Trade, called on J. T. Stirrett, general secretary of the C.M.A., to set forth the aims of the delegation. Mr. Stirrett showed how Canada, which produced three and one-half billions of goods last year, and employed 700,000 people in making them, provided for several millions of others who are dependent on the industries in indirect ways. The general secretary also spoke of the splendid part Brampton had played in the campaign for "Made-in-Canada" goods.

T. F. Monypenny, Imperial Paint & Varnish Company, surprised his audience by saying that the town had produced $5,000,000 worth of goods last year, and that her neighbor, Georgetown, had produced $3,300,000 worth.

Mr. Monypenny declared that if men would give their service in behalf of advancing their country as they give it to their own business, Canada would make progress through a fair sea. We want to make every town one hundred per cent. efficient, he declared, and urged against the fallacy "of letting George do it."

James Acton, Acton Publishing Company, who has been a member of the C.M.A. for 33 years, told of finding that more than ever co-operation is the basis of success in industry. This co-operative effort will put industry into its right relations with the Canadian people; they will support their own.

W. M. Alderson, president of the Toronto Board of Trade, said that the small towns cannot do too much to impress on the people the propriety of using only made in Canada goods. He said that even small plants could get their employees into line. You can get no more out of a business than you put into it, he declared, and you will get no more out of the Dominion than you put in.

Our Branch Chairmen for 1920-21

Vivian Burrill

Chairman, Three Rivers Branch

THE election of Mr. Burrill to the chairmanship of the recently-formed Three Rivers branch was natural, since he is the oldest member of the C.M.A. in that city. Coming to Canada from England, in 1871, with the intention of farming, he recognized the possibilities that lay in the development of the Province of Quebec and soon became connected with the lumber industry. Later, he formed the Drummond Lumber Company, and in 1878, foreseeing the great development of the St. Maurice Valley, he took up land near Shawinigan Falls. When the village was founded there Mr. Burrill was elected as the first mayor.

Though the Burrill Lumber Company is still a prosperous concern in Three Rivers, its founder is trying to keep out of business, finding enjoyment in his recollections of the past and his observation of the magnificent results of his work in some of Quebec's leading industrial centres.

R. L. McIntyre, McGregor, McIntyre, Limited, continued on the same text, speaking of the $70,000,000 which is annually paid to the United States for coal, while Alberta produces coal that tests better, five to one.

Mayor Beatty, who is a labor man, spoke of the industrial depression. It had been expected and had arrived, and now it was up to every man, whether employer or employee, to take his medicine. A. E. Chatterson, Copeland, Chatterson Company, told of the difficulty of keeping a sales force going during the buyers' strike which had descended on the country. He was, however, confident that business would right itself and he welcomed any efforts the C.M.A. might make for better business in Brampton.

Other speakers were T. W. Duggan of the Dale estate; Robert Crawford, county treasurer; C. F. Bate, manager, Merchants Bank, and Gordon Hall, manager, Dominion Bank. After giving three cheers for their hosts the party motored back to Toronto.

How to Help "Made-in-Canada" Campaign

IN a circular issued to the membership on March 26th, on the "Made-in-Canada" campaign, the progress of the campaign is noted and the following suggestions are thrown out to members:

"The Executive Council respectfully directs your attention to the assistance which can be given to the campaign by individual members of the Association. It is suggested that our 4,100 members should constitute 4,100 organization points for the "Made-in-Canada" campaign. Connected with these 4,100 organization points are about 700,000 industrial employees, who, with their families, number about two million people.

"The Executive Council asks if you as an individual member are doing your utmost to help direct the purchasing power of the consumers of this country. Are you asking your municipal authorities to buy "Made-in-Canada" goods? Are you making the same request to the purchasing departments of the various organizations and firms with which you are connected?

"The Executive Council also asks if you are concentrating your own buying power on the Canadian market? Are your purchases helping to keep the staffs of other factories busy? If you do not, will your own staff be kept busy? If you buy imported goods unnecessarily, can you ask other Canadians to buy your goods?

"Are you watching your purchasing department and checking closely what it buys in the way of equipment, machinery, tools and supplies? Are they domestic or imported, or, has the foreign engineer or salesman told your purchasing department what it should buy? Are you living in a "Made-in-Canada" house, or, have you been influenced by foreign architects and salesmen to live in a "Made-in-any-other-country-but-Canada" house? Do the members of your family spend their "Made-in-Canada" money in Canada, or, do they make buying trips elsewhere?

"And then, your own personal purchases—what about them? Remember, that your neighbors are watching where you buy what you need for your factory, your home and yourself. They will follow your example.

"The Executive Council respectfully makes the above suggestions in the hope

that every member of the Association will do all he can to direct the hundreds of millions of dollars worth of purchasing power of this country towards the consumption of goods "Made-in-Canada" by Canadians."

Toronto Purchasing Agents Hold Annual Meeting

THE Toronto Association of National Purchasing Agents, a branch of the National Purchasing Agents Association, which embraces practically all of Canada and the United States, held their second annual meeting on March 10th, in the Board of Trade lunch room. The following officers were elected for the coming year: President, Walter F. Dodd, Canadian Kodak Co.; vice-pres., W. K. McGuffie, Sheet Metal Products Co.; secretary, G. P. Beswick, Boynton & Williams; treasurer, R. M. Sedgwick, Standard Chemical Co. The executive committee has the following members: J. A. Fraser, Gutta Percha & Rubber Co.; F. J. Lucas, Purdy-Mansell, Limited; E. B. Ross, Dunlop Tire & Rubber Goods Co.

Tentative arrangements were made for holding the second annual convention of the Canadian Purchasing Agents Association in the King Edward Hotel, on Saturday, May 14th. The four Canadian branches of the National Purchasing Agents Association, Montreal, Toronto, Ottawa and Hamilton will co-operate, and a most representative convention is assured. The convention will occupy the entire day.

The morning session, after the usual formalities are dispensed with, will be taken up with a discussion on the advisability of forming a Canadian Association, by formally uniting in one Association the four branches as above, at the same time continuing the affiliation with the parent organization in the United States. In the afternoon, subjects of interest to all purchasing agents will be covered by experts on the various phases of commercial life.

The evening session will consist of a dinner, and if the present plans are carried out, one of the most enjoyable, interesting and instructive sessions possible will be held. The headquarters for the convention will be the King Edward Hotel, and the morning and afternoon sessions will probably be held in the Pompeian room or the banquet hall.

Membership Standing of Association

ON March 2nd a bulletin was issued to the membership giving information about the present standing of the membership of the Association and emphasizing the great desirability of increasing it to a point where the Association could be said to reach all the manufacturers of Canada.

Last year was the most successful year in the history of the C.M.A. so far as increase in membership was concerned. 662 applications were accepted and 131 resignations. No resignation was due to dissatisfaction with the the policies or services of the Association but to such causes as liquidation, ceasing manufacturing, etc. This gave a net gain last year of 531 members. The second most successful year was 1901, when the net gain in membership was 485, and the third most successful was 1905 when the net gain was 328.

From May 1st, 1920, the beginning of the Association's fiscal year, to January 15th, 1921, the membership work of the Association showed the following: Applications, 238; resignations, 143; net gain, 95. The reasons given for the above resignations are classified as follows: Out of business 41; not manufacturing, 20; amalgamations, 19; arrears, 33; deceased, 8; no reason, 2; financial difficulties, 4; additional representatives dropped, 21. Total, 143.

In only two years has the Association's membership suffered a net loss, namely, 1908, which showed a net loss of 4, and 1916 which showed a net loss of 78. The net loss in both cases, it may be observed, occurred in a year when there was a serious trade depression.

As might be expected, membership work is difficult this year owing to the present trade depression. It is essential, therefore, that the Association should put forth every effort to retain its old members and to secure new ones.

Alberta Chairman Speaks at Luncheon

MADE-IN-CANADA was the keynote of one of the largest gatherings ever held by the Edmonton Board of Trade on March 8th. The manufacturers of the city, headed by C. G. Robson, chairman Alberta Branch, C.M.A., had charge of the meeting, which took the form of a luncheon, with a made-in-Edmonton menu. Nearly 350 manufacturers and business men attended.

The principal speaker was Mr. Robson, who advanced many facts and figures to show the importance of buying made-in-Canada goods.

"There is a crisis in our Dominion at the present time," he said. "It calls for true patriotism by every Canadian. The outward signs of this crisis are lessening exports; increasing imports; depreciation in currency when compared with the American dollar; factories idle or working on part time only; labor unemployed."

Mr. Robson then dealt with the evil of unemployment and urged that everything possible should be done to keep the laboring men fully employed. Referring to antipathy towards the East, h said that the way to get rid of this ant pathy was to develop industry west o the Great Lakes. In this connection h referred to the fact that in 1918 ther were 1,422 manufacturing establishment in Saskatchewan alone, while in 1920 ou of a total membership of 4,124, the Cana dian Manufacturers Association had a most a thousand members west of th Great Lakes.

Mr. Robson was followed by James Mc Caig, head of the publicity departmen of Alberta, who spoke on dairy and kin dred interests, and by Harry Parrish who referred to the importance of th meat industry.

The Association Opposes 8-Hour Day Bill

IN connection with the introduction i the Ontario Legislature by a privat labor member of a bill providing for th establishment of an eight-hour day, th Association has enumerated the follow ing reasons why the legislation is i every way detrimental to the best in terests of the community:

1. The United States has not adopte and is not likely to adopt such legis lation, so that its adoption in Canad would be intolerable.
2. Canada is trying to attract foreig capital and an eight-hour day la would frighten foreign capital away.
3. As proved in France and Denmark it would lessen production, and there fore,
4. It would increase the cost of living.
5. It would be impossible of universa application in a country with s many seasonal industries such a lumbering, etc.
6. As it could not and would not appl to agriculture, it would increase th drift from country into town.
7. It is, in effect, a movement for highe pay, not for shorter hours.

The present Bill, known as the Max mum Work Hour Day Act, contains th following provisions:

1. The normal work day shall be eigh hours.
2. The normal week shall be forty-fou hours.
3. All industries, trades, etc. are in cluded, except agriculture.
4. Exceptions are made in the case o foremen, watchmen, nurses, etc., als in the case of machinery breakdown and emergencies generally.
5. Systematic overtime shall be illeg except in emergencies when the lim is ten consecutive hours.
6. Penalty in case of infraction by ei ployer or employee—$1,000.00 or s months' imprisonment.

The Tour of the Manufacturing Cities of Western Ontario

The Second C.M.A. Party Visits Windsor, Chatham, London, St. Thomas and Woodstock

WINDSOR, in the cold, gray dawn of March 1st, was the beginning of the second tour of Ontario's industrial centres; but the coldness and grayness were soon dispelled by a good breakfast provided by the Border Cities Chamber of Commerce at the Windsor Club. Here the visitors were met by a number of local manufacturers and, after a short time spent in getting acquainted, were taken for a motor ride through the industrial districts of the Border Cities.

A stop was made at the plant of the Dominion Forge & Stamping Company, Limited, where, under the guidance of Pearson Wells of that company, the party were able to see the drop-forging process in operation. Following this inspection they returned along the river-front to be entertained at luncheon by the Ford Motor Company of Canada, Limited.

The Ford Luncheon.

W. L. MacGregor of the Ideal Fence & Spring Company, Limited, was chairman at the luncheon, and after an address of welcome introduced J. R. Shaw, second vice-president of the C.M.A., as the first speaker. Mr. Shaw outlined briefly the objects of the series of tours; too many people, he said, were of the opinion that the C.M.A. was a Toronto organization. It was not a Toronto organization any more than a Vancouver or Halifax organization, or any less; it was a national organization engaged in constructive work.

After referring to the services that the C.M.A. could render to its members, Mr. Shaw made a determined appeal for a united front to defend the present fiscal system.

Pearson Wells, of the Dominion Forge & Stamping Company, speaking next, explained that, though there was not a branch of the C.M.A. in the Border Cities, the manufacturers branch of the Chamber of Commerce was doing practically the same work, and they greatly desired to keep in touch with all C.M.A. activities. F. Monypenny, of the Imperial Paint & Varnish Company; J. F. MacKay, of the John Morrow Screw & Nut Company, and H. Macdonald, legal secretary of the C.M.A., also spoke. The latter described the work covered in his own department with especial reference to the Workmen's Compensation Act, the Eight-hour Day Bill and matter of taxation.

At the close of the luncheon the visitors were shown through the factory and Tower plant, where they saw all the processes employed in turning out the Ford. Two hundred and twenty-five cars a day are now being completed. To those who had not been through the plant before, the smoothly-running production system was a revelation of what can be done by organization and discipline.

Visit to Chatham.

The next day the party travelled to Chatham where they were met by the Board of Trade and taken to their rooms for a luncheon. The president, George Wands, welcomed the visitors on behalf of the Board of Trade, and F. H. Briscoe, mayor of Chatham, extended the welcome of the city. F. Biette, manager of the Standard Bank, and J. Elwood, who was the chief mover in establishing a model system of industrial relations in Chatham, testified to the great community spirit that animated all citizens there. A very witty speech was given by N. H. Stevens, of the Canada Flour Mills Company, Chatham's oldest manufacturer, who drew upon his store of reminiscences for illustrations of the enterprising spirit that has changed an unimportant village into a leading industrial centre. J. R. Shaw, also in a reminiscent vein, spoke of the great opportunities within the grasp of young men of the present day as compared with the era previous to Canada's industrial development, when so many were forced to emigrate to the United States to make a living. After speeches by W. M. Gray, of the Gray-Dort Motors, Limited, and J. F. Mackay, a vote of thanks, moved by J. D. Kennedy of the Wilson Canadian Company, and seconded by Jas. Innes of the Sutherland, Innes Company, was presented to the Ladies' Assisting Society, who had served the excellent luncheon. A further feature about the luncheon was that, with one or two exceptions, all the viands served were products of Chatham manufacturers.

A short drive through the city followed, during which C. Glock conducted the party through the large wagon factory of the International Harvester Company. A visit was also paid to the handsome new club house which the Gray-Dort Company have just opened for their employees. There was unfortunately no time for more than a hurried inspection of the building, though the cheerful fireplace in the entrance hall tempted one to linger, and the party moved on to London.

The morning of March 3rd was spent in driving through London and inspecting the plants of some leading manufacturing concerns. The temporary plant of the Ruggles Motor Truck Company was first visited and then their new home which will shortly be occupied. The latter is a model of modern factory construction. Large and airy, lighted by huge windows, it combines ideal working conditions with efficiency of design. Next door is an equally fine example of an up-to-date factory, the plant of the McCormick Manufacturing Company, Limited. It is well named the "Sunshine Factory," and everyone admired the manner in which the many confections are handled and packed. The last plant to be visited was the foundry of the McClary Manufacturing Company, another of London's pioneer industries.

St. Thomas Entertainment.

A lunch at St. Thomas was the next item on the programme and the business men of the town, to the number of about eighty-five, turned out to the meeting in the Grand Central Hotel. After addresses of welcome from A. E. Horton, president of the Board of Trade, and F. L. Brinkman, the mayor, John R. Shaw discussed the tariff situation, advocating the formation of a permanent tariff commission to advise the Government on necessary changes in the tariff. "The Canadian Manufacturers Association is not in politics," he said, "and has never contributed one dollar to the funds of any political party. But the tariff is a matter which vitally affects all manufacturing interests, and we claim that it should be taken out of politics altogether."

Arthur White, of the George White & Sons Company, Limited, extended fra-

A New London Industry

Plant of the Ruggles Motor Truck Company, Limited, Visited by Party Number 2.

ternal greetings from the manufacturers in London to those in St. Thomas and issued a general invitation for them to return with the party to London. The meeting closed with speeches by T. F. Monypenny, H. Macdonald and W. J. Murray, of the Chapman Double Ball Bearing Company of Canada, Limited. A visit to the Monarch Knitting Mills and a rapid tour through the city completed the entertainment.

Banquet at London.

The party, augmented now by some St. Thomas representatives, returned to enjoy a banquet provided by the London Chamber of Commerce at the Tecumseh House. A. W. White was chairman, and, after introducing Alderman John Bridge, president of the Chamber of Commerce, who made a short speech of welcome, he called upon J. S. McKinnon, president of the C.M.A., to speak for the visitors. It was fortunate that Mr. McKinnon had been able to join the party at this time, as the morning papers had carried accounts of the attack on the C.M.A. made by J. J. Morrison, U.F.O. organizer, at a meeting in Peterborough. "Mr. Morrison calls the Canadian Manufacturers Association the 'One Big Union,'" said Mr. McKinnon. "He said it was the most powerful organization in Canada, and added to this statement a strong appeal for class consciousness among the farmers. When this Association is classed as 'One Big Union,' we have to ask ourselves what this means. As you all know the 'One Big Union' showed itself in Winnipeg, and there it set itself to upset law and order and to wreck the constitution. We emphatically resent a statement in which such an analogy is drawn. The 'One Big Union' at Winnipeg was an organization which sought to overthrow the law of the country in an unconstitutional way. Its methods were those of destruction. Our policy is one of construction."

Mr. McKinnon also dealt with the necessity of a protective policy and made a strong appeal to Canadians to unite on the basis of a common nationality and buy goods made in Canada. The same subjects were also dealt with by Mr. Shaw, who characterized the protective policy as "the keystone of Confederation."

Appeals to Younger Members.

Col. W. M. Gartshore, of the McClary Manufacturing Company, addressed his remarks particularly to the younger members, urging them to take a greater interest in the Association. Other speakers were: A. E. Horton, of St. Thomas; G. R. Taggart, United States Consul, and R. R. Hart, of S. R. Hart & Co., Toronto.

Next morning the party arrived at Woodstock for the final visit of the tour. They were conducted first to the large plant of the Canada Furniture Manufacturers and shown the ingenious woodworking machines in use there. The modern department store of E. J. Cole was inspected, and later the visitors were shown a compact and serviceable electric generator which the Canadian Linderman Company are putting on the market. After being taken through the Bain Wagon Works and the Sterling Textile Company's mill, they returned to the Armouries where a luncheon was served by the Havelock Chapter of the I.O.D.E. E. A. Rea and Mack Paul delivered addresses of welcome on behalf of the Board of Trade and the city. Mr. McKinnon again spoke of J. J. Morrison's attacks as unjust and uncalled for. He sketched the growth of the C.M.A. and dealt with the exchange situation, quoting statistics of exports and imports to back up his appeal for union to support home industries. T. F. Moneypenny, who followed, described the work carried on by the different departments of the C.M.A., and urged that members make wider use of the facilities at their disposal. He gave instances from his own experience of large sums of money that had been saved by handing over problems to experts on the C.M.A. staff.

R. M. Ball, president of the Woodstock Manufacturers Association, told of the history and work of his organization, and W. J. Murray and H. Macdonald made short speeches. After an enthusiastic vote of thanks to the ladies of the I.O.D.E. for serving the luncheon the meeting closed.

All members of the party are satisfied that the tour was a decided success. For them it was a unique experience of the activity and the community spirit which are building up the industrial centres of Western Ontario, and the princely hospitality which was shown them everywhere will always be gratefully remembered. For the manufacturers in the cities visited the tour had the desired effect of creating a more personal link with the Association.

Party No. 3 Visits Eastern Ontario

Successful Tour Made of Industrial Centres of Brockville, Kingston, Belleville, Peterborough and Oshawa

BROCKVILLE was the first industrial centre to be visited by Touring Party No. 3, which set off from Toronto on Monday, March 7. On arrival at this St. Lawrence River city, the party were met by a delegation of local manufacturers, headed by W. A. Lewis, president of the Board of Trade, and conducted on a tour of local industries in a fleet of automobiles, most of which were brand-new Brockville-built "Briscoes."

The first plant to be inspected was the splendid new fireproof factory of Machinery and Foundries, Limited, the first erection on the Board of Trade's extensive tract of land secured for industrial purposes. This industry, manufacturing pumps, pulleys and other lines, has only just got started and the plant is a model in every respect. From here, the party were whirled over to the Wolthausen Hat Corporation, where the mysteries of hat manufacture were illustrated and explained by Messrs. F. and F. D. Wolthausen.

A brief inspection of the premises of the Canadian Briscoe Motor Car Co. followed, the processes involved in assembling this popular make of car being surveyed. Then came a very interesting visit to the big condensed milk plant of the Laing Produce and Storage Co., formerly a brewery, where hundreds of cases of milk, mainly for the export trade, are prepared and shipped daily. Here were seen some truly marvellous machines for manufacturing, filling and packing the cans automatically.

The St. Lawrence Engine Company's plant was next in line. This company's principal product is a gas engine in various designs and sizes for motor and power boats. Then followed a rapid inspection of the Brockville works of the Canada Foundries & Forgings, Limited, where almost innumerable lines of hardware are being turned out on a large scale. Finally a visit was paid to the plant of the Office Furniture and Supplies Co. Here some fine examples of office furniture were examined and admired.

The evening's entertainment took the form of a dinner tendered to the visitors at the Grand Central Hotel by the Brockville Board of Trade. Mr. Lewis presided and prominent among those present were Mayor Dobbie, Hon. George P. Graham, W. H. Shapley, R. L. McIntyre, Elmer Davis and T. J. Storey. In opening, Mr. Lewis extended a hearty welcome to the visitors, hoped that the visit would prove mutually beneficial and expressed regret that it had not been possible to see all Brockville's industries.

W. H. Shapley, on behalf of the C.M.A. told in detail of the organization, its departments and its work and stressed its national character. He concluded with an appeal for a better understanding between Ontario and Quebec. He was followed by R. L. McIntyre, who dealt with accident prevention and also emphasized the value of the Association's services to its membership. A fine speech was next delivered by Elmer Davis, Kingston, who spoke in an optimistic vein of the business outlook and further dealt with the needs of Eastern Ontario in the matter of power.

Hon. George P. Graham declared that he had become a manufacturer out of local pride and urged the Association to inform the public more fully on its work. The C.M.A. was for the betterment of

conditions and the public should be told of its true functions. Mr. Graham was quite outspoken in his support of a tariff.

Other speakers were T. J. Storey, Brockville; F. D. Vandusen, Brockville, and C. E. Macdonald, International Nickel Co., Toronto.

The Visit to Kingston.

Kingston's welcome on the morning of March 8th was tendered by Mayor H. C. Nickle and J. M. Campbell, president Kingston Board of Trade. Accompanied by several of the local manufacturers, the party visited in turn the plants of the Canadian Locomotive Co., the Collingwood Shipbuilding Co., and the Canada Cutlery Co. At the locomotive works, the whole of the interesting process of engine manufacture was witnessed, some of the operations being most spectacular in character. The company have built 1,687 engines in the sixty-four years of their existence. At the shipbuilding plant near by, one of the big freighters being built for the Canadian Government Merchant Marine was seen, almost ready for launching, on the stocks. The visit to the cutlery works proved interesting. This is a new industry and Mr. Eaton, its promoter, showed the visitors how knives are made and presented each with a Kingston-made jack-knife as sample and souvenir.

A civic luncheon, presided over by Mayor Nickle, took place at the Frontenac Club at one o'clock. Among the aldermen present were Col. Kent, W. H. Craig, Noble Stacey, R. D. Rogers and Mr. Stroud. Major-General Sir Archibald Macdonnell, Commandant of the Royal Military College, was also a guest. The speech-making was short, as time was limited, but appropriate remarks, in response to the civic welcome, were made by Messrs. Shapley and McIntyre.

Following the luncheon, the party was motored out to the Royal Military College, where an hour was spent in inspecting this interesting establishment. Wonderful models of the trench systems in France were shown and squads of cadets went through gymnastic exercises with astonishing agility.

The Belleville Programme.

Arriving at Belleville at 6 p.m., the party were welcomed by W. C. Springer, W. B. Deacon and other local manufacturers and taken to the Hotel Quinte. Here all dined informally, afterwards proceeding to the handsome quarters of the Belleville Chamber of Commerce where a meeting was held, with W. H. Shapley presiding. Speeches on this occasion were numerous and a good deal of useful ground was covered. The chairman struck the keynote with an introductory address on the work of the Association and was followed, on behalf of the visitors, by Messrs. McIntyre, Anthes, Murray, Gillies, Craick and McIntosh. Interspersed were speeches by such well-known local men as Col. Ponton, W. B. Deacon and John Elliott, president of the Associated Boards of Trade of Ontario.

On the morning of Wednesday, March 9, a tour was made of several Belleville industries, including the plants of the Springer Lock Mfg. Co., the Marsh Engineering Co., the Steel Co. of Canada and the Wood Valve Company, all of which proved intensely interesting. At noon, the visiting manufacturers were guests at luncheon of the Belleville Lion's Club, a new organization blessed with a great deal of jovial enthusiasm and good fellowship.

Fine Peterborough Meeting.

Before reaching Peterborough on Wednesday afternoon, the party was reinforced by the addition of the president, the general manager and the legal secretary and with this reinforcement were able to face with confidence the splendid gathering of Peterborough manufacturers who assembled for dinner at the Empress Hotel at 7.30 p.m. W. A. Richardson, chairman Peterborough Branch, presided and did the honors of the occasion most felicitously. A pleasing opening ceremony was the presentation to Mr. McKinnon of a mammoth key, which he was assured would let him and his followers into any industry in the city.

Stability is Needed.

The president, after thanking the Peterborough members for their fine hospitality, delivered a splendid speech, embracing a great many aspects of the present business situation. He declared that what was most needed just now was stability and, in order to maintain stability, he urged that the country be preserved from the turmoil of a general election for at least eighteen months. He presented figures to show that the present Canadian tariff was very moderate and added that the tendency all over the world was towards higher tariffs. Further, he wanted to see business with the United States on a dollar-for-dollar basis.

Mr. Walsh next presented a number of interesting figures about the Association, and told in some detail of the work that was being done by the various departments. He was followed by Mr. Macdonald, who dealt more particularly with the work of the legal department. Short addresses were also made by Messrs. Shapley, McIntyre and Anthes, while E. G. Patterson and W. R. Breyfogle spoke briefly on behalf of the Peterborough manufacturers. A toast to the chairman concluded the proceedings.

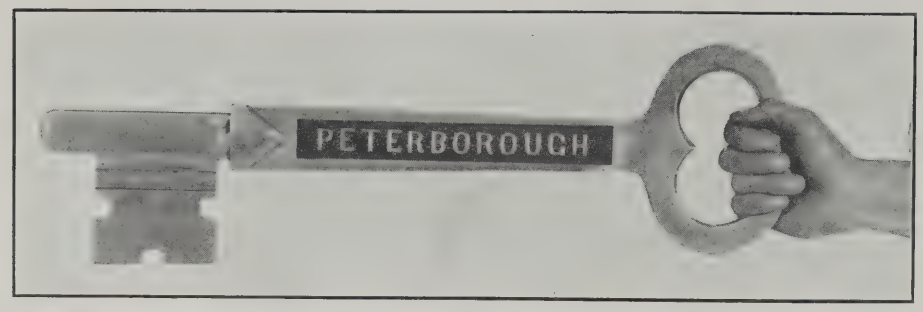
Owing to limited time on Thursday morning, the party were split into four groups. One group was taken to the Canadian General Electric Co.'s plant; a second to that of the De Laval Co.; a third to Canadian Woollens, and a fourth to the Quaker Oats Co. Luncheon was served at 11.30 and the party entrained for Oshawa at noon.

The Visit to Oshawa.

A large delegation of Oshawa manufacturers, with G. W. McLaughlin at their head, welcomed the visitors on their arrival at this progressive industrial centre. A programme of factory inspection was at once commenced, the first plant to be visited being that of the Robson Leather Co. Then followed in rapid succession the fine new plant of the Pedlar People and the extensive premises of General Motors Corporation, in both of which a great deal of automobile work was in progress. The process of taking off the "heat" at the big plant of Fittings Limited, was watched with great interest and the visits ended with a trip through the plant of the Williams Piano Co.

There was a splendid turnout of Oshawa business men at a dinner tend-

Our Branch Chairmen for 1920-21



W. A. Richardson

Chairman, Peterborough, Ont., Branch

MR. RICHARDSON, who is now managing director of the Peterborough Canoe Company, Limited, has been with that firm throughout his business career, which began twenty-one years ago, when he entered their services as office boy. The business was then small, the only other member of the office staff being the general manager, and less than twenty-five hands being on the pay-roll.

The growth of the Peterborough Canoe Company has been accompanied by Mr. Richardson's advancement. In 1908 he became a shareholder and was appointed secretary. In 1909, on the death of Colonel James Z. Rogers, founder of the business, he was promoted to his present post of managing director. He has not been actively engaged in any other business nor in municipal politics, but he has given the benefit of his experience to the local Board of Trade and to the C.M.A.

The Key to the Industries of Peterborough

Presented to President J. S. McKinnon on behalf of the manufacturers of the city by W. A. Richardson, chairman of the Peterborough Branch, on the occasion of the visit of Party No. 3 to Peterborough. The key, which was made by the Peterborough Lock Mfg. Co., is about two feet long and bears on the reverse side the word "Welcome"

ered the visitors by the Board of Trade at Walsh's Banquet Parlor at 6 p.m. F. J. Bailes, president of the Board, presided, and the proceedings were greatly enlivened by the singing of a song of welcome by George Henley, into which the names of all the visitors were cleverly interwoven. Mr. McKinnon spoke again dealing particularly with trade and the tariff. Short speeches were also delivered by Messrs. Macdonald, Shapley and McIntyre and the meeting broke up at 8.15 p.m., in order to enable the visitors to catch the train for Toronto.

Excursion to the Niagara Peninsula

Enthusiastic Meetings in Niagara Falls, Welland, St Catharines and Hamilton Complete the C.M.A. Series of Ontario Tours

ALMOST forty members represented the C.M.A. on the fourth tour of Ontario industrial centres, which covered the cities of Niagara Falls, Welland, St. Catharines and Hamilton. On the morning of March 14th the party left Toronto and, reinforced by a delegation of Hamilton manufacturers, arrived in Niagara Falls about noon. A reception committee, consisting of the mayor, H. P. Stephens, E. T. Pollard, Pollard Manufacturing Company; Mr. Mallum, chairman of the Niagara Falls Chamber of Commerce; M. R. Meldrum, Herbert Morris Crane & Hoist Company, Limited, and W. W. Blew, Spirella Company of Canada, Limited, met the visitors at the station and escorted them to the Clifton Inn, where a luncheon was served.

Niagara Falls Meeting

After the luncheon visitors and local manufacturers got together in a general meeting and addresses of welcome were delivered by Mr. Mallum and Mayor Stephens. The latter spoke of the favorable position of Niagara Falls with its immense power resources attracting manufacturers and the fertile soil that yielded magnificent returns to the fruit-growers of the peninsula.

Thomas Roden, Roden Brothers, Limited, Hon. Treasurer C.M.A., who headed the party, pointed out the necessity for co-operation between industry and the Government. There was never a time when organization for a sane direction of public affairs was more urgently needed than it was at present, he declared. The part played by the C.M.A. in assisting Canadian industry was an illustration of what could be done by proper organization. Mr. Roden described the work being carried on by the various departments of the Association for the assistance of manufacturing interests.

Labor Legislation

J. E. Walsh, general manager, C.M.A., urged manufacturers of Niagara Falls to take an active interest in the Association's work. He also dealt with the growth of the C.M.A. from its formation in 1872 to the present time. He was followed by Sam Harris, Harris Lithographing Company, Limited, who gave an account of the work done in connection with labor legislation at the Washington Conference. E. H. Jones, Canadian Yale & Towne, Limited, St. Catharines, also spoke of labor legislation, with particular reference to the burden placed on industry by the unfair operation of the Workmen's Compensation Act. R. L. McIntyre told what the Industrial Accident Prevention Association was doing to make this burden lighter and stated that a reorganization of that body was under way and would bring about more efficient work. H. Macdonald, legal secretary, C.M.A., spoke last, describing the work handled by his department.

A trip was then made to the generating station of the Electrical Development Company, taken over by the Hydro-Electric Power Commission last December. The plant is admirably adapted for sightseeing and the party saw everything of interest from the generators on the ground floor to the monster turbines one hundred and fifty feet below the earth's surface. They were then motored back to the Clifton where an informal evening was spent.

Visit to Welland

On Tuesday morning Welland was visited and members of the Board of Trade made the delegation welcome at the Welland Club. The morning was occupied in driving around the city and inspecting some of the factories to which it owes its prosperity. The plants of Canada Foundries & Forgings, Limited, and the Empire Cotton Mills were seen. Welland is experiencing fairly good industrial conditions, though the plants are not all running full time. The work on the Welland Ship Canal and the Hydro development relieve the unemployment situation.

At noon the party reassembled in the Welland Club for luncheon and were tendered an official welcome by J. C. Diffen, mayor of Welland, and Mark Vaughan, president of the Board of Trade. B. J. McCormick, Canada Foundries & Forgings, Limited, also greeted them on behalf of the local manufacturers, speaking of the good done by such tours in cementing business friendships.

"The productive and distributive machinery of commence," said Mr. McCormick, "is so evenly balanced that all industry prospers or suffers together. Canadian industry is as well organized as industry in any other country in the world, and sometimes I think it is over-organized, because we have created multiple organizations in trades, as well as in zones or communities. It has become a habit that when we find existing conditions do not please us, instead of trying to find out how we can add to what we already have, in order to serve the needs that are newly determined, we immediately set our brains to work to organize a new opposing force.

Strength of Centralization

"In this way we have pyramided organizations, and in this process of pyramiding we have overlooked, on many occasions, an opportunity to tie together these innumerable units, all good in their way, for dealing with national and international affairs.

"No local trade organization, no matter how strong or how well organized, can possibly exercise an influence in a national or international sense, such as can be exercised by one great federation, properly organized and representative of all.

"A trade organization, strong and virile in its own industry, meets and considers its own requirements and decides that certain action should be taken by public authorities in province or nation. It proceeds immediately through its own committees to appeal for what it needs; it has not yet learned to come to this central federation re-

ferred to, and ask that their problem be studied by business generally, and that business generally concede, approve of and demand a remedy. The result is that what is gained by this independent action is often but a minor part of what is petitioned for, and that part is most always the result of a negotiated compromise.

"The only way in which national affairs can be directed for the good of the public—and what is good for the public is always good for business—is by representation, where the minds of men not directly affected are brought to bear upon the question. Such minds can form and give consent to a method of operation and finally convince the authorities, as well as the public, that there is merit in the suggestion, and that this demand should be met.

"Never was there a day in the history of Canada when it was so necessary that right influences should be exerted and that right decisions should be made. There never was a time when the Canadian Manufacturers Association were so entitled to the thanks as well as the support of each unit in each industry doing business within the borders of Canada, for their recent efforts to clarify conflicting situations and to bring about wise and equitable legislation."

In conclusion, the speaker made a strong appeal for business men to take an interest in legislation and co-operate with the C.M.A. in its efforts to adjust Canadian business affairs.

Greater Publicity Advocated

L. B. Duff, editor of the *Welland Tribune-Telegraph*, advocated a greater use of publicity. The opponents of the manufacturers were organized and were getting their case before the public while the manufacturers were not. Mr. Roden followed, and Mr. Walsh replied to Mr. Duff's complaint about publicity.

George H. Douglas, Thornton & Douglas, Limited, Hamilton, addressed the gathering on the subject of taxation. Recent legislation in this matter, such as the excess profits tax, was, he said, unsound, since it was based upon profits and confiscated the means which should go towards the expansion of business. It was not fair that the man who ran his business efficiently and made a success of it should be penalized, while the man who was a failure contributed nothing to the country's revenues. He recommended a tax of one per cent. on all business, and the abolishment of the present income tax on corporations.

Mr. Macdonald then dealt with the subject of taxation from his experience in the legal department, and briefly reviewed other pieces of legislation affecting industry. The guests then indicated their assent to a vote of thanks, moved by Messrs. Harris and McIntyre, by giving three cheers and a tiger for the hospitable Board of Trade of Welland, following which they were driven to the station and took the car for St. Catharines.

At three o'clock in the afternoon the club rooms of the St. Catharines Chamber of Commerce were reached and a large representation of local manufacturers had motors in readiness for a tour of their charming city. Before the tour, E. R. Jones, Canadian Yale & Towne Company, presented the visitors with pocket screwdrivers as a souvenir of his firm.

Tour of St. Catharines

The McKinnon Columbus Chain plant was then visited, where the machines that fashion and weld the chains fascinated everyone by their almost human ingenuity. From the McKinnon plant the visitors were taken to see the industrial and residential sections of the city, returning to the club rooms for a get-together meeting with the local business men.

E. C. Graves, president of the Chamber of Commerce, welcomed the party on behalf of that body and said that St. Catharines, a city adapted to manufacturing purposes by excellent labor and living conditions, appreciated the present visit of manufacturers from other cities. His welcome was reinforced by Mayor Lovelace, speaking for the citizens of St. Catharines. Mr. Roden then outlined the objects of the tours that the C.M.A. had organized. C. G. McGhie, Welland Vale Manufacturing Company, Limited, said that the services which the C.M.A. placed at the disposal of members were not sufficiently utilized. He also spoke of the tax legislation which was making the securing of new capital almost impossible, as investors now preferred to place their money in non-taxable securities.

Mr. Douglas also reviewed the question of taxation and suggested remedies for the present evils. Colonel Hatch, Canada Steel Goods Company, Hamilton; W. A. McKinnon, of the McKinnon Industries; J. E. Walsh and Sam Harris also spoke of various phases of the Association's work.

At the close of the meeting a banquet was served in the dining-room of the Welland Hotel. Then the delegation left for Hamilton, a downpour of rain not damping their spirits or their pleasant memories of St. Catharines' hospitality.

At Hamilton, on Wednesday, March 16, after an inspection of the International Harvester Company's enormous works, the trip was brought to a close by a luncheon at the Royal Connaught Hotel. Mr. Douglas was chairman here, and his address of welcome was followed by one from G. C. Coppley, mayor of Hamilton, who made a strong appeal for co-operation between employers and employees.

The President's Speech

J. S. McKinnon, president, C.M.A., voiced his appreciation of the splendid reception that had been given the party. He spoke of the need for business men to take an interest in matters of legislation that affected industry, mentioning Mr. Coppley who had retired from business and was devoting his energies to municipal affairs. The president then spoke of the importance of industry to the country as shown by the taxes paid by manufacturing and agricultural classes respectively. The bulk of the country's revenue came from the former class.

Speeches by Messrs. Walsh, Roden, Stewart and McIntyre concluded the programme. The party then left for their homes well satisfied with the success of the tours and the courteous receptions accorded them at every city visited.

Farmers and Manufacturers Fraternize at Gathering in Vancouver

Friendly Greetings Interchanged Between Chairman of B.C. Division, C.M.A., and Officers of United Farmers of B.C. at Luncheon Tendered the Farmers

This is an account of a function on the Pacific Coast which it affords us much pleasure to publish. The United Farmers of British Columbia were holding their annual convention in Vancouver, when a happy thought struck the manufacturers,—they would invite the farmers to a luncheon. The two bodies came together and here are some of the pleasant things that were said on the occasion.—The Editor.

ONE of the most pleasant features of the annual meeting of the United Farmers of British Columbia, held in Vancouver on February 22nd, 23rd and 24th, was the tendering to the visiting delegates by the Manufacturers' Bureau of the Vancouver Board of Trade of a complimentary luncheon. At this gathering manufacturers and agriculturists sat down together on the friendliest possible footing and enjoyed an hour or more of agreeable social intercourse. Speeches delivered on the occasion were most felicitous in tone, and altogether much benefit was derived from the interchange of views.

Some idea of the tone of the meeting may be gathered from the following extracts from the speeches. K. O. Copeland, president of the United Farmers of British Columbia, said among other things:—

"I want to tell you that I have had visions of such a get-together meeting as this for some time past, hoping that some day there would be a better understanding between the manufacturers and the producers. That is why I am so pleased to be here."

* * *

"I just want to tell you how pleased we farmers are, how proud we are of this magnificent City of Vancouver."

"Tickled to Death."

"I am tickled to death with this movement. There is just one thing that I think in this town they might very usefully have had a rider added to—'Home-made Goods'—I thing you should have added 'Home-grown Goods.' If we are ever going to accomplish anything as a people in this province, we must get together along these lines."

* * *

"To my mind, co-operation is the only solution for us, not only in the Province of British Columbia, but in this fair Dominion of Canada. We must get together as farmers and manufacturers."

* * *

"I want that fairly understood—as farmers. We want to make this Province of British Columbia the banner province of the Dominion."

* * *

W. F. Laidman, Kelowna, a leader in the farmers' organization, said:—

"This gathering, I think, ladies and gentlemen, is unique, when you see the farmers and manufacturers sitting down together on such a good occasion as this for the first time.

"Before I go further I would like to refer to a statement of my friend, Mr. Malkin, in speaking to you just now. A farmer was coming over on the boat to this convention, and a friend of Mr. Malkin's was talking to him. The farmer said he was coming over to the convention, and the other gentleman said, 'Well, I see the manufacturers are going to entertain the farmers,' and the farmer replied, 'Oh, well, we know what they want.' Now, we were asked to speak straight, and I want to assure our worthy chairman and Mr. Malkin (and I know I am speaking on behalf of the whole of the farmers here present) that we are not here in that spirit. (Hear, hear.) We are here in the spirit that we are invited, and may good come of it." (Hear, hear.)

* * *

"I believe that such gatherings as this, of men representing different branches of industry, is the proper form to bring about an equitable and proper market for everyone. We have had a great deal of experience in that in the fruit industry. When our fruit was placed upon the market indiscriminately, what was the result? Chaos. Can you wonder at it. You cannot altogether blame the merchants, ladies and gentlemen, if you will sit down and think out the situation."

* * *

"Now I must not take up any more time. But I do hope that this will not be the last occasion when we shall see the merchants and the farmers together. Let us put our problems up to each other, and if you merchants will do that you will assist the farmers in carrying on and in making the farm what it should be, not what it has been up to now, merely an occupation, but help to make it a commercial undertaking." (Applause.)

Get Together Spirit Needed.

E. W. Neale, Cowichan, Vancouver Island, another prominent member of the United Farmers of British Columbia, said:—

"I am not going to pass any opinion on the relations which exist between the industries and agriculture in other portions of Canada except to say this, that I believe a lot of the situation that exists to-day, and it is an unfortunate situation, that situation exists and is largely due to lack of the getting together spirit, a lack of that very spirit which we here are exhibiting to-day."

* * *

"I believe very strongly in the destiny of British Columbia. I think every one will agree that British Columbia is destined to become one of the greatest industrial countries of the world, and that Vancouver is going to become one of the great ports of the world. We have here the raw material. We have the climate, and that only is a priceless asset. We have open ports the year round. But, Mr. Chairman, if British Columbia is to become a great province industrially, it must also be a great province agriculturally. The two go hand in hand. Prosperous agriculture means good markets for the manufacturer, and prosperous industry means good markets for the farmer."

Used to be a Farmer.

Speaking on behalf of the manufacturers, Jas. B. Thomson, chairman British Columbia Division, Canadian Manufacturers Association, said:—

"I feel that I am talking to friends because, personally, the younger days of my life were spent upon the farm. It will be thirty-one years this year since I came to this province from Scotland, and went with my parents to reside on a farm at Ladners. Subsequently, we moved to a farm on Vancouver Island, which is to-day operated by my brother, so that I have always a very close connection with the farmer, and, through my early life-work, I know pretty well the hardships and the hours of toil which he has to put in.

"To-day I have been asked to speak to you on the patronizing of home industries, and I presume there is no question but this includes the agricultural industry, which is the largest of any industry in Canada. A great load of responsibility has been placed upon the shoulders of all industrial life, including that of the agricultural department of national life. We see that greater production is necessary. We are informed by some that to-day we are suffering from over-production. This is entirely a mistaken theory. What Canada suffers from is under-production and under-con-

sumption, under-consumption of our home products.

"Prior to August, 1914, conditions in the world were what one might term normal, that is as far as trade and commerce were concerned. We produced and sold our products in common with other nations on the markets of the world, taking from them in return as payment products which we were requiring which they were able to supply, possibly not directly through the interchange of the commodity, but by that which represented an exchange because it furnished us with money, that is money backed by a gold reserve with which we could go to other nations and obtain anything we required which they had to sell.

Effect of the War.

"Our standard of living, as you might say, was, therefore, gauged according to our ability to produce a surplus which we could market to other nations and allow us to enjoy from the proceeds obtained the fruits of our labors. The law of supply and demand has at all times governed the price of a commodity, and still continues to do so. The war cloud descended in 1914, and in common with other nations, Canada had to turn her attention to the outfitting of an army and to provide for that army the necessary supplies both in munitions and other materials to keep her in the field, it being a recognized fact that the army which could supply the greatest destructive force in the field of battle would be the ultimate victor. Therefore, the energy of the industrial life of Canada was directed, as far as possible, to that end in common with our other Allies.

Inflation of Currency.

"Demand was far greater than the supply, and, therefore, as happens when any commodity is so urgently in demand, cost of production is not considered to be an important factor. It is getting the commodity which is so urgently required and an absolute necessity at the moment. This created in all countries an increase in the apparent money or wealth of the country by what you might term mortgaging the future and making payment in the shape of promises to pay rather than in the old-time standard of payment, that of money which had behind it a gold sufficiency to make such money have a secure value as formerly existed. Our Government and our banks willingly accepted this money at its face value. This increase of money is very much greater than the average person is aware. It is interesting to note that prior to the war the paper money in circulation in the world amounted to about seven and a half billion dollars. It steadily increased until last year it had reached the enormous sum of eighty-one and a half billion, and that did not include the paper money of Russia, which is credited to be at the end of 1917 by statists, somewhere in the neighborhood of thirty-four billion.

"This great influx of money was distributed amongst the citizens of our country who were left at home, busily engaged in the production of materials referred to, and with the result of so much money being in circulation, people became very extravagant, and money was spent very freely for all commodities which would tend to the further enjoyment of life without thought being given as to whether they could be economically afforded or not. We found great demand for all classes of expensive wearing apparel, house furnishings, automobiles for pleasure, etc., etc., and those engaged in other forms of industry than were actually required for war purposes were taxed to meet the demand so that plants

James B. Thomson

Chairman B.C. Division, C.M.A. who Spoke for the Manufacturers at the Get-Together Luncheon.

were increased, and as quickly as goods could be turned out they were absorbed by the public, both here, in Great Britain and in the United States.

"When the Armistice was signed it was felt by many that prices would immediately be lower as the demand would cease. This condition did prevail for a short period, but with the return of the army to civil life, many of the men having back pay to draw, war bonuses, grants, pension money and civil service re-establishment funds, they, too, joined the ranks of the spenders, and money was spent as freely as formerly only with even greater impetus. Plants were overtaxed to meet the demand, and so prices advanced, and until about midsummer of last year, despite the warning of our leaders in Government and our financiers, the bankers, the lavish expenditure by the public continued.

"If you will recollect, our bankers' statement at the end of 1919 showed our position as a nation. We were all jubilant at the fact that our exports were three hundred million odd greater than our imports, but the bankers made a close analysis of our financial situation, even with such a surplus as indicated, and found we were not in a sound position. Our annual interest charges payable outside of Canada to other nations amounted to one hundred and twenty-five million. Added to this were payments for freight charges, which were paid out of the country, payments for insurance, so that when those amounts were totalled our bankers showed us that we were a debtor for the year to the extent of between thirty to forty million.

Nations Could not Buy.

"The public turned a deaf ear to the warning. We still kept on producing, but early in 1920 it was quite apparent that what was being produced could not be absorbed by other nations from the fact that some of them were not producing as during the pre-war period, and, therefore, were not able to absorb from ourselves, Great Britain or the United States the commodities which had been their custom during peace times. Russia and Continental Europe, as I have already shown, had an enormous issue of paper money, but had neither the gold nor the products behind it to make it of value, so it became the duty of the bankers, both here, in Great Britain and the United States to stop production at this extravagant cost, especially when the commodity could not be absorbed, unless by further issuing of paper currency, which had the effect of making our position daily unsafer. We pursued the policy still of extravagant expenditure as was evidenced at the end of 1920 by our trade returns. Look at our increased imports from Great Britain. In 1919 they were eighty-one million. In 1920 the amount has risen to two hundred and twenty-six million dollars. Our imports had increased so that we imported from the United States four hundred million more than we exported to them. They had increased their trade in selling us 34 per cent. Our exports had decreased. The products of the farm, such as flour and meat, had decreased in the neighborhood of fifty million. Do you wonder, with such a condition as this, that the adverse rate of exchange reached as high as 17½ per cent. between ourselves and our neighbors to the south?

Money Left Country.

"The public had expended their money, the greater proportion of which had gone, as already evidenced by the figures I have quoted, out of our own country, leaving us so much poorer with our heavy war indebtedness still unpaid, and heavy interest charges accruing on the Victory Bonds of our own people who had invested their money, and also to holders of those securities who were not our own citizens, and here again the bankers at their annual meeting made it perfectly

Transportation Department

General Enquiry into Freight Rates in Canada to Commence this Month—Progress being made with revision of Canadian Freight Classification—The Manifest Fee

THE Board of Railway Commissioners intend to open their hearings in connection with the general investigation *re* equalization of eastern and western freight rates, at Vancouver on April 7th, to be followed by hearings at the following places on the dates mentioned:

City Hall, Victoria, B.C., April 11th.
City Hall, Calgary, Alta., April 18th.
Court House, Edmonton, Alta., April 20th.
City Hall, Saskatoon, Sask., April 21st.
City Hall, Regina, Sack., April 22nd.
City Hall, Brandon, Man., April 23rd.
City Hall, Winnipeg, Man., April 25th.

The British Columbia Government have retained Mr. G. G. McGeer to act as counsel for the purpose of presenting the case of British Columbia; Mr. Symington and Mr. McDonald are acting for the Manitoba and Saskatchewan Governments.

Following the hearings in the West, it is expected that the Board will hold hearings possibly in the Maritime Provinces followed by hearings in Ontario and Quebec.

The Division secretaries of the Association located at Vancouver, Winnipeg, Amherst and Montreal, are being kept advised of any matters pertaining to this question, so that interested members who desire to secure information may do so, either through the Division secretaries or direct from the Transportation Department of the Head Office.

Proposed Classification No. 17

The special committee appointed to deal with the question of revising the Canadian Freight Classification have held five meetings since early in February, and have been able to make considerable progress in connection with this question.

The rules were given very careful consideration and in a number of cases revisions made from the proposals outlined in No. 17, as originally drafted. The revised rules have been forwarded to all boards of trade, as well as individuals who subscribe to the Canadian Freight Classification. There is one rule which it was considered difficult to satisfactorily adjust, for the reason that the views in regard thereto were not unanimous and the question has therefore been placed before the Board of Railway Commissioners so that evidence may be submitted in regard thereto and the Board render a decision as to what rule shall apply in connection therewith. This particular rule is that covering mixed carloads which is at present covered by Rule 2, Classification No. 16. In the original draft of proposed No. 17, Rule 7 was suggested, but the committee decided to substitute therefor the rule shown under the revised regulations as No. 10. Details in regard to these rules are outlined in our circular No. 300, which has recently been sent out.

In addition to the rules, the committee has also conducted several hearings with groups of manufacturers and others interested in the following commodities:

Agricultural implements and parts thereof.
Furniture.
Acids.
Soda products.
Lime (calcium).
Iron and Steel articles.
Wire Fencing.

In regard to agricultural implements, the question of carload rating is now before the committee for decision. In connection with furniture, a very satisfactory adjustment was made, the committee agreeing that 4th class at 14,000 lbs. should govern the general run of household furniture. Satisfactory arrangements were also made in connection with the acids, soda products and lime (calcium.) The iron and steel interests were not prepared to proceed with their case and the committee arranged for a postponement until they have had an opportunity of getting together for the purpose of determining just what action should be taken.

The committee found it necessary to postpone further conferences until some time in May or June, owing to the fact that a number of its members found it necessary to be absent, appearing before the Board of Railway Commissioners in the West in connection with the general inquiry into freight rates. However, as soon as the committee reconvenes various organizations and groups of interested manufacturers and others will be called upon to appear before the committee for the purpose of discussing the proposals outlined in No. 17. It is therefore urged that all interested manufacturers should immediately study this question very carefully, as is suggested in our circular No. 300.

The Board of Railway Commissioners have set the revised rules down for hearing at the different sittings to take place in Western Canada beginning at Vancouver on April 7th. These hearings are particularly for the purpose of hearing evidence on the question of the mixed carload rule.

Proposed Supplement 16, re-numbered Supplement 15

The Board of Railway Commissioners, by Order 30811, dated Ottawa, March 22nd, authorized the Canadian Freight Association to publish proposed Supplement 16, re-numbered 15. It is expected this will take effect on or about the first of May. Certain agricultural implement manufacturers protested against certain items in this Supplement at a hearing before the Board on March 15th, but in view of the fact that the Board did not consider any actual increases were being made in the various items, they allowed the item to remain in the Supplement.

This Supplement contains a number of changes constituting reductions as well as advances of interest to members of the Association, advice of which has been submitted heretofore and the matter fully discussed. It would be well, however, for interested members to study carefully the changes outlined in this Supplement when it is eventually distributed.

Manifest Fee

It will be remembered that the railway companies, effective November 1st last, published an item providing that a charge of 11c. per shipment would be made against all shipments imported into Canada. The railway companies claimed this charge was being made because of the fact that their agents had to make out manifests at border points and ports of import, and that such service constituted a charge for which they were not receiving proper compensation. At the time no such charge was published to take effect on business moving through ports located west of Fort William. Later on, the Michigan Central Railway cancelled the arrangement in Eastern Canada, which affected both the Niagara and Detroit frontier ports.

The Transportation Department of the Association entered a protest in January, after securing considerable evidence from interested members as to the effect of this charge, on the grounds that it was discriminatory and unreasonable, the stand being taken that the service had been performed by the carriers under requirement of the Customs Act for a great number of years, and that therefore the service was a part of the transportation of the goods, and any charge was included in the freight rate. This is very clearly borne out by the fact that the railway companies in their various applications for increase in freight rates included all costs which entered into the transportation of the traffic. As this was one of the costs included, naturally any increase granted considered such a cost. The question of discrimination was clearly obvious, because in the west no such charge was being made, whereas the same service was being performed.

The Canadian Freight Association, on behalf of the railway companies, under date of Mar. 14th, 1921, wrote the Board of Railway Commissioners stating that the charge would be cancelled effective on March 14th, but that this cancellation was not due to any complaints made to the Board of Railway Commissioners, and further that a charge for this service would be established by the carriers at a later date, after they had an opportunity of determining the actual

Tariff Department Bulletin

Important Excise Tax Rulings which should be carefully noted by Manufacturers—Board of Customs Decisions and Departmental Rulings

Board of Customs Decisions

Vegetable parchment paper, per sample submitted, declared to be dutiable under tariff item 197 at the rate of 25 per cent. under the general tariff.

Printed examination booklets, per sample, known as International Intelligence Tests, declared to be dutiable under tariff item 181, at the rate of 35 per cent. under the general tariff.

Departmental Rulings

Sheet steel, cut in circular form, to be rated as "sheet" when 30 inches and over in diameter. Sheet steel circles less than 30 inches in diameter to be rated under tariff item 454. This line of demarcation applies also to aluminum, copper, brass, zinc and other metal circles.

Steel tanks, glass enamelled lined, per illustration, ruled to be dutiable under tariff item 454, less than 50 per cent. of the metallic surface thereof being enamelled. The rate of duty under item 454 is 30 per cent. general tariff.

In cases where raw leaf tobacco is transferred IN BOND from Customs to Excise warehouse, the sales tax is only payable when ex-warehoused for duty.

Excise Tax Rulings

Confectionery—Candy. — The Department of Customs and Inland Revenue has ruled that candy, packed in pails and retailing at one cent (1c.) each, is subject to the payment of Manufacturers tax.

Candy Sold at Retail by Manufacturers.—The Department of Customs and Inland Revenue has issued instructions that the Manufacturers and Sales tax on candy sold at retail by candy manufacturers, is to be computed in the following manner:

1. On the average retail selling price—unless the manufacturer has a distinct separation of his manufacturing and retail business.

2. If the manufacturer has a distinct separation of his manufacturing and retail business—but does not sell to other retail merchants, the taxes shall be assessed upon the value of the candy sold from his manufacturing department to his retail department, and such value shall not be less than 60 per cent. of the price at which the candy would be sold at retail.

3. If the manufacturer has a distinct separation of his manufacturing and retail business—and also conducts a *bona fide* business of selling his product to other retailers—the Excise taxes on sales to the consumer shall be assessed upon the same prices as charged for similar goods to other retailers. (Note: A manufacturer who only makes occasional sales to other retailers will not be regarded as conducting a *bona fide* business of selling to retailers. The taxes on all sales from his manufacturing to retail branch will, therefore, be assessed under the provisions of Section 2, above.)

For the purpose of this regulation, a manufacturer shall be considered to have his manufacturing and retail departments separated provided that he keeps the following records:

(*a*) Record of all candy made by him, showing quantity and kind.

(*b*) Record of all sales to his retail department of candy made by him, showing quantity and kind.

(*c*) Record of all sales to other retailers together with copies of invoices of these sales.

Dyers.—The Department of Customs and Inland Revenue has had under further consideration, the question of the application of Sales tax in cases where material is supplied for the purpose of being dyed, the goods remaining the property of the person or firm placing the order therefor.

The decision has been reached that the dyeing of such goods constitutes a manufacturing process, and that, therefore, the Sales tax is collectible at the rate of 1 per cent. on the net invoice price charged to the person or firm furnishing the goods, as above stated, if such person or firm are licensed as manufacturers or wholesalers. The Sales tax is collectible at the rate of 2 per cent. if the material is dyed for persons or firms who are retailers or consumers.

If the consumer of worn or used clothing or material sends same to a dyer to be dyed, Sales tax does not apply by reason of the fact that the goods are not for resale by the owner.

The process of sponging by dyers or other concerns is regarded as being a taxable transaction when performed on materials for resale by dealers.

This decision becomes effective on and after the 11th February, 1921.

Timber, Poles and Pulp Wood.—The following rulings have been issued by the Department of Customs and Inland Revenue:

Timber, poles or pulp wood *unprocessed*, cut on areas, being farm lands, are not subject to Sales tax when sold by the *bona fide* farmer or settler owner of such lands.

Farmers or settlers cutting forest products, as above mentioned, on areas, not being their own farm lands, must collect Sales tax when selling such products.

Contractors, jobbers or dealers, cutting forest products on owned or leased limits or areas, or purchasing these products from farmers or settlers, must collect Sales tax on their sale of such products.

Lumber or paper companies must collect Sales tax on products or materials sold by them.

The Sales tax, when exigible in the foregoing instances, is collectible by the vendor, and must be remitted by him to the Crown, through the nearest Collector of Inland Revenue.

It has been brought to the attention of the Department that lumber companies are not paying the Sales tax to the vendor, but are, in some instances, remitting the tax payable on their purchases to collectors. The tax must be collected and remitted, in the manner prescribed in the Act, viz.:

"The tax shall be payable by the purchaser to the wholesaler or manufacturer, at the time of such sale, and by the wholesaler or manufacturer, to His Majesty in accordance with such regulations as may be prescribed."

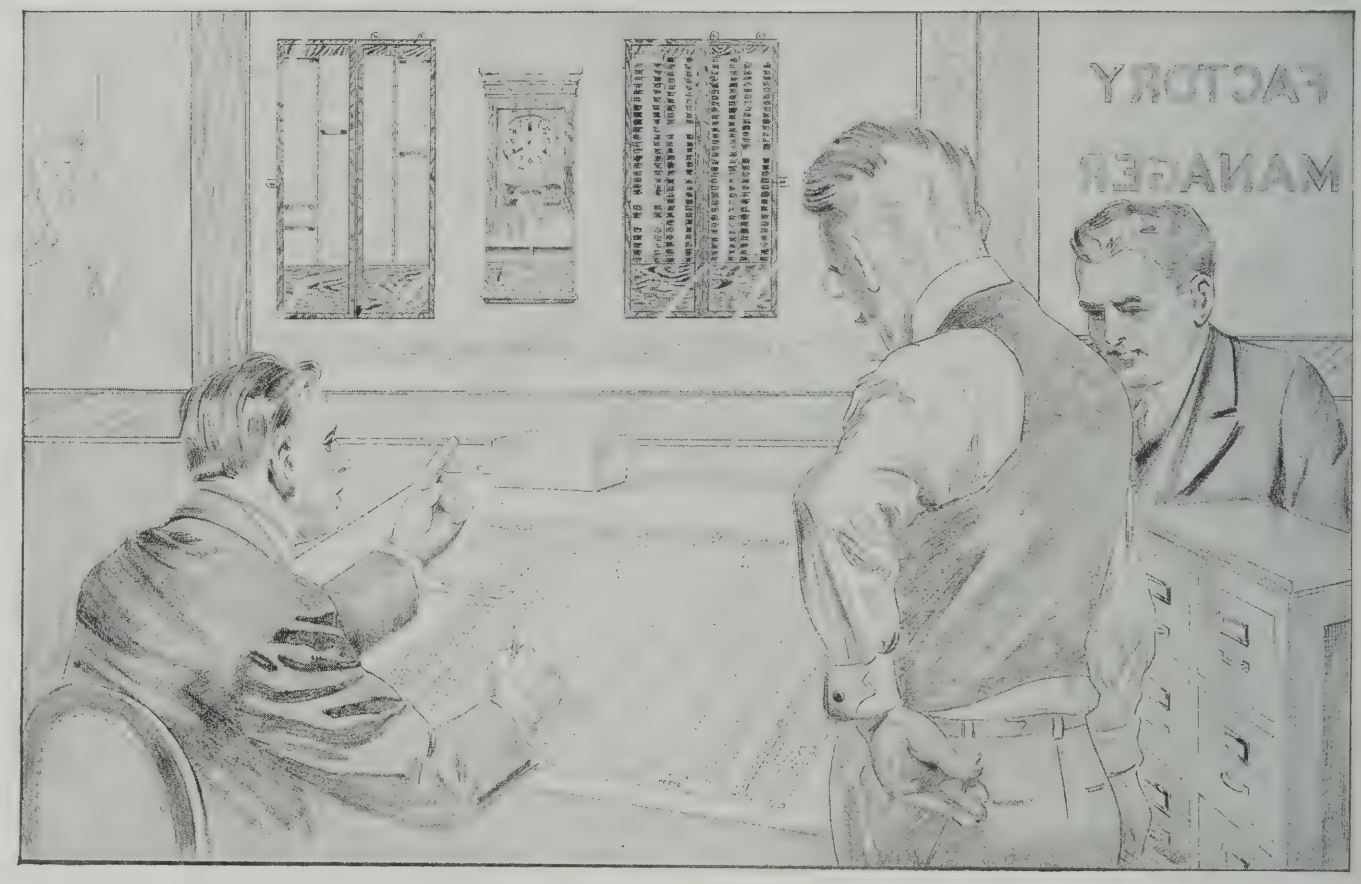
Processed products, being manufactured articles or materials, are subject to Sales tax when sold by manufacturers, wholesalers, or jobbers.

Raw Leaf Tobacco.—The following instructions have been issued by the Department of Customs and Inland Revenue concerning the application of the Sales tax on raw leaf tobacco:

The sale of Canadian raw leaf tobacco by the producer, or cultivator, to a packer, or licensed manufacturer, is not subject to payment of Sales tax at the rate of 1 per cent.

The sale of Canadian raw leaf tobacco by a packer, to another packer, cultivator, wholesaler, or licensed manufacturer, is subject to payment of Sales tax at the rate of 1 per cent., to be computed upon the net selling price of the tobacco. When said tobacco is ex-warehoused for consumption (use) by the licensed manufacturer, such manufacturer must pay Sales tax of 1 per cent. upon the amount of excise duty then being paid.

When a tobacco or cigar manufacturer sells raw leaf tobacco, in bond, to another manufacturer, the vendor will collect from the purchaser, Sales tax at the rate of 1 per cent. upon the net invoice price of the tobacco. The purchaser, when ex-warehousing such raw leaf tobacco for consumption (use) in his factory, is required to pay Sales tax, at the rate of 1 per cent. upon the amount of excise duty then being paid.



When Canadian raw leaf tobacco is purchased by a tobacco or cigar manufacturer from a cultivator, or when foreign raw leaf tobacco is imported by a manufacturer, the Sales tax is payable by the manufacturer at the rate of 1 per cent., when such tobacco is ex-warehoused for consumption or use in the manufactory, the tax being computed upon the *duty paid value* of the tobacco.

Ship's Stores. — Regulations regarding the exemption from Sales tax and excise duty on goods for use as ships' stores have been issued by the Department of Customs and Inland Revenue. Full particulars of these regulations may be obtained from the Department of Customs and Inland Revenue, from any Collector of Inland Revenue or from the Tariff Department of this Association.

Domestic spirits, tobacco, cigars, playing cards and matches may be delivered from the distillery or place of manufacture,

INTERNATIONAL

Jones is a Punctual Worker *but*— Is Jones a Productive Worker?

The Factory Manager who is up-to-date will tell you at a glance. He uses Job Time Clock Records

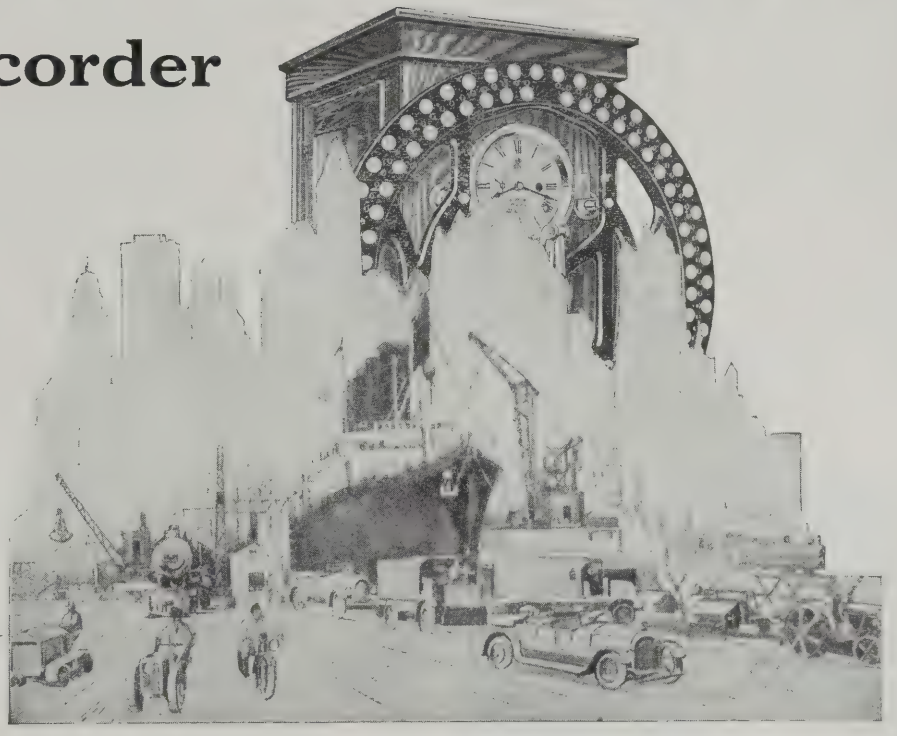
International Job Time Recorders afford the most accurate means of accounting for every employee's time and of showing you to what job it is charged.

They show the starting time of each job. They show the stopping time of each job. They tell whose time and how much time has been put into a specific job. The record is printed, legible, accurate—there is no research; there are no questions, no disputes.

Oldest and Only Made in Canada

As pioneers in the Time Recording Industry we have advanced from a very simple beginning. To-day we are the largest manufacturers in the world of payroll and job time recording equipment. Our products are everywhere accepted as the best word in time recording equipment. They are made in Canada.

MINUTE FOR MINUTE, YOUR TIME INVESTMENT IS ACCOUNTED FOR AND PROTECTED



The illustration above shows how the modern, efficient factory manager is enabled to check his "job" time with his "In and Out" time. The International Time Recorder records show in an instant the total of non-productive time in any department in any week or month.

NON-PRODUCTIVE TIME MEANS A PAYROLL LEAK—STOP IT!

TIME RECORDERS

The Dial Recorder

gives a complete, compact story of the arrivals and departures of your employees. Payroll sheets under lock and key. The accountant's hands, only, touch the record.

Study Your Payroll Leaks—There is Profit in It

Do you know what FIVE MINUTES A DAY, on an average, lost by each employee, amounts to in a year, nine hours being taken as a day's work? Glance at this:

Rate of Wages	Lost by 1 Employee	By 10	By 20	By 25	By 35	By 40	By 50	By 100
$2.50 per day	$7.25	$72.50	$145.00	$181.25	$253.75	$290.00	$362.50	$725.00
3.00 per day	8.69	86.90	173.80	217.25	304.15	347.60	434.50	869.00
3.50 per day	10.15	101.50	203.00	253.75	355.25	406.00	507.50	1,015.00

The Dial Recorder shows the Original Payroll Entry and registers to the minute the working time of each employee.

International Business Machines Co., Limited

F. E. MUTTON, Vice-President and General Manager

Head Office and Factory, 300-350 Campbell Avenue, Toronto

For your convenience we have Service and Sales Offices in
Vancouver, Calgary, Edmonton, Saskatoon, Winnipeg, Walkerville, London, Hamilton, Toronto, Ottawa, Montreal, Quebec, Halifax, St. John, Nfld.

Also manufacturers of International Dayton Scales and International Electric Tabulators and Sorters.

Quarter-Century Jubilee Celebrated

Stanfield's Limited, Truro, N.S., have enjoyed Creditable growth since New Company was formed in 1896

QUITE recently there was celebrated at Truro, N.S., the jubilee of the establishment of Stanfield's Limited, one of the outstanding industries in Canada in the field of woollen manufacturing. The industry has had a long and successful career. It may almost be said to date back to the year, now a century ago, when Charles Stanfield began the manufacture of woollens in Bradford, England. From him, Charles E. Stanfield, founder of the Canadian industry, learned the business thoroughly and, crossing the Atlantic in 1855, located at Tyron, P.E.I., the first woollen mill on the Island. Here he remained eleven years, selling out in 1866 and locating anew in Truro, N.S.

In 1896, when Charles E. Stanfield was getting up in years, he sold out his interest to his sons, John and Frank, who

Hon. John Stanfield

The recently appointed Senator from Nova Scotia and President of Stanfield's, Limited

are to-day the heads of the enterprise. John had learnt the business in his father's mill but had also gone afield for further knowledge, working in woollen mills in Upper Canada and the United States. Frank had devoted his time to the office and sales end of the Stanfield mills.

The new partners had little capital, but they had practical experience and an untouched market for knitted goods of quality. They decided to specialize on knitted goods, and sold the cloth machinery, putting the money obtained into machines for making underwear. At the end of the first year, there were 17 employees, the sales were $24,000 and profits $2,250. Practically all of the first year's profits were put into advertising, and the new firm decided to go in for quality and printers' ink. In the words of the vice-president, "these three words are responsible for our success."

Year after year, production was increased, new buildings were constructed and new machinery installed. The business, under the wise and economical management of John and Frank Stanfield, continued to grow. Bright, young, energetic men were brought into the mills. Every foreman in the Stanfield plant was educated in the mills; they have no importations, promoting their own men, whom they know and trust and whose loyalty has been proved.

From 17 employees in 1896, the payroll grew to 600 in 1920. The capital, which was $1 in 1896 is now $1,250,000. Sales have jumped from $24,000 to $3,100,000 and the number of shareholders has increased from 2 to 782.

Tariff Department

(*Concluded from page* 89.)

free of excise duty and Sales tax, under regulations.

Imported goods, which by customs regulations are permitted to be ex-warehoused free of duty for use as ships' stores will be free of Sales tax also if delivered in accordance with customs regulations.

Domestic articles, which are consumable stores, and the following list of articles, viz.: Biscuits, chocolate, cocoa or cocoa paste, mineral waters (bottled or not), fuel oil, illuminating oil, lubricating oil, kerosene or coal oil over .725 specific gravity, and vinegar, also may be delivered free of Sales tax, under regulations, for use as ships' stores to any vessel bound on an ocean voyage to a port outside of Canada, or to vessels clearing for the deep sea fisheries, seal fisheries, or for delivery to British and foreign warships and telegraph cable ships, for use on such vessels.

Manufacturers' Licenses Abolished: Sales Tax License Only Required.—By regulation of the Department of Customs and Inland Revenue, manufacturers of confectionery, of playing cards, of spirits, beer, wine, etc., will not have to take out a Manufacturers' License for the fiscal year commencing April 1st. Such manufacturers are required to obtain a Sales Tax License only, in addition to any license which may be required under the provisions of the Inland Revenue Act.

Sales Tax Licenses For 1921-1922.—The Sales Tax Licenses issued by the Department of Customs and Inland Revenue last year expired on the 31st of March and must be renewed by all manufacturers, wholesalers or jobbers dealing in goods subject to the Sales tax.

Notices have been sent by the Department of Customs and Inland Revenue to all licensees with a form on which applications for renewal may be made. The Department states that licenses must be renewed not later than April 30.

Status of Provincial Governments in Respect of Sales Tax.—The basis of the application of Sales tax in the case of Provincial Governments, subsidiary departments thereof or institutions in which the Crown is involved, will be as follows:

When such organizations or institutions are under the direct control of the Provincial Government or any Department thereof and do not form separate bodies corporate, Sales tax will not apply. Where such organizations or institutions constitute distinct bodies corporate, Sales tax will apply regardless of the nature of any control which may be exercised by the Crown over such organizations or institutions.

In pursuance of this governing principle each case will be considered on its merits in order to decide in which of the above-mentioned classes the individual case should be placed. It will be necessary to determine in every instance the exact relation which the institution involved bears to the Crown, but in most cases the statutes referring to each institution will settle this point.

Provincial Power Commissions and Provincial Railroad Companies, when forming separate bodies corporate will be subject to the tax.

It has been observed that certain provinces have adopted the use of a rubber stamp the purport of the text of which is that *all* purchases made by the Provincial Government are exempt from Sales tax. The general use of such a stamp is not approved and same cannot be accepted as providing a claim for exemption which must be established in accordance with the governing conditions set forth above.

Transportation Department

(*Concluded from page* 88.)

cost, stating that the cost was a good deal more than 11c. per shipment as formerly in effect.

The Transportation Department of the Association has written to the Board of Railway Commissioners, stating that such a charge should not be allowed to take effect without being given full consideration by the public and having a thorough investigation of the alleged extra charges. Interested members should bear this in mind and keep track of all import shipments so that it will be possible to show actual information in regard to the extent of any charge which might be made.

Rail, Lake and Rail Traffic Accepted on and After April 11, 1921.—The Canadian Pacific Railway have just announced that on and after April 11, 1921, they will accept freight traffic routes "Rail-Lake and Rail" subject to delay at Owen Sound and Port McNicoll First steamer to sail about May 1, 1921.

The nearest approach to absolute reliability in belting performance

Dominion Friction Surface Belting is the result of the combined experience of all our industrial rubber factories. It is the finished product of the finest materials put together with all the skill of the belt-maker's art. The inbuilt strength and pulley-gripping power of

Dominion Friction Surface Belting

make it the most dependable and economical for all drives. Every Dominion Rubber System belt installed means so much power conserved and so much freedom from troubles due to stretch and slip.

It will cost you nothing to have one of our belt experts study your belting problems.

plain that something had to be done, and they also stated the only solution is for us as a people to be more economical and cease extravagance and produce what we require as far as possible in our own country, and see that those are the products upon which the public money is expended.

"Allow me to quote what the bankers said. Sir Herbert Holt in his speech said, 'Only by increasing the sale of Canadian products can we avoid increasing our foreign indebtedness.' E. L. Pease said, 'Is it a wonder we suffer from adverse exchange rates? The only correction is the curtailment of imports, especially of non-essentials.' Sir Edmund Walker said, 'We now import what we should make ourselves. This creates our foreign debts which our exports fail to pay.' If you will take the statement of all the other bankers, you will find they are practically along the same lines. It is quite clear, therefore, that our course of action is clearly outlined for us by those who finance the farmer and the manufacturer. We must endeavor to stimulate the consumption of our goods upon the home market and prevent as far as possible the importation of goods from foreign countries. With this end in view I think the closest co-operation is necessary between those of the agricultural industry and other industries, so that a policy may be worked out which will bring home the truth to all in Canada that it is no longer a matter of sentiment the purchase of Canadian goods, but it is an absolute necessity from an economical standpoint.

"We find if we refer to the happenings of our neighbors to the south that they, by a protective measure, are seeking to keep even the products of our farms out of their country. Are we going to sit back idly and not try to correct the situation on this side of our own people eating the foodstuffs which are grown in the United States, and use the products of the loom and the factory of the United States or other countries, thereby making our financial position harder? I think, gentlemen, that every one of us, when we sit down and consider the situation, must say that the action taken by the Vancouver Board of Trade in inaugurating the campaign in British Columbia to stimulate the sale wherever possible of 'Made in British Columbia' goods, is one which you must all heartily co-operate in. It is not a manufacturers' campaign. It is as much a campaign of the agricultural interests as those of the city manufacturer. The objects and policy of this are fair, square and British. First, to buy as far as possible our requirements from within the Province of British Columbia. Second, if we have requirements which we cannot obtain in British Columbia, either from the field or the plant, let them be of Canadian origin. Third, failing Canada's ability to supply, see that at least we get our requirements from within the Empire."

Pulp and Paper in Quebec

(*Concluded from page* 73.)

school and is about to inaugurate a similar school for forest rangers. Its system of fire protection is being constantly improved.

The private companies are co-operating with the Government in all these measures. They maintain their own fire protection forces and have recently introduced aerial patrol and wireless communication to assist them in the work. The Laurentide Company, Limited, whose headquarters are at Grand' Mere, are pioneers in the work of reforestation, having begun to plant trees as long ago as 1908. They now maintain a nursery covering 4 acres of ground and are planting over a million trees a year, their objective being five million trees, which they hope to achieve in 1924. Other companies are following their example and eventually Quebec expects to develop a system which will ensure a sustained yield of forest products.

A Fanning Mill or "Thresher" removes all dust and dirt from the rags

No. 2 of a Series

"From Rags to Writing Paper"

The "Thresher"—One of the characteristics of Superfine Linen Record is the absence of specks and blemishes. This is obtained by extreme care in eliminating dirt and all foreign bodies in its early stages of manufacture. Every sheet, even in its finished state, is carefully inspected.

Write for Brochure of manufacturing illustrations—"From Rags to Writing Paper"—sent on request

Romantic History of Quebec

(*Concluded from page* 60.)

capital of $24,894,251 out of a total for Canada of $38,680,581, furnishing employment to 9,746 of the 15,341 hands engaged in the industry in Canada, and producing goods valued at $41,689,124, out of a total Canadian boot and shoe and leather production of $63,319,128.

In the milling of flour Quebec has 428 industries, but mostly of small capacity, having only about twelve and a half million dollars invested in them, out of a total for Canada of $76,411,423 in 1,255 different establishments.

Of abattoir and meat packing establishments Quebec has 15 out of a Canadian total of 82, capitalized at $10,613,712 out of $93,363,791 for the whole Dominion.

Men's furnishing are made in 31 factories out of a total of 84 in Canada.

The province has nine shipbuilding plants representing a capital of $14,423,090, and the marvellous turn-out of ships of various kinds from the Vickers yards in Montreal, and from the shipyards of Levis and Three Rivers were amongst Canada's most important industrial contributions towards the winning of the great war. In this connection, too, the tremendous output of munitions of war by many manufacturing plants in Montreal, Lachine, Quebec, and several other parts of the province are not to be overlooked.

The wonderful undeveloped resources of the soil, the forests, the mines and the waters of the province, and the vast amount of raw material which they contain, coupled with enormous water-powers and a plentiful supply of honest, sane and resourceful labor assure to Quebec an industrial future of ever-increasing prosperity and promise.

Shoe Manufacture in Quebec

(*Concluded from page* 75.)

new second vice-president of the Shoe Manufacturers Association of Canada, and one of its originators and hardest workers in Association affairs.

Herbert Gale, of Gale Bros., Limited, has always taken the deepest interest in the local association, and by reason of his character and fluent command of both languages occupies a very influential place in shoe circles in Quebec and never lags in doing his share of work. Onesime Goulet is another example of the working of the steady-going French-Canadian characteristics. Mr. Goulet is also a pioneer in the business, and has his son with him to follow in his footsteps. Despite the success of local organization in Quebec, the business is highly individualized and we could recount at length some interesting phases of every personality in it, but we may be pardoned for skipping from distinctive shoe manufacturers to Paul Hebert, a glove manufacturer, who so successfully worked out a series of topical verses about shoe manufacturers and sang them to the great delight of their friends and sometimes to their own discomposure. That was at a banquet a year ago. The banquet brings us to a figure who cannot possibly be omitted in any review about the shoe and leather trades in Quebec, Jas. Scott. It is hard to write his name as other than "Jimmy" and everyone who knows him, knows too that that is not disrespect. "Jimmy" Scott is to everyone in Quebec who has seen, smelled, or handled leather or boots and shoes, a "guide, philosopher and friend," and his geniality and courtesy are expansive enough to go entirely outside the boundaries of Quebec and stretch from coast to coast. Anyone who has not heard him lead the crowd in "Allouette" has missed a most inspiring performance.

Both Montreal and Quebec shoe men have shown themselves to be really great hosts and really great mixers in many senses of the word. It is unquestionable that the other trades are on a par with the shoe trade, so that the Canadian Manufacturers Association convention in Quebec in June should be a real get-together in all the best senses of the phrase.

Torrington MACHINE SCREWS

All that is necessary to convince you that *TORRINGTON MACHINE SCREWS* are superior to anything you have had in the past is to write us for samples.

Standard sizes are carried in stock in large quantitiesin, suring you of prompt deliveries and perfect service.

Let us quote you our prices when in the market for machine screws. Our quality is sure to please you and our prices are right.

A Universal Exhibition

Will be held in Buenos Aires in July, 1922, under patronage of Argentinian President

A Universal Exhibition will be held in Buenos Aires, on July 9, 1922. The Exhibition is officially recognized by the Argentinian Government and is under the patronage of H. E. Dr. Hipolito Qrigoyen, President of the Republic. A site of 500,000 square meters has been given by the Government of the Argentine and the City of Buenos Aires, and pavilions for every nation taking part will be built at the expense of the Society organizing the Exhibition.

The Argentinian Government will give special facilities to foreign exhibitors, to pass their exhibits through the Custom House and an official delegate will be sent to Canada to interview interested manufacturers.

Artistic Color Printing

Rous & Mann, Limited, Publish Reproduction of an Ontario Museum Treasure

The latest example of the artistic color printing done by Rous & Mann, Limited, Toronto, is a reproduction of a terra cotta medallion by Andrea Della Robbia. This plaque, which was modelled about the year 1475, has passed through the hands of many collectors and is now in the possession of the Royal Ontario Museum. It represents a Madonna and Child surrounded by cherubim.

The printers have faithfully reproduced the delicate coloring and a background of dark blue throws the medallion into strong relief. The print is mounted in a folder which is also a good illustration of Rous & Mann's workmanship and design.

Your 1921 Vacation

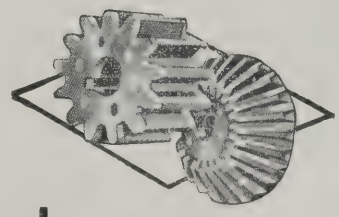
Where are you going to spend it?

Get away from the beaten paths this year—See for yourself the wonders of your Great West. Broaden your knowledge of Canada.

VANCOUVER
BRITISH COLUMBIA

promises you a vacation that is different—gives you a world of new sights and sounds—offers a trip that is a liberal education in itself.

The Transcontinental Trip—over the great Western Prairies, the world's great granary—across the Canadian Rockies, Nature's rugged grandeur at its best.



A Week in Vancouver—more if possible—every hour packed with interesting sights—beautiful English Bay—sea bathing in the waters of the Pacific—world famous Capilano Canyon, one of Canada's great natural wonders—Stanley Park, 1,000 acres of forest beauty — etc. Trips for every hour that you will never forget—Motoring, Golfing, Hunting, Fishing.

VISIT Vancouver THIS SUMMER

Gears that give better Service

THE secret of the universal satisfaction given by Diamond Fibre Gears is in the special grade of fibre used in their manufacture. Its dense mixture, high tensile strength, unusual wearing qualities, low cost and slight elasticity make it a wonderfully serviceable gear material.

Diamond Fibre Gears are noiseless. They combine the efficiency and regularity of an all-metal gear-drive with the silent, smooth operation of a belt transmission. In your own interests be sure to specify

DIAMOND FIBRE GEARS

New uses for Diamond Fibre are being discovered daily in the industrial, mechanical and electrical field. Even if you cannot think just now in what possible way Diamond Fibre can interest *you*, let us send you our new illustrated catalog. It is interesting and instructive, and may show you some way in which the use of Diamond Fibre will decrease your production costs and increase your production.

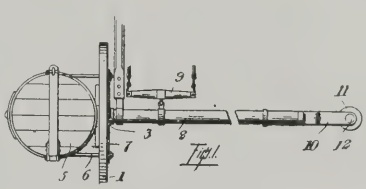
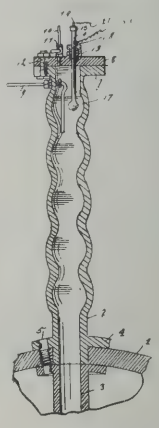
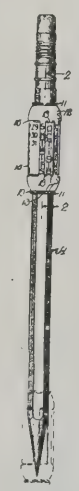
PATENTS FOR SALE



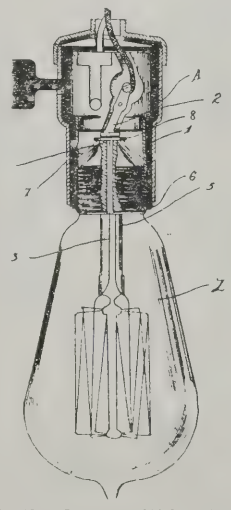
SHOCK ABSORBER. This invention relates to improvements in shock absorbers adapted for use on hydroplanes and the like. When a hydroplane is taking off for a flight, it is well known that the shock of waves on the floats is excessive, causing a considerable amount of jarring, and one of the objects of the present invention is to eliminate such shock. The shock absorber will also be effectively employed when making a landing after a flight, and will eliminate any sudden jar which would otherwise be transmitted to the floats on their contact with the water. Further objects are to simplify the construction of the absorber and render it easily assembled and inspected and repaired when found necessary and to adapt it to function under all circumstances where it may be advantageously employed. Write Wilfred E. Curran, 154 Victoria Street, St. John, N.B., Canada, for information regarding the sale of Canadian patent.

BED SPRING. This invention relates to a bed spring, consisting of the combination with a frame including spaced side apertured rails and end rails, blocks slidably mounted upon the side rails and in which the end rails of the frame are seated, a mattress firmly secured to the respective end rails of the frame, an apertured bracket mounted on the side rails of the frame, a pin extending through the apertures of the bracket and projecting into the apertures of the side rails, and a screw carried by said bracket and having connections with each of the blocks. Write the inventor, Sidney Nash, Box 21, Embro, Ontario, Canada.





ENGINE GOVERNOR. This invention relates to an engine governor comprising in combination a shaft rotatably mounted in a suitable frame, means for rotating that shaft from the engine it is desired to control, a member secured on the shaft to rotate with it, levers pivotally mounted intermediate of their ends on diametrically opposite sides of that member, each of said levers having a weight secured to one end of it and the other end of each offset from the shaft, means for limiting movement of the weighted ends inward toward the shaft, a spring normally holding the weights at the inner limit of their movement, a member endwise movable on the shaft, links connecting the offset ends of the levers to the endwise movable member, and adjustable means for transmitting endwise movement of the link connected member to actuate the throttle valve of the engine. Write William McGovern, Port Alice, B.C., Canada, who has Canadian patent for sale.

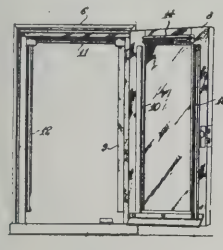


CONCRETE MIXER. This invention relates to a concrete mixer comprising a wheel, a mixing receptacle, a hinged cover for one end, said receptacle being suitably secured to the wheel, a substantially horizontal pole, an axle at one end on which the wheel is mounted, a post pivotally connected to the opposite end of the pole, a tongue secured to the pole between the receptacle and post and a whiffletree also swingably secured to the pole. Canadian patent for sale. Apply Colin Hutchins, Leamington, Ont., Canada.

BOILER ALARM. This invention pertains to boiler alarms, and it contemplates the provision of a simple, inexpensively installed and reliable apparatus, calculated in the event of the water in a boiler getting dangerously low to apprise the engineer of the fact, so that he can have the boiler supplied with water before any damage takes place. The apparatus is designed more particularly for use on a marine boiler. Canadian and United States patents for sale. Write John J. Hines, P.O. Box 728, Halifax, Nova Scotia, Canada.

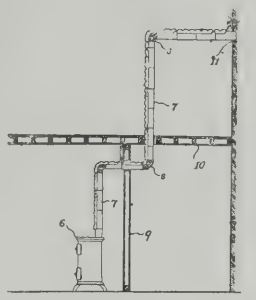
PENCIL AND PENHOLDER. This invention relates to a pencil and penholder including an inner split sleeve to slidably receive a pencil or penholder and frictionally engage the same for retaining the attachment in position, an outer shell turnable on the said sleeve and spaced therefrom, and a strip between the said sleeve and shell adapted to be wound and unwound, the said shell having an opening to expose the strip and having a pair of parallel longitudinal slots between the ends of said opening, the shell furthermore having longitudinal bars separating the opening from the respective slots, and a third longitudinal bar between the slots, the said strip having its outer end extending through the slots over the intermediate bar and under the other mentioned bars. For particulars regarding the sale of Canadian patent, write John W. Miller, Baker, Minn., U.S.A.

SAFETY LOCKS FOR ELECTRIC BULBS. This invention relates to improvements in safety locks for tungsten and other electric bulbs commonly used on lighting systems. In public places, factories, warehouses, and other places, a considerable number of electric bulbs are misappropriated and the financial loss is considerable, besides which the inconvenience occasioned by the loss, and the loss of time and expense in having to replace the globes is considerable. The principal object of the invention is to lock the lamp within the socket in such a manner that if any one attempts to remove the lamp or bulb, it will become broken and unfit for service. It is also an object to construct this locking feature in a very simple manner, so that it can be applied to standard sockets, and with the bulbs or lamps engaging therewith. For information regarding the sale of Canadian patent, write the inventor, James W. Doward, 40B Main Ave., Exhibition Grds., Halifax, N.S., Canada.

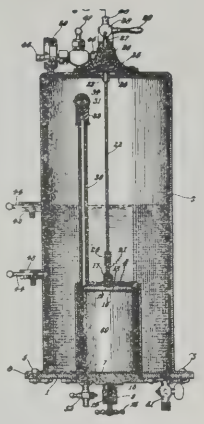


JEWELER'S TOOL CHUCK AND HANDLE. This invention relates to a jeweler's tool chuck comprising an elongated handle having a central bore of uniform diameter throughout its length, said bore opening at one end through the front end of the handle and terminating at its other end in a flat bottom within said handle, a one-piece tubular tool holder received in said bore and of uniform diameter throughout its length with the exception of its ends, said ends being conical, the bore of said tool holder being of different diameter at one end than at the other end to receive tools of different size, said holder having longitudinal slits leading from its centre through its ends and dividing said holder into two sets of jaws, the slits of one end of the holder being staggered with respect to those of the other end to form yielding necks connecting the two sets of jaws, and a tubular cap threaded on the end of said handle and having in its outer end an opening for receiving either conical end of the aforesaid holder to contract the jaws of such end upon the tool, the other jaws then resting squarely against said bottom of the handle bore. Canadian and United States patents for sale. Write Albert F. Robbins, Waltham, Mass., U.S.A.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada



PATENTS FOR SALE—*Continued*



IRONING PAD. This invention relates to a pad for irons, comprising a base, a cover, an anchoring bar permanently securing a portion of said cover to said base, a plurality of superposed sheets arranged on said base and having vertically registering apertures forming pockets for the reception of a block of wax, said pockets being arranged at different elevations whereby a fresh supply of wax is exposed on the removal of an upper sheet, and a fastening means pivoted to the anchoring bar including opposed spring members, whereby the remaining portion of said cover may be detachably secured to the base. The inventor, Hamilton B. Metzger, 125 N. Metcalf St., Lima, Ohio, U.S.A., will furnish information regarding the sale of Canadian patent.

DOOR MECHANISM. This invention relates to improvements in door construction, and consists of a usual door frame, which door frame has moldings around their end to receive moldings secured to the inner side of the door, which moldings fit together and form an air-tight closure. Owing to arises to be formed on the treaded portion of the frame a molding cannot be used there for this purpose. We provide a hingedly connected place which is adapted to fit level with the treaded portion of the frame. Canadian patent for sale. For particulars write Harry B. Lee, P.O. Box 27, Rouleau, Sask., Canada.

AUTOMATIC FIRE ALARMS. This invention relates to automatic fire alarms to be positioned on stove pipes, so that when the stove pipes are overheated the alarm will automatically ring. The objects of the invention are to provide an alarm which can be easily and quickly attached to stove pipes which extend through various rooms, walls, floors, partitions and the like, to provide an automatic fire alarm in which a fuse is carried over the stove pipe and which fuse will be melted when the pipes are overheated (by the breaking of this fuse the alarm will ring), and to provide a simple and effective automatic fire alarm with a fuse therein which can be easily and cheaply replaced. Write the inventor, William Zinger, Swan River, Manitoba, Canada, who has Canadian patent for sale.

GAS MANUFACTURE. This invention relates to an apparatus for producing liquefied gas from distillation or natural gases. These gases contain various hydrocarbon constituents, some of which, such as gasoline or naphtha, are easily liquefiable, that is, they can be liquefied at atmospheric pressure by a moderate refrigeration, or at normal temperatures by moderate pressure, and others of which are much more difficult to liquefy and require either high refrigeration or high pressure or both to effect the liquefaction thereof. Canadian patent for sale. Write the inventor for particulars, Mr. K. F. Linus Wolf, Chicago Heights, Ill., U.S.A.

Boiler Fusible Plug

This invention, generally considered, aims to provide means for protecting the threads on that end of the thimble, which projects into the water space, to provide novel means for alining one end face of the thimble and one end of the socket with the fire surface of the crown sheet or shell, to provide novel means whereby the thimble may be rotated out of the socket, and to provide a device of the sort above mentioned in which one stamp receiving end face of the mass of fusible metal is shielded and protected against deterioration due to furnace heat. For particulars regarding Canadian and United States patents, write

WILLIAM F. RAY, Samoa, California, U.S.A.

Substantial Net Earnings

Abitibi Power & Paper Company, Limited, Makes Good Showing for 1920

Optimistic expectations with respect to the earnings of the Abitibi Power & Paper Co. find complete fulfilment in the statement of the pulp and paper enterprise for the twelve months ended December 31 last, now going forward to shareholders. Net earnings of the period were well in excess of the $5,000,000 mark, the showing in this regard having been made possible through a heavy increase in the company's sales of pulp and paper products, which aggregated in 1920 $10,580,142, an increase of more than $4,500,000 over the 1919 total, representing a gain of over 75 per cent.

The actual figures of $5,043,133 in net earnings were far more than double those of the preceding twelve-monthly period when the total reported was $2,125,717 and over three times those of 1918, which stood at $1,643,653.

After all deductions, including interest charges, depreciation allowances, taxes for 1918 and preferred dividends were made, there remained a balance applicable to the common stock outstanding of $3.613,592 or equal to $14.45 on each of the outstanding no-par-value shares, on which the company presently pays yearly dividends of $6 per share. The showing in this connection was equivalent to over 72 per cent. of the old capitalization compared with slightly over 16 per cent. a year ago, 8.82 per cent. in 1918, and 5.42 per cent. in 1917.

Disbursements amounting to $1,500,000 on the 250,000 common shares outstanding deducted from the balance available, there remained a surplus from the year's highly successful operations of $2,113,592 to add to the previous balance, bringing the amount carried forward into the account of the current year up to the substantial total of $3,688,571.

The balance sheet portion of the statement reflects the heavy capital expenditures made during the year in the effort of the management to increase further the capacity of the mills and the Twin Falls power development. To reimburse the treasury partially for the outlay in connection with these extensions and improvements, the company, it will be recalled, recently sold an issue of $4,000,000 10-year bonds, the effect of which financing, naturally, is not shown in the year's accounts. Lands, timber limits, buildings and new construction are carried in the statement under review at $19,870,405, against $13,820,544 in 1918, an increase of in excess of $6,000,000.

Pulp Mill Project

Negotiations Reported to be Under Way for Large Plant in Northern Ontario

According to a report in the *Toronto Globe*, negotiations are under way for the erection of a large pulp mill on the shore of Lake Temiskaming at Dickson Creek, about half way between Haileybury and New Liskeard.

It is stated that those behind the project have already advanced several thousand dollars for securing the site, and an endeavor is being made to secure assurance from the Township of Bucke that the fixed assessment of the plant shall not exceed $20,000 for a term of twelve years. The plant would use the Hydro-Electric power generated for the mines at Cobalt.

POSITION WANTED

Engineer with first-class certificate wishes to connect with plant requiring to be put on a better basis. In present plant the saving last year was over $10,000, and this year it will be over $20,000. Specialist in fuel. Box 220, INDUSTRIAL CANADA.

WORLD-WIDE EXPERIENCE
At Your Command

It has taken years to gather from every part of the industrial world the information that **SKF** engineers place freely before the Canadian manufacturer.

Not to use it is to ignore hard-earned experience gained in thousands of industrial plants.

SKF engineers are more than doctors to troublesome transmissions or inefficient machines, they are constantly required to show ways of improving this product, and cutting costs. They also place at your service a complete industrial laboratory where new manufacturing problems are solved for the benefit of all industry.

Consult Canadian **SKF** Engineers without cost or obligation.

Canadian SKF Company, Limited

TORONTO - - - MONTREAL

The Chateau Frontenac

(*Continued from page 69.*)

(Wolfe's) was not fought on the only open ground now left (an absurd place for any general to choose), but nearer Quebec and right across the high ground between the St. Lawrence and the valley of the St. Charles, along the line of the present de Salaberry Street. The site of the second battle (Lévis and Murray in 1760) is admirably marked by the new Avenue des Braves.

(4). Montcalm should not be regarded as defeated as much as a victorious general. He is the only man in history who defeated the British four times. He was a master strategist, like Marshal Foch, though on an immeasurably smaller scale. He divined Wolfe's every purpose and would have anticipated his every move if he had not been thwarted by the foolish Governor, Vaudreuil.

(5). The Daughters of the Empire in Quebec will place crossed British colors on the Wolfe Monument in Westminster Abbey this year, with the following inscription:

Commemorating
Canada in Arms
Beside her Mother Countries
During the Great War.

At the same time they will place crossed French colors on the tomb of Montcalm in the famous Ursuline Chapel in Quebec, with this inscription:

Quatre fois victorieux
Une fois vaincu
Toujours à l'honneur
Des Armes de la France

(6). The story of Nelson's wanting to marry pretty Mary Simpson, daughter of Wolfe's old Provost Sergeant, who lived on the site now occupied by 55 Grande Allée, is true. Nelson was here in 1782, in command of *H.M.S. Albemarle.*

(7). In 1799 the French-Canadian Roman Catholic Bishop of Quebec preached a Thanksgiving sermon after Nelson's Battle of the Nile to show his appreciation of British protection against the Revolution.

Water Power Development

(*Continued from page 65.*)

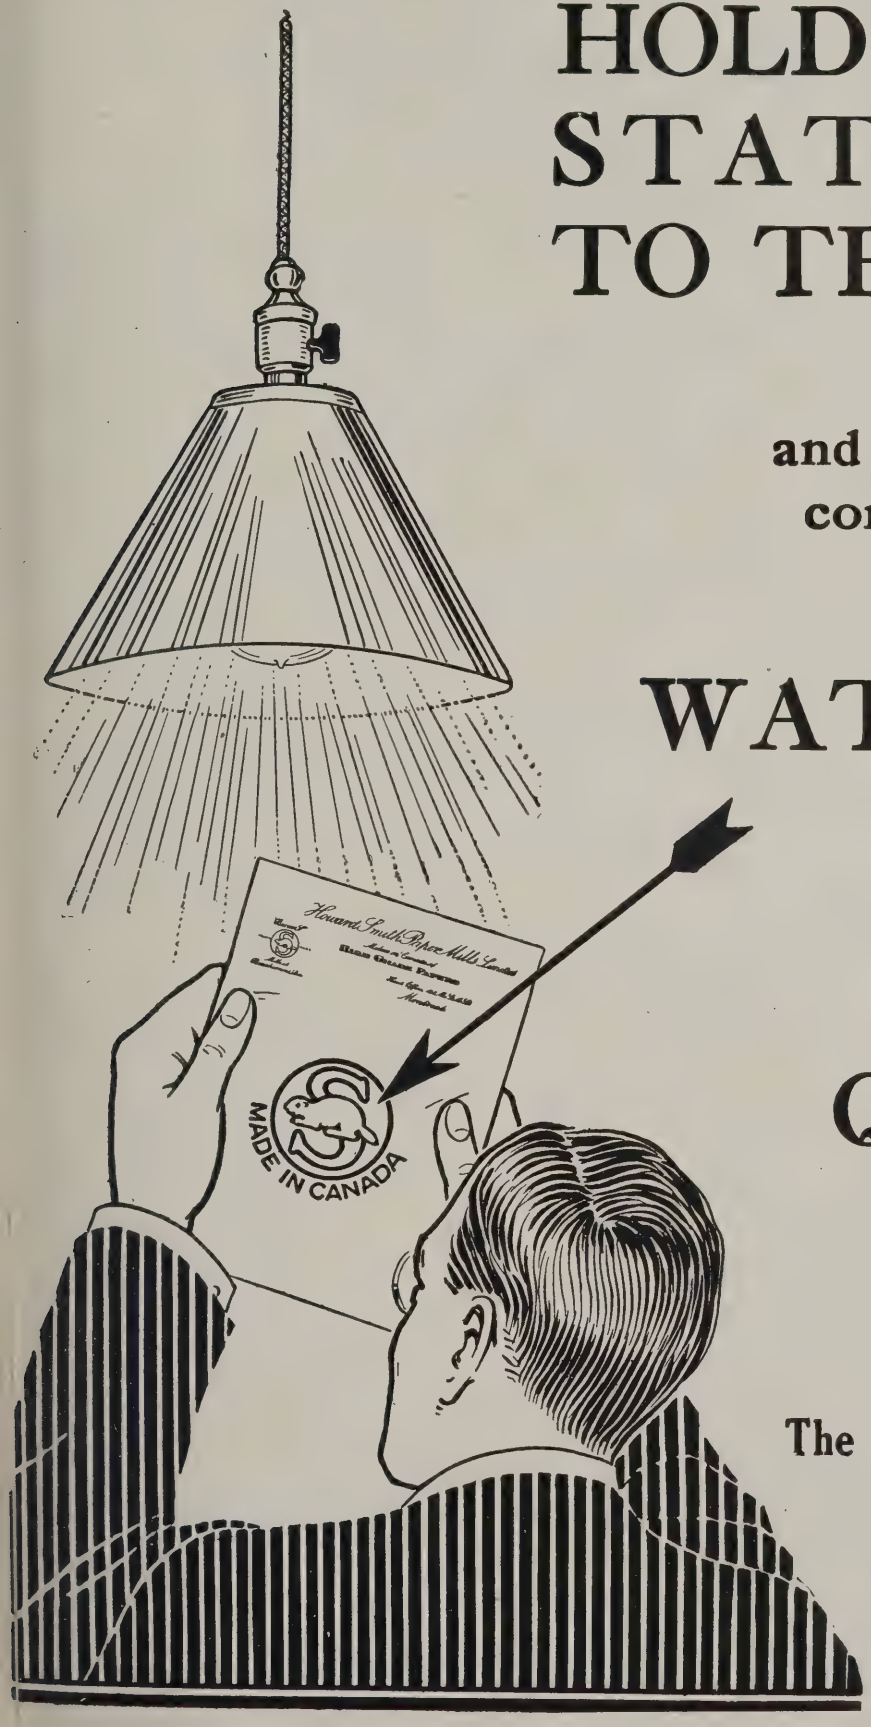
900 c.f.s., and on the St. Anne River the minimum flow has been increased by 100 c.f.s.

From these three reservoirs, the annual revenue derived is $278,000. The operating expenses are about $20,000 per annum. This revenue will be increased when new developments are made upon

The Government of Quebec has not seen fit to go into the power business itself. It prefers to let private capital and initiative look after public requirements in that line. It has adopted a power policy which gives capital the guarantees it requires, and investments in water powers have been made without taxing the exchequer of the province.

Parliamentary Proceedings

(*Continued from page 55.*)



erecting its protective wall against imports, and this aspect of the situation makes doubly interesting the announcement from Washington that an emergency measure, patterned after or an extension of the Fordney Bill is to be forced through immediately Congress assembles. Sir Henry Drayton, as is the invariable practice of Ministers of Finance, refuses in reply to interpellations, to disclose in advance any features of the Budget or, as yet, to make any announcement as to the date of its delivery, although admitting that it is engaging his attention not only day by day but also by day and night. Those who say that the tariff will be revised before the session ends are in the majority, but should their opinion prove faulty there is no reason why the session should not be completed before the Prime Minister leaves for London to attend the meeting of Prime Ministers of the different parts of the Empire, to be held there in June next.

AUDITORS' REPORT

In accordance with the provisions of sub-sections 19 and 20 of Section 56 of The Bank Act, we report to the shareholders as follows:

We have Audited the above Balance Sheet and compared it with the books and vouchers at Head Office and with the certified returns from the Branches. We have obtained all the information and explanations that we have required, and are of the opinion that the transactions of the Bank which have come under our notice have been within the powers of the Bank.

We have checked the cash, and verified the securities representing the investments of the Bank, at its Chief Office and principal Branches at a date other than that of the verification at the Chief Office on the 28th February, 1921, and found that they were in agreement with the entries in the books of the Bank relating thereto.

In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

OFFICE AND FINANCE

Labor-Saving Machinery in the Office

Mechanical Devices that Increase Efficiency—the Duplicator, Telautograph, Check Protector and Other Aids to Organization and Management

By ALAN M. IRWIN

The present day has been called an age of machinery, and in this article Mr. Irwin gives some illustrations of the truth of the description. Machinery is no longer confined to the factory, but has invaded the office, saving time and money, and promoting efficiency. The devices described here are a few examples of the way in which inventive ingenuity has solved office problems.

—The Editor.

WHEN Sholes invented the first practical typewriter in 1868, it is probable that the business men who made use of this device were considered extremely radical. No doubt there were plenty of "knockers," who shook their heads dolefully over this contraption. Yet to-day the typewriter is a commonplace. Its absence causes more remark than its use, and no office is without one. It has been followed by a multitude of mechanical devices, and each of these bids fair to become as indispensable. We have duplicators, talking machines, book-keeping machines, and many other instruments which serve to lighten labor, speed up operations and increase efficiency.

For quantity production of advertising matter, news bulletins or circulars, which are not needed in too great a quantity, there are several makes of stencil duplicators made. These machines, all operated more or less on the same basis, can be used by stenographers or office boys. To reproduce typewritten matter on these machines, it is necessary carefully to stencil the reading matter on a prepared silk or wax stencil. The operator must first remove the ribbon from her typewriter, see that the type is clean, and then write as in an ordinary letter. This stencil is then placed on an inked drum and the impressions are obtained as this drum revolves and comes into contact with the paper. It is best to use a paper which has not too high a finish for this work.

The Multigraph.

More expensive, but with a greater range, is the multigraph, a miniature printing outfit that is capable of turning out a great variety of work. With this machine it is possible to achieve almost any kind of printing work. Operated by a trained operator, as many as 7,000 copies per hour may be produced, in type ranging from 8 to 18 point.

A perfect imitation of typewritten matter is possible, and by use of a signature plate and special inking attachment, a facsimile signature appears at the foot of each letter or circular. One particular advantage is that, by carefully matching the ribbon on the typewriter, the whole thing may appear to have been hand-typed.

This machine, operated usually by a small electric motor, appears somewhat the same as the duplicator. It has the same revolving drum, with the exception that in this case the type is set in grooves on the drum or segment. When printers' type is used, the ink is supplied by a system of rollers to the type face. With pica type a special ribbon is stretched over the type. Almost any kind of work may be done on this press, and many firms use it for printing their own stationery, envelopes, etc.

For Protecting Cheques.

The cheque-writer or protector has made great strides in recent years and is now in quite general use. Cheques written or counter-marked by this means cannot be raised or altered. About the size of a desk clock, it may be easily moved from desk to desk, and its operation is extremely simple. On the front is a dial containing enough figures so that any amount may be indicated. Moved by a thumbscrew an arrow points to the figure desired, the cheque is inserted and the roller inside which carries the type is depressed by a lever. The result is that the amount of the cheque is indelibly written upon the paper with colored ink. The type is so constructed that it is impressed deeply into the paper, so that each letter is hollowed out and has the appearance of being embossed on the reverse side.

Coming into more common use is the telautograph, an instrument which, by the use of electrical energy, reproduces at any distance what is written at the transmitting point. In the transmitter the motions of the pencil are communicated by levers to two rotary shafts. By these, variations in current are produced in two separate circuits. Electromagnetic devices and levers move a pen in the receiver as the pencil transmitter moves.

Possibly the banks are the greatest users of this instrument, with large stores who run "charge accounts" a close second. The bank teller can ask the standing of a customer's account without leaving his cage and without embarrassing the customer. In a large store, where customers are not known to all the clerks, the device is again useful. You may have been surprised some time at the apparently indiscriminate way the clerk hands out your parcel in return for your address. The answer quite often is the telautograph. While your parcel is being wrapped, the clerk writes your name on the telautograph, and the Credit Department consults its records, and merely writes O.K.

Visible record systems may almost be classed as machinery, too. They are made up in many forms and consist of special cards hung on racks. These racks are so constructed that all the cards overlap, with one line showing the name and address visible at the bottom, and as cards may be inserted anywhere, it is possible to keep them in exact alphabetical order. Perhaps the handiest form is one which is reminiscent of the display stand used by vendors of picture postcards. This stand, which revolves readily, may be placed close to the telephones in the Credit Department and from it information may be obtained in a moment.

Inter-Office Communications.

Office communications are taken care of now by interoffice telephones and dictagraphs. The internal telephone may be operated either by a central switchboard or it may be automatic, each telephone being a miniature switchboard in itself. In this, and in the dictagraph, the required person is obtained by the depression of a key or lever. The chief advantages of the internal telephone are its lower cost of operation, as the current may be stepped down from the lighting circuit; and the fact that it can be used without interfering with the service on the outside lines.

The dictagraph, an elaboration of the office telephone, has some decided advantages. First, there is not the necessity of holding a receiver to the ear. The

instrument, a wooden box, rests on the desk, and is so tuned that any sound in one room is reproduced in the room with which the dictagraph is connected. It is not necessary to ring up the person wanted—you merely depress his key and start to talk. He can hear you anywhere in the room. If the general manager wishes to hold a conference, it is not necessary for all his lieutenants to go to him—he merely connects his instrument with each of them and the same result is achieved. It is said that this instrument is extremely popular with the office boys at lunch times, and that they are apt to damage its delicate mechanisms.

A few words should suffice for the dictating machine; it is so well known that much explanation is not necessary. Operated on the same principle as the talking machine, these machines, to the finished dictator, are a time-saver. They permit him to do his dictation after office hours, or before breakfast if he wishes. The records are made of a wax composition, and may be shaved and used over several times. The outfit comprises: Dictating machine, reproducer, and shaving machine. These are operated by electricity, and may be started by either a thumb or foot switch. On the machine beside the cylinder are marked numbers and a slip with corresponding numbers is used with each record, on which any notes or corrections may be made. The reproducing machine has an attachment like a stethoscope, which the typist uses when transcribing the letters. She is able to run the machine as fast or as slow as she wishes.

Another piece of machinery is the cash register. This, generally considered a necessity to the store only, is now used in some large offices, particularly those doing a mail order business, and may be adapted to any business which receives a great deal of money by mail. For use in this connection, the mail is opened in the Cashier's Department and the amount of remittance enclosed is rung up on the register, stamped on the letter and retained. The correspondence then goes on in the regular way to a correspondent for acknowledgment and to the accountant for posting. At the end of each day the cash register strips are checked against the deposit slips and forwarded to the accountant. In his department the various adding, book-keeping and calculating machines are found. These machines can do almost anything with figures and are of various types. There are those which add, subtract or calculate visibly but are non-listing, others with the same operation that list figures and totals, and again the very intelligent type which make journal entries, post to the ledger and invoice all at one operation.

This article does not attempt to cover every mechanical aid in the office; it barely scratches the surface. There are many small devices which are not touched upon here and all these are becoming more common every day.

Dominion Linens, Limited

Slight Decrease in Profits on Business Done Last Year is Reported

A slight decrease in profits is reported by Dominion Linens, Ltd., for the year ended December 31. Net profit, before providing for depreciation, etc., was $8,872, compared with $76,190 in 1919, $71,142 in 1918, and $50,578 in 1917. Although there is a considerable increase in inventories, there has been a decrease in bank loans. Inventories stand at $291,496, compared with $175,926. Bank loans have been reduced from $50,200 to $30,000. Accounts and bills receivable, on the other hand, have declined from $96,500 to $38,366, while accounts payable have risen from $10,484 to $64,308.

Out of the year's profits the sum of $19,320 was allowed for depreciation on plant, machinery and equipment, practically unchanged from 1919. Preferred dividends were paid amounting to $24,500, and a bonus of 5 per cent. on common stock amounting to $10,000. After reserving $5,000 for Federal taxes for 1919, there remained $35,169 at credit of profit and loss, compared with $49,594.

Record Profits Announced

Canadian General Electric Company, Limited, Report Excellent Year and Vote Stock Dividend

The annual meeting of the Canadian General Electric Company, Limited, was held in Toronto on Monday, March 21st, and the report for the year ended December 31st, 1920, was presented to the shareholders. The company have had an excellent year, closing 1920 with orders on their books amounting to $7,500,000. Net profits were $1,356,689, as compared with $1,093,320 in 1919, and earnings on common stock were 15.2 per cent. as compared with 11.92 in the previous year.

The company have earned and paid dividends since they were first organized, and each year the directors have been careful to set aside an adequate sum for depreciation and reserve. As a result of this conservative policy carried over a long period of years the amount at the credit of the depreciation reserve stands at $5,091,949 and the amount at the credit of the surplus account stands at $5,778,672. It has now been decided to distribute a portion of this accumulated surplus to holders of common stock in the form of a stock dividend of 20 per cent.

In concluding his report, Senator Frederic Nicholls, president and general manager of the company, announced his resignation from these positions. In appreciation of his services, extending over a period of thirty-three years, a gift of about 2,400 shares of common stock was voted to him. Senator Nicholls becomes chairman of the board of directors, and A. E. Dyment, vice-president and chairman of the board, succeeds him as president. Stephen Haas becomes vice-president in Mr. Dyment's place, and J. J. Ashworth, who for some time has been assistant general manager is the new general manager.

Increased Business Reported

Nova Scotia Steel and Coal Company, Limited, Issue Twentieth Annual Statement

In their annual report of operations for the year ended December 31st, 1920, the directors of the Nova Scotia Steel and Coal Company, Limited, state that their anticipations at the beginning of the year have been realized and the volume of business done during 1920 has reached satisfactory proportions; from $6,889,941 in 1919 it increased to $19,558,479 in the year under review.

The foreign demand for coal during the year was great owing to the general European shortage and the miners' strike in Great Britain, but owing to the embargo placed on the export of coal a number of very attractive contracts had to be cancelled at a considerable loss. In the early part of the summer demands from the coal trade warranted the opening of an additional colliery at the Sydney mines, and this will soon be in a position to produce 400 tons daily. The total output of the year was 663,845 tons, as compared with 550,965 tons in 1919.

In the iron ore mines at Wabana the operations were restricted almost entirely to development work, and consequently the output of ore is only slightly larger than last year, amounting to 265,775 tons, as against 213,410 tons in 1919. The demand for iron and steel products suffered a serious decline, and it was considered advisable to shut down the steel plant at the Sydney mines about the middle of November. Two steamers, the *Canadian Miner* and *Canadian Sapper*, each of 2,800 tons, were completed and delivered to the Canadian Department of Marine, and a third similar steamer, the *Volunda*, was retained for the company's own business.

As a result of the acquisition of the coaling plant at Halifax the company were able to dispose profitably of over 85,000 tons of coal. During the year further substantial holdings in the Acadia Coal Company, Limited, have been secured. The balance sheet for the Nova Scotia Steel and Coal Company, Limited, and subsidiary companies shows a surplus of $3,015,868.

ESTABLISHED 1875

IMPERIAL BANK
OF CANADA

CAPITAL PAID UP $7,000,000 RESERVE FUND $7,500,000
PELEG HOWLAND, President

The Imperial Bank offers exceptional banking facilities to Canadian Manufacturers. Branches throughout Canada. Agents and correspondents in all the world centres.

Collections made at all points in Canada and in foreign centres.

Drafts—Money Orders and Letters of Credit issued, available throughout the world.

Exchange—Domestic and Foreign Exchange bought and sold.

Government and Municipal Securities dealt in at all branches.

Savings received at all branches—interest credited half yearly at current rate.

Accounts of Merchants and Manufacturers solicited.

Bank of Hamilton

Increased Profits are Earned and General Position of Bank is Strengthened

Substantial progress in all departments of banking activity and a strengthened position are disclosed in the statement of the Bank of Hamilton for the year ended February 28, 1921. During the year the capital of the bank was still further increased by the issue of $998,220 paid-up stock, bringing the capital stock up to $4,998,220. The reserve fund was at the same time increased from $4,200,000 to $4,849,110. The average working capital for the year was thus $4,598,491 and the average reserve, $4,511,745. With profits earned of $888,018, the handsome return of 19.32 per cent. on the average capital or of 9.75 per cent. on combined average capital and reserve was secured.

In common with other banks reporting recently, non-interest bearing deposits show a decline but there has been a satisfactory increase in interest-bearing deposits. The former have declined from $23,692,537 a year ago to $17,996,910. The latter have increased from $44,972,167 to $50,528,661, the net result being that total deposits stand approximately the same at beginning and end of the year.

The bank's assets have expanded during the year from $84,134,109 to $85,348,503. There have been no marked changes in the bank's holdings of securities but call and short loans in Canada on bonds, debentures and stocks show a reduction from $8,169,905 to $6,686,445. On the other hand current loans and discounts in Canada, which disclose the share taken by the bank in business development, have increased from $45,318,138 to $50,416,647.

The year's profits, as already noted, amounted to $888,018, comparing with $847,104 in the previous year. Including $499,110 premium on new stock and a previous balance at profit and loss of $85,249, there was available for disposition $1,472,378. Of this amount $649,110 was transferred to reserve, $598,568 was paid out in dividends, $20,434 was paid to pension fund, and $65,000 reserved for Dominion Government taxes. This left a balance to be carried forward of $139,264.

Many Changes Shown

Balance Sheet of Goodyear Tire & Rubber Company of Canada, Limited

Many changes, with evidences of expansion, are shown in the balance sheet of the Goodyear Tire & Rubber Co. of Canada, Ltd., for the year ended September 30th last. There is a large increase in inventories, and, while current assets and current liabilities both show large extensions, the net working capital has been somewhat substantially diminished. The total assets are shown as $19,100,754 as compared with $10,891,390 for the year ended September 30th, 1919. The surplus is $1,071,275.

Canadian Salt Company

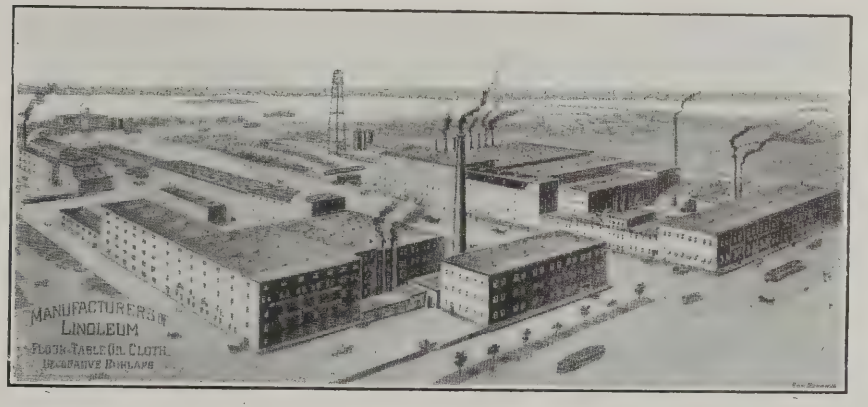
Profits for Year Ended December 31st, 1920, Amounted to $202,298.52

The profits of the Canadian Salt Company for the year ending December 31, 1920, were $202,298.52. Additions and improvements to the plant in that period amounted to $40,000 and $40,000 was paid on the purchase price of new land at Sandwich.

Unusually large stocks of coal had to be carried, owing to the uncertainty as to delivery, and an expenditure of $62,000 was entailed in making remitment to the States, due to the adverse rate of exchange.

Sir Thomas Tait, the president, states in his report to the shareholders that the cost of manufacture during the year was the highest in the history of the company. "There have, however," he adds, "lately been signs of an improvement in some of the conditions affecting costs."

A Message to Canadians



ONLY by increasing the sale of Canadian commodities can we avoid increasing our foreign indebtedness. Never, even in war time, was it so essential to increase our exports.

A DUTY falls on manufacturers to produce articles of a quality and price that will compare favorably with foreign makes, and on our agricultural interests to increase production.

Penmans, Limited

Annual Report Shows Increased Business but Decreased Profits

The fifteenth annual report of Penmans, Limited, was presented to the shareholders and adopted at their annual meeting in Montreal on March 7th. An increase in sales of $960,332.82 over the 1919 figures is shown, the total sales for 1920 amounting to $9,499,180.97. Notwithstanding the large volume of business, the net profits, in comparison with the last few years, have fallen off to a very marked extent. This is the result of a heavy shrinkage in the value of both raw and manufactured stock which took place during the latter part of the year.

After writing down inventories to present market prices, providing for the cost of administration and payment of the bond interest the net trading profits amount to $360,305.61. After appropriating $64,500 for dividends on preferred stock; $209,683.50 for dividends on common, and $45,000 as provision for war tax there remains a surplus of $41,122.11 to be carried forward.

Sir Charles Gordon, president of the company, while regretting the decrease in profits, stated that he was hopeful and confident of the future. The enterprise, he stated, was now in a position to take full advantage of any improvement in the field in which it operates.

Have Increased Profits

Sawyer-Massey Company, Limited, Report a Satisfactory Year

Profits of the Sawyer-Massey Company, Limited, for the fiscal year ended November 30th, 1920, totalled $223,815, after deducting administration expenses. The record was the best in some years and was $124,533 in excess of the profits of 1919. After paying bond interest, $28,620; providing for Federal income tax, estimated at $12,000; reserving for plant depreciation $24,000, and making a reserve for possible inventory depreciation of $50,000, the amount carried forward to the credit of profit and loss account was $100,966. As the company had carried a debit balance in the profit and loss account of $452,987 from the previous year, a debit balance still remains of $352,020.

In his report to shareholders, R. Harmer, the president, said in part:

"The inventory was taken at cost or market prices whichever was the lower) as of November 30th last, but, owing to the present unstableness of the market, your directors deemed it expedient to make provision for a further possible decline in values.

"The larger earnings shown are wholly due to a very substantial increase in sales and economies in operating expenses; the sales being approximately thirty per cent. in excess of the previous year.

"The appraisal of your company's plant and property referred to in the report of last year) was made in August last by the Canadian Appraisal Company, whose appraisement value greatly exceeded the amount at which the property was carried in the books of the company. No portion of the appreciation, however. has been treated as profit, $71,964.85 of the amount having been applied to the reduction of good will account, and the balance transferred to the existing reserve for plant depreciation.

"With the exception of a period of two weeks in November, when the inventory was being taken, the plant has been in continuous operation during the entire year.

"The demand for road-making machinery continues active, a large shipment of this class of goods having recently been made to Kingston, Jamaica. The connection established in the States in 1919 continues to expand, your company having entered into a contract with a reliable company covering the sale of threshers for the three ensuing years."

The company's total assets now stand at $5,915,316, as compared with $5,309,585 a year ago. Fixed assets, which stood at $1,388,106 at the close of November, 1919, rose to $2,292,662 during the past year, and notes and accounts receivable totalled $1,658,134, as compared with $1,446,776 before. The reserve for depreciation increased to $417,441, as against $106,243 the year before. Bills and accounts payable aggregated $1,981,196, an increase of $264,918 for the year. Total current liabilities were $1,989,375, as compared with current assets of $3,034,399, hence the company's working position is strong, the excess of current assets over current liabilities being $1,035,024.

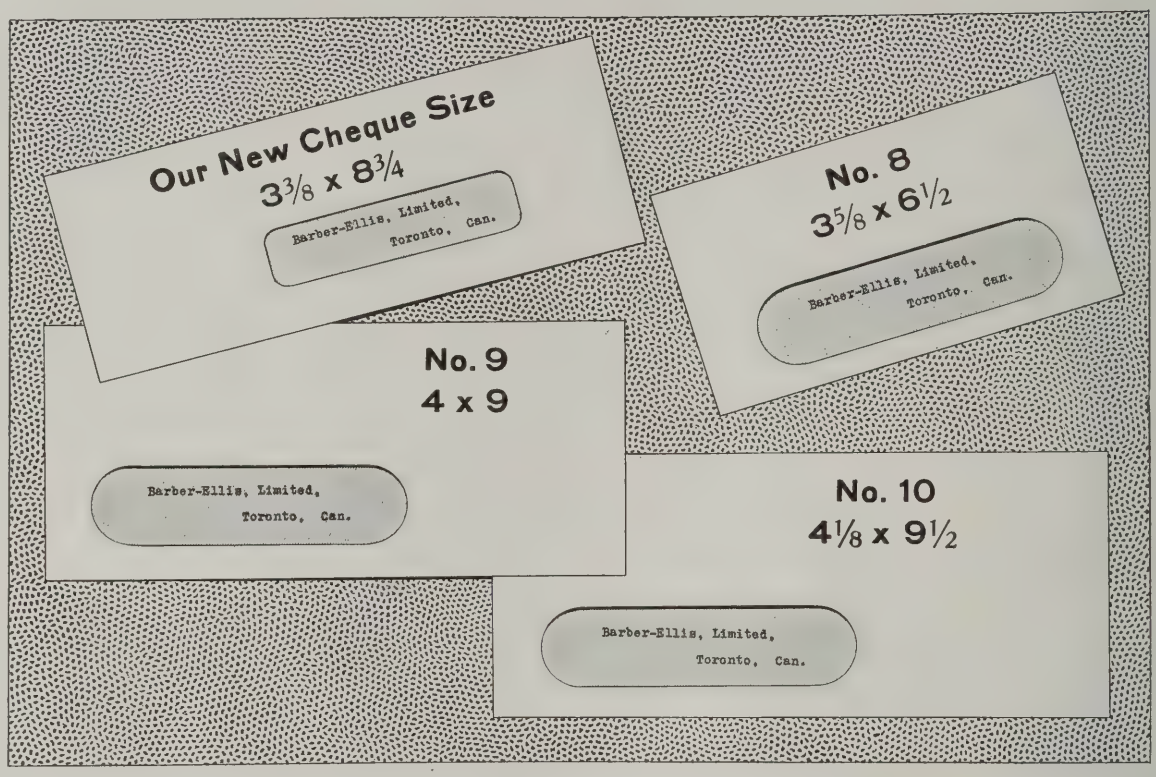
National Breweries, Limited

Annual Report is Viewed With Satisfaction by the Shareholders

The annual report of National Breweries, Limited, presented to the shareholders at the general meeting, held in Montreal on March 16th, was viewed with satisfaction. Operating income was given at $976,609, as compared with $1,616,266 in the previous fourteen months (the period covered by the previous statement), and with $616,266 in 1918. After depreciation write off of $90,971, bond interest of $92,400, and preferred dividends of $194,250, there remained net profits available on the common stock of $598,988, as compared with $637,146 for the previous fourteen months and with $236,510 in 1918. After deduction of common dividends there remained a surplus addition of $238,300, as compared with $479,345 in the previous fourteen months, and with $236,510 in 1918. Total surplus was thus increased to $1,618,238, as compared with $1,379,938, as shown in the previous annual statement.

The net earnings are equivalent to 26.57 per cent. on the old shares, or equal to $6.64 earned on the outstanding 92,000 shares of $25 par value common stock.

The balance sheet is a good one, although it reveals a decrease in net working capital. The chairman, Vesey Boswell, first vice-president, explained this as being due largely to the expenditures made on the new plants of the company, three of which are now in operation, and the fourth of which will come into operation in three or four months' time. He also, at the same time, made the forecast that the company, in view of these heavy expenditures, would probably find it necessary to carry on some new financing during the current year, as it was necessary that they have at least $500,000 of new money. With the completion of the fourth Montreal plant, the Lachine plant would be closed down, giving the company concentrated plants instead of six scattered plants heretofore operated.



Net surplus assets. or working capital, now amount to $696,136, leaving investments out of consideration, as compared with $1,851,507. Current assets amount to $2,505,875, as compared with $2,201,744 a year ago, while current liabilities, swelled by a bank loan of $1,000,000, total $1,809,739, as compared with $350,237 a year ago.

Standard Clay Products

Satisfactory Year's Business Reported in Spite of Adverse Conditions

Notwithstanding high costs of labor and raw material, the directors of Standard Clay Products, Limited, of St. John, N.B., and New Glasgow, N.S., are able to report a satisfactory year's business during 1920. Bond interest and depreciation have been earned and the sum of $16,857.81 has been added to the surplus account, which now stands at $137,805.30. The total earnings for the year were $75,348.97. The output for the year, owing to coal shortage, slump in building operations and various other reasons, was about 70 per cent. of capacity, but the directors expect that 1921 will bring increased activity.

Quaker Oats Western Plant

Newly-Completed Elevator and Other Details in Quaker Oats Company's Plant at Saskatoon

Constructed throughout with reinforced concrete, no wood or any inflammable material being used, says the Saskatoon *Phoenix*, the newly completed elevator at the Quaker Oats plant is now in operation with an unloading capacity of 4,000 bushels an hour. The installation of dust suctions prevents any dust accumulation whatever, and the possibilities of fire are reduced to a minimum. Nothing, however, is left to chance, and the erection is fitted from basement to roof with sprinklers connected to the plant's private pump and reservoir.

The grain is unloaded from the freight cars by power shovels and dropped on an endless belt which carries under the elevator to one of the six steel elevator legs. There is a suction attachment to each grain stream. Drawn up the leg to the top of the elevator, the grain is poured into two garners, one being immediately over the separator and the other above the hopper scale.

The separator fans the screenings off the grain and sifts it into one of the bins, of which there are forty-one.

From these the grain can be conveyed along two endless belts to the storage bins, which have a total capacity of half a million bushels, and it is brought back as required by an endless belt running below the two buildings.

On the east side of the workhouse is the flour mill, while on the west side the rolled oats mill is located. The grain is passed through pipes from the elevator to these buildings.

In the flour mill the grinders or rollers first grind the grain, which is then drawn up to the sifter machines. Here the coarse grain is sifted from the fine and then dropped back to the grinders. This process is repeated until the required fineness for flour is reached. The flour is then conveyed over the belts to the packing room, where the bags are automatically filled and sewn and the weight of each sack is checked.

Below the rolled oats mill is an electric power plant in which are two seventy-five and one one hundred and fifty horse-power return tubular boilers for heating, steaming and drying purposes. Here also is located the private fire pump.

The oats are first hulled in the revolving mill-stones, which separate the hulls from the groats. The groats then pass successively through the dust reels, aspirators, and cell machines to the rolls, where they are sterilized under a ninety-pounds pressure of live steam, and then passed through another set of aspirators.

The plant is fitted up with machinery on which the wooden cases and cardboard cartons are constructed, as well as mechanical wrappers for the cartons.

From the aspirators the grain, which is now the finished product known as rolled oats, is conveyed to the automatic scales, where on one set the sacks are filled and sewn, and on the other set the cartons are filled and sealed and the Quaker Rolled Oats "Family Package" is complete.

In the office building attached to the plant the employees' recreation rooms are located. Here is a billiard table, player piano and victrola, and a polished dance floor.

The reading room is comfortably furnished with leather upholstered chairs, and in the dining-room hot tea and coffee

New Plant of the Quaker Oats Company at Saskatoon

is served free of charge to those who bring their lunch. Those who desire it can obtain full lunch at cost price. Every Thursday, in a small dining-room for the purpose, the department managers meet for lunch and to discuss questions of general routine and management.

Nanaimo Plant Starts

Fish Meal and Oil Refinery on Vancouver Island is Now Operating

The plant of the Nanaimo Fish Meal and Oil Refinery erected recently at Nanaimo at a cost of $40,000, has now commenced operations. It extracts all oils from fish and manufactures the fish into meal for animal food, making the product valuable for farmyard usage. The plant has a capacity of twenty tons of fish per day, five tons of fish making one ton of meal and producing about fifty gallons of coarse oil suitable for heavy machinery.

Proposed Pickle Factory

Branch Factory of Large Pickle Company to be Located in Okanagan Valley

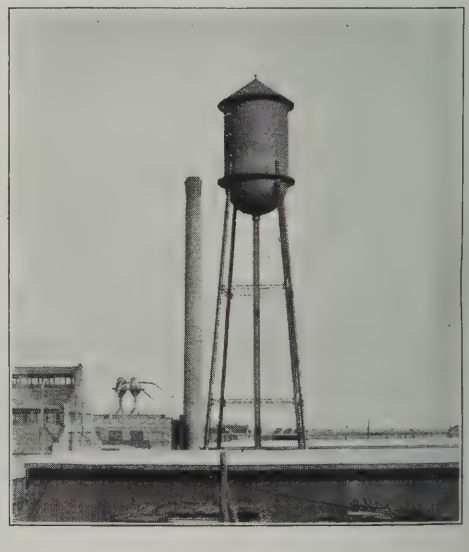
A large pickle concern in Canada will purchase all the cucumbers the Okanagan Valley can grow and establish a branch factory that will furnish permanent employment to at least thirty hands was a statement made by E. B. Reynolds, of Winnipeg, recently at Vernon. Mr. Reynolds pointed out that the sales of his company during 1920 in Alberta and British Columbia only amounted to $150,000 and that if it had been possible to obtain a greater quantity of cucumbers in the valley, especially for the manufacture of dill pickels, it would have been a great deal larger. This, however, is but a small part of the total turnover of the company.

In discussing the consumption of pickles, Mr. Reynold affirmed that Western Canada alone used about $1,500,00 annually. Of this huge amount the valley supplied practicall none. Most of these pickles were brought from Ontario o the great pickle states of Minnesota, Wisconsin and Illinoi His firm alone in 1919 bought sixty-four carloads of America cucumbers. There is no reason, he said, why this remunera tive trade should not be captured at once by the valley. Som have said that the Okanagan could not produce good picklin cucumbers, but Mr. Reynolds characterized this as nonsens There were no better pickling cucumbers grown in the worl than those produced in this valley.

New Fruit Cannery

Chilliwack, B.C., to be Location of New Industry Established by K. A. Boyd

The Chilliwack Evaporator buildings, plant and land hav been purchased by K. A. Boyd, a recent arrival in Britis Columbia from Saskatchewan. During the war many hun dreds of tons of Fraser Valley vegetables were evaporated o these premises for the use of the armies in France and Be gium, but Mr. Boyd purposes converting the property into fruit cannery and jam manufactory. The former owner of th evaporator was J. Hind, of Vancouver, but the plant has bee practically closed down since 1918.



Mr. Boyd before coming to Chilliwack was connected wit the grain business in the vicinity of Moose Jaw. On a forme visit to the Coast he was so impressed with the fruit possibili ties and prospects of the Chilliwack Valley that he decide to move here, and shortly before Christmas he purchased th residence of F. B. Lyle, manager of the Royal Bank, an brought his family from Saskatchewan. Mr. Boyd expects steady influx of prairie farmers and believes that before man years are past the majority of large dairy farms in the valle will be transformed into fruit farms.

Steel for Permanence

The All Steel Elevated Water Tank is the most economical installation for Automatic Sprinkler systems for fire protection, general mill supply, or Municipal Water Works systems.

Its first cost is not excessive, the maintenance expense is very low, and there is no danger of leakage, falling ice, or possibility of the tank bursting or catching fire.

Hundreds of our All Steel Elevated Water Tanks now in service throughout Canada bear witness to these facts.

Signs that Say: Safety

Through the night the coaches speed *but you sleep on.* And the reason? Because of your confidence in the elaborate system of safety equipment provided by the railroad to increase the "margin of safety" for its passengers.

The elaborate signal systems of the modern railroad—the curtain of asbestos in "Fire-Wall" Filing Cabinets—both are signs that say: Safety.

FIRE-WALL FILING CABINETS
Steel-*plus*-Asbestos

Strength favors steel. But steel alone conducts heat. So "Fire-Wall" Filing Cabinets are made with a curtain of asbestos between two sturdy walls of steel—a curtain of asbestos that stands between your valuable business records and the fire that may steal upon you any time.

"Fire-Wall" means better protection—an increased "margin of safety" for your business records. Consider this safety when buying *your* equipment.

Drop a card in the mail to-day for a copy of "Protection for Your Business Records." Address nearest service store or Home Office.

Steel *plus* Asbestos *for* Better Protection

The "Office Specialty" Direct Name Filing System in "Fire-Wall" Filing Cabinets is the ideal combination for modern business records.

Make Vegetable Parchment

Canadian Vegetable Parchment Company, Limited, turn out New Canadian Product

Late in the year of 1913 a group of experienced paper men met to discuss the merits and advantages of establishing a new industry in Canada, viz., the manufacture of a line of paper never before attempted in this land. Plans were laid, investigations were made and all points thoroughly discussed, and in 1914 it was decided to go ahead with the venture and establish the Canadian Vegetable Parchment Company, Limited, at Merritton, Ontario, to manufacture genuine vegetable parchment paper, a product which has always been imported from Europe. However, the Great War came along, raw materials commenced to soar, and the future looked black, uncertain and troublesome from the perspective of late 1914. The venture was temporarily laid aside, to be revived at a more suitable season, and from 1914 until 1919, almost five whole years, plans were abandoned but not forgotten.

In the spring of 1919 it was decided to go ahead full swing, and in the meantime, or in other words during the war period, this trade had become diverted from Europe, and was solely under the control of the United States manufacturers. No time was lost; sod was turned in August, 1919, and building proceeded with great energy. The company knew that, with fair protection, Canada could manufacture this product just as well and satisfactorily as any country in the world, and confidently planned and built a splendid plant, most up-to-date in all its machinery, efficient layout and economy of manufacture. The buildings are of brick, stone and concrete, the machine room measuring 80 feet x 200 feet. The shipping facilities are splendid, viz., G.T.R., C.P.R., C.N.R., and N., St. C. & T. Ry. sidings, running right up to the plants. An output of eight tons per day is the capacity of the present machine, and with the demand for export to other parts of the British Empire, the directors are considering the immediate installation of another parchment machine, which is already partly built. An up-to-date water system from wells of most suitable water is an important feature in producing "Purity" white parchment. The plant commenced to operate the middle of March of last year and has been running continuously ever since.

The product, scientific and difficult to manufacture is, to say the least, a splendid result of well planned effort and hard work. The sheet produced from the very first was beautifully white, clean and strong. The trade-marked name, "Purity Parchment," is truly lived up to, and the management readily recognize the necessity of keeping up the quality at all times. The directors have decided to market the output of the mill through the wholesale paper merchants of Canada, whose loyalty they are receiving generously. The company are now doing some extensive advertising and sampling, in order to make "Purity Parchment" well known to all pure parchment users.

Officers and directors, all experienced paper men, are as follows: Chas. V. Syrett, president; Lauren H. Gardner, first vice-president; Wm. H. Howe, second vice-president; Leo E. Charles, secretary-treasurer; H. Zimmerman, Chas. F. Hubbs and H. J. Severance, directors.

Make Storage Batteries

Eternal Battery Company of Canada, Limited, Have Plant in Winnipeg

The Eternal Battery Company of Canada, Limited, are one of Winnipeg's newer industries, capitalized at $1,000,000, to manufacture storage batteries for automobiles, electric vehicles, motorboats and other purposes for which storage batteries can be conveniently used. They have a plant and offices, with about 13,000 square feet floor space, at 233 Stradbrook Avenue, Winnipeg. There are three buildings in the

Keeping Output Up and Overhead Down

In heavy machining operations your big expensive lathe, planer, boring mill or slab miller often stands idle, while the operator is lifting, setting up or moving the work around.

A Little David Motor Driven Air Hoist is a big factor in reducing this lost motion or non-productive time of men and machine tools. Where a Little David Hoist is used a few seconds are often sufficient to permit the arrangement of a heavy casting or jig that formerly required as many minutes and you save the wages of two or three "helpers."

Little David Air Hoists are made in five sizes with lifts of twenty feet and capacities of 1,000 to 10,000 pounds. They are easy to install, fool proof and economical in operation, often paying for themselves in a few months by the savings they make. They are simple and rugged in construction and the load cannot jump, jar, stick or twist.

Write for bulletins describing these hoists and a few of their uses in detail.

plant—a main building, two stories of brick; a two-story wooden building, and another wooden building, with only one floor.

The company employ twenty hands, and have a secret process of suboxide of lead for manufacturing their product. For the current year it is estimated that thirty batteries a day will be turned out, representing an annual turnover of $500,000.

John N. Lyon and C. T. Lount, of Winnipeg, are president and vice-president of the company, and Urban D. Clark is secretary-treasurer and general manager. Mr. Lyon is vice-president of the Canada Ingot Iron Company, Limited, and Mr. Lount is manager and vice-president of the Lount Engineering Company of Winnipeg. Mr. Clark was employed by the British Government during the war in the chemical department of the munitions plant at Trenton, Ont.

To Make Baskets

United Growers Packages, Limited, to Operate at Niagara-on-the-Lake

United Growers Packages, Limited, is the name of a new company at Niagara-on-the-Lake, Ontario, incorporated to supply the great demand for baskets, berry boxes and fruit containers, from fruit growers of the Niagara Peninsula. They are capitalized at $75,000, and there are at present from eighty to one hundred fruit-growers who are stockholders.

The factory is located at Niagara-on-the-Lake, beside the Michigan Central Railway and Canada Steamship Lines. It is a building about 180 x 60 feet, with additional wings of 60 x 40 feet. The work of equipping the building is now in progress, and manufacturing should start shortly. The initial capacity is estimated at a million baskets and there is plenty of room for increased production.

T. B. Revett, reeve of Niagara-on-the-Lake and one of the original incorporators of United Growers Packages, is secretary-treasurer of the company. The other directors are: A. T. Baker, president; T. A. Griffiths, vice-president; C. E. Secord and W. H. Hunter.

Rearrangement Doubles Production

Business Prospects of Bishop and Pringle, Limited, Owen Sound, are Favorable

From Bishop and Pringle, Limited, manufacturers of pickles, vinegar, catsup, cider, etc., at Owen Sound, Ontario, comes the news that business is picking up and that they have increased their staff of employees to about the same number as they had in the spring of 1920.

During the winter, while they were running with a small staff, a rearrangement of their factory was made, and by changing the location of a considerable amount of machinery in their pickle and catsup department they have put themselves in a position to double their 1920 output. In conjunction with their plans for expansion in manufacturing they have inaugurated a campaign among farmers and gardeners of the district to double the acreage of vegetables grown for the company. As contract prices for the raw material have not been reduced it is expected that this movement will meet with a ready response and that the additional acreage will be maintained and increased in the future.

E. B. Ratcliffe, Limited, have been incorporated in Hamilton, Ontario, with a capital of $40,000, for the manufacture of cement products. Their plant is 40x50 feet, partly two-storey, with office attached. Operations will commence about the first of March, eight men being employed at the start. The directors of the company are E. B. Ratcliffe, Lydia E. Ratcliffe and H. Ward.

British Columbia's New Cordage Industry

By CARL J. KETCHUM

LAST YEAR Seattle, Washington, sold to British Columbia approximately $350,000 worth of hempen rope. It is estimated that more than $700,000 was imported by the province from the United States as a whole. To-day British Columbia is buying rope from British Columbia. A new and long-needed industry has sprung up within the year and the indications are that its output, already exceeding six tons of rope per day, will increase until it has absorbed practically all the business in Western Canada.

With what is generally conceded to be the most modern factory of its kind in America, the Western Canada Cordage Company, controlled and operated solely by men who served overseas in the Canadian Expeditionary Force, has come into the market with a variety of ropes, lines and twines ranging in diameter from the lightest strengths of binder twine to grades of cable of fifteen inches in circumference. Only a short time ago Mayor J. J. Johnston turned the switch that set the machinery at the spacious factory at New Westminster in motion, and to-day thirty returned men are working day and night at full pressure endeavoring to maintain a supply that will meet the public demand.

The company's plant occupies something like seven and a-half acres and consists of five handsome reinforced concrete buildings connected with fire-proof doors and having all the latest factory conveniences. The cost of the building was in the neighborhood of $100,000. There are already installed thirty of the most recent patent machine units, and, according to an announcement of the company's officials, not many weeks will elapse before one hundred will be in operation. A further asset on hand is the very heavy stock of raw material, a manila fibre of the very highest grade, bough when it was available in abundance and when the market wa low. Every detail for the benefit of the workers themselves as well as for efficiency in production, has received attention and it needs not more than a casual observation to becom assured that there will always be a minimum waste of raw material and of time lost through faulty machine arrange ments.

The Western Canada Cordage Company was formed i Aug., 1918, the original directors including Major J. C. Thorn E. A. Paige, F. C. Brown and other well-known veterans This company got together $100,000 and in time prevailed upon the Department of Industries of the Provincial Goverr ment to grant them a loan of $200,000. In February of las year they commenced building on the splendidly situated property at New Westminster, given to them free of all cos by the city. No time was lost once construction operation were undertaken and at the end of the year the five separat buildings were completed. The civic authorities then adde a further gift in the shape of exemption from all taxatio for a period of ten years.

On the occasion of the formal opening of the factory busi ness men as well as professionally prominent people from al over the province assembled at Westminster and witnesse the simple but impressive ceremony presided over by Mayo Johnston.

It will thus be seen that the company got away to a goo start under very favorable circumstances. The machine operated well; without a hitch. Some of the operators wer slow at first because they were not trained. They wer soldiers who were becoming re-established into civil life. Bu they did not remain untrained long, under the supervision o Superintendent W. Passmore, regarded as one of the mos experienced rope producers in the world. This is best evi denced by the fact that these men individually are turnin

out a record production each week and are ready and anxious to push still harder. As has been already pointed out they are working night and day, and, it is announced, to such an extent that the staff will have to be augmented by at least fifty more men in the very near future.

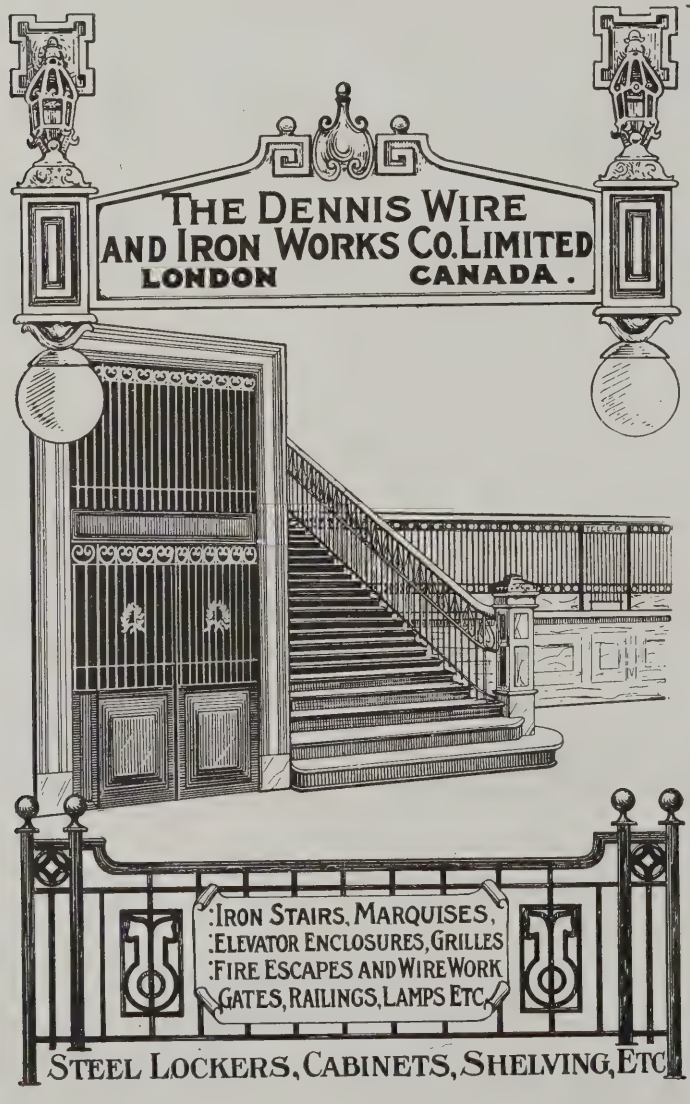
At the present time the factory is making chiefly marine ropes of various descriptions, and transmission ropes. It has orders that will take days to fill. Recently J. C. Thorn, president of the company, returned from the prairie provinces and announced that he had brought with him orders that will keep the whole present staff working overtime for at least sixty days.

The company have a few modest claims to put before the public. They include:—

"The commencement of manufacture by the Western Canada Cordage Company means lower prices for cordage for British Columbia users than they are now paying, or better material and better workmanship for the same price."

"By purchasing our products you will help to stimulate other Canadian industries and increase the market for Canadian goods, and promote other employment throughout the province."

Sales are being handled through the office of J. C. Thorn and Co., Metropolitan Building, Vancouver. The board of directors now consists of: President, J. C. Thorn; vice-president, D. A. McDonald, K.C.; R. P. Foster, G. G. Hulme (manager), and General Victor Odlum, Government representative. Superintendent W. Passmore is from New Zealand and is highly qualified in every branch of the trade.



Pulp and Paper Industry in B.C. Expands

SOME NEW DEVELOPMENTS

PULP AND PAPER PRODUCTS sold by British Columbi mills amounted during 1920 to $21,000,000, according t the annual report of the Hon. T. D. Patullo, Minister of Land presented in the British Columbia Legislature recently. Th figure for the preceding year was given as $12,000,000, an with the many enquiries regarding pulp and paper possibil ties, the Minister expects to see a very great expansion i the pulp and paper figures.

If investigations which are at present being carried ou by a group of American engineers are brought to a successfu conclusion, and there is every indication that they wil British Columbia will have another pulp undertaking of grea size. The engineers represent wealthy financial interests o Chicago, New York and Buffalo, who are prepared, it is state to invest between $8,000,000 and $10,000,000 if a favorabl report is received. This investment would represent the tak ing over of the plant of the Beaver Cove Lumber & Pulp Co Limited, which at present has a daily capacity of 40 tons o kraft paper and in addition timber holdings on Vancouve Island aggregating five billion feet.

Application was made to the Prince Rupert City Counc recently by E. F. Duby on behalf of the Prince Rupert Pul & Paper Co., Limited, for a free supply of water and a fixe

rate of taxation for fifteen years as an inducement to that concern to establish a pulp mill at Seal Cove within the city limits.

This is the company recently incorporated to take over the Emerson mill at Prince Rupert together with a large block of timber limits with the purpose of establishing a pulp and paper plant in or near Prince Rupert, the understanding being that if no privileges are granted by the city the plant will have to be established outside.

The lumber mill was established three years ago by the late J. S. Emerson, but for some time past has been under the direct charge of his son John Emerson, of Vancouver, with Mr. Duby as manager. The new concern is capitalized for four million dollars. The sulphite mill proposed will have a capacity of fifty tons a day and will be the first unit of a larger concern to include a big paper mill.

Several important changes in the executive of the Western Canada Pulp & Paper Company were announced recently from the offices of the company, in Vancouver, one of the most interesting being the appointment of Henning Helin as general manager of the company's affairs in this province. Another change announced is the selection of H. J. Daly as president of the company, to succeed E. M. Davis, whose retirement from that office has been rendered necessary for business reasons. Mr. Daly is also president of the Home Bank of Canada.

Henning Helin, the general manager, is well known in industrial circles throughout the Dominion, having been for six years technical manager of the Wayagamack Pulp & Paper Company before coming to this province. For 10 years he was engaged in the practical end of the manufacture of pulp and paper in Sweden and is a graduate of one of the largest technical colleges in that country.

The plant of the Western Canada Pulp and Paper Company will be put into operation early next month, according to Mr. W. O'Connor, secretary of the company at Toronto, who has been spending a few days on the cost on a trip of inspection of the company's holdings. The plant is located at Port Mellon, about 30 miles north of Vancouver and will have a capacity of about 40 tons of pulp a day. While the output of the plant will be governed to a great extent by the demand in view of the fact that a very large proportion will be for export, it is believed by the company's officials that within a short time the plant will be turning out pulp to the limit of its capacity.

There was incorporated in the office of the British Columbia Registrar of Joint Stock Companies recently the Harrison Lumber and Pulp Company, Limited, with a capital of $15,000,000. The company are reported to be ready to start work at an early date. They have for one of their principals Sir Douglas Cameron of the Rat Portage Lumber Company. The new pulp mill is to be erected adjacent to the company's lumber mill at the mouth of the Harrison River, and will have a capacity of 60 tons of pulp per day.

In the manufacture of kraft paper, cedar, hemlock and fir can all be utilized, and the waste from the Rat Portage lumber mill, together with the logs not suitable for cutting in the mill, will be utilized in the manufacture of pulp. The company have very extensive holdings on Harrison Lake, and during the past year have spent considerable money in opening camps and rafting logs near the entrance to Harrison River and just above the rapids. These booms will be moved down the river during the freshet in the spring, and the big lumber mill is to be opened after several years' idleness.

While the pulp plant at Harrison River would cost about $3,000,000, the balance of the amount of incorporation is expected to include another pulp mill at Kitamaat of the sulphite class, and possibly a paper mill. With the new pulp mill on Harrison River the company will be able to log off clean on all holdings on and adjacent to the lake.

George Anderson & Company of Canada, Limited, engineers in Montreal, have moved from 157 Craig Street West to larger premises at 225 St. Ambroise Street, where they will carry a full supply of their machines and cranes.

To the Buyer of Equipment for Industrial, Hotel, or Institutional Kitchens

As a buyer of the above equipment, you are held responsible for its efficiency and stability. This is a large responsibility. Moreover, there are very few organizations who are in a position to advise and help you. Equipment of this nature is highly technical. It requires experienced mechanical judgment and skill to execute it. You may devote your best brain in the formation of the plan. Its acceptance, however, is only the first step.

Catalogues of various equipment are on your desk. They receive your consideration. You may do one of two things.

Order each individual item from different firms or place your confidence in one firm to furnish you with the entire equipment. The latter is not only the most satisfactory from practically every point of view but it also relieves you of a mass of detail. In either capacity, that is, in supplying one piece of equipment, or, in the furnishing of the entire equipment, we offer you our services. Our experience is manifold. Write us so that we may send you our literature. Our experts are at your command in submitting layouts and prices. Write us when you need us.

Department of Industries Does Good Work

SIXTY COMPANIES ASSISTED

ACCORDING to the report presented in the B.C. Legislature recently by the Hon. John Oliver, Premier and Minister of Industries, the provincial department of industries which was established two years ago for the purpose of extending financial and other assistance to deserving manufacturing projects in that province, during the year 1920, granted loans amounting to $630,658. Loans totalling $3,044,050 were applied for, showing that four-fifths of the applications, were not favorably considered. Six applications, according to the report, were under advisement at the end of the year, and about forty-five were being investigated.

The report gives a good indication of the establishment of new industries in British Columbia from the fact that by December 31st, 1920, 362 applications for loans had been received by the Department and of this number 60 had been approved and had been granted financial assistance.

The report graphically illustrates the wide range of manufactured articles produced in British Columbia, the firms assisted including sawmills and shingle mills and concerns manufacturing furniture, boots and shoes, toys, cut-to-fit buildings, machinery, fish by-products, neckwear, boats, boxes, electrical appliances, woollens, phonographs, concrete blocks, cigars, sandpaper, knitted goods and canned products. Probably the most striking feature of the report is the statistical summary of British Columbia industries. There are 567 logging firms in the province, employing 11,250 persons, at an average wage of $5.25, and an aggregate in wages paid for 1920 of $15,336,155. The 385 saw and shingle mill firms in the province paid out in wages $14,426,922 to 12,645 employees —an average daily wage of $4.43.

Metal mining firms numbered 117, with a payroll aggregating $4,656,358, whose 3,663 employees received an average of $4.89 per day. Eighteen coal mining firms paid 7,147 employees $9,700,000 in 1920, or an average of $5.22 per day. Five pulp mills employed 2,822 persons at an average wage of $4.12, the total for the year being $3,627,223.

There are sixty-one planing mills and wood-working plants, with 1,902 employees, receiving an average wage of $3.46, or $1,711,496 for 1920. Five firms are engaged in the reduction and smelting of ores. They paid their 1,081 employees $1,407,786 last year an average wage of $5.01. Fruit and vegetable canning firms, numbering forty-five, with 858 employees receiving $956,761, or $4.95 per day. Six oil refineries engage the service of 332 persons at $4.96 per day, the year's aggregate being $426,965.

There are 569 employees engaged in the service of the eighteen confectionery establishments in the province. They average $2.35 per day. Other important industrial figures follows:

Firms.	Employees.	Ave. wages.
Creameries, 25	269	$3 28

Review of British Export Trade in 1920

Statement by the Officer in Charge of the Office of the Department of Overseas Trade in Toronto, Based on Information Supplied by the Head Office in London

THE year 1920 will be long remembered for the chameleon-like character of its economic experience. On the whole, its aspect was fair at the beginning of the year. True, the incomes of many national Governments were insufficient to meet their expenditure, debts were piling up and currencies were being recklessly inflated. The United Kingdom could see its way to make the national budget balance, but the nation was piling up debts in other directions, the heavy excess of imports over exports during 1919 showing that large quantities of goods were being purchased from overseas for which we were unable to export goods in exchange.

Demand, however, was strong and insistent, and Britain's industries were showing a remarkable capacity to regain their pre-war power of production after the devastating effects of the war. As early even as the beginning of last year, the rate of this recovery was clearly visible. During the previous year export trade had increased at a remarkable rate. For the first quarter of that year, exports of United Kingdom produce were between 40 per cent. and 50 per cent. of the quarterly average of 1913, this figure being reached after revaluing the exports at the 1913 level of prices. By the last quarter of the year they had increased to about two-thirds of the 1913 quarterly average.

At the same time as export trade was thus increasing, the needs of the United Kingdom were by no means being neglected. Disorganized industries were rapidly reorganized and re-equipped, the soldiers demobilized from the army and civilians from the munition factories were absorbed into industry at a speed far exceeding all expectations. There is little wonder that the year's work was entered upon in an optimistic and confident spirit.

The experience of the first three or four months tended but to confirm this optimistic spirit. The urgency of demand continued and future well-being appeared to depend almost entirely on the capacity of Great Britain to produce the goods demanded—a capacity which was steadily, even marvellously growing.

Export by Industrial Groups.—Total exports continued to increase, right up to and including the third quarter of the year 1920. The rate of increase, it is true, was not as great as during the previous year, but even so was still fairly considerable.

It must not be assumed from this that the depression of trade was felt only during the last quarter of the year. In most transactions there is a considerable interval between the booking of an order and the delivery of the goods. The first sign of depression is felt by the manufacturers in the reduction of the number of orders booked, and in the cancellation of orders already on the books. This stage was reached during the late spring and early summer. The increase in export trade, as shown by the statistics, was not, therefore, an index of increasing demand, it was merely an indication of the increased rate at which orders already booked could be executed.

The increase during the first three quarters of the year was practically confined to the manufacturing industries. This was all to the good, as it is on the export of manufactured goods that the United Kingdom mainly depends in order to pay for the goods and raw materials it is necessary to import. Normally they amount to over 80 per cent. of her total exports.

The greatest increases were those shown for iron and steel, machinery, vehicles, and all kinds of textiles. Of an increase of £7,000,000 (1913 values) in the second quarter over the first, more than £3,000,000 was for textiles, nearly £1,400,000 for iron and steel, the same for machinery, and

£1,900,000 for vehicles. By the third quarter textiles had begun to drop, but iron and steel, machinery and vehicles continued their increase, the last-named at an accelerated rate.

During the fourth quarter export trade showed a decided drop. In one quarter the whole increase in the flow of export was lost. The reduction is distributed over all manufacturing industries, with the exception of earthenware and glass, cutlery, electrical goods, machinery, manufactures of wood and timber, and paper and cardboard. These cases continue to show slight increases, but in no instance has the rate of increase exhibited during previous quarters been maintained.

Market Distribution of Exports.—The market distribution of British exports has also undergone considerable change during the year. The percentage of total exports going to markets within the Empire during each of the four quarters of the year was 31.3 per cent., 38.3 per cent., 39.5 per cent., and 40.1 per cent. respectively. For the whole year the Empire markets received 37.5 per cent. of our exports. This, however, merely illustrates a tendency for the distant markets to receive more nearly the same proportion of these exports as they did before the war. In 1913, for instance, the European and Mediterranean markets received 38.56 per cent. of the total exports. In the second quarter of 1919 they took no less than 64.74 per cent., in the first quarter of 1920 they fell to 51.70 per cent., and during the last quarter to 39.4 per cent., this last figure being only .84 per cent. above the 1913 proportion. The adjustment between the proportion of exports going to near and distant markets was, however, practically complete by the second quarter of 1920. The fall in exports registered by the figures for the last quarter affected trade with all markets fairly evenly, ex-enemy countries, South and Central America and Russia being the only considerable exceptions. These countries received British exports of greater value during the last quarter of 1920 than during the previous quarter. On the other hand, five of the largest groups not only took a smaller value of these exports than they did during the previous quarter, but the reduction was considerably greater in these markets than in any of the other. These markets were European countries neutral during the war, European countries allied to the United Kingdom during the war, the European Fringe, Canada, and the U.S.A. Exports to the remaining groups of markets decreased, but not by so great a proportion as the five markets just mentioned. It will be noted that this latter group includes all the more distant markets in the Eastern hemisphere.

Volume of Exports to Various Markets.—It is not possible from the information at present available to estimate with any guarantee of accuracy changes in the volume as distinguished from the value of exports going to different markets. A comparison shows how the prices of United Kingdom exports compare with pre-war prices. For each of the four quarters of 1920 these were 326 per cent., 358 per cent., 376 per cent., and 373 per cent. of the 1913 level of prices, the average for the whole year being 358.3 per cent. The only method at present available for estimating what the value of the exports going to various markets would have been at the 1913 level of prices is to correct the quoted values by the above index numbers. There is in this method, however, considerable liability to error, as all markets do not receive the same proportion of the various kinds of British exports. In the case of countries to which a large proportion of coal or cottons is included among the exports, correction by the above index numbers might have the effect of overstating the 1913 values of the exports, and in the case of those where no coal is exported, but a large proportion of machinery is sent, of understating the 1913 value. This follows directly from the fact that the price index for coal was 600.3 per cent., for cotton textiles 459.1 per cent., and for machinery 272.3 per cent., as compared with the average 358.3 per cent. of the 1913 level.

If, however, we venture to ignore this difficulty, we may secure some interesting comparisons of the variation in the direction of trade measured by volume, assuming provisionally

BRANTFORD, ONTARIO, CANADA

that the composition of trade with any particular region has varied in conformity with changes in the composition of exports as a whole.

On this basis it can be seen that the volume of exports to all the European and Mediterranean markets during the fourth quarter of 1920 was considerably less than it was in 1913, whereas from the second quarter of 1919 until the third quarter of 1920 it was in excess of the 1913 volume. On the other hand, the volume of exports sent to South and Central America have steadily increased throughout this period, the volume for the last quarter of 1920 being about double that for the second quarter of 1919 at between 65 per cent. and 70 per cent. of the 1913 volume. An interesting point to note in connection with these statistics is that at no time during the past two years has the value of goods going to distant markets, including the British Dominions, been as great as that sent in 1913. It would appear, therefore, that so far as British exports are concerned, the complaints of glutted markets which have been heard on all sides require some other explanation than actual superfluity. The true reason is, of course, to be found in the change which has come over the general credit situation, and the impossibility of maintaining demand in face of a general and rapid fall in prices.

Big Order for Ties

British Columbia Mills to Cut Eight Million Feet for Egyptian State Railway

British Columbia mills have recently started to cut an order of eight million feet of ties for the Egyptian State Railway. The ties will be shipped to Alexandria late in April on board two ships of the Canadian Government Merchant Marine. The order in all probability is a forerunner of further and larger contracts for British Columbia mills, as the Egyptian State Railway is understood to be preparing for a large building programme.

The order has been in the hands of the Canada Overseas Trading Company for some weeks but numerous obstacles arose which had to be surmounted. This company is a new organization composed almost entirely of returned men. H. Clarke, of London, is president and manager of European branches; H. J. Haslett, Vancouver, is vice-president and manager of branches at Montreal and Sydney, N.S.W.; Arthur E. Salsbury is manager at Vancouver. The company shipped 8,000 cases of salmon to Egypt last year and has orders for 10,000 cases this year.

Exporting Threshers

Over Two Hundred Carloads Shipped Last Year to U.S. by Hamilton Company

During 919 the Sawyer-Massey Co., Limited, Hamilton, shipped to and sold in the United States over eighty carloads of their threshers. In 1920 the business was increased to over two hundred carloads. For 1921 they have on their books a large order for further shipment of threshers. This is an entirely new development for the company as, up to two years ago, none of the company's product had ever been sold in the United States. When Mr. H. W. Hutchinson, vice-president, became identified with the company, he immediately set about obtaining a connection across the line with the results indicated. The foreign business secured, together with the domestic trade, permits the company to operate their plant for the twelve calendar months of each year continuously.

An addition to the engine-room and boiler-house of the Bell Thread Company, Limited, Hamilton, Ontario, is being made. A new 125 h.p. boiler is also being installed, making a total outlay of $10,000.

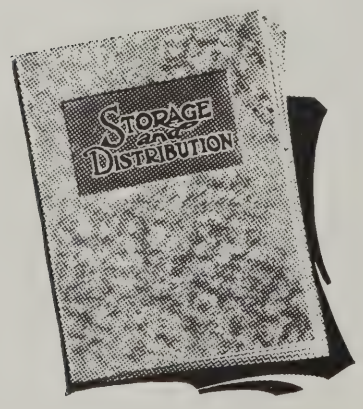
Deaths Among Prominent Manufacturers

William Clarke

Founder of Clarke City, Quebec, and Pioneer Paper Maker Dies in New York

The death occurred in New York, on March 4th, of William Clarke, of Toronto, one of the pioneers of the pulp and paper industry in this country, and the founder of Clarke City, Quebec, now a prosperous manufacturing centre of 10,000 inhabitants. Such an individual achievement within a few years, says the Toronto *Saturday Night*, could only be possible in a young country such as this, and in a century like our own, in which industrial organization had been carried to a point of unexampled efficiency.

The late Mr. Clarke was born in Toronto seventy-one years ago and was one of a family of three brothers, all of whom have shown astonishing business enterprise. His brothers, James and George Clarke, of New York, are famous in the publishing business on both sides of the Atlantic, as the men who put the "Encyclopedia Britannica" on a business basis, and who by their initiative helped the London *Times* over a very serious crisis in its fortunes. The close association of all three brothers with Lord Northcliffe is well known.



Mr. Clarke in his early days was a building contractor in Toronto, and amassed a considerable private fortune. Twenty-one years ago next summer, while taking a pleasure trip with his brothers on the lower St. Lawrence, he became impressed with the possibilities of the pulp and paper industry in that region. Together they purchased a thousand acres of pulp-wood limits at Seven Islands, Saguenay, and near there erected mills and established the municipality of Clarke City. Their enterprise did not cease merely with the creation of an industrial plant. Under the supervision of William Clarke an entire town of modern equipment was erected, with good roadways, sewers, sidewalks, electric lighting, a sanitary water system, hotels, residences and stores. In twenty years Clarke City has grown from nothing to a town of ten thousand population, centering around the Gulf Pulp and Paper Company, which employs 1,000 hands and has an annual output of about three million dollars value. This plant was recently sold to Lord Northcliffe. Four of Mr. Clarke's sons, Frank W., Walter, Desmond and Wilfrid have been identified with this industry and all reside in Clarke City.

Six months ago Mr. Clarke was stricken with pernicious anæmia and went to New York for treatment, which proved unavailing. His body was brought to his home at 39 Beatty Avenue, Toronto, for burial, which took place on March 7th. On Saturday, March 5th, when the news of his death reached Clarke City, a mass meeting of citizens was immediately called, and the following resolution passed: "That this meeting of the citizens of Clarke City records its profound sense of loss and bereavement on the death of Mr. William Clarke; its high appreciation of his unparalleled initiative as one of the founders of this community, and of his sterling worth as a man of personal honor and unimpeachable integrity; its proud recognition of all that he has achieved for Clarke City and its commercial and social welfare."

George Y. Chown

President of Wormwith Piano Company and Former Registrar of Queen's University

In the morning of March 2nd George Y. Chown, for many years a member of the Executive Council of the C.M.A., died at his home in Kingston, Ontario, after an illness of two years. Mr. Chown was sixty years of age, and was a son of the late Edwin Chown. After graduating in Arts at Queen's University in 1884, he entered his father's business, whole-

Every Reader of "Industrial Canada" should have this book!

IT explains how manufacturers and manufacturers' agents can save money by using Howell Service. It gives all the facts about Howell storage and distributing facilities. Shows you how to get rid of annoying detail work of shipping, distribution, freight, customs clearing and collection of damage claims. This new book "Storage and Distribution," is free. It is also both interesting and instructive, a beautiful, concise brochure such as you want to have. A copy will be mailed to every reader of "Industrial Canada" who writes or phones for it.

sale and retail hardware, later buying out his father's interest. He was secretary-treasurer and registrar of Queen's University for about twenty-two years, succeeding Rev. George Bell, D.D., as registrar in 1897. Two years ago he retired from the registrarship. He possessed administrative and financial ability of an exceedingly high order and was a pillar of strength to Queen's. Two years ago he endowed a chair in the university.

Mr. Chown was president of the Wormwith Piano Company, Kingston, and a member of the McCarthy Irwin Company, Montreal. He was financially interested in many business and financial institutions, and was uniformly successful.

Beginning as a member of the Board of Education, he was later chairman, and also president of the Ontario School Trustees' Association; alderman for Victoria Ward, and latterly one of the public utilities commissioners. Quite recently he presented to the city the handsome building at the corner of Brock and Bagot streets for use as a free public library. He was a member of the Frontenac Club, Kingston Health Association, the Canadian Club, the Kingston General Hospital Board, Board of Trade and Kingston Yacht Club.

Joseph Nelson Tallman

Death of the President of the Tallman Brass and Metal Company, Limited

Joseph Nelson Tallman, president of the Tallman Brass and Metal Company, Limited, Hamilton, died recently at St. Joseph's Hospital. Mr. Tallman had been ailing for some time past, but the news of his death will come as a shock to a wide circle of friends. He was born in Hamilton on North John Street 73 years ago and had been a resident there practically all his life. He was a member of the First Methodist Church and held the office of trustee and member of the quarterly board of the church for a number of years. He was one of the oldest members of the A.O.F. and Chosen Friends, but during the last few years did not take an active part in these organizations. In 1896 Mr. Tallman purchased the brass business on North Wellington Street from William Hunter and since that time has enlarged the plant, which is now situated at the corner of Sanford Avenue and Wilson Street.

In business circles Mr. Tallman was well known, and he took a very active and prominent part in the management of his firm until his last illness.

William Davies

A Pioneer of Canadian Industry Dies in His Ninetieth Year

A pioneer of Canadian industry, William Davies Company, Limited, died at his Toronto home on March 21st. He was in his ninetieth year, and his long life is a record of industry and perseverance.

Born in England in 1831, Mr. Davies came to Canada and started a small provision store in Toronto in 1854. The business developed and he began exporting dressed hogs to England. From this he branched into the export of bacon, which was the foundation of the William Davies Company's business. During his active business career Mr. Davis was instrumental in improving the standard of hog-breeding and gaining a high reputation for Canadian bacon in the English market. In 1891, when Sir Joseph Flavelle joined the firm, he withdrew from active connection with the company.

With the late Sir William Gage he took a keen interest in the affairs of the National Sanitarium Association and was

FILES

Made in Canada by

Nicholson File Company

Port Hope, Ontario

one of the principal donors to the Queen Mary Hospital for Consumptive Children. Many other causes—charitable, educational and religious, are also indebted to him for generous support. By his death Canada has lost a valuable citizen and Canadian industry has lost a man whose integrity and ability may well be remembered with pride.

Charles K. Hagedorn

President of Kitchener Buttons, Limited, and Kitchener Suspender Company, Limited

The death of Charles K. Hagedorn, president of Kitchener Buttons, Limited, and of the Kitchener Suspender Company, Limited, occurred suddenly on the afternoon of March 12th. Mr. Hagedorn had been seriously ill for about a year, but had recovered sufficiently to attend to his business affairs several hours daily.

The late Mr. Hagedorn was born in Waterloo County near Kitchener sixty-two years ago. After completing his education in 1877, he taught school until 1884, when he became a travelling salesman for button concerns, in which capacity he continued for five years. Mr. Hagedorn then commenced the manufacture of suspenders and buttons, his business becoming one of the most successful in the Dominion. He took a keen interest in municipal affairs, and was a member of the City Council for some years, and was the first chairman of the local Light Commission. He was president of the Board of Trade for two years, and has been an active member of the Kitchener and Waterloo Manufacturers Association.

Industrial Statistics

Lumber Industry

Total Production of Industry in 1919 Approaches One Hundred and Thirty Millions

The Dominion Bureau of Statistics has issued figures covering the operations of the lumber industry of Canada for 1919. 3,410 plants are included of which 1,419 are in Quebec, 852 in Ontario and 486 in Nova Scotia. The capital invested and other statistics are as follows:—

LUMBER INDUSTRY.

Capital invested	$231,203,247
Land, buildings, machinery, etc.	$109,299,935
Materials on hand, etc.	$66,845,034
Cash and accounts	$55,058,278
Employees (number)	73,480
Salaries and wages	$60,999,020
Fuel consumption (value)	$844,960
Miscellaneous expenses	$31,280,905
Raw materials (value)	$72,691,337
Logs for lumber	$64,800,352
Bolts for shingles	$3,480,943
Rough lumber	$2,081,601
All other materials	$2,328,441
Production (total value)	$222,648,790
Sawn lumber	$129,041,688
Shingles	$13,524,345
Lath	$2,157,758
Logs, timber, pulp wood	$77,924,999

Meat Industry

Operations of 82 Plants for Calendar Year, 1919, are Reviewed in Detail

Following are the statistics recently issued in connection with the operations of abattoirs and packing houses by the Dominion Bureau of Statistics. There are 82 plants included,

GASOLINE TANKS

COPPER-STEEL
WELDED
TESTED
HIGH-CLASS
TANKS

For Underground Storage of Gasoline
Any Fittings to Suit Supplied

A high quality tank steel welded throughout, making it practically a one-piece tank. Treated with an odorless, anti-rust oil, and then painted on the outside with anti-rust acid-proof black paint. They are practically rust and corrosion proof. We are tank builders. We make a specialty of tanks. Anything we turn out in this line you can depend on. They are made by expert workmen. We put our best efforts into tank building; it is our specialty. Our tanks are built to conform to the requirements of the National Board of Fire Underwriters. They are all tested before leaving our works under air pressure by a competent superintendent and then crated and shipped so they will reach you in good condition. We believe our prices will appeal to you as being very reasonable. Nothing but the best will do for handling gasoline. If not as represented when it reaches your station, fire it back at our expense. Can we do fairer? Any size made to your order.

Book Reviews

Improving Export Methods

Export Packing. A guide to the methods employed by successful shippers. By C. C. Martin, with chapters by M. C. Fitzgerald, D. T. Abercrombie and H. N. Knowlton. New York: *The American Exporter*, 370 Seventh Avenue. $10.00.

A great obstacle to the building-up of a successful export trade has for many years been found in faulty packing of goods for shipment. The present work is a constructive attempt to remedy this defect by supplying the knowledge and technique necessary to overcome it.

The book clearly explains the application of principles of economical and efficient packing to all classes of commodities, from fragile glassware to heavy machinery. In addition their successful application is graphically illustrated by more than 350 photographs, diagrams and drawings, showing the methods employed by the largest exporters in every line. Aside from its usefulness to exporters, this book contains much information applicable to the problems of domestic shippers, especially those who make use of coastwise lines.

The contents of the book are well arranged for constant reference. Chapters are devoted to the principles underlying the use of each type of container, such as cases, crates, bales, barrels, bundles, cartons, tins, etc., and these are illustrated by reproductions of specifications and mechanical drawings as well as by half-tone engravings. Other chapters are devoted to the packing methods employed in shipping all classes of goods overseas. Automobiles, machinery, agricultural machinery, textiles, hardware and tools, glass and fragile goods, furniture and office supplies, bulky cargo and miscellaneous commodities are each fully treated in separate chapters.

Regulations of foreign customs houses are given and questions, such as packing to avoid damage in tropical climates and packing for other special requirements, are fully considered. The author has enlisted the collaboration of authorities on export packing and some of these have written chapters on special subjects.

Fire Prevention Booklets

Lightning, its Origin and Control, by George F. Lewis, and the *Second Annual Report of the Ontario Fire Prevention League, Inc.* Toronto: The King's Printer.

The first of these booklets is a reprint of an address delivered by George F. Lewis, Deputy Fire Marshal of Ontario, before the fifteenth annual convention of the Fire Marshals' Association of America, held in New York City last December. Mr. Lewis is a strong advocate of the lightning-rod as a safeguard for buildings. During the year 1919, in the Province of Ontario, there was a total loss from lightning fires of $506,907. This loss Mr. Lewis designates unnecessary waste, since good lightning-rods, properly installed, are more than 99 per cent. efficient. While the loss for each fire caused by lightning in 1919 averaged $714, the total loss on two protected buildings that were struck amounted to $22. The author advocates Government inspection of lightning-rod installations, and a suitable discount in insurance rates for buildings properly protected.

The second publication is a full report of the proceedings at the Ontario Fire Prevention League's annual convention, held in Toronto on October 5th, 1920. While the fire loss in Ontario is still high, amounting to $10,514,232 for the year 1919, it is gratifying to note that these figures show a reduction of 33 per cent. from the loss for 1918. In Canada as a whole the reduction was 23 per cent., while the reduction for the entire continent was approximately 15 per cent., a comparison that puts the work of Canadian fire prevention societies in a very creditable position.

Some valuable papers on various aspects of fire prevention work were read before the convention, and they are

included in the booklet. A particularly illuminating report, showing what personal effort can accomplish, was given by Mr. Duncan, fire prevention officer of the Township of Barton. In 1913 he and a few other men started an association. With little money, as the work was purely voluntary, but with plenty of persistence, they worked at cleaning up possible sources of danger, so that in the year previous to the convention the total fire loss for the township was only $210.

Production and Trade

Canadian Goods and the World Market. Toronto: The Canadian Bank of Commerce.

A statement of the industrial situation in Canada from the standpoint of production and trade is presented in this booklet, which is published chiefly for the information of importers of Canadian goods and of capitalists seeking a profitable field for investment. The arrangement of the information is by provinces. For each one a brief summary is given showing the extent of its natural resources and manufactured products and the relative importance of its native industries. With the summary of each province a list of business opportunities has been included, suggesting to the prospective investor the lines upon which natural resources should logically be developed.

Five statistical tables supply details of import and export trade with the principal countries of the world and comparative values of Canadian products for the past two decades. The concise form in which imports and exports for the fiscal year ended March, 1920, are presented is particularly convenient for reference.

Progress of Works Councils

Joint Councils in Industry. Bulletin No. 1. Industrial Relation Series. Department of Labor, Ottawa.

This pamphlet of 24 pages has been published by the Department of Labor with a view to giving employers and employees information on the principles and practices governing industrial councils and works committee. It deals with developments along these lines in Canada, Great Britain, the United States and continental Europe, and condenses a great deal of useful information into small space. Thus in Canada we are told that in July, 1920, the number of employees coming within the scope of joint councils and committees was 145,000. The basis of representation on these councils, the meetings, committees and procedure, the matters dealt with and the results are all summarized, while more specific information is given about individual instances. A useful list of reference works is appended.

The Phosphate Industry

Phosphate in Canada. By Hugh S. Spence, M.E., Ottawa. Mines Branch, Department of Mines.

A comprehensive review of the phosphate industry in its many branches, as carried on in Canada, is presented in this publication of the Department of Mines. The year 1870 is mentioned as the beginning of phosphate mining in Canada, when there was a recorded output of 1,200 tons valued at the mine at $13,600. This was produced from two mines in Lanark County, Ontario, and part was shipped to Great Britain and part consumed in the manufacture of superphosphate in the works of the Brockville Chemical Company. Between 1875 and 1880 a number of mines were discovered in Quebec and later the "phosphate boom" started, and lasted

till increased production in the Southern States brought about a serious decline in prices.

Among early manufacturers of phosphorus products are mentioned the Brockville Chemical and Superphosphate Company, established at Brockville in 1869; the Standard Fertilizer and Chemical Company, who started a small plant in Smith's Falls, Ontario, in 1887; and G. H. Nichols and Company, who in 1889 commenced the manufacture of superphosphate at Capelton, Quebec. There are now many firms engaged in the manufacture of commercial fertilizers, but the mining of apatite has declined as the raw mineral is principally imported from the United States.

Included in the book are descriptions of the forty-seven minerals found in Canadian mica-apatite deposits and several maps showing their principal occurrences. The appendix contains a number of photographs illustrating the subjects treated in the work.

Statistics of Labor

Wages and Hours of Labor in Canada, 1901-1920, Ottawa, March, 1921, Department of Labor.

This bulletin, issued as a supplement to the *Labor Gazette*, contains a series of tables showing the changes which have taken place in rates of wages and hours of labor for various classes of employment between the dates mentioned. Thirteen Canadian cities have been used as a basis of calculation and enough classes of employees in each of the trades covered have been listed to give a fair and complete survey of the general situation.

In order to show the general trend of the movement in wages index numbers have been calculated both from hourly and weekly rates, and these have been averaged by groups for all the localities so as to show the percentage of change in weekly and hourly rates for each group. The hourly rate for common labor in factories increased from 94.9 in 1911 to 215.3 in 1920, the weekly rate for the same period increasing from 99.8 to 198.3. Expressed in money, this represents at Toronto an increase from $11 to $27.75 per week and from 18 to 39 cents per hour; at Halifax, from $8 to $19 per week and at Victoria from 17 to 45 cents per hour. The information on which the tables are based has in general been obtained by Departmental officers and correspondents and from copies of agreements and returns from trade union officials and employers.

Facts About Canada

A New Edition of a Handy Booklet of Reference is Published

The 1921 edition of "5,000 Facts About Canada," compiled by Frank Yeigh, has just been issued by the Canadian Facts Publishing Company, Toronto. It brings up to date the record of Canada's expansion in industry, agriculture, mining and the many other lines which go to make up our national wealth.

The facts are grouped by cities and provinces, and under general heads, such as electrical development, financial and banking, etc. Mr. Yeigh has done his work well, and has contrived to compress a remarkable amount of useful information into the limits of his little book.

Personals

Gordon Foxbar Perry

President of Newly Formed Canadian Branch of the English Electric Company

Gordon Foxbar Perry, president and general manager of the National Iron Corporation, Limited, Toronto, has been elected president and chairman of the board of directors of the English Electric Company, Limited, a Canadian company incorporated with a Dominion charter to handle the business in this country of the English Electric Company, Limited, of London, England. Mr. Perry was born on November 28, 1883, in Dundas, Ont., and was educated in Toronto. After serving four years' apprenticeship in the foundry and machine shop of the Canada Foundry Company, Limited, now Canadian Allis-Chalmers, Limited, Toronto, Mr. Perry became a salesman for that firm in 1904, and two years later he was promoted to be Ontario sales manager. In 1910 Mr. Perry resigned this position to become general manager of the newly incorporated National Iron Works, Limited, which subsequently became the National Iron Corporation, Limited. Working jointly with the late Cawthra Mulock, Mr. Perry successfully established the modern foundry in the Eastern Harbor Terminal District, Toronto, for the manufacture of cast-iron water and gas pipe, and upon Mr. Mulock's death he succeeded to the presidency of the company. Mr. Perry is vice-president of the National Steamship Company, vice-president, Eastern Construction Company; director, O'Keefe Brewing Company; vice-president of the newly incorporated Drifting Sand Filter Company, Limited, and a director of several other companies.

Mr. Perry is also director of the International De Lavaud Manufacturing Corporation, a company that has been organized to control the patents for the De Lavaud process for casting iron pipe by centrifugal force. He has been in England for the past three months in connection with the organization of the Canadian subsidiary for the English Electric Company, and on business in connection with the European patents for the De Lavaud process.

C. W. Northcott

Promoted from Regina Branch of Goold, Shapley & Muir Company to General Sales Manager

The Goold, Shapley & Muir Company, Limited, Brantford, Ont., announce that C. W. Northcott, manager of the Regina branch of the company, has been promoted to the position of general sales manager. Mr. Northcott left Regina on March 5th, and is now resident in Brantford. In his new post he will have supervision over all sales, both east and west, and jurisdiction over Western Canada. As general sales manager he will make frequent trips over the western territory in connection with business in the western field.

J. E. Davies

Succeeds C. A. Magrath as President of Lethbridge Iron Works

J. E. Davies, president of the Alberta Foundry and Machine Company, Limited, Medicine Hat, has been appointed president of the Lethbridge Iron Works Company, Limited, succeeding C. A. Magrath. Mr. Magrath will continue with the firm as vice-president. V. W. Parrish, who is secretary of the Alberta Foundry and Machine Company, is the new secretary-treasurer of the Lethbridge Iron Works Company.

Directors Are Appointed

Colonel J. A. Currie is President of Imperial Steel and Wire Company, Limited

The adjourned annual meeting of the Imperial Steel and Wire Company was held in Collingwood on March 14th, when the following directors were appointed: Colonel J. A. Currie, M.P.; G. A. Royal, G. I. Evans, Dr. Donald McKay, C. I. Currie, J. H. Harrison and H. W. Currie. Colonel Currie announced in his annual report that the new works, which were up to date in every respect, would be completed and ready for work by the end of April, but that at present business was quiet in all lines. At a subsequent meeting of the directors Colonel J. A. Currie was re-elected president and G. A. Royal secretary-treasurer of the company.

Officers Re-elected

Howard Smith Paper Mills, Limited, Hold Annual Meeting

Officers and directors were re-elected for the ensuing year at the annual meeting of the Howard Smith Paper Mills, held in Montreal on March 14th: C. Howard Smith, president; James W. Pyke and J. Alex. Cameron, vice-presidents; J. J. M. Pangman, D.W. Campbell, W. D. Robb, T. P. Howard and Howard Murray, O.B.E., with Harold Crabtree, secretary-treasurer.

Changes in Board

Norman J. Dawes is Elected to the Presidency of the National Breweries, Limited

Norman J. Dawes, of Montreal, was elected to the presidency of National Breweries, Limited, at their annual meeting on March 16th, succeeding the late Andrew J. Dawes. Two other vacancies on the board were created during the year by the retirement of the vice-president, H. A. Ekers, and A. J. Grubert. The three new directors elected were Kenneth A. Dawes, W. O. H. Dodds, and J. D. Hudson, comptroller and secretary of the company. Vesey Boswell and Thos. Cushing were elected first and second vice-presidents respectively.

Printing Trades Exhibition

Will be Held in Royal Agricultural Hall, Islington, During May

In the Royal Agricultural Hall, Islington, London, there will be held from April 30th to May 14th, inclusive, the sixth international exhibition of printing, paper, and other allied trades. A number of new processes will be shown, and a betterment of production is the principal object of the whole exhibition.

"No ex-enemy goods" is the password for 1921, but all allied nations are invited to display their exhibits of printing and engraving machinery, etc. Intending exhibitors may obtain particulars from the Organizing Manager, Exhibition Offices, 36-38 Whitefriars St., London, E.C. 4.

A handsome, substantially-bound new catalogue, profusely illustrated and containing a most comprehensive summary of Diamond Fibre and its different uses, has just been issued by the Diamond State Fibre Company of Canada, Limited.

W. E. Finnegan has resigned from the position of general sales manager of the Gray-Dort Motors, Limited, Chatham, Ontario, and has been appointed general director of sales of the Ruggles Motor Truck Company, Limited, London, Ontario.

The Pulse of Business in Canada

Building Conditions

Large Increase in Value of Contracts Awarded During February

Building and engineering operations in Canada took a splendid spurt during February, when contracts to a value of $17,641,000 were awarded, being an increase of $8,693,500 over January, and a decrease of only $696,100 from February, 1920. These figures, compiled by MacLean Building Reports, Limited, represent the value of 734 different projects compared with 438 separate contracts awarded in January. The February figures in detail are as follows:

	No.	Value.
RESIDENCES		
Frame	124	$414,500
Brick	420	2,571,500
BUSINESS BUILDINGS		
Frame	35	202,400
Brick	96	10,609,200
Concrete	1	3,000
INDUSTRIAL BUILDINGS		
Frame	2	79,000
Brick	27	1,113,000
ENGINEERING CONSTRUCTION		
Steel Bridges	3	133,500
Concrete Bridges	1	17,500
General Engineering	25	2,497,400
Total for Dominion	734	$17,641,000

Trade Returns

Imports and Exports for February Show a Considerable Decrease

Imports and exports during the month of February were considerably lower than those for the corresponding period in 1920, according to the summary issued by the Department of Customs. In the imports the decrease is greater with free products than with dutiable ones, a decline of almost eleven millions being shown by the former, as compared with about five millions by the latter. Following are the statistics of February trade:—

Imports Entered for Home Consumption.

Month of February.

	1920.		1921.	
	Free.	Dutiable.	Free.	Dutiable.
Agricultural and vegetable products, mainly foods	$3,379,859	$8,980,019	$1,948,755	$8,715,173
Agricultural and vegetable products, other than foods	5,049,257	3,588,446	2,210,303	6,771,436
Animals and animal products	2,567,072	4,018,701	880,915	2,813,373
Fibres, textiles and textile products	7,929,670	15,850,109	2,262,066	7,915,852
Chemicals and chemical products	985,438	1,437,882	891,470	1,009,354
Iron and steel and manufactures thereof	1,792,151	12,184,566	2,175,389	11,610,505
Ores, metals and metal manufactures, other than iron and steel	1,850,254	2,472,563	681,143	2,003,785
Non-metallic minerals and products	4,364,694	4,110,013	5,498,131	7,597,627
Wood, wood products, paper and manufactures	1,218,930	1,833,131	1,202,870	1,964,713
Miscellaneous	1,185,553	2,698,548	1,831,443	1,986,204
Total	$30,322,878	$57,173,978	$19,582,485	$52,388,022
Duty collected		$14,966,558		$10,285,460

Recent Trade Inquiries

A List of Inquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

FOREIGN.

670. A firm in Trinidad wishes to obtain the representation of several Canadian manufacturers. They forward bankers' references.

671. Food Products and Other Goods: General commission agent and manufacturers' representative, with office in New Amsterdam, Berbice, etc., desires to represent Canadian manufacturers and exporters in British Guiana. Is particularly interested in foodstuffs, but is open to consider representation for any other Canadian goods. Bank reference.

672. Canoes: Secretaries of various Belgian aquatic clubs desire to receive catalogues and prices of Canadian canoes delivered in Antwerp.

679. Canoe Motors and Outboard Motors: Belgian aquatic club desire to receive full particulars and prices of Canadian canoe motors and outboard motors.

674. Sporting Guns and Ammunition: President of Belgian gun club desires to receive Canadian catalogues and prices of firearms and ammunition.

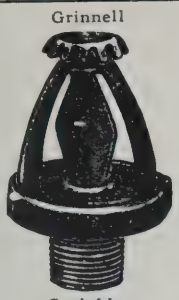
675. Mica and Asbestos: Dutchman in Belgium desires to receive quotations from Canadian manufacturers of mica and asbestos.

676. Flake Graphite: One of the largest and most influential British concerns in Japan are in the market for large quantities of flake graphite, 82 to 98 per cent. carbon, and would be glad to have fair average samples of Canadian graphite, together with best prices c.i.f. Kobe, and all other information in connection with shipment of same.

677. Small Gramophone Records: An important Japanese importer is in the market for 50,000 phonograph records of approximately 7-inch diameter, which retail in the neighborhood of 10 cents or 15 cents in Canada, and samples and prices are requested at once.

678. Lumber: Lumber company, United States, are in the market for the following: 4,000 feet 5/4 1st and 2nd unselected birch, 8,000 feet 4/4 1st and 2nd unselected birch. 1,000 feet 5/4 1st and 2nd red beech, 3,000 feet 4/4 red beech. Balance car 8/4 shop or shop and better white pine or can leave off the beech or white pine and increase the birch. Quotation is required for delivery at Pittsburg, and full description must be given as to widths, lengths, and material. The company also wish particulars of any other stock available for disposal, especially as regards white pine, hemlock, hardwoods and lath.

679. Pulpstones and Grinding Pulp for Paper Making: A British firm of good standing desire to be put in touch with a reliable Canadian manufacturer of the above. Samples of the stone, also prices c.i.f. Yokohama on sizes as specified below are requested: size 54 inches diameter by 27 inches wide, centre hole 10 inches; size 54 inches diameter by 27 inches wide, centre hole 7 inches. Quality No. 1. Must be well packed to prevent breakage; lagging and battens to be at least ⅞ inch or 1 inch thick; side battens to be at least 1½ inch or 2 inches; all well hooped with iron bands to prevent breakage.



680. Agents: Vancouver firm of importers and exporters, with branches throughout Canada and Europe, desire additional agencies from manufacturers the world over. Their experience covers all Europe and North America, and firms of good standing can be assured of live representation in Western Canada. Inquiries are invited for all British Columbia products and manufactures. The company are well represented in foreign countries by agents, and Canadian manufacturers desirous of developing business abroad are particularly requested to communicate.

681. Agency: Recently organized Canadian firm of export and import merchants would like to get in touch with Canadian firms looking for representation in Great Britain and the West Indies.

SHIPPING OR TRAFFIC DEPARTMENT HEAD

Have had ten years' experience on railroad as clerk, operator, agent and relief agent. Three years overseas as lieutenant of Engineers, C.E.F., a good grounding in business office work and thorough grounding in handling claims. At present employed by Canadian National Railways in travelling position. Desire settled position as traffic man for industrial concern. Best references. Apply Box 210, INDUSTRIAL CANADA.

The Canadian Engineering Standards Association have issued their second publication which deals with standard requirements for single-phase distribution transformers. The booklet is the first report of the C.E.S.A. sub-committee on transformers and is intended to secure uniformity in Canadian practice regarding standard sizes, polarity, number and percentage of taps, etc.

Important New Service

Tri-monthly Service Between Three Rivers, Quebec, New York and Baltimore

In its issue of March 7, the *Quebec Chronicle* announces that a movement is on foot to establish a freight service between the St. Lawrence and Chesapeake Bay. To quote *The Chronicle*:—

"A prominent transportation man was in Quebec recently looking over conditions and, if the lumber and general business picks up, it is practically decided that a tri-monthly service will be established between Three Rivers, Quebec, New York and Baltimore. Two new 5,000 tons steel steamers have been acquired by the company, who are planning this route and they are ready to put them into service, if given any reasonable encouragement, such as should undoubtedly be forthcoming.

"Railway rates are so high that they are seriously interfering with the movement of raw materials and many commodities, so it is evident that water routes must again be brought into use. The revenue of the Canadian railways will not be affected by the proposed service, so it is expected they will co-operate with a view of giving Canadian shippers an opportunity to resume exporting into the United States, thereby restoring commercial activity, the balance of trade and parity of exchange"

On investigation, it is found that these ships are controlled by New York interests identified with the pulp and paper industry and that Mr. Guy Tombs of the Canadian Export Paper Co., Montreal, has been asked what tonnage would be available from Canada.

New Passenger Service

Canadian Government Merchant Marine Steamers Sail Between Halifax and West Indies

A new passenger service was inaugurated by the Canadian Government Merchant Marine, Limited, on January 25th, when their steamer *Canadian Fisher* left Halifax bound for Nassau, Kingston, and Belize. The service provides for a sailing from Halifax to the West Indies every three weeks.

The two ships that will perform this service are the *Canadian Fisher* and the *Canadian Forester*, built by the Tidewater Shipbuilding Company, Limited, of Three Rivers, Quebec, and completed at the Halifax Shipyards under the direction of the Tidewater Company's officials. They each have accommodation for twenty-eight passengers, in ten staterooms and two suites. The *Canadian Fisher* is commanded by Captain John T. Randell, D.S.C., who was formerly in command of the *Canadian Miller*.

Changes in Sailings

Some Readjustments are Made in Spring List by Canadian Pacific Ocean Services

Owing to the withdrawal of the *Grampian*, which was damaged by fire in drydock at Antwerp, several changes in sailing dates have been made by Canadian Pacific Ocean Services, Limited. The *Scotian*, which was scheduled to leave London, May 3rd, for Montreal via Havre and Southampton, and from Montreal, May 21st, will now sail from Antwerp, May 31st, and from Montreal, June 18th. The *Scotian*, which is now in drydock in Antwerp, will thereafter maintain the *Grampian* dates for the balance of the season. The *Sicilian* will sail from Montreal on May 7th for Antwerp via South-

CHATEAU FRONTENAC · QUEBEC

ON the cliffs of old French Quebec, on the site where the Comte de Frontenac built his Chateau St. Louis in the name of his King, is one of the most individual and beautiful hotels of the world—THE CHATEAU FRONTENAC. Like a king's castle, impressive, dominating, it stands dispensing a royal hospitality, a friendly ease and welcome.

Below flows the St. Lawrence; the Laurentian Mountains stretch to the horizon. An old-world atmosphere surrounds it, as in Normandy, with a glamour of history and romance. Old battlefields, shrines and places of natural beauty are near by—Ste. Anne de Beaupre, Montmorency Falls, the Plains of Abraham; while beneath its windows, along Dufferin Terrace, Quebec's promenade, passes its international life.

The Chateau Frontenac is Quebec's social centre — with music, dancing, life and color, and has the perfect, luxurious appointments, the comforts and the individual service, of the chain of CANADIAN PACIFIC hotels of which it is one.

QUEBEC is most easily and conveniently reached from any part of Canada by Canadian Pacific. Frequent day and night trains from both Windsor Street and Place Viger Stations, Montreal.

Bureau of Canadian Information

THE CANADIAN PACIFIC RAILWAY, through its Bureau of Canadian Information, will furnish you with the latest reliable information on every phase of industrial and agricultural development in Canada. In the Reference Libraries maintained at Chicago, New York and Montreal are complete data on natural resources, climate, labor, transportation, business openings, etc., in Canada. Additional data is constantly being added.

No charge or obligation attaches to this service. Business organizations are invited to make use of it.

CANADIAN PACIFIC RAILWAY
Department of Colonization and Development

165 E. Ontario St. Chicago | 335 Windsor Station Montreal | 1270 Broadway New York

ampton, instead of to Glasgow, and the *Pretorian* will leave Montreal for Glasgow, May 7th, instead of the 8th. The *Corsican* when she leaves Montreal, June 30th, will sail to Glasgow instead of to Antwerp and will return from Glasgow, July 23rd.

Freight sailings arranged at the present time are the *Bolingbroke* from St. John to Avonmouth and Glasgow, April 15th; the *Bosworth* from Montreal to London, May 6th, and the *Bothwell*, Montreal to London and Antwerp, May 14th. In addition to which there is the regular service of passenger and freight steamers to Liverpool, Glasgow, Southampton, London, Havre and Antwerp.

EXPORT

A market for goods abroad is a safeguard of no mean order to the manufacturer in Canada and some of the largest and most progressive firms in the Dominion are realizing to-day on their foresight by marketing the products of their factories in foreign lands.

Canada is by nature a world-trader. We have raw materials in variety and abundance that the world outside requires, and we have the intelligence and the ability to work those basic materials into finished products for the peoples of other countries. Again, there are some things we cannot produce here and which must come from other peoples, hence we can hardly avoid trading to, and in, the principal ports of the seas of the world.

By the "NATIONAL" Ships

The facilities for marketing are ready for your use; and so, likewise are the facilities to bring the native raw materials to your factories. The rails of Canadian National Railways, traversing the nine provinces of the Dominion and reaching direct all of the ocean ports furnish the domestic service. The ships of the Canadian Government Merchant Marine radiate from the ports on both coasts to Britain, the West Indies, South America, Australasia, the Orient, the Far East, and to the Mediterranean cities. They will take care, adequately, of your business abroad.

TRAVEL AND SHIP "NATIONAL"

The Importance of Paper

Story by Secretary of Canadian Pulp and Paper Association is Published

A short story, entitled "The Gray Terror," by Arthur L. Dawe, secretary of the Canadian Pulp and Paper Association, has just been published in booklet form. It brings out the importance of paper to the world by picturing the confusion and chaos that would follow a total destruction of that material.

The hero dreams that a poisonous gas has permeated the atmosphere, and is reducing every piece of paper to a fine, gray dust. Banks are closed, as bills, cheques and ledgers are disintegrated. Business is at a standstill, street cars, telegraphs and telephones have ceased to operate, as the destruction of paper used in insulating material has short-circuited everything. The climax is reached when the hero returns home and finds pictures and books destroyed. Just as the paper on the ceiling goes, and the cracked plaster under it begins to fall, he awakes with a greater respect for the humble but indispensable commodity.

A New Machine

Horizontal Band Resaw Made by E. Long Manufacturing Company, Limited, Orillia

A new piece of sawmill machinery, a horizontal band resaw, has been added to the products of the E. Long Manufacturing Company, Limited, Orillia. The purpose of this machine is to cut half logs, or heavy slabs, into lumber of any thickness desired, and by its use lumber of great accuracy can be produced by unskilled labor; but the greatest saving to the mill owner is in the very thin saw used, which means that only half as much of the log is wasted in sawdust as when an ordinary circular saw is used.

This machine was designed entirely by the E. Long Manufacturing Company's engineering staff, and is somewhat different from any other machine now put on the market for the same purpose either in Canada or the United States. This particular machine is a heavy model, weighing about nine tons, and before being put on the market it was put through very exhaustive tests in the company's plant, covering a period of about eight weeks. Cutting on frozen timber it produced lumber of absolute accuracy, and the manner in which the machine stood up under the various tests to which it was subjected is a tribute to its good design and a credit to the company's engineers.

New Locker Building

Laurentide Company's Golf Club to Have Larger Accommodation This Year

A new locker building is planned for the golf club run at Grand' Mère, Quebec, for the employees of the Laurentide Company, Limited. Work will be started on it as soon as the weather breaks and it is expected that it will be completed by the first of June.

The building is to be constructed of slab logs with shingled gabled ends and roof. There will be a locker room, shower baths and a small room for the caretaker on the ground floor. There will be 150 lockers, enough for each member of the club to have one to himself. On the second floor a dormitory for members of visiting golf clubs will accommodate from twelve to fifteen cots.

The Douglas Fir Turpentine Company of Vancouver have for some time been engaged in experimental work on the extraction of turpentine from the Douglas fir. Their experiments are now practically completed and operations are expected to commence as soon as details of capitalization have been arranged.

We are builders of railway vehicles to suit every requirement of passenger, freight and general service on steam and electric lines either to the purchaser's or, if required, to our own designs and specifications for home or export orders.

Among our many other products are the following:---

STEEL
CASTINGS
ROLLED BARS
PRESSED WORK
COUPLERS
SPRINGS
BOLSTERS
BRAKE-BEAMS
DRAFT-ARMS
RAILWAY TRACKWORK
ROLLING MILL ROLLS
ETC.

IRON
MALLEABLE CASTINGS
ROLLED BARS
CHILLED WHEELS
DROP FORGINGS
ROLLER SIDE BEARINGS
ETC.

If not mentioned here, it is probably an "Etc."

FERRO-ALLOYS
CASTINGS
CRUSHER JAWS
DIPPER TEETH
BUCKET LIPS
PINS AND BUSHES
CRANK SHAFTS
CRANK PINS
ROLL SHELLS
SPECIAL TRACKWORK
ROLLING MILL ROLLS
ETC.

Our plants are thoroughly equipped for large and efficient production, and we invite correspondence from those interested.

White Walls — More Light — and Greater Efficiency

"Save the surface and you save all" *Paint & Varnish*

Increase the lighting efficiency of your factory by painting walls and ceilings with

Maple Leaf Mill Whites

Good white paint has a light reflecting power which more than doubles the light in a factory.

According to careful experiments an average of 60% increase in illumination has been attained through the use of well selected Mill White Paint.

Put Your Trucks on the Ceiling

Gray-Dort Motors' paint shop. On the right is "OveR-Way" carrier loaded with automobile hoods. Two loaded cars, each weighing 1,200 pounds, are moved easily into the oven by two men, who handle metal for thirty cars a day. It required six men before. Richards-Wilcox engineers can give advice on the type of carrier system to meet your needs.

An "OveR-Way" carrier run into the electric oven. The load weighs 1,200 pounds. The Superintendent says, "It doubled the output of our enamelling ovens." Richards-Wilcox trolley track systems and I-beam systems will handle loads from 500 to 8,000 pounds.

Cutting the Cost of Japanning and Doubling the Output

Gray-Dort Motors, Ltd., Chatham, installed "OveR-Way."

In the paint shop it facilitates handling of fenders, hoods and castings from the paint tanks to the ovens.

The Superintendent of the Gray-Dort plant says of

OVER-WAY

"This equipment has proved entirely satisfactory and since installing it we have doubled the output of our enamelling ovens. . . . . The type of trolleys and track makes it possible to load the conveyor cars to full capacity and push them in and out of the ovens readily."

Isn't there a place in your plant where an "OveR-Way" would save you a lot of money?

Fairbanks Auto Truck and Dial Scales Stand Strains of Heavy Service

The extensive use of motor trucks has pointed out the need for scales of the required capacity and reliability to stand more strenuous service than the ordinary wagon scale. Fairbanks Auto Truck Scales successfully meet the needs of this service. Their design takes care of the shock of starting and stopping the truck and the consequent strain on the mechanism, as well as the fact that since most trucks carry approximately 85% of the total load on the rear axle, this load is concentrated on one end of the scale.

Fairbanks Dial Scales are the most highly developed machines of their type for quick weighing. The dial indicates the gross or net weight at a glance so that there are no loose weights. The unique principle of obtaining full capacity on the dial enables the scale to be made any desired capacity.

Massey-Harris

An Engine You Can Depend On

The Massey-Harris Engine can be depended on to give all the year 'round service in any kind of weather at minimum cost, because it's designed on scientific principles and every part built to stand up and wear long.

Think what these features mean:

Simple in operation.

A Simple and Efficient Carburetor gives a perfect mixture in any kind of weather.

Effective Governor—No charge or spark on Idle Stroke.

Valves Easily Removable.

Large Water Space surrounding Cylinder.

Safe Gasoline Storage in the substantial Cast-Iron Base.

Write for more detailed description of the Massey-Harris Gasoline Engine.

Made in Sizes to deliver from 2 to 15 H.P.

AGENCIES EVERYWHERE

What Would This Cost You?

If one of your workmen had his fingers crushed in an open gear it would mean:

Disorganization of the department.

Loss of time of other employees at the time of the accident.

Lower efficiency for several days of those who saw the accident.

Cost of training another man to take the place of the injured employee.

Figure in dollars and cents what that would cost you.

For a small portion of that cost you can install a Meadows Wire Guard which will prevent any such loss.

Let us tell you more about it. Tell us the machines needing this protection and we'll tell you what the equipment will cost.

GEO. B. MEADOWS LIMITED

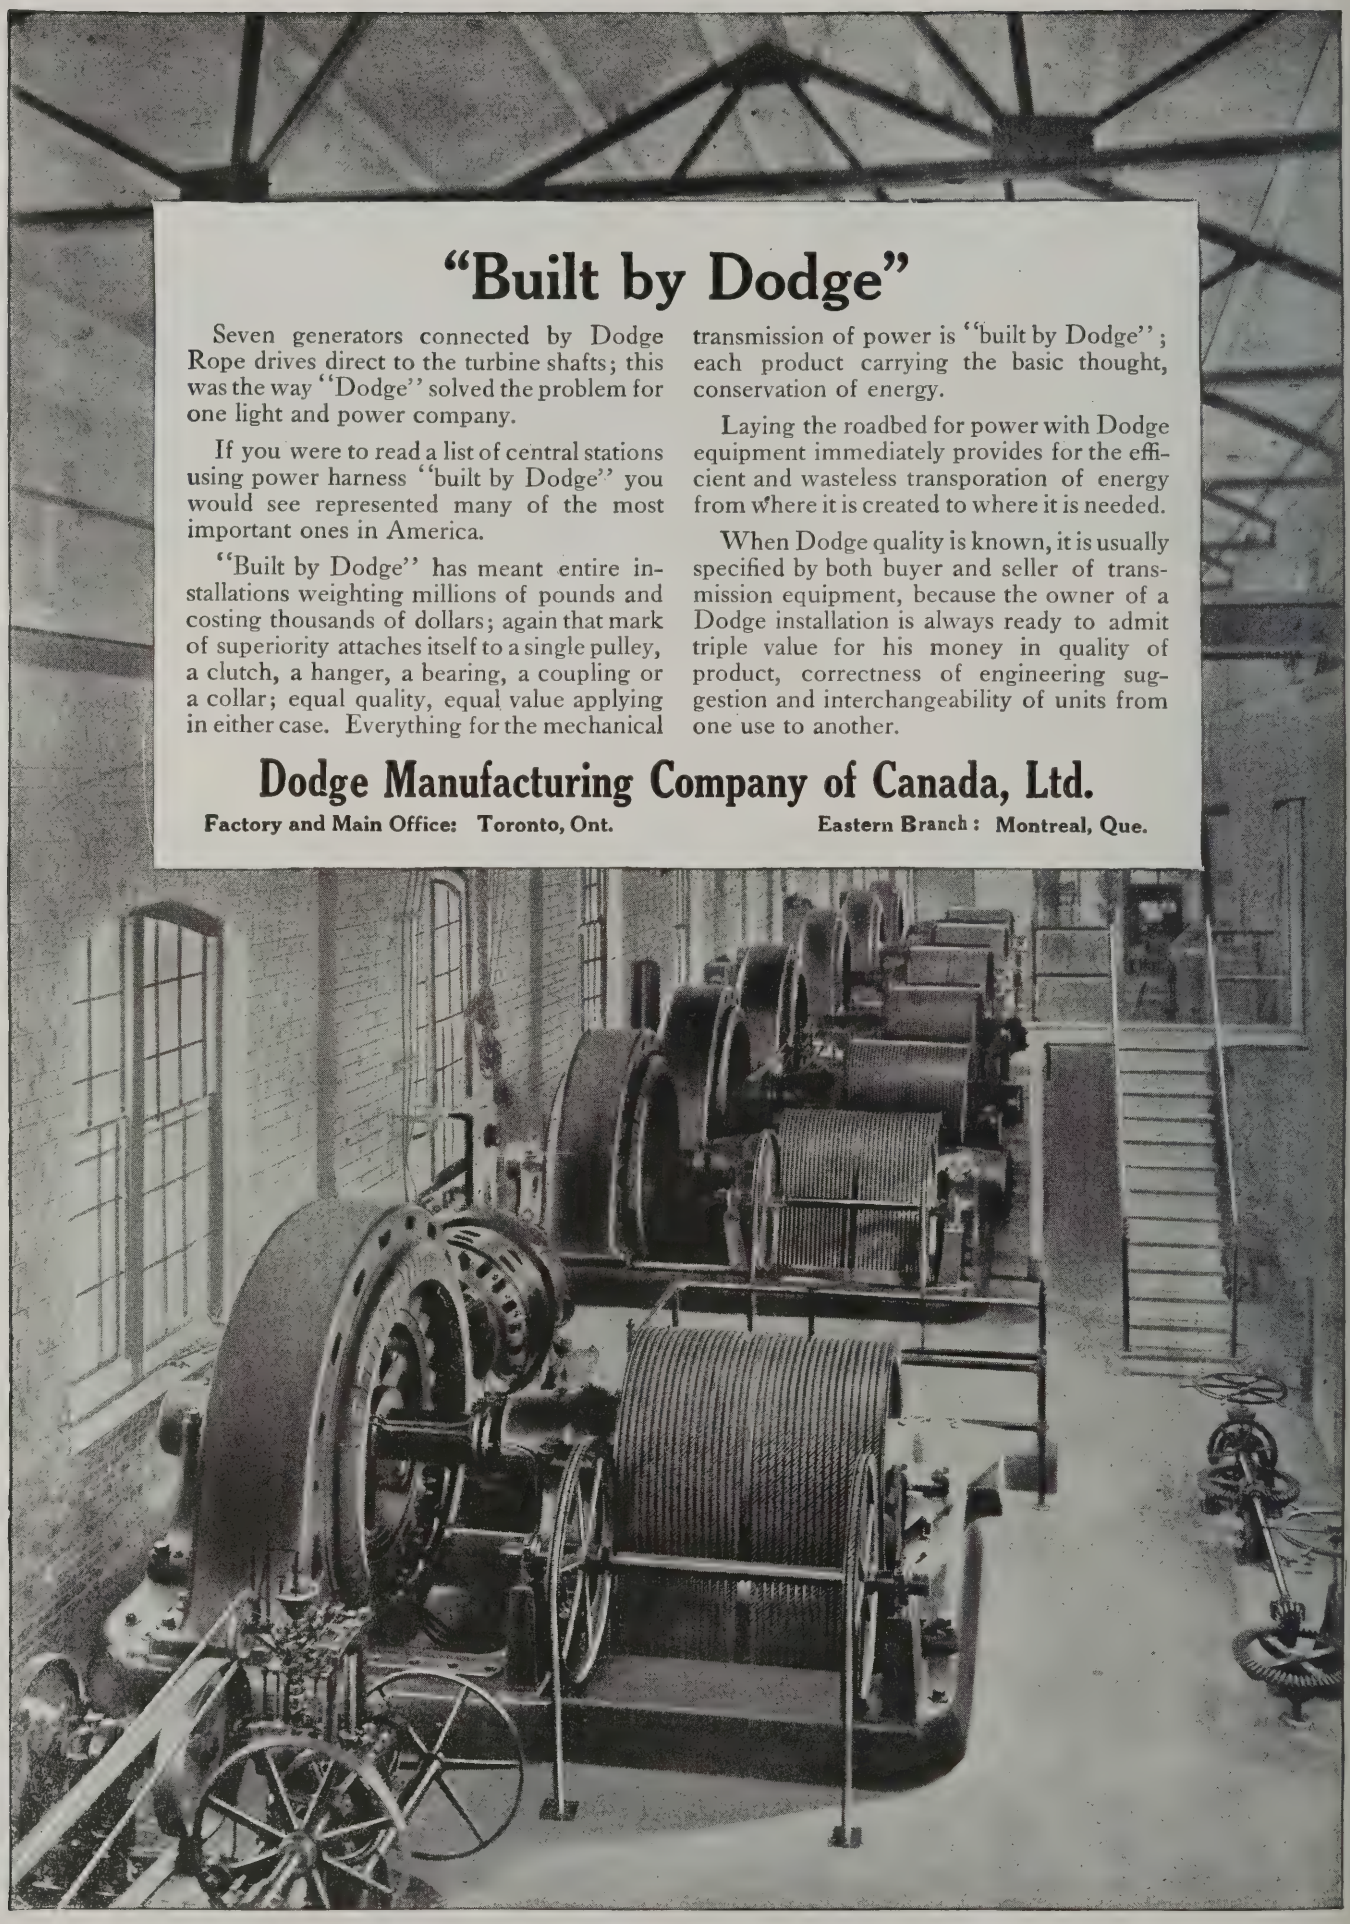
"Built by Dodge"

Seven generators connected by Dodge Rope drives direct to the turbine shafts; this was the way "Dodge" solved the problem for one light and power company.

If you were to read a list of central stations using power harness "built by Dodge" you would see represented many of the most important ones in America.



"Built by Dodge" has meant entire installations weighting millions of pounds and costing thousands of dollars; again that mark of superiority attaches itself to a single pulley, a clutch, a hanger, a bearing, a coupling or a collar; equal quality, equal value applying in either case. Everything for the mechanical transmission of power is "built by Dodge"; each product carrying the basic thought, conservation of energy.

Laying the roadbed for power with Dodge equipment immediately provides for the efficient and wasteless transporation of energy from where it is created to where it is needed.

When Dodge quality is known, it is usually specified by both buyer and seller of transmission equipment, because the owner of a Dodge installation is always ready to admit triple value for his money in quality of product, correctness of engineering suggestion and interchangeability of units from one use to another.

Cause and Effect

The attitude of workers is a disappointment to many employers, to whom it seems surprising that even the best efforts of management are misunderstood in the shop. Until this attitude is changed, it is impossible to obtain the co-operation which is so vital.

Basically, it is not what the employer thinks the workers should think, but what they actually do think which counts. To their eyes the employer often stands in the wrong light. Their attitude follows the fundamental law, industrially, of cause and effect. The chasm of ill will is there — wide and deep between employer and employee — etched by the acid of misunderstanding. Relatively few employers have taken effective steps to convert the ill will of their workers.

The Sherman Organization
— Foremost in Industrial Co-ordination —

with its unique means of reaching the minds and hearts of workers, corrects misunderstanding, dispels suspicion, and places employees and employer on the sound basis of confidence and co-operation, where each side sees the other in the true light of mutual dependence and support. This basis insures harmony, loyalty, and improved production to a degree which our clients find highly satisfactory — the direct result of transforming ill will into good will.

Let us Demonstrate Our Ability to Create Good Will in Your Plant

We are prepared to satisfy you that our service affords a practical means of establishing the spirit of good will, which is the vital need of industry, especially under present conditions. Ask our nearest office to send a representative to confer with you. No obligation.

TYPE C-4

THE MASTER MOULDER

Will help increase the production of your Plant. How?

Quick.—Will run mouldings up to 100 feet per minute.

Accessible.—Entirely "open side" from end to end—set ups quickly and easily made. Gear guards and hoods easily removable. Control devices at operators' finger tips.

Compact.—Takes up less room than the old sticker.

Durable.—Base is cast in one piece, flaring at the floor line, eliminating vibration so disastrous to the production of fine mouldings, also increases the life of the machine.

These are but few of the features—truly a master machine.

The C-3 is one of the most useful machines.

Look it up. — You'll be glad you did.

P. B. Yates Machine Co. Limited

EVEREADY FLASHLIGHTS MEET EVERY NEED FOR EMERGENCY LIGHT

Essential Tools in Every Shop--Eveready Flashlights

No matter how efficient or well placed your fixed illumination may be, there are hundreds of places in every shop that demand the handy portability of Eveready Flashlights.

Fire-risk precludes the use of any sort of open flame. Ordinary trouble-lamps with their glare and their awkward cable are inadequate. Eveready Flashlights with their safe, bright, penetrating beam meet every need for emergency light.

Store-rooms should be supplied with Eveready Flashlights in ample number and variety. Workmen should be urged to "own their own" flashlight, as part of their tool-kit.

Drop us a postcard today for specific information concerning Eveready Flashlights for industrial use.

Monel metal measures power plant efficiency

DEVICES depended upon to detect and "show up" inefficient power plant operation can do their work no better than each metal part in them.

Coal, hot flue gases, steaming boiler feed water, high pressure and superheated steam, all act to wear out the device used to measure, handle or control them.

Metals commonly used for contact parts in these devices yield to corrosion—rust out. Of the commercial metals, only Monel combines the strength of steel with the ability to stand up under the attacks of most acids and alkalies and of high heats and high speed vapor erosion. Therefore, vital parts of automatic coal weighing scales, CO_2 Recorders, Venturi meters, flow meters, hot water meters, gauges, etc., are made of Monel.

In addition to the few uses for Monel listed above, leading designers specify Monel. Monel is now used in many places where other metals have been tried and have failed. For instance, Chapman, Crane, Jenkins, Lunkenheimer, Nelson, Pratt & Cady use Monel for valve stems, seats, rings, clappers, spindles, etc. It has a prominent place in the specifications of the largest engineering organizations in the country.

You'll Know It By The Diamond Trade Mark

Dependable Performance is guaranteed the buyer of Diamond Trade Marked Valves.

The name "Jenkins" within a Diamond Mark cast on the valve body—every **genuine** Jenkins Valve carries it, a protection to the customer against inferior imitations.

And whatever the service, whether for steam, water, oil, air, gas or chemicals, genuine Jenkins Valves will prove safe and dependable.

Jenkins Valves are made to serve. They are designed throughout for the maximum service, not merely the average—and tested in this regard before leaving the factory.

Supply houses everywhere carry a complete stock of Jenkins Diamond Trade Marked Valves. Catalog No. 8 (free on request) will show you how comprehensive the Jenkins line is—a valve for every purpose.

BOOKLET T. I.C. sent free on request.

Clerk B has made a cash sale for $1.00

The indication at the top of an up-to-date National Cash Register gives publicity to every transaction. The merchant, the clerk, and the customer see this record.

This prevents mistakes in price and in making change. It removes temptation.

The record shown in the indication is printed on a strip of paper which is locked up inside the register. This record also is printed on a receipt for the customer.

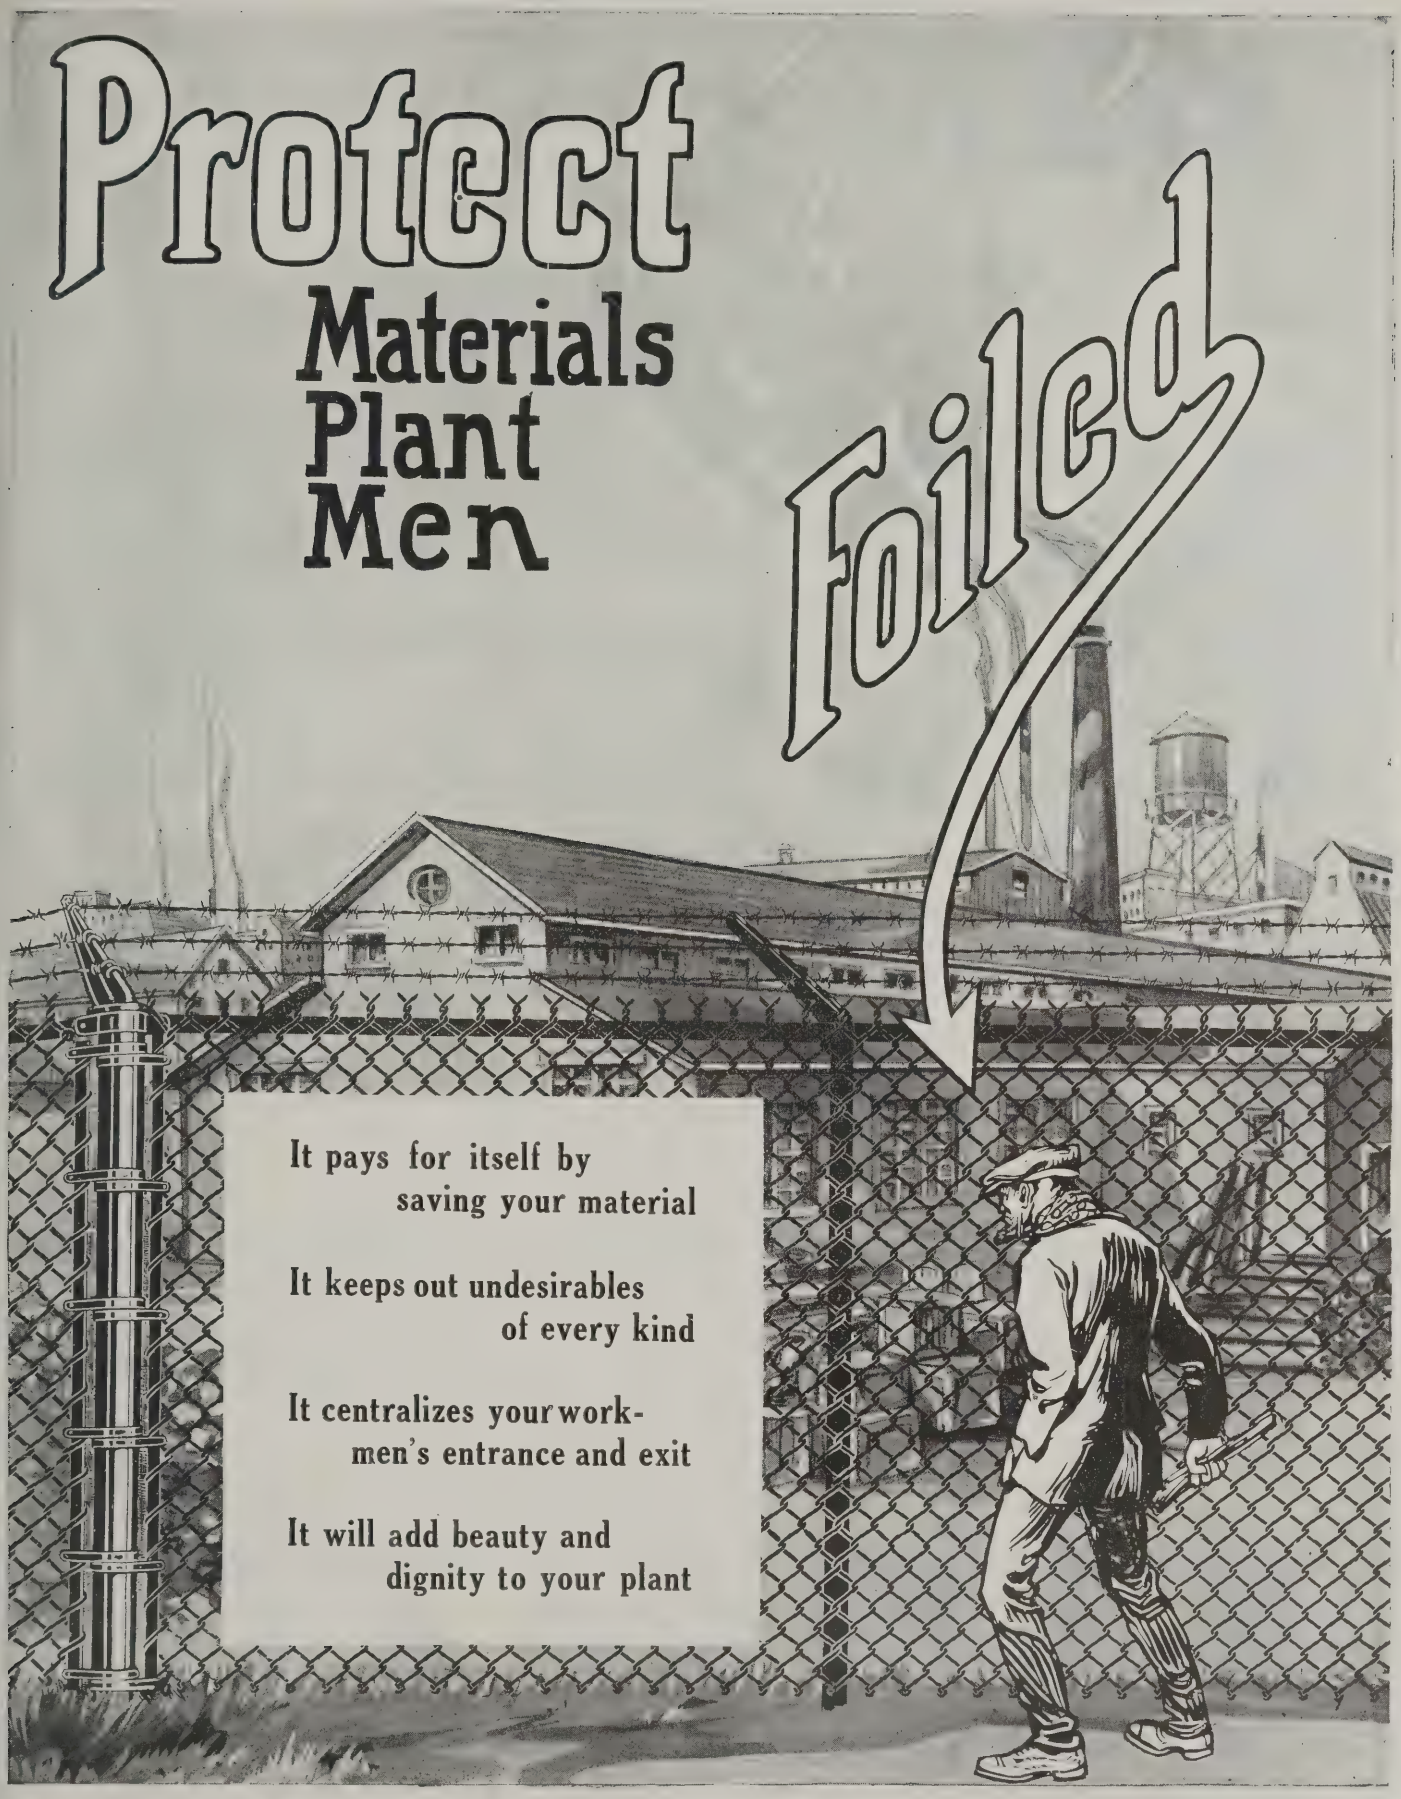
The amounts indicated and printed are added into totals which show, at a glance, (1) the total business handled by each clerk, and (2) the total of each kind of transaction.

This assures the merchant that every sale is handled accurately. It also assures him of accurate records which give him control of his business.

This is the indication. "Ca" shows it was a cash sale. "B" is the clerk's initial. "1.00" is the price.

Charge sales are indicated by "Ch," received on account by "Rc," and paid out transactions by "Pd."

The same indication shows on both front and back of the register.



We make cash registers for every line of business

Less Wear and Tear

IMPERIAL Lubricants keep plant machinery running smoothly, reducing friction and consequent power loss.

Their regular use prolongs the life of your equipment, and increases its efficiency.

Imperial Lubricants are graded to meet the varied requirements of every type and make of machine. Each grade of oil is refined to the same exact, scientific standard. Ample supplies—every grade—carried in stock near you.

Many Imperial Oil customers voluntarily report savings as high as 35% in lubricating oil bills when following our recommendations. That's worth while economy that goes along with increased capacity and lowered depreciation costs.

Imperial Lubrication Engineers will gladly make it their business to see that you get full value from the lubricating oils you use. It will pay you to call in the Imperial Oil man and have him prescribe for your plant.

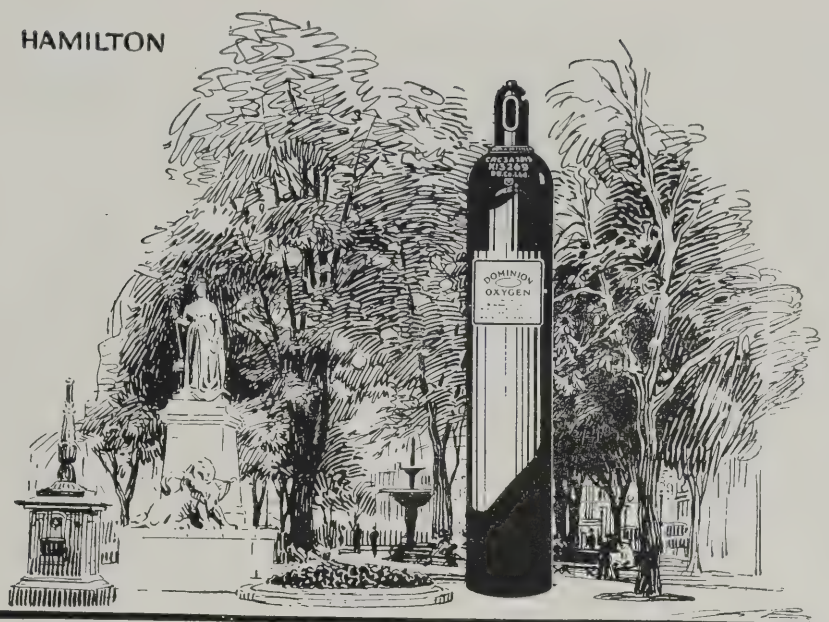
OPERATED IN CONJUNCTION WITH A CONTINENT WIDE NET-WORK OF DISTRIBUTION STATIONS



"LIQUID AIR" OXYGEN
MEANS A SAVING IN TRANSPORTATION

With a network of Factories, not only planned but in actual operation, and a number of Distribution Stations situated at all large centres all over Canada, purchasers of Oxygen can obtain their supplies at a point very near to the point of consumption. This completely obviates heavy freight charges on cylinders, and assures an immediate supply at any time within a few hours, and even minutes, after the orders are placed.

All cylinders conform to the specifications of the Canadian Railroad Board and are made to ensure safety without unnecessary weight. When purchasing "Liquid Air" Oxygen, you not only save on freight, but in very many cases this expense is almost eliminated.

Dominion Oxygen

when and where you want it

FROM four centrally located points the Dominion Oxygen Company, Limited, supplies Canadian industry with the commercial oxygen it needs. Thanks to the completion of these first four distributing stations, Canadian manufacturers can now rely on a never-failing source of immediate oxygen supply.

Delivery of pure oxygen in any quantity, at any point, at any time, is made certain by Dominion's producing and distributing organization.

The manufacture of uniformly pure oxygen in quantities large enough to insure prompt attention to your needs has been the aim of the Dominion Oxygen Company, Limited, since the formal announcement of its building plans. The fact that every order for oxygen is filled on the day it is received is evidence of the efficiency already reached.

Dominion Oxygen Service is based on the Company's realization of Canada's need of an always available supply of uniformly pure oxygen. Dominion oxygen, in the high capacity cylinder built for economical and safe handling, fills that need.

Engineers—Hydro Electric Power Commission Staff

THE ORMSBY-LUPTON STEEL SASH

ARE TO BE USED IN

The Largest Power House in the World

THIS Power House will develop when completed five hundred thousand horse power (500,000 h.p.). The building is 650 feet long by 130 feet wide and 165 feet high, and a type of Power House Sash was demanded that would be in keeping with the building and that would give real protection from the elements. The largest Sash used are 21 feet wide by 38 feet 5¾ inches high and are the largest Power House Windows ever made in the Steel Sash Industry.

This contract was given to us after investigation with the full knowledge and firm belief that our engineering ability and experience in the Sash business was of the highest order and that the Windows would be eminently and entirely satisfactory.

You want real Windows; you want rugged Sash; you want Sash that keep the elements out; you want Sash that admit the maximum of light; you want Sash that last as long as your building—then do what the Hydro did. Give your business to real Canadian Sash Makers and you will get the right goods at an interesting price.

Let us submit our proposition to you when you are in the market for Steel Sash. It will surely be to our mutual advantage.

REMEMBER—" To-day the Sash makes the Building "

Jones "A-C"

Jones "A-C" Stokers used in connection with Hydro-Electric Development. The same stoker that is giving excellent results in large plants is also ideal for small plants. The saving is even more gratifying.

Since Hand Firing Won't Do— Install a Real High-Duty Stoker

TOO many stokers are merely substitutes for hand firing. By eliminating the waste of hand firing they effect economy—but not as great economy as is possible through **real** high-duty stoker firing. Small plants as well as large plants to-day regard a stoker as a means of **economy** instead of an expense. First cost is considered only in relation to the dividend it yields.

The Jones "A-C" has proved its ability as a dividend producer by perfectly fulfilling the rigid requirements of high-duty stoking.

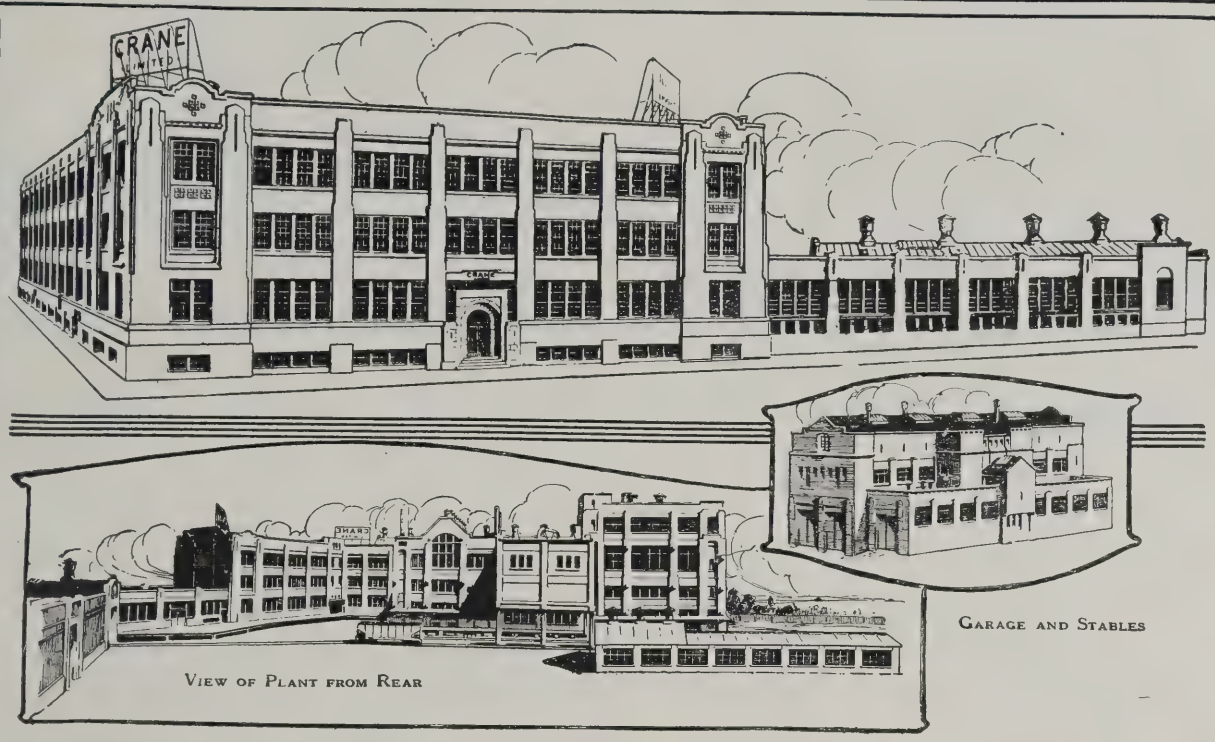
Its extreme simplicity—only one moving part, none in the fire—reduces maintenance and practically eliminates shut-downs.

The under-feed principle of combustion—a principle originated in the Jones Stoker—provides maximum combustion efficiency, ability to burn poor grades of coal, and heavy overload capacity.

The automatic-cleaning feature and special tuyere construction overcome objectionable formation of clinkers on front, side, and bridge walls. Automatic control of fuel and air insures even steam pressure under widely varying load demands.

What single investment will yield as great return as high-duty stoker firing?

The new Jones "A-C" Catalog explains this new coal and labor saver in detail. Ask for a copy.



The Under-Feed Stoker Co. of Canada, Limited

81 Victoria Street - Toronto

Made in Canada for Canadians

The Jones "A-C" is 100% Canadian—made in Canada by Canadians, and sold for Canadian money at par. The former Jones Under-Feed Stoker Company, Ltd., an organization commanding great respect in Canada, has recently been replaced by the Under-Feed Stoker Company of Canada, Ltd. To the vast experience of the older company is added the engineering resources of the Under-Feed Stoker Company of America. This unrivalled engineering combination is at your command. Investigate.

LIONOIL RAVEN

Black Baking Japan

makes

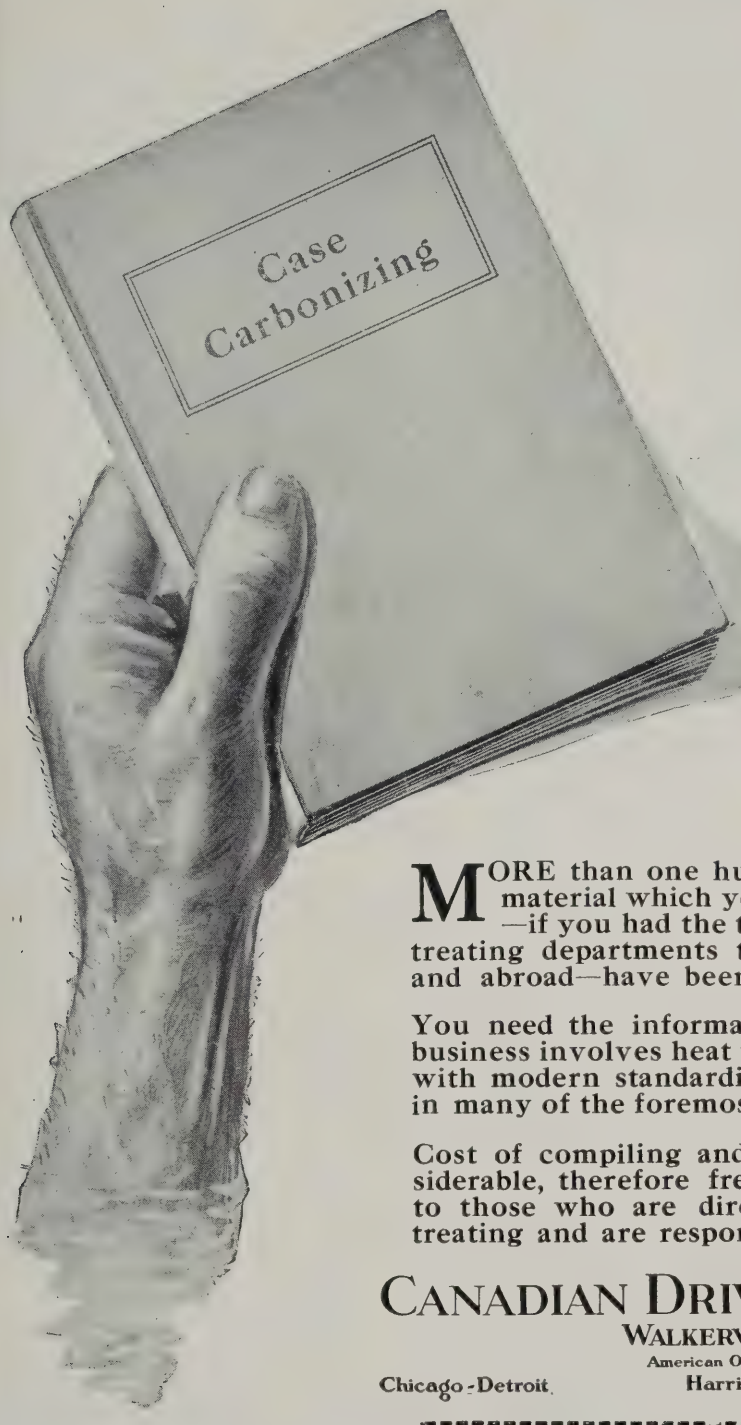
Ideal Foundation Coat for Metal Work

Increases Your Oven Capacity

LIONOIL RAVEN BLACK JAPAN bakes perfectly in from 30 to 40 minutes instead of the usual 3 or 4 hours. This increases your oven baking capacity from 2 to 6 times, speeding up production, and saving time and money.

Gives Smooth, Tough, Elastic, Semi-Gloss or Satin Finish, for Stove, Range, and Automobile Parts, Etc.

Flows without sags or curtains. Retains covering capacity in one coat when reduced 50% with Naptha. Applied with spray, floco, brush or dipping.



Durable, Non-Corrosive, Anti-Rust Coating

Its tough elasticity permits fabricating metal after **LIONOIL RAVEN** is applied, without chipping edges, or cracking when forming. Its adhesive qualities are unexcelled.

Write for information and booklet of practical value to users of Japans and Enamels.

This Book Belongs to You

MORE than one hundred pages of the very material which you yourself would gather—if you had the time to visit modern heat treating departments throughout the country and abroad—have been compiled in this book.

You need the information it contains—if your business involves heat treating. The book deals with modern standardized methods as practiced in many of the foremost plants.

Cost of compiling and printing has been considerable, therefore free distribution is limited to those who are directly interested in heat treating and are responsible for results.

STA-WHITE MAKES THE DIFFERENCE

How Should Mill White Paint Be Selected?

With the efficiency of mill white paint as an aid to good lighting and improved working conditions firmly established—the vital question of what mill white to use remains to be decided. It's a question of service and ultimate cost.

Good mill white tells its quality story year after year—not only during the first few months of service. Most any paint looks good for a time. Real worth is demonstrated by length of service.

If paint falls down after a short period its use represents loss regardless of the initial cost.

You combine sound business judgment and real economy when you buy ***Sta-White***— the pure white oil paint for industrial interiors. It is made right and has demonstrated its high quality in service.

Sta-White reflects all the light and will not discolor under service conditions. It is backed by satisfactory records covering every type of industry.

Write for a sample panel and our factory lighting book, "Lighting Industrial Interiors"

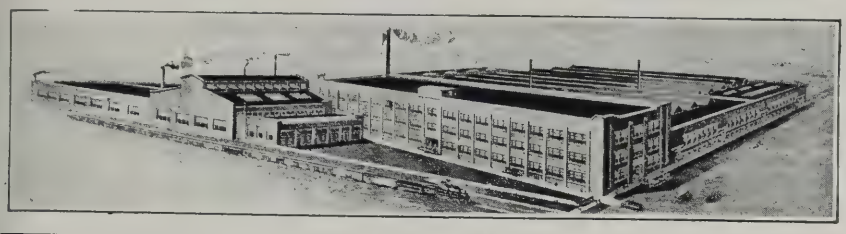
[31]

Sta-White— *a pure white, light-reflecting oil paint for industrial interiors. It stays white. The mill white you can rely upon.*

Superior Graphite Paint—*a protective coating for structural steel, bridges, metal roofs, stacks and all metal surfaces.*

Degraco Paints, Varnishes and Enamels *are made in all colours for interiors and exteriors, for every service requirement.*



Degraco Brick and Concrete Paints—*for interiors and exteriors. Concrete Walls. Floor Paint, Floor Hardener, Damp-proofing.*

Degraco-Tone—*an oil paint in flat finish for interior use on plaster walls, woodwork, wall board, concrete, tile, metal ceilings.*

DEGRACO

Paints - Varnishes - Enamels

HERE is the plant that stands behind the Banfield product and amply substantiates the Banfield claim of superiority in volume of production and exactitude of workmanship. Equipped with batteries of the newest presses and lathes—to give a service modern, efficient and complete.

Sheet Metal Stampings—

¶ A greater degree of uniform strength and accuracy is possible with stampings than with cast or machined parts---and the cost is usually *less.*

¶ We are prepared----with a hugh stock of sheet metal always on hand----to give early delivery of all orders entrusted to the modernity of our machines and the efficiency of our workmen.

¶ Stampings in all gauges of steel, brass, aluminum---- finished in nickel plate, brass, copper or enamel. We are equipped to handle well all forms of metal stamping and pressed steel parts.

¶ Entrust your work to Canada's most up-to-date stamping plant. Your blueprint or sample will bring you our quotations.

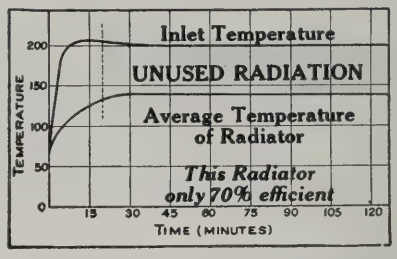
Making Radiation Usable

All who specify and install radiation are agreed upon one point; radiators cannot do their work when they are choked up with air and water.

The two curves are from actual laboratory tests and the same radiator, fitted with two kinds of radiator traps—one of which was the Dunham Radiator Trap—the trap that has been making radiators practically 100% hot since 1903.

You know which trap you would prefer. So would the man who pays the bill for the radiation which he rightfully expects will keep every room warm.

Making radiation usable is as commendable as the conservation of coal.



Send for the entire Dunham story
You will find it interesting

Westinghouse

Most important of all, Westinghouse Appliances are reliable.

Built both substantially and attractively, they sell readily.

The Type H Iron uses little current and uses that little to best advantage—centreing it upon the ironing surface.

The Turnover Toaster turns the toast

The Turnover Toaster is not only attractive, but is just as useful and convenient as it is attractive.

Turn the knob and the toast is turned.

All Westinghouse Appliances sell readily, for the Westinghouse reputation for reliability is world-wide.

Type H Iron — The heat is centralized on the Ironing surface

Protection Against Consequential Loss

HOWEVER much fire insurance you may carry you are bound to be a heavy loser if a fire occurs. Rent, rates and taxes must be paid; interest on borrowed capital must be found; expert assistants and permanent staff must be retained; and, above all, profits are wiped out until the plant is reinstated. It frequently happens that the consequential loss is far greater than the actual damage to property, and yet it cannot be collected from the insurance companies. Insurance to provide for the payment of fixed charges and profits is therefore a precaution, at least as necessary as ordinary fire insurance. The certainty of income being maintained cannot fail to produce a sense of security to the proprietors or shareholders.

This class of insurance usually costs rather less per hundred dollars than ordinary fire insurance. Full information on the subject will be gladly given to enquirers.

WILLIS FABER & CO.

INSURANCE BROKERS.
MANAGERS, C.M.A. INSURANCE DEP'T.

TO MANUFACTURERS

Are You Satisfied with Your Insurance Rates?

We maintain Branches throughout Canada and Newfoundland to which fully qualified engineers are attached, so that we are in a position to give expert technical advice on all questions connected with Insurance. We would welcome the opportunity of discussing your problems with you and offering competitive rates.

It is quite possible we might effect a considerable reduction for you as well as offering you an established insurance service which is recognized throughout the Dominion.

Dominion Tires are GOOD tires

Wherever cars roll on the highways of the Dominion, you will find Dominion Tires the choice of the experienced motorists.

For business as well as pleasure—for service and economy, equip your pleasure cars and delivery trucks with DOMINION TIRES

DOMINION TIRES and ACCESSORIES are distributed through DOMINION RUBBER SYSTEM BRANCHES and sold by the Best Dealers throughout Canada

JUST as many others have done, you also may find the road to cost-reduction and improved service to your customers lies in the use of Thompson and Norris

CORRUGATED BOXES

From every standpoint they are much superior to wooden packing cases. They give strength without weight; security without nailing; greater protection from odors, moisture and pilfering in transit. Drop us a card and our traveler will call and give you all information as to how to pack your product. ***Do it now.***
